We will join you in that effort—with our armed forces, as rapidly and fully as our efforts against our enemies and our responsibilities to other liberated peoples permit. With God's help we will complete the fulfillment of the pledge we renewed when our men returned to Leyte.

May 5, 1945: President Truman, statement after several discussions with President Osmeña:

As a result of the discussions I have had with the President of the Philippines, I am prepared to endorse and carry through to their conclusion the policies laid down by President Roosevelt respecting the islands and the independence of the Filipino people.

* * * * *

In view of the special relationship between the United States and the Philippines as created by Senate Joint Resolution 93, I believe that suitable reciprocal trade between the two countries should continue for such time, after independence, as may be necessary to provide the new Republic with a fair opportunity to secure its economic freedom and independence—a permanent blessing for the patriotic people of the Philippines.

* * * * *

It will be my constant endeavor to be of assistance to the Philippines. I will be only too happy to see to it that the close friendship between our two peoples, developed through many years of fruitful association, is maintained and strengthened.

October 3, 1945: President Truman, statement after conference with President Osmeña:

I propose to confer again with President Osmeña and to formulate a broad program for this Government with respect to the Philippines. This program will, of course, reflect the traditional friendship of the people of the United States and of the Philippines, and it will take account of the heroic and loyal conduct of the Filipinos during the war.

* * * * *

It would be neither just nor fair to the loyal people of the Philippines, who have been our brothers in war as well as in peace, to proclaim their independence until the necessary program for rehabilitation has been worked out and until there has been a determination of the fundamental problems involved in our mutual relationship after independence. Additional time is also required to enable the Philippine Government to set its own house in order and to hold a free democratic election.

To assist in the orderly working out of these problems, I am taking this opportunity to state that I do not intend to consider advancing the proclamation of Philippine independence to a date earlier than July 4, 1946, until the necessary measures which I have outlined have been taken.

October 25, 1945: President Truman, statement after several conferences with President Osmeña:

All Americans feel a very warm friendship for the Filipino people, who stood by us so heroically throughout the war and who now are in dire need of help. I consider a program of assistance to the Philippines essential for our relationship with the people there.

November 15, 1945: President Truman, statement on the occasion of the tenth anniversary of the Commonwealth of the Philippines:

The Filipino people are spiritually worthy of independence. They have won their spurs as a nation. We will honor our promise and our pledges to them. The United States stands ready to aid the heroes of the Philippines in every way we can.

November 15, 1945: United States High Commissioner to the Philipines Paul V. McNutt, statement on the occasion of the tenth anniversary of the Commonwealth of the Philippines:

But they need American help to rehabilitate both people and economy. We Americans cannot fail.

Let us remember on Commonwealth Day that the institutions of the Philippine Commonwealth have grown from American roots. And let us salute the courage and the will to liberty of the Filipino people. We look ahead to July 4, 1946, when the Filipino people will enter the world community of nations as a nation who has already gloriously earned its democratic name—the Philippine Republic.

January 21, 1946: President Truman, message to the Congress:

We have already determined that the Philippine Islands are to be independent on July 4, 1946. The ravages of war and enemy occupation, however, have placed a heavy responsibility upon the United States. I urge that the Congress complete, as promptly and as generously as may be possible, legislation which will aid economic rehabilitation for the Philippines. This will be not only a just acknowledgment of the loyalty of the people of the Philippines but it will help to avoid the economic chaos which otherwise will be their heritage from our common war. Perhaps no event in the long centuries of colonialism gives more hope for the pattern of the future than the independence of the Philippines.

North Shore Sportsmen Hit Game Preserve Plan

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Daily Evening Item, Lynn, Mass., on Wednesday, February 6, 1946:

NORTH SHORE SPORTSMEN HIT GAME-PRESERVE PLAN—CLAIM SYSTEM OF DEEDING LAND TO GOVERNMENT AIDS WEALTHY

Charging that Attorney Samuel Hoar, of Boston and Concord, prominent member of the executive committee of the Massachusetts Fish and Game Association, favors setting up a caste system in America and seeks to set a pattern for having taxpayers meet the cost of hunting preserves for the rich, the North Shore Sportsman's Club has sent an open letter to Secretary of the Interior Harold L. Ickes, calling attention to a possible pattern for future land grabs.

The open letter to Secretary Ickes, signed by Dr. Raymond A. Harpin, and Earl M. Lawrence, secretary-treasurer, seeks to point out the type of man in favor of the Parker River Wildlife Sanctuary "grab."

A hearing on the issue is scheduled for Friday in Washington by the Joint Senate-House Committee on Agriculture. Dr. Ira Gabrielson will speak in favor of the Federal Government taking the Parker River land, with David Coddaire, assistant attorney general, presenting the case for the State of Massachusetts in opposition.

FOR RICH ONLY

Dr. Harpin, of the North Shore club, stated today that the open letter to Mr. Ickes calls attention to a "possible plan for the wealthy to have the taxpayers pay the cost of private hunting preserves." The Lynn sportsman claims that if the plan is followed "there will be no place in America for the poor man to hunt or fish."

It is claimed that Attorney Hoar and others "would deed to the Federal Government acres of land, that the Government would stock the preserve, but that only the owner, his children and their guests would be permitted to hunt there."

The open letter to Secretary Ickes, entitled "It Can't Happen Here," follows:

"It can't happen here?

"An open letter to Secretary Harold L. Ickes.

"The subject matter of a deed, executed at Suffolk County, and recorded in the Middlesex County Registry of Deeds, should be labeled 'Required reading' for all taxpayers of the United States of America.

"Especially should it be recommended as up-to-date supplementary text in the classroom, for study, shall we say, immediately following a lecture on the glorious accomplishments of our Democracy, in protecting and advancing the rights and interests of the 'common man'."

THE DEED

Excerpts from said deed follow:

"I, Samuel Hoar of Concord, Middlesex County, Mass., for consideration paid, grant unto the United States of America, to be held in perpetuity as a wildlife sanctuary, subject to the provisions hereinafter set forth, all by right, title, and interest in and all of the land, water rights * * * Said property is granted subject to a written license to hunt, shoot, and possess migratory water fowl given by the grantor to his son, Samuel Hoar, Jr., dated May 3, 1944, to be recorded herewith * * * excepting and reserving to the grantor, for the remainder of his life, the following rights and privileges with respect to the property hereby granted, namely: The right alone or together with my son, Samuel Hoar, Jr., or one guest at a time, to hunt, shoot, and possess migratory water fowl * * * and to erect and maintain blinds and to use boats upon said property. * * * The grantee by its acceptance of the within conveyance hereby covenants, that * * * it will at all times keep and preserve the property hereby granted as a wildlife sanctuary; will not at any time permit the use of

said premises or any portion thereof for any other purpose; will not at any time permit any hunting or shooting upon said property other than that specifically reserved to the grantor and his said son and their guests * * *; will not permit the use by the public of said premises * * * There is no consideration for this deed, it being a gift to the United States of America." (Middlesex ss. Dec. 29, 1944, 12:01 p. m. Received and recorded (Book 6826, p. 226. Attest: Ralph A. Neilson, Asst. Reg.))

"Mr. Samuel Hoar has long been a prominent member of the executive committee of the Massachusetts Fish and Game Association, the same organization commonly regarded as sponsor of, and still fiercely supporting, the Parker River wildlife sanctuary land grab, perpetrated by Dr. Ira Gabrielson's Federal Fish and Wildlife Service.

"Approval and support by these vested interests of this bureaucratic seizure continues defiantly in the face of solid nonpartisan opposition by the Commonwealth of Massachusetts, as made manifest through its distinguished senators, representatives, governor, and entire legislature.

A NEW PATTERN

"Can it be, Mr. Secretary, that Dr. Gabrielson and Mr. Hoar are setting a new pattern for future landtakings?

"Sportsmen, taxpayers, through the good offices of your obedient servants, upon you falls the signal honor and privilege of furnishing through taxation enshrouded by law the funds necessary to post, police, and otherwise maintain the private hunting preserve of Mr. Samuel Hoar, his son, and their guests, henceforth officially titled by the United States of America, a wildlife sanctuary.

"A handful of duck hunters, Doctor? In the public interest, Mr. Secretary?

"If historical Concord's celebrated Paul Revere and revered Henry Thoreau could today be called to witness, might not they inquire, 'What price gentlemen, what price wildlife sanctuaries?' "

Citation Awarded B'nai B'rith

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. THOMAS of Utah. Mr. President, last Monday, in the office of Gen. Dwight D. Eisenhower, Army Chief of Staff, the national executive committee of B'nai B'rith, meeting in annual session in Washington, was received by General Eisenhower and presented with a special citation awarded B'nai B'rith by the War Department in recognition of the organization's outstanding contributions to the morale and welfare of Army personnel. The citation is signed by Secretary of War Robert Patterson and Maj. Gen. Joseph W. Byron, director of the Army's Special Services Division.

I ask unanimous consent that there be printed in the RECORD the remarks of General Eisenhower in awarding the citation, the reply of Mr. Henry Monsky, of Omaha, Nebr., national president of B'nai B'rith, in accepting the citation, and a statement entitled "B'nai B'rith Serves the Army."

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

REMARKS OF GENERAL EISENHOWER IN PRESENTING THE CITATION

Mr. Henry Monsky, president of B'nai B'rith; Col. Elliott Niles, of the National War Service Committee; members of the executive committee of B'nai B'rith, throughout the world, men and women, enlisted men and officers, have been the recipients of, and are grateful for, the unselfish services of the men and women of B'nai B'rith.

No one will ever know how much these services did in keeping high the morale of the armed forces during the terrible days of this war. I know that B'nai B'rith's service to the Army long antedated Pearl Harbor. I am familiar with the great many recreational rooms which you have furnished and continued to serve. Yes, millions of our soldiers will always be grateful, among other things, for the games, books, and magazines, the parties and the dances, and the free lodgings which you have provided.

I am especially happy to learn from Colonel Niles that your splendid work is going to continue and you are not forgetting our veterans. I know your services to these veterans will be as welcome to them now as it was during the war.

All this being done on a non-sectarian basis by the nation's oldest and largest Jewish service organization is proof enough that the preservation of our democratic traditions is worth fighting for.

The Army is mindful of all that you have done and desires to recognize it officially by the presentation to you of this citation, the first of its kind to be so awarded.

The citation reads as follows: "The War Department expresses its appreciation for patriotic services to B'nai B'rith in recognition of outstanding accomplishments in behalf of Army personnel and of meritorious contributions to its welfare and morale."

REMARKS OF HENRY MONSKY, OMAHA, NEBR., NATIONAL PRESIDENT OF B'NAI B'RITH, IN ACCEPTING THE CITATION ON BEHALF OF THE MEN, WOMEN, AND YOUNG PEOPLE AFFILIATED WITH B'NAI B'RITH

This is a moment of rare privilege; to stand in the presence of one of our contemporary immortals who has become the symbol of America's will and determination "to do justice and to pursue it," is indeed a great privilege.

It is my privilege, as president of B'nai B'rith, to accept from the hand of such a symbol a citation for service rendered to our beloved country. B'nai B'rith was not conscious that it was rendering a special service. It was following a tradition of more than a century, to be worthy of the blessings of American life by giving unstintingly of loyalty, sacrifice and treasure, so that our country can continue to serve the cause of world peace. It is gratifying to be singled out as a service for a citation. It cannot be and is not interpreted as thanks from our government. The gratitude is rather on our part to the United States Army for having been accorded the opportunity to utilize the forces of our organization for the welfare of the armed services.

It will be interpreted by our membership as a challenge to continue their services to returning veterans, the machinery for which has already been established, in their devotions to the task of keeping America the home of liberty, of inter-faith and inter-group amity, and preserving it as the land wherein there shall always exist the concept of our brother's keeper. Thank you, General Eisenhower.

B'NAI B'RITH SERVES THE ARMY

In the closing months of 1943 the weekly influx into Los Angeles of tens of thousand of men in uniform created a housing crisis. Hotels and rooming houses were jammed and thousands of Uncle Sam's finest were compelled to sleep in hotel lobbies, doorways, on lawns and sidewalks, and even against buildings and lamp posts. B'nai B'rith, the Nation's oldest and largest Jewish service organization, decided the situation required action.

The Hollywood lodge of B'nai B'rith opened a small dormitory in Hollywood but that only scratched the surface. In December 1943, B'nai B'rith obtained from one of its members the use of the long-vacant Alexandria Hotel annex with rent, heat, and light free, for use as a free dormitory for servicemen.

On the strength of this generous gift, B'nai B'rith created the B'nai B'rith Hospitality House, the world's largest free dormitory for GI's. All men in uniform, without regard to race or creed or color, were welcome. Since the hospitality house opened on Christmas eve, 1943, it has been host to better than 150,000 servicemen, an average of some 600 every week end.

The first man to register at the hospitality house coined a phrase when he learned everything was for free. Said he: "You mean all this is for free? It doesn't cost a cent? Geez! You guys are O. K."

Throughout the world, the men and women of Uncle Sam's Army have echoed that GI's words—"You guys are O. K."—as they saw and heard what B'nai B'rith has been doing for the men and women of the Army since 1940 on a completely non-sectarian basis.

B'nai B'rith's service to the Army long antedated Pearl Harbor. A few weeks after the first camps for selectees were opened in 1940, B'nai B'rith began providing Torah scrolls for use in conducting Jewish religious services at Army chapels. By VJ-day 200 of these scrolls had been made available to Army chaplains. Later, B'nai B'rith also furnished a number of the chapels with special equipment not provided by the Army.

Early in 1942, B'nai B'rith launched what was to become its No. 1 war-service project—the furnishing and equipping of recreation facilities at Army installations. The first of these was furnished at Fort Custer, Mich., in May 1942. Since then, B'nai B'rith has equipped 1,507 recreation facilities in every State of the Union, Alaska, and the District of Columbia at an estimated cost of $750,000 in material, furnishings, and equipment.

These facilities included: 592 company and squad rooms, 587 hospital solaria, 132 recreation centers, 48 reading and writing rooms, 58 game rooms, 19 service clubs, 12 lounges, 13 chapels, 10 libraries, 8 induction and separation centers, 6 loudspeaker systems, 5 theaters, 6 canteens, and 4 kitchens.

The facilities furnished by B'nai B'rith were located at 227 different camps, forts, and barracks; 81 air bases and airports, 53 Army hospitals and veterans' facilities; 22 Army training schools and Wac barracks; 24 service clubs and USO centers; and 5 induction and separation centers. Among the facilities were 73 for units of Wac's and Negro troops.

In addition to outfitting these facilities with all manner of furniture and equipment to help officers and men relax during their leisure time, B'nai B'rith provided a constant flow of special services for the men using these facilities. These services included sewing, refreshments, magazine and newspaper subscriptions, motion pictures, recorded messages for the home folks, stationery, games, musical instruments, athletic equipment, amplifying systems, washing machines, electric irons, and telephone funds.

Isolated antiaircraft batteries and desert units received the same attention from B'nai B'rith, as did the men stationed at large camps and forts. The first recreation facility furnished in Alaska was provided by B'nai B'rith.

When American battle casualties began coming home early in 1944, B'nai B'rith broadened this program to include service to the men in Army hospitals. As the need for recreational facilities at Army camps lessened, new facilities were furnished by B'nai B'rith at Army hospitals. Solaria, sun porches, music rooms, and game rooms were equipped by the score. In a number of instances B'nai B'rith undertook to provide complete recreational facilities at Army hospitals. At Vaughan General Hospital B'nai B'rith expended over $150,000 to outfit 26 rooms, including 1 complete recreation building for enlisted men and a club room for officers. The huge Army Service Forces Convalescent Hospital at Camp Upton had 219 rooms in 78 separate buildings outfitted by B'nai B'rith. The Camp Edwards Convalescent Hospital had 64 rooms furnished by B'nai B'rith. One Army hospital commandant remarked that "visitors to the hospital see so many signs of B'nai B'rith's generosity that half the time they think B'nai B'rith built the hospital."

Not content with providing the facilities for recreation, B'nai B'rith embarked on an extensive program of hospitality for the Army's wounded. This program included almost the entire gamut of entertainment and relaxation activities. Special traveling entertainment units visit many hospitals and put on shows regularly. Outings, fishing, and boating parties, carnivals, week-end parties, are arranged, with B'nai B'rith committees acting as hosts and providing transportation.

In many hospitals, B'nai B'rith set up the machinery to enable convalescent GI's to send recorded messages to the folks back home. Special efforts were made to provide entertainment for battle-fatigue cases. Telephone funds were raised to enable the men to call home. Movie equipment was furnished and sound systems installed to enable recorded programs to reach every man in a ward. Since VJ-day, B'nai B'rith has been furnishing collapsible wheel chairs, projected books which enable patients to read material thrown on the ceiling, portable libraries, and special bedside radios. In the Chicago area B'nai B'rith created a special week-end camp—Camp GI Joe—to which convalescent GI's were taken for a 3-day period of recreation.

In recognition of its unique efforts, the Army invited B'nai B'rith to be the first organization to provide special services to wounded men returning on hospital ships. Thousands of men on 24 hospital ships were furnished with all manner of gifts by B'nai B'rith. There was also a regular supply of birthday gifts made available for the wounded. At ports of debarkation, B'nai B'rith made its business to arrange welcome-home parties for the wounded upon their arrival.

Besides its hospitality program in the hospitals, B'nai B'rith also undertook to aid in the rehabilitation of the wounded. In cooperation with the Red Cross and Army special service officers, B'nai B'rith has equipped at Army hospitals a variety of hobby and occupational therapy rooms. These rooms were furnished with tools, shop equipment, and materials. In some hospitals B'nai B'rith provided electric bed lamps and electric razors. Thousands of dollars were raised for Army hospital welfare programs through B'nai B'rith shows in many parts of the country.

When the weekly influx to Los Angeles of tens of thousands of GI's on week-end leave created a major housing crisis, B'nai B'rith stepped in and created the Los Angeles B'nai B'rith Hospitality House. For more than 2 years this dormitory has been the week-end home of an average of 600 GI's and enlisted men. They received a clean bed, linen, shows, towels, writing material, shaving equipment, and coffee and doughnuts, with everything on the house. Some 150,000 men have thus been guests of B'nai B'rith.

Similar housing units with somewhat more limited facilities were provided by B'nai B'rith in Hollywood, Daytona Beach, Fla.; Evansville, Ind.; Raleigh, N. C.; and Miami, Fla. No wonder a Brooklyn corporal of Italian ancestry wrote to his mother that B'nai B'rith "in Jewish means a place of rest." In Miami, B'nai B'rith not only provided housing for lone GI's but organized a city-wide campaign to obtain apartments for the families of enlisted men and officers and set up a clearinghouse for purchasing.

Roadside shelters for hitch-hiking GI's; aid in the WAC recruiting campaign; hundreds of volunteer male orderlies at Army hospitals; hundreds of thousands of holiday gift packages shipped to all corners of the world; mobilization of an army of 70,000 blood donors for the armed forces; establishment of baby-furniture exchanges for wives of GI's; tours for the wounded; sponsorship of GI weddings—these were some of the other services given by B'nai B'rith to Army men and women, without regard to race, creed, or color.

Through its vocational service bureau, B'nai B'rith published a now world-famous chart entitled "What You Can Do With Your Army Training as a Civilian," which has been widely utilized by Army educational and counseling officers. Designed as a graphic guide to point up for discharged Army veterans the relationship between civilian employment and the skills acquired in 124 jobs most common in the Army, the chart took the form of a two-color illustrated wall document. Army authorities throughout the world have paid tribute to this unique chart as an invaluable contribution.

In all of these services to the Army, B'nai B'rith was motivated only by its century-old tradition of service to the Nation, a tradition that encompasses a proud record during the Civil War, the Spanish-American War, World War I, and World War II.

B'nai B'rith takes pride in the fact that these services played their part in keeping high the morale of our fighting men and are now helping rebuild the lives of the wounded. As the commander of an Army service base said: "Minus soldiers without guns, such as you, there would be no army."

STATISTICS

One thousand five hundred and seven recreational facilities equipped for the Army.

Two million seven hundred and fifty thousand servicemen entertained at B'nai B'rith sponsored hospitality programs.

Two hundred and twenty-five thousand Army men housed at B'nai B'rith dormitories.

Seven hundred thousand gift packages and service kits contributed to Army men by B'nai B'rith.

Two million games, books, and magazine subscriptions provided to Army men.

Two hundred Torah scrolls made available to Army chapels.

Fifty-three Army hospitals received B'nai B'rith recreational equipment and hospitality.

Twenty-four Army hospital ships served with recreational material and gift packages.

Seventy thousand B'nai B'rith blood donors recruited for armed forces through Red Cross.

Shortage of Building Materials

REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. SPRINGER. Mr. Speaker, there has been a very great shortage of building materials and building supplies in this country. That shortage still exists. This shortage is materially interfering with the desire of the people to build houses and homes. Our returning veterans need, and they want, houses in which to reestablish their families. They want to rehabilitate themselves as quickly as possible. But there is a scarcity of houses, and there is a scarcity of building materials, including lumber, plumbing materials and supplies, and other essential commodities—and because of this existing shortage it is impossible for the builders to proceed with their work, and it is impossible for the people, who desire to build, to go forward.

We have learned that much lumber, and building supplies, are now being sent to Europe, and elsewhere. Recently I observed that some 250,000,000 board feet of lumber was to be sent to Europe during the first 3 months of 1946. Of course, that vast amount of lumber would be very helpful in repairing and building houses in this country, which are so badly needed.

Mr. Speaker, one matter has been called to my attention regarding this very great shortage of building materials by a group of people from Indiana who are now touring through several countries in South America. Mr. Maurice Early, of the Indianapolis Star, Indianapolis, Ind., is one of that party of Hoosiers who are making that trip. He states in an article sent back to his newspaper, "that upon leaving Indianapolis, where all building is at a standstill, we were amazed to find that virtually everything used in the construction work down here comes from the United States." They were at the time that statement was written in Caracas, Venezuela. He further reports that trucks coming into that city are loaded with building materials, and the ports are crowded with ships and vessels loaded with construction steel, cement, and other building materials, including lumber and other essential commodities. We know that these countries were not engaged in this late war. They have not suffered either from invasion or the ravages of war, yet they are securing vast quantities of building material, and they are building new homes. In many of those cities, it is reported, blocks of slums have been razed to make way for new houses and homes. Our country is furnishing the material necessary for the construction of the buildings which are now going up. Yet we know there is a dire need for buildings, houses, and homes in this country, but the scarcity of all kinds and types of necessary building materials prevents the construction thereof.

Mr. Speaker, many people who are engaged in the contracting business, and as builders, and many who are engaged in the sale and distribution of building materials and supplies, are greatly disturbed and distressed because of this policy on the part of our Government. It appears to them, naturally, that they are being discriminated against in this particular, because they are prevented from pursuing their business because of this scarcity of building material, while our Government permits, and actually

approves, the sending of this needed building material to these South American countries so they may proceed with their building programs. Of course, this is a very unjust discrimination, in my opinion. Our own people, our returning veterans, need houses, and this very unwise and unjust procedure is preventing them from obtaining them.

Mr. Speaker, in order that all may read the report, I ask unanimous consent to insert the article written by Mr. Maurice Early, of the Indianapolis Star, of Indianapolis, Ind., at this point in the RECORD.

THE DAY IN INDIANA—CAPITAL BOOMING—UNITED STATES MATERIALS—CARACAS REBUILDING — GROUP ENTERTAINED — OUTLINE PLANS

(By Maurice Early)

CARACAS, VENEZUELA, January 28.—This capital of Venezuela is experiencing a building boom that resembles the feverish construction activities in American cities during the boom days of the 1920's. To outsiders this tearing down of ancient structures and the building of the most modern kinds of houses, apartments, and office buildings is amazing.

What is more amazing to the Hoosiers, who have just left Indianapolis, where building is at a standstill and the housing shortage is acute, is that virtually everything used in the construction work here comes from the United States.

There is a constant procession of trucks winding up the mountain road from the port of La Guaira to Caracas. They are loaded with construction steel, cement, and the other building materials. Walls of all the houses and other buildings here are made of brick that is manufactured in Venezuela. Some of the cement is made locally. But all other materials, including plumbing and light fixtures, modernistic glass, aluminum for decorative effects, come from the United States.

Rebuilding of Caracas did not start after the end of the war. It has been going on during the war years. Last year a mammoth government housing project was completed. Blocks of slums were razed to make way for wide streets and seven apartment buildings with 800 living units. They cost $12,500,000, loaned by the government to the housing authority. The loan is to be amortized by the rentals. The development is just as modern and attractive as any new section of a city in the United States.

As a result of the construction activity there is no severe housing shortage here even though the city has grown rapidly during the war.

There is only one explanation here for the fact that building material from the United States is coming now, and has been coming during the war, when construction in America was strictly rationed.

Materials sold in the United States are subject to ceiling prices. The United States Government would have no interest in regulating the price of materials sold to Venezuela. Consequently the materials are going to buyers who will pay more than the restricted prices paid by the construction industry in the United States.

New buildings include a large school, an eight-story office structure for one of the newspapers, apartments, and residences. There are few places in the old business section where buildings are not coming down to make way for new ones. In the suburbs, up the valleys, there are double-lane streets, regular American-type filling stations, neon lighted stores, and there are three large groceries. In all other parts of the town the food stores are mere stalls not much larger than stands in the Indianapolis city market. If Caracas could get all the materials it wants from the United States there would be $18,000,000 of new construction a month.

At the direction of the President of Venezuela, the Indianapolis Chamber of Commerce group was entertained by two members of the cabinet at a fashionable resort restaurant outside of the city. All members of the group declared this was the most important contact that any group interested in business promotion could have made. The government officials were lavish in their entertainment. The dinner meeting lasted from 9 o'clock in the evening until after midnight. Officials giving the party were Perez Alfonso, minister of commerce, and Valmore Rodriguez, minister of the interior. They explained their plans for industrial development of the country and for the improvement of the living conditions of the poor class which is now suffering from malnutrition. Tuberculosis is rampant. Minister Alfonso said there are 7,000 homeless children in Caracas.

Mr. Speaker, many of our lumber dealers and plumbers have but a very small amount of stock on hand. They cannot obtain lumber, and they cannot obtain plumbing materials and supplies, and this has prevented the building of houses which are badly needed. It is abhorrent for the people to know that these very supplies which are now needed for building purposes are being sent, in large quantities, to the various South American countries. By this practice, those countries are going forward with their improvements while our returned veterans and our own people have to stand by and await the time when they can secure those necessary materials for building in our own country, and our businessmen and our building contractors are compelled to await the time when those materials are available.

The people in our own country want to proceed with their businesses, and they want to build and develop in our own country. The people want the United States of America to go forward. They do not want the other countries of the world to build and develop, while we are forced to sit idly by and await the time when available materials may be secured. In other words, we are now witnessing a stoppage in building because we are all too generous in sending our needed building materials to other countries who do not need the same as greatly as our own Nation. This procedure should be stopped. Let us build in our own Nation.

Shipments of Wheat

REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. HOPE. Mr. Speaker, in the discussion of the current wheat crisis too little attention has been given to the question of transportation. It has been intimated in the press and elsewhere that a part of the current shortage of wheat is due to the fact that farmers are holding it for higher prices. That definitely is not the situation at the present time. Of course, some farmers normally carry wheat from one year to another. Many of them have adequate storage on their farms and, irrespective of the price situation, many farmers like to hold at least a part of their wheat until they see what their crop prospects are for the next year. However, there is no need to worry about that situation now because there are millions and millions of bushels of wheat in this country now on farms which cannot be moved because of a lack of rail transportation. The last figures I saw a few days ago indicated that more than 500 country elevators throughout the country are now closed because they are full and cars are not available to move the wheat stored in them. I am advised that unless some drastic action is taken this situation will grow worse rather than better. As an illustration of the situation which exists in many localities in the wheat country, let me quote the following letter from the manager of a grain elevator at Johnson, Kans.:

We read in the papers how the farmers are holding their wheat when the mills are needing it so badly and what a big job the farmers have ahead of them for 1946 to produce enough food to avert a famine.

This is all disgusting to read when out here in the country all the elevators and most of the farm bins are bulging with wheat—much of it going out of condition. It cannot be moved because of the shortage of grain cars.

Johnson has received since the 1st day of November an average of slightly over two cars a day, and there never has been a day that a car came to town that it was not loaded in an hour or two after it was spotted. The elevators were full when the car was loaded and some farmers had to haul their grain home again. Furthermore, farmers have hauled their grain to any point they could unload it. Right now about 3,000 bushels a day are being hauled from here to mills in Texas.

Basing an estimate on the number of bushels of grain, mostly wheat, that is in the Johnson territory we will have to have an average of six and one half cars a day from now until harvest to get this year's crop out before another harvest. A lot of the wheat if not moved soon will be condemned as unfit for human consumption.

This condition exists not only in Johnson but in all of this part of Kansas. Is there anything that can be done to relieve the situation?

It will be noted that not only is the movement of wheat being delayed in this community, but if it is not moved soon the deterioration which is taking place will render it unfit for human consumption.

I do not want to be critical of the railroads. They are up against a situation where it is impossible for them to move all the goods that are waiting to be moved. They simply do not have the rolling stock to do it. I am advised that, in addition to the shortage of rolling stock, the 5-day week has resulted in reducing the supply of cars. Estimates which I have seen place this loss at as much as 10 percent. The prevailing strikes have also contributed to this loss of cars as many cars are tied up in strike-bound plants.

What must be done if this crisis is to be met is to give some top over-all direction to the problem. If it is more essential to move wheat than some other commodity, then someone ought to have the authority to say that preference must be given to wheat movements. Furthermore, there should be top direction and coordination in the way of surveys and exchange of information to a greater extent than exists now. I am convinced that a considerable amount of transportation is now being wasted in long hauls from one part of the country to another which could be avoided with more coordination from the top. The letter above quoted speaks of hauling wheat from western Kansas into Texas. I am advised that at the present time 3,000 bushels of wheat per day are being hauled by truck from one shipping point in western Kansas to mills at Amarillo, Tex. This is ridiculous when it is recalled that Amarillo is the center of a great wheat-growing area. I understand wheat is being shipped from North Dakota to Texas and from the Pacific Northwest to Kansas. This at a time when Kansas farmers have millions of bushels of wheat which they want to sell but cannot because there is no transportation.

This is the time of year when farmers have time to haul wheat. Later on they will be busy with their spring work and it will be much more difficult.

The present situation has existed all fall and winter. It is getting worse. Unless some real effort is made to move wheat now on farms, some of it deteriorating, we will be faced with a real crisis. Prompt action now is essential and should have priority over all other steps to meet the food situation. Farmers are anxious to sell. They are demanding transportation. Do not blame them for the shortage.

United Nations' Educational, Scientific, and Cultural Conference

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a radio broadcast which I delivered on the Congressional Record on the Air program over Station WHN, New York, N. Y., on Monday, December 3, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I had the privilege of representing the United States on the American Delegation to the United Nations' Educational and Cultural Conference held in London, November 1 to 16. I have returned from that meeting with renewed hope for the establishment of a lasting peace.

Representatives of 44 nations there agreed on a constitution to form the basis of cooperation among peaceful nations in advancing through international, educational, and cultural relations the objectives of peace and human welfare.

These nations through their representatives declared that:

"Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed. Ignorance of each other's ways and lives has been a common cause throughout history of that suspicion and distrust which all too often results in war."

It is the purpose of this organization to build understanding and confidence in the world as a basis for peace. It will encourage the free flow of information and ideas through the press, radio, and motion pictures and through educational and scientific exchange. It will help teachers, scientists, writers, and others to work together throughout the world in support of the peace aims of the United Nations.

The Conference in London showed that the people of the world are agreed on the fundamental proposition that the best weapon against war is understanding. Common knowledge and understanding among the nations of the world removes the danger of violent dispute. The greatest danger today is the feeling which has been developing in the minds of too many men in this country and abroad—that already the next war is inevitable. Debates have taken place even in the Congress in which this fear has been expressed. This organization of the United Nations is dedicated to proving the falseness of that psychology.

It can be done.

It must be done.

I am sure that Americans, to whom education has, since its very founding, been a priceless heritage, will be especially quick to appreciate that in a world emerging from a war not over boundaries nor colonial domains, but to preserve the very soul of democracy, the cooperation of the nations of the world in educational and cultural endeavors presents one of the best guarantees of continued peace.

Because Americans have been able to educate their children and because American scientists and cultural leaders have been free to pursue their research and their achievements, the United States is prosperous and united. The years just behind us have surely taught us that our own prosperity is largely dependent upon the prosperity and the unity of the world. It is possible, perhaps, to prevent aggressor nations from actually waging large-scale wars by invoking the powers of the Security Council of the United Nations, but a mere police force is not enough. Human beings are peacefully inclined, so that it becomes unnecessary to call upon the police force, only when they are educated and fully accept the fundamental principles of a common morality and when they find constructive outlets for their energies in promoting the economic and cultural life of the world.

The formal title of this organization is the United Nations Educational, Scientific, and Cultural Organization. Using the first letter in each word of the title, we have the abbreviated title "UNESCO" by which name it will be generally referred to.

I believe that the American people and the Congress of the United States will find the constitution which was developed in London fully acceptable and that this Government and the governments of the United Nations will take prompt action in approving it and making it possible for the Organization to begin functioning in the near future.

I am convinced that it will aid immeasurably in preventing war. International organizations to be effective must have the support of enlightened world opinion. The success of UNESCO depends on the brains and will of the peoples of the world to make it work. America has made an incalculable contribution to the winning of the war. We now have an opportunity to organize the world for peace. With great power comes great responsibility. America must give leadership in the building of the new world.

Question. Senator MURRAY, you have commented several times since your return that you were much impressed by the reports of devastation of educational and scientific facilities in the countries occupied by Axis nations. What does UNESCO plan to do about this?

Senator MURRAY. UNESCO is not to be a relief organization. It is designed to engage in spreading education, knowledge, and culture among the masses, to encourage peace by removing racial prejudice, intolerance, and ill will from the minds of people and inculcating in their place the principles of human dignity, equality, and mutual respect among men. Such a program could not be expected to carry on relief activities.

The Conference at London, however, provided a preparatory commission and the establishment of a special technical subcommittee to examine into and report on the needs of devastated countries with a view of bringing such conditions to the notice of governments, organizations, and persons wishing to assist in such relief problems.

Question. Has the Government of the United States committed itself in any way about this organization?

Senator MURRAY. Well, this is one of the objective programs of the United Nations authorized at the San Francisco Conference. The United Nations Charter, adopted at San Francisco, provides in article 57 for 'various specialized agencies, established by intergovernmental agreement with wide international responsibilities in economic, social, cultural, educational, health, and related fields. Furthermore, both Houses of the Congress have unanimously passed resolutions favoring the establishment of an international organization for educational and cultural cooperation."

Question. How soon will the United States become a member and what is the mechanism of that?

Senator MURRAY. The United States will become a member through the adoption by Congress of a joint resolution accepting the constitution of this organization and agreeing to membership.

Question. What about Germany and Japan—will they be members?

Senator MURRAY. The membership is confined to members of the United Nations Organization. However, states not members of the United Nations Organization may be admitted to membership upon recommendation of the executive board by a two-thirds majority vote of the general conference.

Question. I understand that Russia did not take part in the London Conference. Can you tell us why and are there grounds for anticipating her participation later?

Senator MURRAY. Russia did not take part in the London Conference but it was the universal judgment of the delegates to the Conference that Russia would find the organization acceptable in every way. She approved the idea of such a specialized agency at the San Francisco Conference. A position has been held for Russia on the executive committee of the preparatory commission, and I hope that she will play an active part in the planning activities now going forward in London.

Question. How will the organization operate to be effective in promoting peace in the world?

Senator MURRAY. The plan of action is provided for in article I of the constitution The organization will contribute to peace and security by promoting collaboration among the nations through education, science, and culture in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world. It will collaborate in the work of advancing the mutual knowledge and un-

derstanding of peoples through all means of mass communication and will recommend such international agreements as may be necessary to promote the free flow of ideas by word and image. The Organization, however, is prohibited from intervening in matters which are essentially within the domestic jurisdiction of nations.

The Sugar Situation

REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. McGREGOR. Mr. Speaker, for sometime I have been wondering what is being done, or will be done, relative to the sugar situation by the Department of Agriculture or any other department having jurisdiction over this commodity. Last year, thousands upon thousands of bushels of fruit and vegetables were wasted because there was not sufficient sugar available for canning. Certainly the department that is responsible for the supply of this commodity has had full knowledge of this condition for sometime and it is regrettable at this date little has been done to correct it.

On January 21 I wrote the following letter to the Honorable Clinton P. Anderson, Secretary of Agriculture:

I am wondering just what is being done in order that we will not have a sugar shortage this coming summer, and what is being done that we will have sufficient amount of sugar for canning purposes, both summer and fall of this year. Last year a definite drive was made for home production of food, and yet thousands and thousands of tons of fruit and vegetables spoiled because of the lack of sugar for preservation. It would appear to me that we should make preparation for this before the time of emergency, and am therefore wondering what the status of the subject is.

Also I am wondering, Mr. Secretary, what happened to the approximately 1,600,000 tons of sugar that our armed forces found on the island of Java.

In your opinion, will it be necessary to increase the price of sugar, either in the form of subsidy or an increase in price to consumers, in order that we may have the sufficient amount necessary to meet the needs?

I hope that you will give this request a full detailed reply, and if legislation is necessary, so inform us, so that your recommendations may be given serious consideration and study at the earliest possible moment.

Assuring you that I appreciate your prompt attention to this request, I am, with kindest regards,

Respectfully yours,
J. HARRY McGREGOR,
Member of Congress.

On February 4, 1946, I received Secretary Anderson's reply which reads as follows:

This is in reply to your letter of January 21 in which you asked what is being done to assure that there will be a sufficient amount of sugar for canning purposes this year.

In an effort to stimulate sugar production for the harvests which would be available for this year's consumption, the Department of Agriculture made early announcements of support payment programs for sugar beets and domestic sugarcane, both continental and offshore. Such support payments were designed to stimulate sugar production in a manner which would not be inconsistent with the Government's program of economic stabilization. Growers of sugar beets and sugarcane have responded to such payments with increased acreages. There is nothing further that can be done in connection with such programs to increase sugar production for consumption this year. The Department already has announced support programs for the sugar beet and continental sugarcane crops which will be harvested next fall for use late this year and during the first 9 months of next year.

We are negotiating for the purchase of the 1946 Cuban sugar crop. We have offered Cuba a price of 3.675 cents per pound for its 1946 production which is an increase of .575 cents per pound over the price paid for the 1945 crop. Since the harvest of the 1946 crop already is under way, there is nothing further that can be done to increase this year's Cuban production.

It has not been possible to move any part of the 1,600,000 tons of sugar reported in Java because of the current internal political difficulties. It is not possible to predict when such difficulties may be settled in such manner as to permit the shipment of any part of the sugar.

In order to assure the prompt availability of this year's sugar production, it will be necessary to increase the price of sugar substantially or to obtain legislative authorization to incur losses on 1946 crop operations. Such action is not necessary to stimulate this year's production, since such stimulation has been given by the Department's early announcements that it would make the announced support payments if necessary to assure growers certain levels of income which were deemed necessary to achieve increased production. However, such offers, as announced, are contingent upon legislative authorization to incur losses on 1946 crop operations. We have submitted a request for such authorization to the Congress, which, if granted, would permit the importation and distribution of Puerto Rican and Hawaiian sugar of the 1946 crop, the harvest of which has just started.

We are attempting to work out agreements with producers which will permit interim shipments of sugar from these areas pending our receipt of the required legislative authorization. This is being done to avoid any delays in shipments of sugar during the period of the most critical shortage. If such authorization is forthcoming in the near future, there will be little interruption in the orderly movement of new-crop sugar supplies as rapidly as they become available. The ceiling prices of raw and refined sugar will be increased in the near future by an amount which will permit the importation and sale of 1946 crop Cuban sugar by Commodity Credit Corporation without loss.

Further legislative authorization will be necessary to permit the fulfillment of the Department's support payment program for 1946-crop sugar beets and continental sugarcane which will be harvested next fall. We expect to submit a request for such authorization soon.

Sincerely yours,
CLINTON P. ANDERSON,
Secretary.

Now, Mr. Speaker, you will note that some of my questions were not fully answered and at this time no definite program has been arranged. I am fearful that we will soon be placed in the same category as in the past—that is, "too little and too late."

I ask, Mr. Speaker, that an investigation be made by the proper committee of Congress of this entire subject, and at an early date report back to Congress the findings so the people will have a definite knowledge of what they can expect so far as quantity of sugar is concerned. This subject is a most urgent one, and I request that immediate action be taken.

Let's Get Our Bearings

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which was delivered by the Senator from New Jersey [Mr. HAWKES], one of the ablest Members of the Senate, at the Hotel Astor, New York City, February 5, 1946, before 1,200 prominent businessmen. The address was broadcast over a national hook-up. At the meeting, which was held under the auspices of Brand Names Research Foundation, awards were made to more than 150 companies which have maintained successful brands on the market for 50 years or more.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored by being present with this distinguished group of businessmen who have wisely used brands and trade-marks to develop successful business and vast employment under our American system of free men.

Tonight, at this great meeting, under the auspices of Brand Names Research Foundation, at which are present more than a thousand of America's leading businessmen, recognition has been given to business institutions which have established and maintained for 50 years or more, trade-marks and brands which became known by the public as symbols of quality and integrity in connection with the products and materials offered to the public by these institutions.

It is fitting they should receive citations from Brand Names Research Foundation in recognition of their accomplishment.

The future of our American life of free men is hanging in the balance tonight, and that is why I have chosen the subject, Let's Get Our Bearings. There never was a time in the history of the American people when it was more important for us to get our bearings than at the present moment.

We all know we have been in two World Wars, and principally as a result of the last war our national debt approximates $280,000,000,000. This is not the worst threat to our future liberties. The worst threat comes from an organized movement in this country to destroy the American system.

At the present moment there are factions in this Nation who would destroy the great American system of business, which is commonly called our free enterprise system. They have so stated for publication.

One of the targets they have chosen for attack is the brand-name system as it is used in the distribution of goods and services in our economy. It has been chosen for attack for an obvious reason.

The brand-name system, as it has developed in American life, is the keystone of distribution. Distribution is the arch which

supports our whole economy. Distribution—the movement of goods produced, to the consumer for his use—is, in four words, our standard of living.

One of our heritages from the war is a tremendously expanded productive capacity. If it can be used to the full, and the products of our farms and mills and mines and forests and fisheries and factories find full distribution, maximum employment will be the automatic result—and a national debt that would have destroyed an earlier America need not unduly worry us.

But another of our heritages from the war is an expanding social unrest.

Abroad we have seen it upset governments. We have seen it change nations' faces to the economic left. We have seen it deny the virtue of the economic system by which America waxed great, and through which America supported her allies in this war while the courage and devotion and sacrifice and precious blood of our uniformed forces sealed world confidence in American prestige.

At home we see social unrest blazoned in the daily newspaper's headlines. We stand uneasily on a powder chest. Let distribution fail—let factories close and fields lie fallow from failure of distribution—and what has happened elsewhere can happen here as the fatal aftermath of the war our strength has won.

I am recently returned from a trip to Europe, made as a member of a United States Senate committee. I do not know which of the weary evidences of years of brutal conflict I saw oppressed me more. Cities blown to shreds were dramatically horrible. But worse, I think, was the deadly apathy, the smell of defeated personalities, which blanketed whole populations.

America can be saved from that. But those who wish to destroy American free competitive distribution precisely do not want to save us from that. Because from wreckage, from an economically defeated people, from such apathy as I saw, they hope to build an economic revolution.

That is why destruction of the brand-name system is important to them.

I have never been able to understand why they would destroy it, why they wanted revolution by economic defeat, because I have studied our economic system from an impartial standpoint. I have studied it for 50 years—when I was a worker in overalls, when I was a clerk in an office, when I was an executive in business institutions, and from the point of view of a public servant holding office by the people's vote. The obligation of a man who assumes such responsibility is a solemn thing.

Tonight we are honoring fulfillment of an equally important obligation.

We are honoring those who have kept faith with the public and rendered a great public service to the Nation under established brands and trade-marks. A brand name or trade-mark is notice to the world that the product it represents is of a certain standard which the owner hopes the people, over a period of time, will decide represents the best value for the money.

Any brand that lasts and endures must have kept faith with the public, both in quality and price. Character has something to do with keeping that faith, but also business judgment compels an intelligent owner to keep faith because the owner of the brand or trade-mark has an increasing investment of time and money in the brand.

If he breaks faith with the brand or the trade-mark, thereby with the public, he is injuring himself many times more than he injures any particular individual. If he destroys the faith and confidence in the public mind regarding brands or trade-marks, then, all of his time and all of his investment have been destroyed.

I know there are those who say that because millions of dollars have been spent in advertising a given brand or trade-mark the public has to pay the bill.

Nothing could be further from the truth. I could cite a business—in which I was interested for many years—in which the cost of production of a single piece of merchandise was $12 and the wholesale selling price $18.

In the beginning the volume of business was very small. The brand and trade-mark, plus bringing the facts regarding it and its value to the public, cost the company millions of dollars. Advertising increased the demand for the product by millions of units.

This process led to a reduction of cost, which made it possible to sell the product to the consumer for approximately $5. These are facts that can be proven from the record, and they dispute the false propaganda that advertising is nothing but a waste of the consumer's money.

I could show in hundreds of cases, and particularly in the automobile field, where advertising and resultant increased production brought automobiles to the consuming public for less than one-quarter of their original production cost.

These brands and trade-marks are responsible for building good employment jobs at high wages for millions of workers. They are the very essence of our American success in making a living.

Brands and trade-marks, if successful, create business and profits for their owners as well as employment for vast numbers.

To be successful, their originators must advertise by newspaper, magazine, and radio, etc.

The whole process of telling the people creates business for the newspapers and magazines, thereby giving them income which leads to a better financed press and publications, with more employment.

It also gives substantial business to the radio stations and broadcasting systems. The income they receive from this source supports the radio in giving to the public programs of music, debate, and religion which are not available elsewhere in the world without cost to such an extent as here.

There are some in our executive branch of Government who would limit the time of exclusive use of brands and trade-marks to the owners of such trade-marks to a certain number of years only and then open them to public use. Think of it. They would have the diligent create and the slothful absorb the benefits. They would let John Smith create, establish, and maintain his triangle brand, and then, if it becomes successful, they would let John Doe watch its development and use it in its success.

We might as well let John Doe use Smith's name for all purposes if Smith made his name mean something in life. This is a weird and thoroughly un-American suggestion, but it indicates the current of thinking, and it would lead to communism.

The whole world is looking to America to help save them from themselves. There must be a reason. Why do we have to protect ourselves with rigid immigration laws? There must be a reason why the people of all countries in great numbers want to emigrate to this country. Let us save America so we can help them save themselves.

It is fair to find a parallel between the history of brands and trade-marks, with their years of growth and honest successful life, to that of the average American. Each started as infants, hoping for its share of success in a fair competitive world. The American economy assured them both the right to that hope.

There are few, if any, other places in the world, where the poorest man can, by his own industry, education, thrift, and the use of the genius with which God has endowed him, take himself from the lowest rounds of the ladder to the highest.

That has been done in America so often it needs no illustration.

No one familiar with the conditions in all the countries throughout the world will dispute the fact that under our system the individual has the greatest opportunity to move forward, improve his living standard and reach success in business, the professions, the ministry, or government.

Under our system the laborer of today can become the capitalist of tomorrow.

Labor has just as much right, under our system, to work lawfully for the improvement of its conditions in the business and industrial world as has ownership and management lawfully to seek profits through reward, invention, and increased efficiency.

If we are to continue, our laws must be fairly interpreted and apply with equal vigor to the rich and the poor, the high, and the low. Great power in the hands of any individual or group must carry with it great responsibility under our system. If that responsibility is not voluntarily accepted by those possessing such power, it then must be fixed by law.

It has been fixed by law in connection with corporations and large business organizations through the enactment of the Sherman antitrust law and the Clayton Act.

The interest of the public now demands that it should be fixed fairly as to the great labor unions and organizations which are collecting from the workers hundreds of millions of dollars.

No law enacted in the heat of passion or for other purposes than proper control in the interest of the people as a whole will be successful among a free people.

Government regulation should be limited to absolute necessity, and we should all remember that when we cease to function under voluntary cooperation we must, of necessity, become a regulated people with Government as the master and the people the servant, rather than as we were established, with the people as the master and the Government as their servant.

Great problems can only be successfully analyzed by simple and direct procedure.

I ask myself, "What enabled this country of ours to make the contribution it did in World War II for the benefit of humanity and civilization?"

The answer comes back clearly: "It was because the individual here was not only a freeman but he was stimulated to use his genius and ability by just reward for accomplishment, protected by law."

For more than a century and a half he was protected in the right to keep a substantial part of that reward in the form of property rights under a well-defined system, protected by the majesty of the law.

Abraham Lincoln said: "Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

Let us get our bearings and not destroy the great system that put our Nation in a position to furnish the vital materials required to win World War II. World War II was a great victory for freemen, providing we, who are charged with the making of peace, keep faith with those who gave their lives to win the war.

To keep that faith you must recognize that blessings brighten as they take their flight, and eternal vigilance, the price of liberty, means attention to your right of suffrage at the primaries first, then at the general election. That is the only way to keep communism from supplanting our American system of freemen.

Remember, every faker or demagog gives lip service to free competitive enterprise when he talks in public. Behind the scenes he does the things that destroy it. The faker knows the thinking people want to

keep free competitive enterprise because it's the essence of freedom. It's the freeman's way of making a decent living and the best in the world.

The political faker and the Communists hope to function as termites, boring into the foundation of free enterprise and destroying it before the people realize what is happening to them.

You won't save our American system unless you elect as your representatives, honest men, who believe in saving our American form of government and its system of making a living.

Don't trade a success for a failure.

I think this meeting, under the auspices of the Brand Names Research Foundation, is a fine thing to bring to the attention of the people of the United States the fact that builders of fine brands and trade-marks, who have kept faith with them, are being honored here tonight for having kept that faith and helped build America.

If our system was a failure, or there was any system in the world paralleling it, I might be willing to help exchange it, but I, for one, am not apologizing to anyone for referring to our American free enterprise system, or, as I put it, our American business system, because it is the greatest success in the world; and no one in his right mind who understands the facts, will lend any help to those who would undermine and destroy it for reasons of their own, which I have not yet been able to fathom.

I have heard of apologizing for failure, but it is a new thing for me to hear people apologizing for success. I have heard of getting a successful man into an organization to change the work of an unsuccessful man, but I have never heard of getting a man to bring in an unsuccessful system to supplant a successful system.

There are those who sneer at the free enterprise system, and recently men, high in the ranks of certain labor movements, have suggested that the "four freedoms" cannot be accomplished without the destruction of our free enterprise system.

That means that we Americans have an issue which must be faced immediately—are we going to permit those who would destroy our system to succeed in doing it, or are we going to get organized and take the necessary steps to preserve it?

If we will avoid the evil effects of false propaganda and give only fair and sound consideration to the relative conditions of the various people of the earth, we will arise to defend our American system before we have lost the power of action.

Another thing which gave us the power to accomplish the miracles of production that saved the Allies in World War II is found in the statement that for nearly 150 years this Government functioned on the plan that the Government should never interfere in anything which the people can do for themselves and as well as or better than the Government.

We citizens are yet the master of our Government, and if we perform our duties as citizens we can yet harness Government to continue as our servant rather than become our master.

America must accept the penalty of leadership in the world, but to perform the duties of leadership America must first preserve at home the full freedom of the individual, combined with individual acceptance of responsibility.

I ask myself, "What produced the revenue in connection with our great accomplishments and contribution to the winning of the war?" I ask myself, "What produced the revenue that produced the things that made us so powerful?"

The answer comes back, "Freedom of the individual, guaranteed by the Constitution and carefully protected by those in authority in this Government for almost 150 years."

That revenue that produced the industrial and business organizations was the accumulated earnings and profits of diligent and thrifty men who helped to pioneer this great Nation of ours and develop it.

Let us remember they were not all successful for themselves. Most of them lost all, or a substantial part, of what they put into their pioneering ventures and yet the ventures were ultimately beneficial to the people as a whole.

Again I ask myself, "Why should we destroy the American system of business and industry which produced the revenue and made possible the production of materials used in the war by our marvelous fighting men, who brought to us victory on the battlefields."

The answer is—85 to 90 percent of the American people, including workers and owners, will band together to make secure the preservation of this great system if they understand it is being destroyed.

We must analyze, before too late, where we will go if we destroy it. We must soundly appraise the results in other nations which have followed practices that we are being asked to install here, and assume if they have been failures there they will be failures here.

The facts are that we are what we are because of the course we have followed. Liberty is freedom, but freedom is not free, and all we need to do to destroy our individual freedoms and our great American system of business is to tinker with the delicate machine that relies for its success upon proper human relationships, with voluntary, wholehearted cooperation as its foundation.

You can't legislate our system into success. You can't legislate employment. "You can lead a horse to water, but you can't make him drink."

By the same reasoning I know that you cannot legislate that private ownership will do exactly what the politicians or the labor leaders want them to do, on the one hand, nor can you legislate that labor will go to work and do exactly what you want it to do because the law says it must.

The fruits of common effort must be fairly divided. Capital is nothing more than stored-up labor and it is entitled to its just reward when it is invested in business with its hazards and chances.

Labor, on its part, is entitled to a fair reward for its work in producing the fruits of common effort.

Our great system can no longer function if we consider labor a commodity, or we disregard the fact that private capital will only find a working place to create profit and employment if opportunity for reward is secure under the law. Understanding cooperation and tolerance by all groups, coupled with the determination to preserve it is the only answer.

In your own self-interest, Mr. American Citizen, don't forget what happened in Germany when Hitler promised to do everything for the working man and everything for the capitalist.

Don't forget what happened in Italy when Mussolini made similar promises. Remember in every country where the government has promised the millennium and guaranteed security, the people have learned to their sorrow, through misery and suffering, that the millennium cannot be given by government and only comes from work and sweat and the use of the talents given to the individual by Almighty God.

No one but you can make yourself successful.

Isn't it strange that we, with our system of human relationship, are the only people in the whole world to whom a distressed world can turn at this time. This should cause every American to pause and think well before he becomes a party to the destruction or breaking down of this great American system.

Responsibility for where we are going from where we are is an individual responsibility on every working man and woman in the United States, as well as all those in management and ownership. No one group can preserve this precious possession.

Again I repeat it is the duty of every American citizen to do his part in preserving the great system and improving it fairly as we go along. If we lose it, we won't get it back, and I make this statement unequivocally at the moment, that if we lose it, 90 percent of America will be in tears when they find they have not followed the admonition that "eternal vigilance is the price of liberty."

We owe it to the boys who fought this war to preserve this system of opportunity and guard it with their help, so that it stays the outstanding example to the world.

The Parliament of Man

EXTENSION OF REMARKS
OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Parliament of Man," by George E. Sokolsky, published in his column under the headline These Days, in the New York Sun of January 26, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George E. Sokolsky)

THE PARLIAMENT OF MAN

So the Russians want UNO to punish the British for their conduct in Greece and Java. Note that the Russians do not yet complain about British conduct in Palestine. Perhaps the day is not far distant when the Russians will bring a bill of particulars into UNO against American conduct in Japan under MacArthur. They have already, by the devious medium of the Tass News Agency, accused MacArthur of high misdemeanors in Korea.

Of course, no one brings a complaint into UNO against Russian conduct in Latvia, Esthonia, and Lithuania. No one has one word to say about the tragic betrayal of Poland, which is now totally a Russian puppet. Mr. Byrnes, representing free and liberal America, warns the Persians not to burden the infant UNO with complaints against the Russian octopus lest the Russians become angry and either smash Iran or the UNO for interfering with an insatiable land appetite. No one has offered a bill of particulars against the imposition upon China of the Manchurian terms of Japan's twenty-one demands by Soviet Russia—terms against which we protested in 1915 when Japan tried to force China; but supported by the United States in 1945 when Russia succeeded in forcing them upon China. There have been no American protests against Russia's claims to the Kuriles—claims publicly denied by Roosevelt; privately acknowledged by the same Roosevelt.

Russia is making a monkey out of UNO right from the start. It has rejected Bretton Woods. It has refused to join the air conferences and agreements. It has established a veto over the parliament of man. It has destroyed De Gaulle. Its adherents revel in the strikes in the United States. It denounces MacArthur. It has reduced sovereign states to the level of puppets. It has made itself the dominant state of the world, with and by the consent of the United States

of America, which, possessing the substance but not the spirit, the riches but not the character, consents, consents, consents, while the other vetoes, vetoes, vetoes.

There are men who say that this is not the time to raise such questions. When is the time? When will be the time? If the Russians continue their relentless war on Great Britain, will they not in the end succeed in accomplishing by diplomacy and propaganda what Hitler failed to accomplish by war? Is a propaganda and diplomatic blitz less harmful in the end than a military blitz? And is not the elimination of De Gaulle a preliminary to placing Thorez at the head of France; and is that different from placing Laval on that citadel of western civilization? And is it not within the margins of truth that should Thorez, the war-dodger of his country, who took refuge in an alien land rather than defend her boundaries, become the ruler of France, Pétain and Laval and all of Vichy will have been justified by history? Is a puppet of one country any better than a puppet of another?

Was it not Franklin D. Roosevelt who once said that the Rhine is our boundary? And what of the Rhine today? Is it still our boundary in a Russian-held world from Calais to Darien? Where is our boundary now?

No wonder that that UNO commission, looking for a site for its headquarters, acted so arrogantly in New York. They wanted living quarters for a thousand persons and their families in a city in which there is not a flat or a hotel room for a returning veteran. Throw the Americans out of their quarters! What are Americans in America in this one world? And they demand office space in a place where there is no office space. What difference that there is no room? Make the room! Kick out those who stand in the way of the new dispensation. Make room for the dawn of the new day—the day of the conqueror.

And so the British are now the defendants in the UNO and the little American public-opinion makers will be shrieking their heads off about Greece, but they will say nothing about Poland, Rumania, Yugoslavia, Bulgaria, Iran, Manchuria, Korea. Nobody is plaintiff in that case.

Let's Trade

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let's Trade," by Frank C. Waldrop. The article was published in today's issue of the Washington Times-Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S TRADE

(By Frank C. Waldrop)

Now the world is on its knees to the United States of America again, begging for help. This time the world wants not guns, not butter, not even dollars. It is panhandling for a little bread.

And it isn't kidding.

The United States of America, at this strategic moment, literally holds the power of life or death for millions of people in Europe and Asia. Oh, they won't die today or next week, maybe. But their lives will be hell for as long as they live, and the first snap of inevitable disease epidemics will carry them off at high rate unless we send food, and fast.

England is probably able to make her way all right, though unhappily, for she has so much overseas empire to draw from, and so many brussels sprouts at home. But there is nowhere on the European Continent itself a food reserve.

France hasn't got anything. Germany has less than nothing. Spain is begging. Italy is the same. The Balkans are shot. And the great Soviet Russia, which has been doing so much damning and finger pointing and loud talking at UNO—what has she got?

Now is the big chance for the Communists to ride to the rescue of the imperiled maiden, if they've got a "hoss" and can ride.

Asia, likewise, is wide open for the Communists to demonstrate in. If they can. But the fact is that they can't. They're as hard up as anybody and begging, too.

In all the world, there is only the United States of America that can stand off starvation. And there is no doubt that we will do it. It means pulling down our own standards of living some more, and going back into wartime economics again.

But there is no reason why we have to be a pack of "Patsys" while we are about it.

During the war we made ourselves the "Patsys" of the world. Mr. Roosevelt was so worked up being a great strategist and genius that, beginning with lend-lease and going right on down through Yalta, he managed to get us into every involvement that came along without getting, in return, a single gain for the United States of America.

Lend-lease, for instance. We loaned loose to the British in prodigious quantities. And in the end? Why the British are grumbling because Congress is considering whether to lend them $4,400,000,000 with which to balance up lend-lease and start up as a Socialist empire to try to put us out of business.

That "balance up" business simply means we lend them the money to pay us for goods we shipped them under lend-lease.

They come out clean on the deal. We pick up the check.

And if they have any little troubles with the $4,400,000,000 new loan they can call off interest payments any time they like. Tough, isn't it?

For 25 years, Communist Russia has carried on a stated campaign of war to the death with our way of life. That isn't any news to anybody who has read or heard the Communist doctrine.

The Communists claim that in the long run there isn't enough room on earth for them and capitalism, too. And they have stated it for the record that every move they make at home or abroad is aimed toward the violent overthrow of every other government in the world except their own.

Don't forget in that connection: Joe Stalin pulled the trigger for World War II when he signed up with Hitler in August 1939 and gave Adolf the green light to plunge into Poland.

Don't forget, either, that when the double-cross got crossed again and Adolf plunged into Russia, it was no time at all before Joe was all over us with bear hugs, begging for lend-lease.

And then after Pearl Harbor, nothing was too good for the Americans—in the line of caviar and champagne for the visiting firemen in Moscow.

But what, in the end, did we get back?

Look at the Communist party line swerving back today to the same old direction: War on capitalism. War on the very system that saved Russia in the vital hour of her life.

Britain is Socialist, with a stated aim of eating the foundations out from under capitalism bit by bit. Russia is Communist, with a stated aim of knocking capitalism down and beating the life out of its body with a club.

And the little nations of Europe and Asia are sweating as they try to figure out which way to jump. Most of them are already edging toward Russia or being pulled there by Communist parties in their midst.

But one thing they all have in common: They can't even live without the capitalist United States of America. They couldn't live during the war without us, and they can't live now without us.

Well, let's not be Patsys again. We muffed our golden chance during the war to talk some sense into those people. Now we have a second chance. Before that food goes abroad, let's see how fast they can call off their dogs over here. And you know what that means as well as they do.

A Jersey Farm Boy

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story about a New Jersey farm boy, which I think will be most interesting to all who may read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A JERSEY FARM BOY

Recently my attention has been called to the exploits of a 17-year-old New Jersey farm boy—a neighbor of mine from Somerville. His name is Allen La Fever and the whole Nation is talking about him. Allen is the kind of boy who will lead our Nation in the future. He's a member of the 4-H Club, Boy Scouts, quarterback on his high-school football team—and owner of a prize purebred Jersey calf named Phoebe. What makes Allen outstanding is the fact that as of this date he has lifted Phoebe for 111 consecutive days trying to prove the old adage "If a farm boy lifts a calf every day, he will be able to lift it when she becomes a cow." Allen, only 150 pounds himself, finds no trouble lifting Phoebe, even though the calf now weighs more than 230 pounds.

Every Saturday, over a coast-to-coast Columbia Broadcasting System network, Allen is interviewed on the Border Co. County Fair broadcast. He then lifts Phoebe and collects the sizeable amount of $10 a pound for each pound that she has gained during the week. So far, Allen has banked well over $800 toward his college career. Millions of listeners have shown interest in this boy and his calf. People have visited the Somerville farm by the hundreds. Scores of newspaper and magazine articles have featured his picture and story. New Jersey has found a brand new ambassador of goodwill in young Allen La Fever. He represents the kind of all-American boy typical of our lovely farms and bustling industrial cities.

The People's Health: A National Asset

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of the pending national health insurance bill, delivered by the Honorable Watson B. Miller, Federal Security Administrator, before the Medical Society of the county of New York, on December 17, 1945. His remarks were so convincing that even the editors of the medical journal New York Medicine, which reprinted the address in full, stated editorially:

This paper deserves a careful reading and analysis by friends and foes alike of compulsory-health insurance. With much of Mr Miller's analysis no one can differ. His factual summary of the health and medical problem is largely unexceptionable and many of his conclusions will appeal to most physicians as being reasoned and sound. We welcome this sincere and masterful statement from the head of the Social Security System.

I am informed by the Public Printer that the cost of printing the address in the Appendix of the RECORD will be $138.80.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From New York Medicine of January 5, 1946]

THE PEOPLE'S HEALTH: A NATIONAL ASSET

Ever since your invitation reached me, I have been thinking of this meeting as, in itself, a peculiarly revealing commentary on our times, and on our mutual problems and hopes. Here am I, the veriest layman, called upon to speak before one of the great medical associations of the Nation. You have not only paid me the signal honor of asking me to address you, you have asked me—and I quote your cordial letter of invitation—to talk on a "timely social economic medical problem." And I, with all the enormous leeway this subject offers, have chosen what may seem, but it is not, an oversimplified generalization. When I discuss the people's health as a national asset, I am anchoring my feet squarely on the common ground which brings us together—you as medical men, myself as a layman, and all of us as citizens.

I am neither an economist, nor a physician, or a Daniel come to judgment. Yet I do share your active concern not only for the people's health and for the unique and irreplaceable contribution of the Nation's doctors to our common welfare, but also for the complex social and economic setting in which people, including doctors, today live and move and have their being.

For many years, throughout a long period of service in a private voluntary organization before I even envisaged myself as a Government administrator, I was very close to this problem. As an interested and active, and, I trust, somewhat useful, party of the third part, I knew at first hand thousands of men who had to some degree lost the priceless asset of health; I watched, with humility and profound respect, the skill and the self-sacrificing devotion with which their medical advisers helped them regain health; and I discovered for myself both the practical, inescapable necessity of Government participation in the health field, and also the problems Government must face in this field.

Now I come to you as a public servant—as Administrator of that agency of the National Government most concerned with health. Of the constituent units under the Federal agency, there is not one which does not make some contribution in this field—directly through the Public Health Service, the Office of Vocational Rehabilitation, the Food and Drug Administration, the Social Security Board, and the Federal hospitals under our wing including Freedmen's and St. Elizabeths; and indirectly through such agencies as the Office of Education. It is in recognition of this Government stake in the Nation's health that you have asked me to participate in this discussion.

Through my long and intimate association, outside of Government as well as within, I have come to have a deep admiration not only for the results of modern medical science, but also for its methods. More than any other scientific pursuit, medicine applies the techniques of objective research to the solution of subjective problems; its progress in combatting disease is based inherently on a profound scientific distrust of taking anything for granted, coupled with the equally profound and still more subtle art of applying scientific knowledge with due allowance for that supposedly unscientific and certainly unpredictable something called, by laymen like me, the human equation.

This evening I propose, in my perhaps less precise but no less sincere way, to try to apply the method of reasoned observation to the health issues now confronting this Nation—the national issues high lighted less than a month ago by the President's health message to the Congress.

This is the first time in our history that the Chief Executive has ever devoted a congressional communication exclusively to health. But it is not an isolated phenomenon. At the time when the health message was transmitted more than 120 bills, touching nearly every aspect of health, were before Congress. The basic premise to which the President addressed his recommendations is one to which your profession and the people at large have long stood committed. "The right to adequate medical care and the opportunity to achieve and enjoy good health" is not a point at issue. But it is entirely proper, and indeed necessary, to ask why it takes a national health program to implement this right, and in particular why the Federal Government should constitute itself the spearhead of such a program.

The answers to these two questions are all old facts, but seen in the new and often lurid light of this postwar world they take on fresh meaning.

I know, for example, that standards of medical practice and of hospital care in this country are second to none in the world.

I know also that the death rate has declined and the average span of life lengthened in parallel, mounting curves of hope and progress over the years. The fact that there were only 11 deaths per thousand in 1940 as against 17 or 18 per thousand in 1900 represents the statistical distillation of heart-warming scientific advances against human misery and death.

But it does not represent any cause for complacency. Since 1920 the pace of progress has been slowing down—70 percent of that 40-year reduction in the death rate took place in the first 20 years of this century and most of the rest of it before 1930. Since then—and disregarding the war—we would seem to have been marking time. Moreover, I believe I am right in recalling that most of this progress has been in fighting diseases where mass methods of control and prevention can achieve mass results—in the communicable diseases subject to control by sanitation, quarantine, immunization, public education, and similar measures. Saving a man from typhoid to let him fall victim of diabetes is too close for comfort to the spectacle we are now witnessing of medical efforts to put some of the world's war criminals in shape to stand trial.

If death from preventable disease is to be prevented, we must provide not only expanding mass controls but also ready access for everyone to the individualized and often highly specialized care called for by degenerative and other noninfectious diseases.

Furthermore, we must not be content with the negative measure of health represented by a decline in mortality. The 5,000,000 or so young men who failed to measure up to health standards for military service bid us look to the morbidity of our whole people. I am not going to belabor in any detail these frequently discussed military findings. I am familiar with the analyses of these data which point out that no amount of medical care could have rendered fit for military service those men who had lost a limb or who lacked normal intelligence. I do say, making all due allowances for the fine points obscured by any 5,000,000 generalization, that we still have no cause for complacence in the physical showing of our healthiest population sector—the young men of military age.

Nor shall I argue the pros and cons of our health status among the nations of the world. There are too many imponderables, too much need for further refinement in definitions, to leave much significance in contentions that the United States is, or is not, the healthiest Nation in the world.

Health is not a matter of competition among nations. Nor should it be among groups within the Nation. Yet as you know even better than I, our record is vastly more favorable for some preventable disease than for others, for some geographical and economic groups of our people than for others. Even diseases which are almost 100 percent controllable are not universally under control—diphtheria, typhoid, and paratyphoid, for example, have caused no deaths in some States in some recent years; in others three or four deaths per hundred thousand still occur annually from these causes. Or compare tuberculosis death rates—five or six times as high in the State with the poorest record as compared with the best. If the whole country had made as good a showing as the State with the most favorable record in 1943, well over 40,000 lives would have been saved in that single year.

The same kind of contrast—the same kind of tragic and needless waste—is revealed by infant mortality reports. The lowest rate reported by any State in 1943 was 30 deaths per thousand live births; the highest showed more than three times that many deaths; and at least half of these could probably have been prevented if the accident of geography had provided these infants with a more favorable birth place.

Even in the same community there are often shocking differences in infant mortality. You are probably familiar with the studies made in Cleveland from 1920 on, over a period of 17 years. In 1937, the last year of this survey, the infant mortality rate was 50 percent higher in families in the most meager income group than in those in higher economic levels.

These facts do not, of course, add up to a complete and definitive picture. But even if they are no more than straws in the wind of progress, they do point up the uneven sweep of the forces that make for health and illness across this broad land.

These forces are of many kinds—economic, social, and educational—as well as those which fall more strictly within the province of medicine. Poor housing, ignorance, inadequate community health protection all

go hand in hand with lack of essential medical care.

But a comparison of death rates and of medical care, if available, would, I think, leave no question that direct medical services hold the key position as a decisive factor in the Nation's health. The relationship between infant mortality and medical attendance at birth offers one significant glimpse of a situation which exists all too frequently, for in the 10 States where infant mortality was lowest in 1940, nearly 80 percent of the births took place in hospitals and less than 1 percent lacked medical care In contrast, the 10 States with the highest infant mortality showed less than 35 percent of hospital births and 26 percent without any medical care whatsoever.

In spite of all that public hospitals and clinics can do, in spite of the really heroic generosity of individual doctors in their private practice, it is not usually true that the very poor, along with the very rich, get adequate care. Facts, as you well know, do not confirm the too easy comfort of this generalization.

All in all, illness robs American working people of somewhere between four and five hundred millions days on the job each year.

Obviously, there isn't any easy answer to such a problem. Neither the President, nor the Congress, nor the medical profession can pull any rabbits out of the hat to solve it. What we can do—what we have done—is to break down the most astronomical total of our national need into its component parts and tackle each, one by one.

In analyzing these health needs, the President's message simply crystallizes the joint thinking of doctors, public servants, and the people themselves. It maps the five major sectors that together go to make up this broad front:

1. The need to expand existing public health services, including those for maternal and child health;

2. The need for better distribution of hospitals and other health facilities throughout the country;

3. The need of additional support for medical research and medical education;

4. The need to safeguard individuals and families against the loss of family income when the breadwinner is disabled; and

5. The need of Nation-wide provision for spreading and prepaying the cost of medical care.

To meet these five needs, the President's message proposes that the Federal Government extend its existing partnership in the Nation's health. In principle, there is nothing new in this proposal.

Medical care for the indigent is an accepted Government function, though its adequacy varies enormously from one place to another. But Government provision is by no means limited to the indigent. Something like 80 percent of all our tuberculosis beds are in Government hospitals; and Government institutions have taken over practically the entire job of caring for the mentally ill. For the armed forces and for veterans, Government responsibility is unquestioned—and increasing. In the next 30 or 40 years, for instance, it will probably be providing hospital and medical care for somewhere between fifteen and twenty million veterans.

Add to all this the workmen's compensation laws, through which State and Federal Governments assure medical care when accidents and illness occur on the job.

Add also the Federal and State programs for vocational rehabilitation, including medical or hospital care for both the physically and the mentally disabled.

Include Federal grants to the States for maternity and child health services and for the care of crippled children, to say nothing of the wartime program under which $45,000,000 has been provided in the past 3 years for maternity care of servicemen's wives and infants.

Finally add in the cooperative venereal disease control program, the work on malaria control, the strengthening of research activities, and of the national tuberculosis program under the new public health law passed last year.

The sum total of all these existing services represents the substantial figure of almost a billion dollars in Federal, State, and local money spent for health last year. This is just about one-fifth of the Nation's over-all annual health and medical care bill.

To that rather sizable extent the Government is already in this picture—and no one, so far as I know, wants it to pull out. Its participation is right in principle and imperative in practice. If the purpose of a democracy is, in Lincoln's words, to do for a people what they cannot do so well for themselves in their private and individual capacities, then protecting health is the Nation's business. The question is not whether Government has a place in this picture, but rather the extent and method of its participation. And even here there is a broad area of substantial agreement.

We are all agreed, I believe, that community health services must be strengthened and that the Federal Government must provide additional help to see that this is done. A county health department means one thing in a great metropolitan area like New York—and something quite different in a lot of other places. In one-third of our 3,000 counties it means practically nothing at all, because full-time public-health service is simply nonexistent. And that in turn means that some 40,000,000 men, women, and children in this country still live in communities without any public-health provision or at best with part-time, untrained, and precarious protection.

Many of our communities are similarly lacking in hospitals and in other facilities which you in our great cities can pretty well take for granted. Here in Metropolitan New York, I understand that you have more than 5 hospital beds for every 1,000 people—well above the national goal of 4½ per thousand; and the same favorable proportion obtains in such States as Massachusetts and California. But the picture is different elsewhere—in Kentucky and Arkansas, for instance, there are only about 2 hospital beds for every 1,000 and even these are not equitably distributed.

To meet the really desperate situation in the boom towns created by the war, we had the emergency hospital construction program under the Lanham Act. This was a temporary stopgap measure. It helped us over the hump. But we still have the long pull ahead. For that, the Nation will need something comparable to the integrated hospital plan proposed by the Public Health Service and endorsed by the American Medical and American Hospital Associations. This plan, as I am sure you know, envisages a Nation-wide network of cooperating institutions, including regional hospitals and research centers, general hospitals serving more localized areas, and a series of outpost health centers and clinics which would bring medical care within reach of even the more isolated rural communities. Federal grants to the States for hospital construction, as suggested by Mr. Truman, would be a long step in this direction.

The most rugged individualist would hardly carry his reasoning to the ultimate, though logical, absurdity of denying that hospital construction is a task for joint action, for public responsibility. If he has no hospital to go to, it doesn't make very much difference whether a man can afford it or not.

But distribution of hospitals is only one part—the implementing part—of a still more basic question. And that is the distribution of medical personnel—of doctors, nurses, dentists, and the ancillary services.

I applaud and respect the standards of the medical profession which lead a well-equipped physician to seek a practice in a place where the facilities and the teamwork necessary to effective medical service are accessible. But the result, in prewar years, has been a peak and valley distribution that looks like nothing so much as a malaria fever chart. I understand, for instance, that you doctors here in Greater New York stood in a ratio of 1 to every 434 of the general population in 1940, whereas in the southern mountains and elsewhere there was only 1 doctor for more than 3,000 people. And with fifty-thousand-odd doctors in military service, this adverse ratio has spread until it applies to almost one-fifth of all the counties in the country.

With the return of young doctors from military service, we have a never-to-be-repeated opportunity to better this situation, for both the public and the medical men themselves. But we cannot ask well-trained men to assume a carpet-bag, circuit-rider practice.

Answers to the questionnaire sent to doctors in uniform by the postwar medical service committee of the American Medical Association are probably our most revealing guide to their personal plans and preferences. You are no doubt even more familiar than I am with Colonel Lueth's report; but some of its findings are, I think, worth recalling to your attention. It shows, for instance, that more than three-fourths of all specialists came from large cities; that only about a fourth of the men who came from communities of less than 2,500 wish to return to them; and that even among those from towns up to 250,000, half want to seek still larger cities. The trend toward the great centers, which has its roots so deeply in our past, will not be stemmed as long as opportunity beckons only in that direction.

But voluntary redistribution which would locate physicians in communities that most need them is not a closed issue, particularly among the young men who have left our medical schools in the past 8 years. And the answers on this point are so significant that I should like to quote directly from the AMA report:

"About 13 percent (of the doctors questioned) stated they would be willing to go to such an area if an office were already established; 11 percent would go if a subsidy were provided for several months; more than 15 percent would be willing to move if diagnostic facilities were available, and nearly 29 percent would go if there were hospital facilities. From a study of the graduation groups involved," the report concludes, "it appears that the younger men are willing to move into communities needing physicians, under certain preferred conditions."

But as you well know, neither the construction of hospitals nor the willingness of this significant number of young doctors to man the outposts of medical practice will provide for what are, in effect, our great open spaces of medical desert. We need more doctors if the hospitals and health centers are to be staffed even after they are built, if all the people of the country are to be served. The President's proposal of Federal grants-in-aid of medical education, as of research, would help to make up the long lag in the recruitment of promising students, as well as the arrears in medical ranks resulting from the war.

On the research front, I earnestly hope that the benefits of wartime cooperation between Government, universities, hospitals, and foundations may be extended to the even larger tasks of peace. Since 1941 the Office of Scientific Research and Development on the recommendation of the Committee on Medical Research has executed 496 contracts with 125 institutions. More than 95 percent of these costly medical investigations—representing nearly $8,000,000 in 1 year—were conducted in universities or hospitals, the remainder by governmental agencies such as the National Institute of Health. If the concerted efforts of medical investigators which

have yielded so much of value during the war are to be continued on any comparable scale, they must be adequately supported. Government help will no doubt be made available—probably through some such council as is now under consideration in Congress.

But suppose we had surmounted all these hurdles in practice—as indeed we have in principle. Ill health would still remain one of the major economic hazards of that highly precarious business euphemistically described as "everyday living." Unemployment, old age, death of the family breadwinner, and illness remain the four horsemen of poverty and disaster.

Against the first three of these economic hazards, we already employ the familiar protection of insurance. Although this system is still relatively new and not yet complete, 10 years' experience with the Social Security Act has proved that it is effective.

There seems no reason why the existing system should not be extended to disability. Certainly the man of 25 or 30, who is a victim of tuberculosis while his children are still young, has an even tougher problem to face than the hale and hearty 65-year-old who retires by virtue of his age. He suffers the same wage loss, but at a time when his family's needs are greater and when society has an even larger stake in helping him keep it together.

According to estimates of the Office of Vocational Rehabilitation, some 150,000 persons are disabled annually by accident and illness, and the cumulative total of the handicapped who need rehabilitation now comes to something like a million and a half.

This cost, the cost of supporting the handicapped and their families, is not new. Families and friends, neighbors and local governments the country over already bear this burden. Social insurance simply pools risks and resources and spreads the cost broadly not only among many people but throughout many years.

The President proposes that we apply what Winston Churchill has called the magic of averages not only to wage loss, but also to payment for medical care. This proposal is neither so new nor so revolutionary as some of the comment on it implies. Every State but one already has such a system of health insurance in operation—for workmen's compensation is health insurance, and the major difference between this long-standing program and that proposed by the President is that it covers only on-the job accidents and illnesses, whereas the proposed plan would cover nonoccupational accidents and illness. No one seems to question that, even with the inadequacies inherent in any partial plan, workmen's compensation is a benefit both to the worker and the physician. A broader plan would assure better care to more people and more adequate compensation to the doctors and hospitals who serve them.

Without going into legislative and technical details which are properly a concern of the Congress, I want to review with you some of the fundamental issues involved in this proposal. The most frequent is simply "Why?" Why can't ordinarily self-supporting families pay their own doctor bills?"

The plain fact is that they haven't got the kind of money it takes to meet the cost of medical care, either on the emergency basis of a sudden, catastrophic, and costly disaster, or on a long-time basis of continuing prevention.

Ten years ago, when the last comprehensive survey was made, more than 92 percent of the people in this country were in families that had an income of less than $3,000. Even with the upswing since that time, the majority of people in this country still have less than $3,000, and as we all know, a dollar doesn't go as far today as it did 10 years ago. Dr. Leland, former Director of the Bureau of Medical Economics of the AMA, is authority for the statement that an income of less than $3,000 a year provides no safeguards against medical indigence when costly or prolonged illness strikes. Putting these two facts together, we cannot escape the conclusion that all but a tiny fraction of our people live below this margin of safety.

Granting that we must spread the cost of medical care, why can't the individual obtain his own insurance? Hard facts again spell the answer. Most of us cannot afford to pay the full insurance premium. Even those who are normally self-supporting have immediate wants which seem to outweigh possible future costs that human optimism always hopes may not actually occur.

True, many people do carry hospital or medical care insurance. The Blue Cross movement, in particular, has shown remarkable progress in the last 10 years. But even so, it covers less than 13 percent of our entire population, and is made up chiefly of city people in the middle-income brackets. All told, perhaps 40,000,000 persons have some such protection through private insurance. Its adequacy is in some cases another question. Further, this is too often just another instance of the old saying that "them as has, gets"—those who least need this protection are best able to afford it. And those who experience more frequent and more serious illnesses cannot afford it. Public opinion polls show that something like 30 or 40 percent of the people in this country put off going to the doctor because it costs money.

Voluntary insurance, significant as it is, thus does not provide a complete or adequate answer. Many State medical societies have worked hard to set up systems for prepayment of medical care. These plans represent an earnest attempt on the part of organized medical groups to spread the costs. Though they have encountered great difficulties, several of these plans have had considerable success. One of their major problems has been the hazard of adverse selection. Any prepayment plan which people can enter and leave at will is subject to this handicap. But a general social-insurance system obviates the possibility of adverse selection because it covers the good risks as well as the bad.

Health insurance spreads costs widely through the familiar device of a pooled fund—the incoming contributions flowing mainly from potential beneficiaries and their employers, the outgoing payments flowing to doctors who continue to practice medicine on the time-honored and time-tested basis of their own professional standards.

Professional control over medical practice is an ancient prerogative—older than the Hippocratic oath. The guidance, the direction, the supervision, the discipline of doctors are primarily matters for doctors to handle. Subject to Government regulation through licensure, the responsibility has always been yours and should remain so. But just as public licensure gave the profession a new opportunity to deal with these problems, just as grading of medical schools, registration of hospitals, administration of workmen's compensation, and establishment of voluntary insurance plans—to mention only a few—have given you new opportunities to exercise professional controls, so health insurance would constitute still another advance in the long evolutionary movement for high ethical and qualitative standards. On this broad question, health insurance presents no threat—but a new, great opportunity.

It provides not only a great opportunity to render the best possible service when and where it is most needed and will do the most good, but, as the President made very clear, it also provides for the adequate remuneration of physicians—and surely no one has a better title to this basic consideration. Doctors themselves have traditionally recognized the necessity of spreading the cost of medical care, and they have attempted to approximate that purpose through the so-called sliding scale of fees.

Since health insurance would provide more medical care for more people, it is reasonable to anticipate that it should provide a comparably more adequate average income than doctors throughout the country now receive.

I would be the last to pretend that putting all these proposals into effect would be easy. But when has any advance in medicine—or for that matter in the whole structure of living—been easy? Democracy itself was once a great and untried experiment.

There are those among us today who would say, in effect, of the national health program, "Among * * * strange notions * * * there is one which has lately seized the minds of men, that all things must be done for them by the Government, and that they are to do nothing for themselves. The Government is not only to attend to the great concerns which are its province, but it must step in and ease individuals of their natural and moral obligations. A more pernicious notion cannot prevail. * * * It has given us a premium for idleness."

Yet this was not said in the first instance of health; nor was it spoken in 1945. These are the words with which John Randolph of Virginia in 1829 spoke out against the pernicious and revolutionary doctrine of public education.

Through the ages, social and scientific innovations have encountered this same reluctance and viewing with alarm. This deep seated human resistance to embrace change without good cause should arouse neither rancor nor fear. It should be welcomed, as the foundation of permanence, and built upon as the testing ground of progress.

We should be as little concerned or confused by the label pasting—if not outright name calling—which is part of this testing process. It is a kind of oratorical shorthand through which we exercise our democratic right to a certain poetic license. Take the term "socialized medicine." To some "them's fightin' words"—the brand, the label, for something the more fearful because ill-defined. Others—among them outstanding leaders in your own profession—insist that "socialized" precisely describes what the doctor's work is and has always been—the provision of needed care to all, regardless of the money return.

I am even less concerned about the exercise of these semantic privileges in this field than I would be in some others. Doctors are the last people in the world to be taken in by them. All your training in diagnosis—all your age-old creative study of cause and effect as it applies to the living realities of sickness and health—have given your profession the inestimable advantage of the open mind guided by a trained and critical intelligence.

Nor should we fear controversy. Any proposal which in the first instance does not provide leeway for honest and constructive differences of opinion should be suspect as too watered down to have any meaning or use. The great lesson of all history is that conflicts are the growing pains of progress. The advance of medicine and of science in its service has again and again dramatized issues not unlike and no less difficult than those which confront us today. Their resolution reenforces the great hopes which I hold for a truly national health program.

With the President's message, we have all been briefed for a joint mission toward great and imperative goals. With the cooperation of medical men, this mission is assured the best guidance on its professional and scientific fronts. With our abiding faith in the demonstrated capacity of the average citizen to come out with the right decisions, once he has all the facts, we may confidently look

forward to a practicable and workable solution. That is the essence of democracy, the mainspring of progress, and the assurance that the cause of health will be promoted as the Nation's most priceless and enduring asset.

Red River Lateral Canal

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by E. B. Wilson before the Board of Engineers for Rivers and Harbors in behalf of Red River Valley Improvement Association in regard to Red River lateral canal:

My name is E. B. Wilson. I am traffic manager of the Shreveport Chamber of Commerce and have had the privilege of serving that organization in their traffic department for over 21 years. I am presently on loan to the Red River Valley Improvement Association and represent that association in this hearing.

Prior to the time of my association with the Shreveport Chamber I was connected with a railroad auditing department whose line operated through the Red River and Mississippi Valleys between Shreveport and New Orleans.

W first wish to congratulate both the division engineers office and the Department of Public Works of the State of Louisiana on the detailed studies made in connection with the prospective traffic and savings on that traffic for this proposed project.

The department of public works study is entitled "The Case for the Red River Valley Lateral Canal" and accompanied the interim report as exhibit 1 (see subject 37).

It seems rather remarkable that the total tonnage and savings should be so near equal when consideration is given to the fact that different years were used and the material available for the separate studies was secured from entirely different sources and by different methods.

The selection of the year 1939 or 1940, we feel, was proper as these years more nearly reflect normal conditions than would any of the war years or the depression or semidepression years prior to 1939.

While we, of course, are not advocating the use of years other than those selected, we feel it is well to print out that had any of the years 1941 to 1944, inclusive, been selected greater tonnage and savings would have resulted.

To substantiate this, we have prepared a study showing the increases that have occurred in both freight revenue and tonnage of the Southwestern Rail Lines since 1939. This statement is marked "A" and shows increases up to 115 percent in tons originated, 75 percent in tonnage terminated and revenue up as much as 167 percent when compared with the 1939 figure.

As we have previously stated, we feel that the traffic studies of both the Division Engineers Office and the State of Louisiana are very complete and by complete we mean they cover the fields they were intended to cover, but there are other factors of great importance that are not fully developed and should have a great effect in arriving at proper conclusions in this report.

These omitted factors are of a varying nature. We will endeavor to develop them separately.

UNDEVELOPED TONNAGE

It is our understanding that the tonnage and savings shown in the appendix of the Division Engineers report as Table 9 were secured from the study of rail waybills made by the Board of Investigation and Research in 1939.

If this understanding is correct, it is proper to point out that a substantial amount of traffic has been omitted from this report.

Such omission includes all traffic that moved by Common Carrier Motor Truck, private truck, as well as that tonnage which originated on barge or steamship bills of lading and were terminated by other modes of transportation in the territory covered by the report.

To illustrate, we are aware of heavy movements of pipe and cereal beverage as well as a great deal of high rated tonnage that could not have been included if the study was confined to rail waybills.

We are aware of the difficulty that would be encountered in making such an over-all survey but we respectively submit that some consideration and allowance should be made for this excluded traffic.

We suggest that this might explain the difference between the total tonnage shown in the Department of Public Works' report and that of the Division Engineers Office as the figures submitted by the Valley shippers and receivers to the State Board included all traffic they received regardless of the character of the carrier performing the service.

There are several other small items such as the sugar and newsprint tonnage in Table 9 of the appendix of the Division Engineers report that we feel are rather low but realize that when spot tests are made exaggerated figures both low and high are bound to occur. We, therefore, will not press for any increase in these or other estimates that might be low.

In the Department of Public Works Traffic Study, it is stated that it does not include all available traffic as the time element precluded complete coverage. We believe that they should have allowed some increase in their estimates to cover this feature.

There is another point in that study that is worthy of note and that is the terminal cost shown in Table VI on page 33 covering petroleum and its products.

While we, of course, are not in a position to contradict the figures used, we believe them to be high, as in cases before the Interstate Commerce Commission where the railroads were endeavoring to lower freight rates, terminal costs have been considerably below these figures. In fact, they are as low as 1½ cents per 100 pounds in at least one case.

In F. S. O. 16066 gasoline and kerosene to river points in Alabama (216 I. C. C. 127), this amount is shown as one of the cost factors used to reduce railroad rates to meet barge competition from the New Orleans district to Alabama.

Again turning to the division engineers' interim report we find under subject 35 on page 13 the folowing statement "Analysis indicates reasonable probability that lower cost transportation will stimulate commerce in the Red River Valley, but affords no convenient basis for estimating specific volume and savings on future commerce."

This, we respectfully submit, is a matter that should have been developed further as we sincerely believe that undeveloped or only partly developed tonnage alone could justify this project.

Chief among this category would be the iron ore deposits in East Texas, the savings that would accrue from the refining of petroleum in the vicinity of its production and the distribution of pipe into the important oil fields of the Southwest.

To substantiate this, we submit the following:

PETROLEUM AND PETROLEUM PRODUCTS

In an exhibit of letters of declaration of intention and other matters submitted to the division engineer on 28 November 1944, on page 13, there is a statement showing crude oil production in East Texas and North Louisiana which indicates that there was produced over 28,000,000 tons of crude oil within 100 miles of the proposed northern terminal of this canal.

But by reference to page 15 of the same report, it will be noted that the construction of refineries within the same area has not kept pace with the crude oil production.

To supplement information now in the hands of the engineers we have prepared a 3-page statement showing the production of crude oil, oil refineries, and crude run to still in the area near the proposed northern terminus of this canal. It is marked "Statement B," pages 1 to 3.

The conditions shown, we submit, are brought about by the fact that transportation costs of the refined product out of the producing area is too high when compared to the cost for points where barge service is available.

Should barge transportation be made available to the source of production of the crude oil, then it would be more economical to refine this commodity at its source than to pipe it to the refinery on a navigable stream and then ship via barge to the territory normally served by North Louisiana, East Texas, and South Arkansas refineries.

To substantiate this contention we have prepared a statement marked "C" showing the freight rates on petroleum prescribed by the Interstate Commerce Commission in their Docket 17,000, part 4 and part 4a, to selected points in the southeastern United States and at border points along the Mississippi River.

We have compared with these Commission-prescribed rates the present rates in effect to the same points from Shreveport, La.; El Dorado, Ark.; and Baton Rouge, La.

There is also shown on the right-hand side of this statement the difference in transportation cost per gallon, represented by the different rates and on the bottom the tank-car price quoted in Shreveport on December 5, 1945.

As pointed out at the outset of this statement, I have been connected with the Shreveport Chamber of Commerce for over 21 years and during the early part of my service there was a division of the chamber known as the Oil Refiners Division.

The duties of this division were to handle traffic matters for the several Shreveport refiners and in the handling of this phase of their work it was necessary to keep accurate reports of the shipments of petroleum from all the refiners who were members.

I had access to these records as the work was done at an adjoining desk and at times I participated in their work.

Considering this background, I feel that I can say without fear of successful contradiction that at that time one of the best, if not the best, markets for Shreveport products of petroleum was in the States of Mississippi, western Tennessee, Kentucky, and to somewhat lesser degree the points east of that territory.

In recent years the refining interests in Shreveport have seen this market slowly disintegrate and when consideration is given to the lower transportation cost of their competitors along the navigable streams we believe the reason becomes readily apparent.

When consideration is given to all the factors; that is, the location of the proposed canal with relation to the greatest oil fields in the world with resultant lower net in-bound cost and the demonstrated ability of the interior refineries to meet competition when

transportation costs are equal, we can see no reason why petroleum could not be marketed at great savings to the public from the producing district into the entire central United States.

It was done when transportation costs were equal and we firmly believe that it can be done again at a lower cost when this lateral canal is completed.

We respectfully submit that this fact should be given consideration when future tonnage for this project is being considered.

Before passing from this subject of petroleum we think it would be well to call the attention of this board to the demonstrated inability of existing transportation agencies to develop the oil-refining industry.

While there has been rapid expansion in crude-oil production in the territory proposed to be served by this canal, no corresponding increase in refining has resulted in the same district.

IRON PIPE

Also in the Red River Valley exhibit of letters previously referred to, attention was called to the advantageous location of this project when the distribution of iron pipe to the heavy pipe-consuming area of the Southwest is considered.

This reference is made on pages 8 through 11 and by exhibit 4. Copy of exhibit 4 is attached and marked "Statement D."

The territory included within the border of the red line on this map is the territory that could be served by Shreveport with iron pipe at less over-all cost than through either Memphis or Houston.

This line takes into consideration the barge cost from Pittsburgh to Memphis and Houston found to exist in Interstate Commerce Commission cases and an estimated cost to Shreveport.

The cost to Memphis is $3.60 per ton, to Houston $8 per ton, and the estimated cost is $6.20 to Shreveport. This is the rate that would be applicable to Camden, Ark., on the Ouachita River with its 6-foot channel.

This estimate to Shreveport, we feel, is very conservative.

Added to these costs are the out-bound rail rates as published in tariffs lawfully on file with the Interstate Commerce Commission.

The green line shown on this map is the point at which Shreveport rail freight rates meet those of Memphis and Houston on iron pipe when no consideration is given to the in-bound costs. This is shown as a matter of information only.

In view of the fact that only 100,000 tons of iron pipe, as well as steel articles, are shown, we feel that this potential traffic and the vast saving that would be realized from such traffic have been almost entirely overlooked.

It will be noted that Memphis, Tenn., and Houston, Tex., alone during the year 1939 received 399,059 tons of barge pipe. This, of course, does not take into account the vast quantity received at other river ports, such as Vicksburg, Miss., Indian Village, La., and ports along the Ouachita River.

When the territory that could be served by Shreveport with greater savings is considered, we feel sure that this board will agree that the canal would soon be the major terminal point for this commodity in the South.

The fact that iron pipe constitutes a continuous and heavy-moving item into the Southwest is brought out. This study shows the tonnage of pipe handled by the southwestern rail carriers during the years 1938 to 1944, inclusive.

It will be noted that 1939, the year used in this traffic study, is one of the lighter traffic years, and, in spite of wartime difficulties, this article has continued to move into this area in ever-increasing volume.

A brief explanation of marketing practices of a number of large pipe producers will, we believe, assist this board in its deliberation.

When normal transportation and marketing conditions exist, pipe manufacturers ship in bargeload lots to distribution points along navigable streams from Memphis, Tenn., on the Mississippi River, to Houston, Tex., on the intercoastal canal. This movement is principally from the Pittsburgh area. When their products arrive at the barge terminal, they are placed in storage yards and distributed to the consumers in the Southwest as needed by rail and truck.

The reshipment, of course, is made from the distributing yard offering the least over-all transportation cost from point of manufacture to consumer.

This method of handling does not require fast service to the distributing points as full stocks are maintained at all times. However, when it comes to distributing the pipe to consuming public, speed of service is often a factor as in the oil and gas fields it is very often necessary to have available pipe in varying quantities in the shortest time possible.

Shreveport's nearness to the great oil- and gas-producing areas in the Southwest would make it an ideal center for quick distribution of pipe at the lowest of cost.

The benefit of having large stocks of pipe near the point at which they are to be used, we believe, is best demonstrated by the fact that some distributors stored bargeloads of pipe in Shreveport in spite of the fact that it was necessary to move this commodity by rail into Shreveport from river terminals such as Vicksburg, Miss.

The Interstate Commerce Commission, in their decision in Investigation and Suspension Docket 4699, wrought-iron pipe from Memphis to Arkansas, Louisiana, and Texas (237 I. C. C. 161), have a rather complete coverage of the iron-pipe situation into the Southwest should the board desire more detailed information on this subject.

STATEMENT OF THE RAILROAD

Through courtesy of a representative of the railroads we have been furnished with their statement titled "Statement of the Railroads Before the Board of Engineers for Rivers and Harbors November 26, 1945, in Regard to Red River Lateral Canal" in which certain aspects of the department of public works' "The Case for Red River Lateral Canal" are criticized.

While addressed to figures and conclusions of the State body, and we are sure they have or will reply in full, we cannot refrain from pointing out several inconsistencies that appear even to those of us who have had only limited contact with the preparation of material submitted by this State body.

Throughout this statement they refrain from submitting terminal costs on petroleum and its production that are more nearly in line with the figures that have been used in their cases before the Interstate Commerce Commission.

In brief, what they have done is to criticize the line-haul costs used by the State for the reason that they are under those prescribed by the OPA as ceiling but have consistently refrained from calling attention to the terminal costs which they themselves have submitted in cases before the Interstate Commerce Commission when they desired relief to reduce rates to meet water competition.

Also on page 10 of their statement, criticism is made of the metal product ratings used, especially those in table VIII and by their exhibit 2 attempt to show that the rates in that table are too low.

This is done by comparing the ratings used with those applicable to Ouachita River ports. But in this connection, it should be noted that the rates shown in their exhibit are lower than those used in table VIII.

In spite of this fact, they, by some method of averaging not exactly clear to us, claim that the savings shown should be reduced.

In conclusion we wish to point out several fundamental errors made throughout the statement of the railroad.

The first is that they apparently assume there is no cost to the public for handling of shipments other than the published tariff rates when the movement of commodities is by a land carrier. This is not often the case as loading or unloading of vehicle is a cost item regardless of the mode of transportation used.

The second of these errors is that they seem to assume, with the possible exception of petroleum, that common carriers are used in handling interior traffic to the barge terminals.

Investigation, we are sure, will dispel this belief, as all types of private carriers are also employed including drive-away of automobiles.

At several points in their statement reference and comparison are made to Ouachita traffic and costs.

We feel it is not proper to compare the conditions existing on the Ouachita with its 6-foot channel to those that would exist on a 9-foot channel as proposed for this project as the costs would be entirely different.

Possibly the most erroneous assumption made is that no savings should be allowed when traffic can be secured near the consuming point.

This assumption is shown on page 23 where it is stated that "undoubtedly the only cement that could be handled to Shreveport by barge is that originating in the Houston district" and again on page 24 a statement is made that brick are produced in Waskom, Tex.

We feel that it is not necessary to point out to this Board that business is not transacted in that manner. Articles are not always bought or sold at the nearest point of production. Too many other factors are involved.

Compulsory Peacetime Military Training—A Teacher Speaks

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. WHITE. Mr. Speaker, Washington said, "Guard well the Constitution." Now that we with our form of government have attained a preeminent place among world powers, we must guard well the education and advancement of the youth of this country. There is inserted herewith a letter expressing the views of a State leader of educators of this country:

OMAHA, NEBR., *February 4, 1946.*

Representative COMPTON I. WHITE,
Representative of Idaho,
House of Representatives,
Washington, D. C.

HONORABLE REPRESENTATIVE WHITE: During the next 2 or 3 weeks there will be hundreds of 18-year-olds graduating from high schools and completing one semester of college work. What is their fate? The draft, of course, unless there are enough Congressmen who believe that drafting minors is a

forward to a practicable and workable solution. That is the essence of democracy, the mainspring of progress, and the assurance that the cause of health will be promoted as the Nation's most priceless and enduring asset.

Red River Lateral Canal

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. **BROOKS.** Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by E. B. Wilson before the Board of Engineers for Rivers and Harbors in behalf of Red River Valley Improvement Association in regard to Red River lateral canal:

My name is E. B. Wilson. I am traffic manager of the Shreveport Chamber of Commerce and have had the privilege of serving that organization in their traffic department for over 21 years. I am presently on loan to the Red River Valley Improvement Association and represent that association in this hearing.

Prior to the time of my association with the Shreveport Chamber I was connected with a railroad auditing department whose line operated through the Red River and Mississippi Valleys between Shreveport and New Orleans.

W first wish to congratulate both the division engineers office and the Department of Public Works of the State of Louisiana on the detailed studies made in connection with the prospective traffic and savings on that traffic for this proposed project.

The department of public works study is entitled "The Case for the Red River Valley Lateral Canal" and accompanied the interim report as exhibit 1 (see subject 37).

It seems rather remarkable that the total tonnage and savings should be so near equal when consideration is given to the fact that different years were used and the material available for the separate studies was secured from entirely different sources and by different methods.

The selection of the year 1939 or 1940, we feel, was proper as these years more nearly reflect normal conditions than would any of the war years or the depression or semidepression years prior to 1939.

While we, of course, are not advocating the use of years other than those selected, we feel it is well to print out that had any of the years 1941 to 1944, inclusive, been selected greater tonnage and savings would have resulted.

To substantiate this, we have prepared a study showing the increases that have occurred in both freight revenue and tonnage of the Southwestern Rail Lines since 1939. This statement is marked "A" and shows increases up to 115 percent in tons originated, 75 percent in tonnage terminated and revenue up as much as 167 percent when compared with the 1939 figure.

As we have previously stated, we feel that the traffic studies of both the Division Engineers Office and the State of Louisiana are very complete and by complete we mean they cover the fields they were intended to cover, but there are other factors of great importance that are not fully developed and should have a great effect in arriving at proper conclusions in this report.

These omitted factors are of a varying nature. We will endeavor to develop them separately.

UNDEVELOPED TONNAGE

It is our understanding that the tonnage and savings shown in the appendix of the Division Engineers report as Table 9 were secured from the study of rail waybills made by the Board of Investigation and Research in 1939.

If this understanding is correct, it is proper to point out that a substantial amount of traffic has been omitted from this report.

Such omission includes all traffic that moved by Common Carrier Motor Truck, private truck, as well as that tonnage which originated on barge or steamship bills of lading and were terminated by other modes of transportation in the territory covered by the report.

To illustrate, we are aware of heavy movements of pipe and cereal beverage as well as a great deal of high rated tonnage that could not have been included if the study was confined to rail waybills.

We are aware of the difficulty that would be encountered in making such an over-all survey but we respectively submit that some consideration and allowance should be made for this excluded traffic.

We suggest that this might explain the difference between the total tonnage shown in the Department of Public Works' report and that of the Division Engineers Office as the figures submitted by the Valley shippers and receivers to the State Board included all traffic they received regardless of the character of the carrier performing the service.

There are several other small items such as the sugar and newsprint tonnage in Table 9 of the appendix of the Division Engineers report that we feel are rather low but realize that when spot tests are made exaggerated figures both low and high are bound to occur. We, therefore, will not press for any increase in these or other estimates that might be low.

In the Department of Public Works Traffic Study, it is stated that it does not include all available traffic as the time element precluded complete coverage. We believe that they should have allowed some increase in their estimates to cover this feature.

There is another point in that study that is worthy of note and that is the terminal cost shown in Table VI on page 33 covering petroleum and its products.

While we, of course, are not in a position to contradict the figures used, we believe them to be high, as in cases before the Interstate Commerce Commission where the railroads were endeavoring to lower freight rates, terminal costs have been considerably below these figures. In fact, they are as low as 1½ cents per 100 pounds in at least one case.

In F. S. O. 16066 gasoline and kerosene to river points in Alabama (216 I. C. C. 127), this amount is shown as one of the cost factors used to reduce railroad rates to meet barge competition from the New Orleans district to Alabama.

Again turning to the division engineers' interim report we find under subject 35 on page 13 the folowing statement "Analysis indicates reasonable probability that lower cost transportation will stimulate commerce in the Red River Valley, but affords no convenient basis for estimating specific volume and savings on future commerce."

This, we respectfully submit, is a matter that should have been developed further as we sincerely believe that undeveloped or only partly developed tonnage alone could justify this project.

Chief among this category would be the iron ore deposits in East Texas, the savings that would accrue from the refining of petroleum in the vicinity of its production and the distribution of pipe into the important oil fields of the Southwest.

To substantiate this, we submit the following:

PETROLEUM AND PETROLEUM PRODUCTS

In an exhibit of letters of declaration of intention and other matters submitted to the division engineer on 28 November 1944, on page 13, there is a statement showing crude oil production in East Texas and North Louisiana which indicates that there was produced over 28,000,000 tons of crude oil within 100 miles of the proposed northern terminal of this canal.

But by reference to page 15 of the same report, it will be noted that the construction of refineries within the same area has not kept pace with the crude oil production.

To supplement information now in the hands of the engineers we have prepared a 3-page statement showing the production of crude oil, oil refineries, and crude run to still in the area near the proposed northern terminus of this canal. It is marked "Statement B," pages 1 to 3.

The conditions shown, we submit, are brought about by the fact that transportation costs of the refined product out of the producing area is too high when compared to the cost for points where barge service is available.

Should barge transportation be made available to the source of production of the crude oil, then it would be more economical to refine this commodity at its source than to pipe it to the refinery on a navigable stream and then ship via barge to the territory normally served by North Louisiana, East Texas, and South Arkansas refineries.

To substantiate this contention we have prepared a statement marked "C" showing the freight rates on petroleum prescribed by the Interstate Commerce Commission in their Docket 17,000, part 4 and part 4a, to selected points in the southeastern United States and at border points along the Mississippi River.

There is also shown on the right-hand side of this statement the difference in transportation cost per gallon, represented by the different rates and on the bottom the tank-car price quoted in Shreveport on December 5, 1945.

As pointed out at the outset of this statement, I have been connected with the Shreveport Chamber of Commerce for over 21 years and during the early part of my service there was a division of the chamber known as the Oil Refiners Division.

The duties of this division were to handle traffic matters for the several Shreveport refiners and in the handling of this phase of their work it was necessary to keep accurate reports of the shipments of petroleum from all the refiners who were members.

I had access to these records as the work was done at an adjoining desk and at times I participated in their work.

Considering this background, I feel that I can say without fear of successful contradiction that at that time one of the best, if not the best, markets for Shreveport products of petroleum was in the States of Mississippi, western Tennessee, Kentucky, and to somewhat lesser degree the points east of that territory.

In recent years the refining interests in Shreveport have seen this market slowly disintegrate and when consideration is given to the lower transportation cost of their competitors along the navigable streams we believe the reason becomes readily apparent.

When consideration is given to all the factors; that is, the location of the proposed canal with relation to the greatest oil fields in the world with resultant lower net in-bound cost and the demonstrated ability of the interior refineries to meet competition when

transportation costs are equal, we can see no reason why petroleum could not be marketed at great savings to the public from the producing district into the entire central United States.

It was done when transportation costs were equal and we firmly believe that it can be done again at a lower cost when this lateral canal is completed.

We respectfully submit that this fact should be given consideration when future tonnage for this project is being considered.

Before passing from this subject of petroleum we think it would be well to call the attention of this board to the demonstrated inability of existing transportation agencies to develop the oil-refining industry.

While there has been rapid expansion in crude-oil production in the territory proposed to be served by this canal, no corresponding increase in refining has resulted in the same district.

IRON PIPE

Also in the Red River Valley exhibit of letters previously referred to, attention was called to the advantageous location of this project when the distribution of iron pipe to the heavy pipe-consuming area of the Southwest is considered.

This reference is made on pages 8 through 11 and by exhibit 4. Copy of exhibit 4 is attached and marked "Statement D."

The territory included within the border of the red line on this map is the territory that could be served by Shreveport with iron pipe at less over-all cost than through either Memphis or Houston.

This line takes into consideration the barge cost from Pittsburgh to Memphis and Houston found to exist in Interstate Commerce Commission cases and an estimated cost to Shreveport.

The cost to Memphis is $3.60 per ton, to Houston $8 per ton, and the estimated cost is $6.80 to Shreveport. This is the rate that we applicable to Camden, Ark., on the Ouachita River with its 6-foot channel.

This estimate to Shreveport, we feel, is very conservative.

Added to these costs are the out-bound rail rates as published in tariffs lawfully on file with the Interstate Commerce Commission.

The green line shown on this map is the point at which Shreveport rail freight rates meet those of Memphis and Houston on iron pipe when no consideration is given to the in-bound costs. This is shown as a matter of information only.

In view of the fact that only 100,000 tons of iron pipe, as well as steel articles, are shown, we feel that this potential traffic and the vast saving that would be realized from such traffic have been almost entirely overlooked.

It will be noted that Memphis, Tenn., and Houston, Tex., alone during the year 1939 received 399,059 tons of barge pipe. This, of course, does not take into account the vast quantity received at other river ports, such as Vicksburg, Miss., Indian Village, La., and ports along the Ouachita River.

When the territory that could be served by Shreveport with greater savings is considered, we feel sure that this board will agree that the canal would soon be the major terminal point for this commodity in the South.

The fact that iron pipe constitutes a continuous and heavy-moving item into the Southwest is brought out. This study shows the tonnage of pipe handled by the southwestern rail carriers during the years 1938 to 1944, inclusive.

It will be noted that 1939, the year used in this traffic study, is one of the lighter traffic years, and, in spite of wartime difficulties, this article has continued to move into this area in ever-increasing volume.

A brief explanation of marketing practices of a number of large pipe producers will, we believe, assist this board in its deliberation.

When normal transportation and marketing conditions exist, pipe manufacturers ship in bargeload lots to distribution points along navigable streams from Memphis, Tenn., on the Mississippi River, to Houston, Tex., on the intercoastal canal. This movement is principally from the Pittsburgh area. When their products arrive at the barge terminal, they are placed in storage yards and distributed to the consumers in the Southwest as needed by rail and truck.

The reshipment, of course, is made from the distributing yard offering the least over-all transportation cost from point of manufacture to consumer.

This method of handling does not require fast service to the distributing points as full stocks are maintained at all times. However, when it comes to distributing the pipe to consuming public, speed of service is often a factor as in the oil and gas fields it is very often necessary to have available pipe in varying quantities in the shortest time possible.

Shreveport's nearness to the great oil- and gas-producing areas in the Southwest would make it an ideal center for quick distribution of pipe at the lowest of cost.

The benefit of having large stocks of pipe near the point at which they are to be used, we believe, is best demonstrated by the fact that some distributors stored bargeloads of pipe in Shreveport in spite of the fact that it was necessary to move this commodity by rail into Shreveport from river terminals such as Vicksburg, Miss.

The Interstate Commerce Commission, in their decision in Investigation and Suspension Docket 4699, wrought-iron pipe from Memphis to Arkansas, Louisiana, and Texas (237 I. C. C. 161), have a rather complete coverage of the iron-pipe situation into the Southwest should the board desire more detailed information on this subject.

STATEMENT OF THE RAILROAD

Through courtesy of a representative of the railroads we have been furnished with their statement titled "Statement of the Railroads Before the Board of Engineers for Rivers and Harbors November 26, 1945, in Regard to Red River Lateral Canal" in which certain aspects of the department of public works' "The Case for Red River Lateral Canal" are criticized.

While addressed to figures and conclusions of the State body, and we are sure they have or will reply in full, we cannot refrain from pointing out several inconsistencies that appear even to those of us who have had only limited contact with the preparation of material submitted by this State body.

Throughout this statement they refrain from submitting terminal costs on petroleum and its production that are more nearly in line with the figures that have been used in their cases before the Interstate Commerce Commission.

In brief, what they have done is to criticize the line-haul costs used by the State for the reason that they are under those prescribed by the OPA as ceiling but have consistently refrained from calling attention to the terminal costs which they themselves have submitted in cases before the Interstate Commerce Commission when they desired relief to reduce rates to meet water competition.

Also on page 10 of their statement, criticism is made of the metal product ratings used, especially those in table VIII and by their exhibit 2 attempt to show that the rates in that table are too low.

This is done by comparing the ratings used with those applicable to Ouachita River ports. But in this connection, it should be noted that the rates shown in their exhibit are lower than those used in table VIII.

In spite of this fact, they, by some method of averaging not exactly clear to us, claim that the savings shown should be reduced.

In conclusion we wish to point out several fundamental errors made throughout the statement of the railroad.

The first is that they apparently assume there is no cost to the public for handling of shipments other than the published tariff rates when the movement of commodities is by a land carrier. This is not often the case as loading or unloading of vehicle is a cost item regardless of the mode of transportation used.

The second of these errors is that they seem to assume, with the possible exception of petroleum, that common carriers are used in handling interior traffic to the barge terminals.

Investigation, we are sure, will dispel this belief, as all types of private carriers are also employed including drive-away of automobiles.

At several points in their statement reference and comparison are made to Ouachita traffic and costs.

We feel it is not proper to compare the conditions existing on the Ouachita with its 6-foot channel to those that would exist on a 9-foot channel as proposed for this project as the costs would be entirely different.

Possibly the most erroneous assumption made is that no savings should be allowed when traffic can be secured near the consuming point.

This assumption is shown on page 23 where it is stated that "undoubtedly the only cement that could be handled to Shreveport by barge is that originating in the Houston district" and again on page 24 a statement is made that brick are produced in Waskom, Tex.

We feel that it is not necessary to point out to this Board that business is not transacted in that manner. Articles are not always bought or sold at the nearest point of production. Too many other factors are involved.

Compulsory Peacetime Military Training—A Teacher Speaks

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. WHITE. Mr. Speaker, Washington said, "Guard well the Constitution." Now that we with our form of government have attained a preeminent place among world powers, we must guard well the education and advancement of the youth of this country. There is inserted herewith a letter expressing the views of a State leader of educators of this country:

OMAHA, NEBR., *February 4, 1946.*

Representative COMPTON I. WHITE,
Representative of Idaho,
House of Representatives,
Washington, D. C.

HONORABLE REPRESENTATIVE WHITE: During the next 2 or 3 weeks there will be hundreds of 18-year-olds graduating from high schools and completing one semester of college work. What is their fate? The draft, of course, unless there are enough Congressmen who believe that drafting minors is a

vicious thing and who will work to end the draft as of September 2, 1945, immediately.

To force these youngsters into Army camps since September 2, 1945, where they must submit to the iron heel of militarism is one of the quickest ways for the present Congress to end the American way of life. It is common knowledge that no democracy is practiced in any Army camp at any time. Besides there is ample opportunity provided for these children to learn to loaf, to drink, and to carouse. The statistics on venereal diseases among the members of the American Army are a disgrace. What decent men and women can throw 18-year-olds into such environment, thus aiding and abetting the delinquency of our American youth on a national scale? Evidently the Canadian people think more of their youth than do the American Congressmen. The Canadian 18-year-olds are not being drafted. They have freedom.

Any honest Army man will admit that voluntary enlistments and reenlistments are plentiful enough to make drafting unnecessary now. I have been told so by a responsible officer in a recruiting office. Then, why is the administration and Congress so determined to continue drafting 18-year-olds? It is reasonable to suspect that there is some insidious reason for the procedure. Could there be another Pearl Harbor coming up which the leaders know about and desire to keep a secret?

Yours very truly,

FLORENCE B. REYNOLDS.

To Think and Speak Clearly Without Confusion

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. RAMEY. Mr. Speaker, a British statesman, who during the closing days of the First World War, came to the United States—I think with reference to a little loan—made a speech in my home State of Ohio, and said among other things that England already had suffered so severely that a century of sorrow would follow that conflict in their islands. He was, being an Englishman, a first-rate orator. You know what I mean—the voice, the accent, the world-weary air, the glittering phrases, the chairman-of-the-board clothes, and the main-dining-room manners. He made a great impression on those who heard him and the next day the paper printed practically everything he said. It was a fair and generous news treatment, I would say, but the man who wrote the editorials differed somewhat—although he praised the orator highly—with the speaker. A century of sorrow, remarked the editor, would madden the world. He suggested that while he got the gentleman's point, he felt that the visitor had somewhat overspoken himself. Britain has had tough going, the editor said, but so have a lot of other people, and history records no instance of one tragic act or a tragic era of several years becoming a century of sorrow.

"Even the Confederates," he said, "stripped of their fortunes, deprived of their slaves, undernourished and badly clothed, half sick and bereft of their loved ones, achieved a measure of happiness in a very short time, and were lighthearted and gay long before 1870. By 1872 they were producing no end of comedians," said the editor, "and sending most of them to Congress." The gentlemen from the South will please remember that I am quoting an editorial and that the sentiments expressed therein do not necessarily represent any opinions of my own, although I have been accused of worse offenses and with more accuracy. Anyway, that is the kind of editorial it was. You have to be in the mood for it, I suppose, as you do for this speech of mine. There was, of course, a sponsoring committee of the chamber of commerce which had brought the English visitor to town and they were indignant. They did not see the pictures of the man on page one, and apparently did not even look at the three and a half columns of news, or the eight-column line on the front page. They went directly to the editorial, and picked out the one sentence or two in which the editor had suggested that maybe the visitor had unwittingly exaggerated a bit, and how they raised hob with that editor. I do not know how the controversy ended but the chamber of commerce was mad at the editor for a long time, a situation which has happened before and since in many cities and in time everybody forgot about it, as is the way of all flesh.

Shortly after the First World War and in its final stages we had a quick-tempered period of a year or more, during which nobody seemed to want to get along with anybody else. We had held our tempers and had worked together, and it was quite a strain. Finally we got rid of the pressure and then we started in to hammer each other again.

We again are in a condition, having whipped Germany a second time, comparable to that of 1919 and 1920. We are quick tempered and most of us are hopped on one subject or another, and this time in our history, as was 1919–20, has become a time of irresponsible oratory. Oratory, as you may have heard, has been defined as indiscretion set to music. About our native American oratory at this time in our history, as was the case in 1919, there is the flavor of cocksureness. Whether a man is speaking on the necessity for sharing the secrets of the atomic bomb or is advocating a Government subsidy for the National Plant-More-Trailing-Arbutus Society he seems to be certain, beyond the shadow of a doubt, that unless everybody votes his way, all the voyage of our lives will be bound in shallows and in miseries.

The condition I describe is peculiar to war. I am intimately familiar with the postwar oratory of the First World War and of the present or recently ended, we hope, World War. The similarity is unmistakable. I am familiar also through childhood memories of tales my uncles told me and through my reading with the postwar period following the Civil War. The same "my way or nothing" tone was in the speeches of the seventies and eighties too, I can assure you. Whether it was Thaddeus Stevens and his followers or the men from south of the Potomac, or the newly returned generals in my own Ohio, it was always the same. To have heard James J. Blaine tell it, there was no future for America unless he was able to build the Fort Smith and Little Rock Railroad, and to hear Henry Woodfin Grady tell it at Atlanta, there was no chance for the Southern States or the Northern States either, unless the cotton planters started to raise something besides cotton. Well, to mention an instance, they are still raising nothing but cotton and the world has not yet come to an end, that is, unless some oratory I heard the other night forecasts the end of everything. If I remember correctly this latest argument was to the effect that the word "fissible" instead of the word "fissionable" be used in S. 1717 relating to the atomic bomb, research having to do with it, and patents which later may be obtained relating to it. Disaster will follow unless the word is changed.

I started to do this speech as a magazine article and call it Some Aspects of Oratory of the Postwar Character, Showing the Similarity Between War as Indicated by the Finality of What Spellbinders Say, but the article was too long, and so was the title, so I decided to do it as speech and merely call it The Horrors of War.

I would be neglecting the subject if I did not devote at least a part of the time I have to the postwar oratory of the left.

For the left, ladies and gentlemen, surpasses all other groupings of American life at least in one respect. They are surer than anybody else that unless they have their way something worse than anybody else has ever suggested will happen to everybody. The motto of the left used to be "Arise, comrades, you have nothing to lose but your chains." That stirring Marxist injunction has now been changed. What they are saying now is "Damn your story; listen to mine."

Maybe that is due to the fact that nobody on the left has any chains any more. The chains, if we believe everything we hear, are now shackling free enterprise. Anyway and whatever the reason, you do not read much about chains now except in PM, the adless newspaper, and then it is only in connection with a recommendation that chains be affixed to somebody they do not like.

The extreme right, called Fascists by the left, is calling the left communistic, and shaking their heads in solemn belief; they finally have sold themselves that the American way of life is gone forever.

Oratory, emitted from the lungs of orators with cathedral chimes and Waterbury movement, was never more interesting than it is right now, and I urge all of you to hear as much of it as you can and to remember as little of it as possible.

Some of you may be able to make a nice piece of change out of collecting and studying it, for nothing that any person can write will be quite as ridiculous as the excerpt itself, and I imagine that a grouping of these excerpts will provide delightful reading. You can call the collection Not Quite Gone With the Wind, and it should be a best seller.

All of which is preliminary to a few words I have to say today which I assure you are not oratorical. The fine-drawn tempers of most of us, the preoccupation with the various causes we espouse, the misplaced emphasis on things which most of us, quite sincerely, set heavy importance, together with the habit of the times, I refer to the habit of pointing to complete disaster as the alternative of our own particular frustrations, should cause us to do a little calm reflecting. We have got to practice the practical, and we must eternally remind ourselves that the world is not coming to an end tomorrow—or even soon thereafter.

While the atomic bomb changed the character of warfare and is changing the nature of international relations, while it conceivably can change communications, industry, shipping, and many other related activities of man, we should remind ourselves that it has not changed man at all.

He continues to be pretty much the same sort of creature he always has been. He knows a little more now than he ever did, and he is frightened by things which were undreamt of in our knowledge of a few years ago.

But the lessons he learned in the home in which he was reared, the precepts of Poor Richard's Almanac and the unchanging and irrefutable lessons of Holy Writ are forming his conception, as they always have, and singly and in the mass, will determine his course of action.

I am aware that I may now be accused of being naive, and comparable to that well-meaning gentleman who a few days ago dismissed the controversy between the CIO and the United States Steel Corp. by saying that the whole matter should be left to the Golden Rule and principles of Christian adjudication.

I know quite well that if that remedy were feasible it would work. I know also that if we had had for 1,900 years a genuine widespread devotion to the Christain faith in practice and performance we would have had no wars, even those which were definitely excited by religious differences.

But I am childlike enough to hope and to believe that devotion to the faith of our fathers will help us at least to achieve a certain calmness in these distressing times, particularly with reference to the extreme bitterness which controversy has aroused.

After all, what can we do in the face of these frightening problems which press down upon us? We can recognize the truth of the fact that one man's life and preachments are isolated and futile. He can be effective only when acting in unison. What should be his course? His course should be formed on the basis of his experience. He can do only what seems to be best to him. What should guide him? Obviously there is nothing better than Christian principles. What are his reliances? They are the common ordinary reliances of life as we know it. Work, thrift, prudence, unity, the recognition that every man would like to be a little bit better than he is. The essential good will of all peoples once they are informed. Education. Information. Understanding.

Oratory has forced a lot of us to think that we must present some answer, as unusual and as breathtaking as the atomic bomb, to the questions we face merely because they are big and unprecedented and frightening. My point is that we can face them only with the assets we have always possessed, and these I have just recounted.

As a Nation we owe two hundred and ninety-seven billions. That is quite a problem. Here in our own country and with reference to other countries, we face the problem of what to do about the atomic bomb. And that is truly a frightening question. All over the face of the earth people are in rebellion, and that poses many a question for us. We are in Japan and in Germany. How long should we stay? Or should we? Great Britain wants to borrow $4,000,000,000 or more. Can we afford to lend it? Can we afford not to lend it?

These are the questions, some of them. Our weapons are the capsule weapons of our daily lives. We Americans know enough to go to those among us who are better informed than we are for advice. We have experts and we call on them. But the basis of our procedure is the essential common sense of the common man. We must practice the practical.

I need hardly point out the fact that Russia and Great Britain have foreign policies which cause a lot of us to look for the indirect and the mysterious and the delayed effect of cause. We are looking for them to pull, as the saying goes, something smart. I think that a sound study of either proves that common sense is at the basis of what they do, the moves they make, the plans they propose. Self-interest in varying degrees enlightened and common sense guide them, and these virtues should guide us. There is nothing smart about them. They are intensely practical. They make use of the experts among them and these experts are guided by the common sense of their leaders, who are common men lifted slightly in stature.

We can well afford to do the same. The year 1946 instead of being a year of controversy and baffling and confusing ideas, each pushed by a group of fanatics, ought to be a year of national common sense. As a Nation we are greater than either Russia or Britain and greater than our late enemies. All we need to do is to use the assets, mental and physical, that we have, and guide the use of them on the basis of practical procedure, the procedure we have always found workable. It built our country, our cities, our great schools, and our great businesses, and in it is the solution for our difficulties of today.

Label Thinking Our Greatest Danger to Democracy — Well-Informed Public Opinion Is Vital

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me, I take pleasure in presenting and inserting in the CONGRESSIONAL RECORD what I think is one of the finest contributions in editorial writing which I have ever read. I believe it to be especially appropriate at this time, especially in the history of our Nation and in our international relations.

As a Member of this great Congress I wish to again emphatically say it will mean everything to the permanency of our democratic way of life if some ways or means can be found and some methods used whereby people of America can learn what the facts are and then learn to think through these facts themselves, then participate in the political life of their Nation as the result of informed thinking. Both sides of every issue should be known to all people who have to determine the issues. Only by an informed democracy can there be an enduring one. Only as the individuals who make public opinion think through for themselves by having facts of both sides before them can there be an enduring democracy.

This editorial appeared in the Long Beach Independent, which is one of the two newspapers printed in my home city of Long Beach, Calif., under date of February 1, 1946:

LABEL THINKING

A well-informed public opinion can usually be depended upon to make the right decision. No people in the world have such an opportunity of being well informed as the American people. But few take advantage of the opportunity. With the opportunities available to read or hear both sides of each issue most of our people let someone else do their thinking for them.

A well-balanced newspaper has columnists presenting all sides of controversial issues. Some of these columnists are definitely to the left, some to the right. Some present views and conclusions opposite to those of the editor of the paper. But when all are read and considered, a well-balanced view of all issues is ascertained.

The trouble is that some newspapers will not carry columnists who are opposed to the views or policies of the paper. But even where such controversial viewpoints are presented the readers are prone to read only those with which they agree. If newspapers slant their news and use only columnists with which they agree, the tendency is to have only one class of subscribers and readers.

The same condition is true of the radio. The average listeners who have a favorite radio commentator turn off the commentator who has expressed views with which they disagree. The result is that they become label thinkers. They actually do not think, but rather accept the views of someone who expresses opinions that fit into their social or economic class.

Business and professional men have the habit of meeting only those who move within their economic and social groups. They meet the same people in the office, at luncheon, and at social functions. Because they all have the same views and problems they come to feel they know what the public is thinking. Their daily lives are like being on a merry-go-round. They get off at the same place each day. Their thinking or conclusions are labeled. They have not exposed themselves to any ideas not expressed within their own limited circles.

This is also true of workers. It is particularly true of union members. They read their union bulletins or papers. They associate chiefly with other union members, listen to radio programs recommended by the unions. They become labeled and class conscious. Rarely do they make an effort or have the opportunity to meet the employer or professional man. They have little understanding of the employer's problems.

Between these two groups is the two-thirds of our people who are neither employers or union members. They are the white-collar workers, farmers, clerks, school teachers, and individually employed people. These people are the best balanced in their thinking and attitude toward our social and economic problems. But even these people fall into label thinking. They fall into the habit of only reading or listening to those who express views with which they agree.

There are many sides to each issue, and all sides are available to anyone seeking the facts. Our freedom of press and of speech makes it possible to express different views. Where there is competition between newspapers and radio the people are assured of such facts and views being presented. But if the individuals are too lazy or too narrow to expose themselves to all the facts and views, they become label thinkers. Label thinkers are the greatest danger to a democracy where a well-informed public opinion is so vital.

L. A. C.

The Labor Bill Offers Both Sides Equality

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Toledo (Ohio) Times:

THE LABOR BILL OFFERS BOTH SIDES EQUALITY

The so-called tough labor bill seems destined to win approval in the House of Representatives despite vigorous opposition.

The Case bill, as it is known, has withstood the impact of at least 20 amendments, all designed to compromise its regulations. Members of the House are determined to restore order to chaotic industrial conditions through justice established by law.

If there is anything wrong with the bill, it is probably calling it "tough." Actually it demands nothing more than orderly reasoning in the settlement of labor disputes which are threatening to restrict production for years.

The bill would set up a Government mediation board with the power to step into labor situations, and with enough authority to forbid lock-outs or strikes for a period of 30 days. It also would permit the use of court injunctions against both management and labor. It would outlaw boycotts and violence on the picket lines. And, most important, it would provide for civil suits which could be filed either by labor or management.

The bill seeks equality in the treatment of unions and industry. In doing this it invests unions with a financial responsibility which has been missing from the labor picture. The bill would make it possible for a union to sue a company, and for a company to sue a union. Fines and other penalties could be levied against either through regular court procedure.

The bill is not "tough" or unfair to anyone. If a company violates a contract, that company could be sued. The same applies to unions. This is the kind of equality and justice upon which the firm foundation of our independence has been erected. It is justice as we have come to recognize it through our court system. In business life, if a man violates a contract, he can be, and often is, sued. And if the courts find him at fault, his assets can be attached until settlement is made.

Such a bill would stabilize labor. It would make the union member realize that his union has made a contract for which he is personally responsible. It works the other way with equal effect. If a company breaks a contract, the union can sue, instead of striking, get a court judgment, and collect damages in cash.

What the Case proposal provides is that we shall, if it becomes a law, throw our labor disputes, just as we do with all other deadlocked business disputes, into the courts. Under such a program, most of our labor difficulties should soon disappear.

If a company should lose a decision, its funds could be impounded until settlement is made. The same principle would apply if a union lost a court decision. And you can rest assured that the unions are not going to pay much out of their treasuries to employers without getting wise to the fact that law is law. So long as it would work both ways, nothing could be fairer.

The law also discourages violence in picket lines. It would contribute much to making order out of the chaos which already has frozen much of America's production.

The Case bill will never injure an honest and just man, whether he represents a company or a union. Both would receive the same justice upon which we have built our whole system of personal security.

Statehood for Hawaii Important to Future American Policy in Pacific

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present some of the opening paragraphs of an article in the Christian Science Monitor of January 14 by DeWitt H. John on the question of statehood for Hawaii.

The author of this article is a staff writer of the Christian Science Monitor who served in the Hawaiian Islands as a naval lieutenant on the Pacific Fleet staff of Fleet Admiral Chester W. Nimitz.

Mr. John has pointed out very effectively the importance of the question of statehood for Hawaii to future American policy in the Pacific in the paragraphs of his article that follow:

Should Hawaii, melting pot of many diverse races, cross roads of Pacific commerce, strategic outpost of American military power, be admitted as a full-fledged State in the American Union?

This question, vigorously debated in the decade preceding Pearl Harbor, is of particular urgency today because of its relation to future American policy in the Pacific.

The present is a transitional period. The pattern of American peacetime policy is just beginning to emerge.

By deciding the Hawaiian issue, Congress will take an important step in deciding the character and extent of United States policy and influence in the Pacific.

* * * * *

If Congress, in a formal vote on the Hawaiian bill now pending before a House committee, were to reject Hawaiian statehood, this step—plus prospective American relinquishment of authority in the Philippines and eventually in other Pacific-Asiatic areas—well might be interpreted in foreign capitals as presaging an equivocal or weak-kneed American policy in the Pacific.

If, on the other hand, Congress should decisively grant statehood to Hawaii, American hegemony in the Pacific would be confirmed. Such a vote would move the domestic frontiers of the United States proper 2,200 miles westward, establish the first overseas American State, and establish an American lake between San Francisco and Honolulu secure beyond reach of any vicissitudes of policy. It would serve notice on the world anew that the Central and Western Pacific constitute a defense zone of the United States.

The Great Falls Army Air Base

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am including in the RECORD a letter and a brief in support of the retention, by the Army, of their air base at Great Falls, Mont. The letter and the brief explain far better than I can, the need and the usefulness of this base. I know, Mr. Speaker, I speak for my colleagues from Montana in the House and Senate as well as for the people of my State on this matter. It is my hope that the Army and the Congress will see fit to retain this exceptionally good base. To quote the words of Mr. Charles B. Anderson, chairman, airways committee of the Great Falls Chamber of Commerce: "We believe that common sense in planning for the defense of our country in the future, demands that this base, above all others, be retained as a permanent installation."

The letter and brief follow:

CHAMBER OF COMMERCE,
Great Falls, Mont., January 29, 1946.

The Honorable MIKE MANSFIELD,
The House of Represenatives,
Washington, D. C.

DEAR MIKE: The No. 1 project of the Great Falls Chamber of Commerce for the year 1946 is to see to it that the Army air base east of the city, known as the East Base, be made a permanent air-base installation. We earnestly solicit your assistance in this project. While we understand this base has already been selected by the Army as a permanent site, we nevertheless believe that its ultimate destiny will rest with the Congress.

Our reasons for wishing this Army air base to be made permanent are not entirely selfish, though we believe it would be a fine thing for both our city and the State of Montana. Primarily, however, we believe that common sense in planning for the defense of our country in the future, demands that this base, above all others, be retained as a permanent installation.

To support our beliefs we have prepared the enclosed information for your study and consideration. We trust that you will direct this information to the proper committees when this matter comes before the Congress and that we may have your assurances of support. If you desire further evidence of the necessity for the retention of the Army air base at Great Falls as a permanent base, or if you wish additional copies of this brief, please feel free to call on us at any time.

We have discussed this matter with Mr. E. W. Rising, our Washington representative, who will be glad to cooperate with you in every way possible. Mr. Rising's address is 710 Atlantic Building, 930 F Street NW.

With kind personal regards for your continued success, we remain,

Respectfully yours,
GREAT FALLS CHAMBER OF COMMERCE,
C. B. ANDERSON, *Chairman,*
Airways Committee.

BRIEF IN SUPPORT OF RETENTION OF THE ARMY AIR BASE AT GREAT FALLS, MONT., AS A PERMANENT ARMY AIR BASE

(Prepared by airways committee, Great Falls Chamber of Commerce, January 29, 1946)

THE ARMY AIR BASE, GREAT FALLS, MONT.

Strategic geographical location

The Army air base at Great Falls, Mont., is located in a highly strategic spot in any defense system for the country. It is the most northern base just east of the protective Rocky Mountain barrier where weather for flying is as nearly perfect as can be found anywhere in the United States. (See attached exhibit.) It is the nearest fully equipped Army air base to the friendly Canadian Province of Alberta, with which a fine community of interest has been developed during World War II. It is the only such base in a very extensive surrounding area and thus necessary as one of a chain of such bases extending either east-west or north-south. It is the only ATC base between Michigan and the Pacific coast.

A port of embarkation

The Great Falls Army Air Base has served as the principal port of embarkation for men and material destined for Canada, Alaska, and Russia all during the war and has proved itself as the logical point for such operations. On a recent map issued by the National Geographic Society, Great Falls is designated as the only principal inland "kick off" base to foreign points in the United States, all others being located at coastal points. This base is the United States terminus to the only fully equipped air route to western Canada and Alaska. (Facilities on this inland air route are given in detail in this report.)

The airfields and facilities along this route are so complete that it can be flown, and has been flown, by so-called short-range aircraft. It is the only route to Alaska that now can be flown by such aircraft, which makes it of great importance to the private flyer in the coming postwar years.

Gateway to the top of the world

It is generally admitted that in the future it will be particularly important to control the air routes over the "top of the world." Great Falls is the natural gateway to this area from the United States. Not only is it on the shortest air route from some 41 percent of the land area in the United States (see map) but it is nearest to the Canadian border which is an advantage (though perhaps not a controlling one) for border clearance and customs.

Labor market for aircraft maintenance at Great Falls

An important necessity for the operation of an air base is the quantity and quality of available labor. The Great Falls Army Air Base now employs between 1,300 and 1,400 civilians, with a monthly pay roll of approximately $225,000. Most of this labor force consists of men and women experienced in aircraft maintenance. Additional sources of such labor are available from the west coast factories whose operations are now being curtailed and to which many of our previous citizens went for the duration. They can be expected to return if work is available here. Other sources which can be expected will derive from the transfer of certain ATC operations from Canadian points to the Great Falls Army Air Base during the next 3 months.

Facilities at the Great Falls Base are "tops" for maintenance

A special section is appended outlining the equipment and facilities at the Great Falls Army Air Base. It should be noted that these facilities are the best available for the work that would be done at a permanent base.

This base is of great importance as a stopping point for military aircraft. Here, singly or in groups, planes in transit may be serviced completely. It is being used for such purposes daily at the present time, and the importance of this factor cannot be overemphasized.

A field for Reserve fliers

We are advised that there will be a large number of men with commissions in the reserve forces of all branches who must of necessity maintain their efficiency ratings through constant study and by flying a certain number of hours each month. There is no field properly equipped to provide the planes and service which they will need within several hundred miles of Great Falls which is the only field available to men of Montana, Wyoming, northern Idaho, and western North Dakota. This is an important factor to consider in connection with the maintenance of a trained Reserve in case of emergency.

National Guard Air Force

It is probable in the future that squadrons of the National Guard Air Force will be based in Montana. Being centrally located, the Great Falls Army Air Base would logically be used by a portion of this air force both for regular training and for summer maneuvers. It is the only base fully equipped now to handle such operations in Montana.

An air squadron is composed of 35 officers and 200 men.

Proven support of the Alaska wing

It has been amply demonstrated that the Great Falls Army Air Base is an essential unit to the support of operations in Alaska. During the war a truly remarkable record in the transport of planes, men and material north from Great Falls by air was established. This record is summed up in an article printed in the Great Falls Tribune, a copy of which is attached.

Plans are already under way to conduct many Alaskan operations aimed at a full understanding of the North Polar regions and at the protection of our country from attack over the pole, which to and from many world centers provides the shortest route and one which is easily flown with modern equipment. Information about facilities for this research work in Alaska is still in the category of restricted information.

The Alaska Highway

The importance of the Alaska Highway was also proven during the war. Its length is bordered by emergency landing strips used by the smaller fighter aircraft which were not equipped with radio and thus had to fly contact from Great Falls to Fairbanks. The highway runs parallel to the established air route more fully described herein. It is a means for maintaining the telephone and telegraph lines erected during the war from the United States to Alaska.

The Alberta government and the United States Government appear to recognize the desirability of maintaining this highway as a permanent road both for the military and the tourist. As a means of communication it is all important as are those other means which it parallels. Great Falls is virtually the southern terminus of all these means of communication being on the only direct route to the southern end of the Alaska Highway by road.

Importance to Montana

As mentioned above, the civilian pay roll at this base amounts to about $225,000 per month. Total disbursements, however, exceed $1,000,000 per month. Thus the air base must be classed as big business and as such it would be of considerable importance to the economy of the State.

Climate in Great Falls, Mont.

While Great Falls is a northern city it is a comfortable city in which to live. A letter appearing in the Great Falls Tribune from a soldier who had been stationed here for 2 years, written as he was being separated from the Army on October 28, pays us a nice compliment in this respect: "Having lived in the Middle West for many years and on the east coast for 15 years prior to entering the service and with the completion of 2 years in Montana, my choice for a year-around climate would be right here in Great Falls."

We have had extremes of temperature but neither heat nor cold are oppressive due to the absence of moisture in the air. Humidity is low in summer and winter, thus one neither shivers in winter nor drips in summer. Evenings are always cool in the summer and there is nearly always a fresh breeze to temper any heat during the day. The famous Chinook winds in the winter soon break a cold spell and snow seldom remains on the ground for long except in the mountain areas.

Average rainfall is only 14.8 inches. We boast of approximately 300 clear days a year. Examination of the weather reports at Gore Field (Great Falls Municipal Airport) for the 12 months ending February 28, 1945, reveals that there was not a single day in the 12-month period when it was impossible at some time of day for multiengined equipment to land and depart. On an hourly basis, which is decidedly the most unfavorable basis on which to make a study, the records show that only 2.8 percent of the hours during the entire year were closed to flying, and only 3.4 percent required the use of instruments.

Meteorological data on Great Falls

Annual precipitation as taken from the records of the United States Weather Bureau:

Annual precipitation for past 6 years

	Inches
1939	9.89
1940	12.09
1941	17.64
1942	14.55
1943	13.96
1944	14.21
1945	13.51

Average annual precipitation for past 54 years, 1892 to 1945, inclusive—14.8 inches.

Weather	Mean temperature	Temperature		Total precipitation inches	Total snowfall unmelted in inches
		Highest	Lowest		
45—December	24.1	53	−3	1.72	25.0

Brief description of airports, distances, and facilities on the Sunshine international air route from Great Falls, Mont., to Fairbanks, Alaska

Airport name	Distance from last field (air miles)	Standard lighting [1]	Length of paved runways (feet)	Radio range	Control tower	Direction finder	Low-approach system
Great Falls (east base)	Terminus	Yes	8,850	Yes	Yes	Yes	Yes.
Cut Bank	88	Yes	8,600	Yes			
Lethbridge	75	Yes	3,700	Yes			
Calgary	117	Yes	4,700	Yes	Yes		
Penhold	70	Yes	3,400	Yes			
Edmonton	100						
Namao (satellite)		Yes	6,800	Yes	Yes	Yes	Yes.
Municipal		Yes	5,400	Yes	Yes	Yes	Yes.
Grande Prairie	237	Yes	6,500	Yes	Yes		
Fort St. John	111	Yes	6,700	Yes	Yes	Yes	
Fort Nelson	188	Yes	6,400	Yes	Yes	Yes	
Watson Lake	152	Yes	5,500	Yes	Yes	Yes	
Whitehorse	217	Yes	7,200	Yes	Yes	Yes	Yes.
Northway	269	Yes	7,500	Yes	Yes	Yes	
Tanacross	49	Yes	5,100	Yes	Yes		
Big Delta	88	Yes	7,500	Yes	Yes		
Fairbanks	90						
Ladd Field		Yes	9,200	Yes	Yes	Yes	Yes.
Weeks (municipal) [2]							
Mile 26 (satellite) [3]		Yes	6,600				

[1] Standard lighting includes beacon and boundary lights, obstruction lights, flood and runway lights, and in most cases, instrument approach lights.

[2] Weeks, the municipal airport at Fairbanks, has 5,300 feet unpaved runway. It has runway lighting only, and control tower part time.

[3] Mile 26, the satellite airport at Fairbanks, has 6,600 feet paved runway. It has standard lighting, control tower part time on request, and a practice low approach system.

NOTE.—There are landing strips at frequent intervals along the Alaska Highway, which parallel the inland air route. These were used by the men who flew fighters and other ships too small to be fully equipped with radio and instruments and who thus flew contact all the way to Fairbanks.

Between most of the major fields described above there are other emergency landing fields which are unpaved but into which the larger aircraft could get in case of emergency. These fields have lighting facilities consisting of boundary and obstruction lights.

A telephone line parallels the Alaska Highway and there is a teletype system in operation between Great Falls, Fairbanks, and Anchorage.

Facilities at the Army air base, Great Falls, Mont.

1. Maintenance is so set up at the Great Falls Army Air Base that work can be done here, which means that the whole job of major overhaul can be done besides modification and ordinary maintenance. The shops and hangar facilities listed below are among the finest in the Nation and are in operation now, thus assuring an available labor force.

(a) Field class: 89H R1 L5 S6.

R1: Voice station, tower, range, homing device.

L5: Beacon, boundary obstruction lights, flood light, contact runway lights.

S6: Fuel, storage, major aircraft, major engine repair.

89H: Hard surface runways, 8,900 feet.

Instrument approach systems:

Radio range.

SCS 51 (for practice only).

CAA instrument low-approach system.

AACS communication systems available.

Army weather—regional weather station: Controls all weather for entire route from Great Falls to Fairbanks, and also long-range forecasting, and so forth.

CAA weather available at Great Falls.

ATC traffic-control center located in Great Falls.

(b) Runways:

Four runways, each 8,850 feet by 300 feet wide; 150 feet in center of each runway is 5-inch concrete; gross weight, 120,000 pounds.

Taxi strips: 22,350 feet (linear feet), 75 feet wide. Constructed of 5-inch hot mix.

Ramp: 4,889 feet by 500 feet. Constructed of 5-inch concrete.

2. Twin hangar (permanent buildings): All concrete; roof, wood and built-up roofing; each hangar, 64,000 square feet; shops, 80,200 square feet; office space, 12,000 square feet.

3. Building No. T-280—Hangar (permanent building): 26,329 square feet; floor and foundation, concrete; walls, concrete and wood; roof, wood, 45-pound rolled roofing; over-all floor space, 206 feet by 127 feet.

4. Building No. T-210—Hangar (permanent building): 43,026 square feet; floor and foundation, concrete; walls and roof, wood, 55-pound paper.

5. Bomb sight storage building: 1,217 square feet; floor and foundation, concrete; walls, concrete and wood; roof, wood, 45-pound rolled roofing.

6. Air Corps supply warehouses (temporary buildings): 11 warehouses, 1,520 square feet; 1 warehouse, 2,000 square feet; 7 warehouses, 8,977 square feet; 1 warehouse, 9,000 square feet; 1 warehouse, 9,040 square feet.

7. Quartermaster warehouses (temporary buildings): 3 warehouses, 9,600 square feet.

8. Storage tanks: Gasoline, 11 underground tanks, capacity 275,000 gallons; oil, 3 oil tanks, underground, heated, capacity 17,625 gallons each: Diesel oil, 1 tank, underground, capacity 15,300 gallons; drain oil, 1 tank, underground, capacity 15,300 gallons.

9. Railroads: 7,410 linear feet.

[From the Great Falls Tribune of November 23, 1945]

8,645 PLANES FLOWN NORTH THROUGH HERE—5,590,000 POUNDS OF CARGO, PASSENGERS, MAIL TO ALASKA AND RUSSIA

Emphasizing the importance of Great Falls as the principal point of departure for aircraft ferried to Alaska and Russia and as a major port of aerial embarkation to the north during the war, figures of the Army Air Forces show that 8,645 aircraft and more than 5,590,000 pounds of cargo, passengers and mail passed through the east base and Gore Field.

The Army Air Forces report covers the period from April 1942 to August 1945 and discloses that aircraft passing through Great Falls for Alaska included 80 heavy bombers, 842 medium bombers, 1,394 light bombers, 5,367 fighters, 844 transports, and 118 other types of aircraft.

Traffic originating at the Great Falls Army air base from December 1943 to August 1945, and flown north included 10,450 passengers, 3,055,974 pounds of cargo and 15,688 pounds of mail. Weight of the passengers and their baggage totaled 2,518,696 pounds.

It was disclosed in the communication that under present plans the Great Falls Army air base will continue to be used by the Air Transport Command as a base for scheduled services to Alaska at least through June 1946. Plans for the period after next June will depend on future military air transport and ferrying requirements.

Lincoln Day Address of Maj. Gen. Edward Martin, Governor of Pennsylvania

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Maj. Gen. Edward Martin, Governor of Pennsylvania, at the annual Lincoln Day banquet of the Republican Members of the House and the Women's Republican Club of the District of Columbia, Statler Hotel, Washington, D. C., Thursday evening, February 7, 1946:

Mr. Toastmaster and fellow Americans, in this time of critical and momentous decisions, it is appropriate to consider American policies at this Lincoln anniversary meeting. Abraham Lincoln more truly typifies our way of life than any other American. A Republican meeting is an appropriate place for such discussions, because under Republican Party leadership this Nation has made its greatest material, cultural, and spiritual progress.

Lincoln was born in poverty. He knew the value of work, tolerance, thrift, and persistence. He advocated equality of opportunity for every American. He urged everyone to acquire property. He took part in government. He was proud to be a politician. He suffered political disappointments, but he did not sulk. He believed in party discipline.

Lincoln's place in history is secure, and the Republican Party needs no apology. His way of life and the accomplishments of our party are a great part of the real America. The greatest honor we can pay him is to strive for a government of the people, by the people, and for the people.

To do this in a representative republic we must have two great political parties. If one becomes too powerful, the country may drift into dictatorship. Germany and Italy were examples of one-party government. With more than two parties, party responsibility is lost. France is an example of party paralysis.

Our parties have decided the great issues of the past: State rights, banks, central government, sound money, territorial expansion, slavery, free trade, imperialism, conservation, education, labor policies, taxation, the public debt, the Monroe Doctrine, the protective tariff, and a host of others.

Our political parties must again decide great issues. The Republican Party has always been the progressive party. Today, as the minority party and the loyal opposition, it must again declare its position on the great issues of these times.

The preservation of freedom is the basic issue. America is a land of dreams. It has been so since the days of the first settlers. They came here to escape tyranny. They wanted to be free to work out their own destiny, to worship as their conscience dictated, and to govern themselves. They carved a Government out of the rough to maintain certain inalienable rights. They have fought for these rights in their courthouses, in legislative halls, and on bloody battlefields. The story of America is the most dramatic story in history. We should recite it with pride and reverence, because freedom is costly. Millions have paid for it with blood.

There are great words in the story of the American Nation and its Government: "Independence"; "freedom"; "inalienable rights"; "the pursuant of happiness." They are sacred words. Wars have been fought to maintain them. Through the fabric of our laws runs a golden thread preserving the rights of the individual.

The word "liberal" once meant much to Americans, but its integrity has been destroyed by the blatant, breast-beating, rabble-rousing, tub-pounding politician, seeking votes at any cost. "Liberalism" once meant freedom. Today it is used by Communists, Socialists, and revolutionaries, and many so-called liberals would now extend Government at the expense of individual liberty.

The Bill of Rights is the keystone in the arch of our liberties. Every attack upon it must be defeated. Legislation destroying property, the rights of the public, the right to work at the job of our choice; public grants and governmental subsidies—all these must be watched by the picket posts of freedom.

The right to liberty and the pursuit of happiness is older and greater than those three great documents, the Magna Carta, the Declaration of Independence, and the Constitution. It is a God-given right. Free governments are constituted to preserve it. That is why religion is hated in dictator-ruled and communistic countries.

Strange doctrines are now being preached in the United States. They menace freedom. Discontent is being sown here as it was for generations in Europe. Ways are being opened here like the roads over which Hitler and Mussolini marched the people of the Old World to destruction and death.

Many politicians are playing with communism. They are playing with political death and national suicide. Communism teaches hatred. It rules by hate and raw force. It offers something for nothing until it gains control, and then sets its steel-shod boots upon the neck of the common man.

Are we following that pattern? We are now offering everybody something—lower taxes, higher wages, more subsidies, more profits. Are we trying to fool ourselves?

The Republican Party must face the threat to national financial solvency. We are told tax reduction is coming and the Budget will be balanced a year from now. We heard the same solemn announcements before the war. Year after year we saw the Budget swing farther out of balance. Budgets can be balanced only by spending less money than we collect in taxes. Beware of fancy bookkeeping.

Germany and Italy started downward over the road of bad fiscal policy, and in the end led their people through the red gates of war. As the party of loyal opposition we must demand a sound fiscal policy, with a balanced Budget and an equitable tax system. We need a complete audit of the United States, for in 12 years the New Deal has spent at least $500,000,000,000. The records should be examined to see where this money went. The audit should be extended to social security, pump-priming, public projects, and to the costs of the war itself. This was the people's money, and they are entitled to know how it was used.

There should also be an audit of all our commitments, actual and proposed, to the nations and to the peoples of the world. How much have we loaned or given? How much do we propose to give and loan?

What is the reason for much of our trouble? It is the debt. Today, it totals two hundred and seventy-five billions. It is the greatest debt in all history. Sixty billions of it existed before the war started—sixty billions spent on doubtful projects and huge Federal pay rolls.

What can be done? We can demand the swift demobilization of the huge army of Federal pay rollers. Senator BYRD says there are at least 2,000,000 surplus Federal employees, who are adding a burden of more than $5,000,000,000 a year. This is a terrific waste, in view of the fact that the entire cost of the Federal Government in any peacetime year prior to 1932 was less than four billions.

"Tax and tax, spend and spend, elect and elect"—that is still the New Deal formula.

We know it is bad; we know it is dangerous; we know that all expenses must be cut; we know we must start to liquidate that giant debt and stand as a solvent America in an insolvent world.

The Republican Party has another heavy responsibility. It must give a sense of direction and balance to American foreign policy. For years before World War II the New Deal muddled, side-stepped, and evaded on foreign policy. Its blundering diplomacy may now fumble away the peace. The present national administration has no battalion of direction.

We saw what happened before the war; we saw Mussolini move; Japan drive into China; Germany march into the Ruhr—but we did not get ready. We came down to Pearl Harbor unprepared. The people are entitled to know who blundered there, for an army or navy may be defeated, but there is no excuse for a surprise. After years of warning, we came unready into battle, fighting for our lives almost barehanded.

Certainly we did a magnificent job after the war started. Certainly we organized and trained the greatest and best Army, Navy, and Air Force in the history of warfare. Certainly we fought all over the globe and destroyed the undefeated armies of the world.

After Pearl Harbor we did build 72,000 ships; 250,000 airplanes; 100,000 tanks; 3,400,000 motor cars. We did make 43,000,000,000 rounds of small ammunition; 17,000,000 rifles and pistols; 600,000 cannon, and 1,000,000,000 artillery projectiles.

But remember that much of this great undertaking could have been done, and should have been done, before the guns roared at Pearl Harbor. Remember, also, that it was done under the free competitive enterprise system, fostered and encouraged by the Republican Party for half a century, in a free land where men work in freedom at the job of their choice.

The Republican Party must guard against over-centralization. Our forefathers were farsighted. They feared centralized government. They set up plans for checks and balances to protect us against ourselves. They gave us three branches of government: legislative, executive, and judicial. They created three levels of government: local, State, and Federal. They tried to bring government closer to the people. They gave the citizens of each local unit power to govern themselves. As Republicans we must as a sacred duty maintain these wise checks and balances.

Republicans must deal with another and vital domestic problem. We eagerly seek the industrialization of all suitable sections of the country. This can be done gradually in the spirit of free enterprise. It cannot be done by Government direction, for Government cannot change the bases of industry without destroying the morale and the welfare of the worker. We cannot do it in the Russian way.

Nor can we deal with labor in the Russian way. Republicans have recognized that labor has three inherent and inseparable rights: the right to work where it chooses; the right to organize and bargain collectively; and the right to strike. The Republican Party should and will defend these rights.

We should encourage sympathy, understanding, confidence, and cooperation between employee and employer, and make Government the impartial friend of both. All organizations must be responsible organizations whose agreements are kept. Before employees and employers can join with Government in a national effort for production, prosperity, and good will, Congress must lay down a clear and definite labor policy. That policy must be based upon laws and not men.

In fixing wages we must never forget that the worker's savings at the end of the year are what count. The worker as well as the employer must have a profit.

Our tax programs must encourage risk capital. Taxes must be kept as low as possible. They are paid by the sweat of labor. Taxes are deducted from the gains of both labor and capital. Subsidies and grants are paid in taxes. They must be sparingly made.

We Republicans will remember that our Nation has earned world leadership. The war has shown that the American form of government and our way of life are the soundest in the history of organized nations. Dictatorships, limited monarchies, and parliamentary governments all failed to stop the savage drive of the Axis Powers to enslave the world.

America must assume leadership in the movement to insure world peace. That effort will require all the intellectual, material, and spiritual resources of the world's best nations. It must be based upon justice and righteous living. Its terms must be fully understood by the people of the contracting nations.

Material gains and new territory are not American objectives. We do seek the privilege of living in peace and good will in a friendly, liberty-loving family of nations. We do not demand that all groups accept the pattern of the American Republic, but we do insist that all war-breeding forms be eliminated.

Spot assistance—food for the hungry, clothing for the naked, and warmth and shelter for the unfortunate—must, of course, be given to the limit of our ability to give.

Loans of money and industrial goods must be made more guardedly. In the past we have helped nations and they have used that aid against us. These forms of foreign help must be scrutinized. The American people must know about these loans. They can be a cause of future disagreements, disruption and conflict. The people should know the purposes, terms and security of these advances. Before they are made we should know whether we have the money to loan and the rate of interest. We cannot remain solvent if we loan at an interest rate less than the money costs our taxpayers.

For the long pull, the best foreign aid is prosperous trade. Regardless of all the solemn nonsense of the economic morons, money and profit make the wheels go round, abroad as well as at home. World prosperity depends upon large scale and profitable exchange of goods.

The Republican Party has always believed in world trade. It is a fact that the sound progress of commercial relationships among nations, as well as the industrial expansion of America, has always advanced under Republican administrations. Our party has always favored a trade policy giving all nations equal access to world markets.

In noncompetitive goods, which form two-thirds of normal trade, that is simple enough. It is not so simple in competitive goods.

Living standards must be considered. We cannot lower the living standard of American workmen and farmers. We hope to raise the living standards of other nations to our own level. We cannot do this by destroying our own economic stability.

In the field of foreign policy, America has not defined its intentions toward Germany and Japan. Our job in these conquered nations is to prevent future aggression, harness the energies and abilities of their people to useful purposes, which in the fullness of time will permit them—chastened and sobered—to reenter a friendly family of nations as full members.

Here again, as in all foreign relationships, our help must be spiritual as well as material; perhaps as much of one as the other. These demoralized people need inspiration as well as food, courage as much as coal, and guidance even more than cash.

It is time for action here at home. We must form our order of battle against the forces of regimentation and governmental control; against bureaus and commissions; against hundreds of thousands of political Federal employees; and against Government by Executive order. Congress must again assert its full powers.

Free competitive enterprise, with the freedom of the individual, is at stake. The day of the political opportunist and patronage hunter must end or we can fail as a nation. It is a time for courage. The Republican Party can win in 1946, but it must stand for the old-fashioned American ideals of thrift, tolerance, hard work, and the love of God. It must be aggressively led and aggressively organized. It must be aggressively financed by all those who believe in its principles and value their liberties. The "dollars for freedom" program announced by Chairman Brownell today offers the opportunity to help in a great cause.

We can help make America solvent by hard work and common sense. It cannot be done by "planned economy" that is planned by men who never earned a dollar. It takes more than planning to create wealth. It is created at the forge, in the mine and in the fields by men with tools in their hands—by the bitter sweat of men's bodies and brains.

America has seen wealth created by men seeking work, making work, and finding work. It has seen men carrying the Bible, the rifle, and the ax carve a land of plenty out of the wilderness. That same spirit still lives.

The inalienable American right to the pursuit of happiness for which 12,000,000 men and women in uniform served and suffered is sacred. It must be preserved.

Every consideration must be given to the veteran and his dependents. Remember, he is the cream of the crop, the doer and producer of the future, and he will pay the greater part of the tax bill.

In the memory of Lincoln and of the more than 1,000,000 Americans who, in all our wars, have died that liberty might live, let us by humble, sincere, and thoughtful effort safeguard the ideals for which they perished.

The war that has ended was the worst catastrophe in the history of mankind. No other war approached it in magnitude. It was both the greatest effort and the greatest disaster in the annals of the world.

The scope, the accomplishments, and the unselfishness created by its terror and brutality have given America a mighty asset in the millions of fine, brave, and self-disciplined men and women who can be depended upon during these critical times. They know their America was a wilderness continent that has been made into a land of industry, plenty, culture, and good will. They know it is a land of deep religious convictions. They know it became great through free, competitive enterprise, and under the inalienable right of the individual to the pursuit of happines.

These veterans want a land of opportunity. We all want a land of opportunity. We want a free and dynamic America. We can have it by all working together, through Divine Providence and under the Constitution.

Let us glory in American achievements. Let us keep the watch and avoid a surprise attack from within our gates.

Address of Hon. Margaret Chase Smith, of Maine

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of my colleague, Hon. MARGARET CHASE SMITH, before the Women's National Republican Club in New York on January 26, 1946:

Mrs. Pratt, Captain Stassen, distinguished guests, and fellow Republicans, the welfare of the people of America is the responsibility, and should be the accepted objective, of the Republican Party. Welfare means jobs, homes, health, and happiness. The approach to the attainment of this goal must always be objective rather than subjective. We cannot judge the desires and living conditions of others, especially of 140,000,000 people, by our own desires and living conditions.

In other words, we must determine and appreciate what the other fellow wants and what he has to put up with, in order to give him what he desires and deserves. It's again time to talk about a Republican program, and it must be patterned along these lines if we are to retain the support of the electorate.

Now is the time to apply this approach. The public sees in the Democratic Party, and in the present administration, a great conflict of suspicion, selfishness, and subjectiveness of various groups, all clamoring for themselves, completely disregarding the desires and rights of any group other than their own.

The Democratic Party and the Democratic administration have grown decadent. They are plagued with lack of initiative, imagination, and ability to get things done.

We cannot completely discount all of the effective things done by the Democrats while they have held control of the Federal administration. We must particularly give them credit for some of the social reforms which they have fostered. These changes have raised the standard of living of the common man. But whatever the Democrats have provided on this score in the past, their program now seems to have reached a dead-end street.

The present administration has bogged down at the end of a blind alley because of its "do nothing" policy of coasting. There is only one way to coast—down hill. The administration is relying on time, instead of action, to work out the many complicated and crucial problems confronting us.

But we can't criticize unless we can offer something better. We can't find the solutions unless we analyze the problems.

What are those problems, and what are the attitudes of the factions vitally affected by them? They are:

1. The international organization for permanent peace and our relations with the United Nations, particularly Britain, China, and Russia.

2. Domestic reconversion and industrial peace.

3. The continuation of social reforms.

Of course, it is fundamental and obvious that all nations of the world desire permanent peace and national security. There are no differences among nations in this desire.

But there are vast differences in the views of the various nations as to the manner and procedure. Unfortunately, it is this difference as to approach, rather than to the object itself, which has created and aroused

suspicions of the nations of each other as to each nation's real desire.

We want bases in the Pacific because we feel that peace in the Far East and the Pacific can best be guaranteed by us. Russia is suspicious of our desire for Pacific bases because to her it represents a potential threat to her national security rather than the best means of maintenance of peace in that area. Similarly Russia wants bases in the Mediterranean. England regards this as a threat to her life line. The occupation of Germany and Japan has aroused suspicion among the leading United Nations because of their differences of opinion as to the best way to keep Germany and Japan from threatening the world again.

The atomic bomb has created the greatest suspicion among nations. This is more graphically understood when one realizes that it is possible for any nation in this world to be subjected to an atomic bomb attack without knowing who the attacker might be. In such an atmosphere suspicion is almost inevitable.

Means to remove these suspicions cannot be developed overnight. The only way that we gain confidence in others is through knowing them better, knowing them as well as possible. True friendship cannot be obtained without association, without exchange of ideas and opinions, and, most important of all, without determining and appreciating the desires and living conditions of the other fellow—our world neighbors.

It will take time and great effort to learn what we need to know about our neighbors of the world. To obtain their friendship and to encourage closer association, we must also aid the people of other nations to learn about us.

Too often political discussions are motivated by irresponsible charges of one party against the other—of irresponsible accusations of communism or imperialism in derogative comparisons with other nations. This is not the desired approach. It is wholly ineffectual because the American public is too intelligent to be swayed by cries of "wolf, wolf" which they have heard too often. This approach is not only ineffectual, it perils mutual confidence and interest among the nations.

Any Republican who resorts to this irresponsible course does his party and Nation a disservice. It is not the way to make friends and influence people—it is not the way to get votes for the Republican Party.

Suspicion and selfishness equally threaten our domestic peace. This is most unfortunate when we are on the verge of a new world—a world of peace that offers a fuller and happier existence. I say we are on the verge of this new world because we have yet to reconvert our energies, capacities, and facilities from the wartime objective of destruction to the peacetime objective of construction.

While millions of Americans are pleading for homes, for automobiles, for household appliances, for clothing, for food, this Nation is afflicted with critical shortages of these items. It is ironic that such shortages exist when our potential civilian production is greater than it has ever been before.

During the war the production of food, clothing, housing, and transportation equipment for military purposes was the greatest the world has ever known. But with the war having ended nearly 6 months ago, we still have no promise of substantial civilian production of living necessities in the near future.

How does it happen that we have these shortages in this land of plenty? It is because, while World War II has been won and is ended, this Nation is in the grips of another war—domestic and industrial. What prompts this? Suspicion and inability of the warring groups to understand and to appreciate the desires and rights of each other.

Labor is suspicious of management—because of management's past history in exploiting labor to the fullest. Management is suspicious of labor because of labor's ever-increasing demands and refusal to accept responsibility. The public is suspicious of both because each demands greater monetary returns for which the public is called upon to sacrifice.

But labor, management, and the public have become suspicious of the Democratic administration because of its do-nothing attitude. It has exhibited a distressing lack of imagination and courage to meet the problems squarely.

Herein lies the great opportunity of the Republican Party to secure public confidence by supplying a specific and progressive program for the solution of differences between labor and management. We cannot win by merely accusing the administration of letting things coast along. We must offer something that is better and more specific.

This problem is similar to the experiences of the three great powers at London. You will recall that the foreign ministers of the United States, England, and Russia closed that meeting without tangible progress. Most observers considered it a complete failure, but their later meeting at Moscow brought about very definite results.

What accounts for this difference? Just this—the London meeting prepared the way for what happened at Moscow. The ministers got acquainted by talking frankly, often bluntly, with each other. They prepared themselves to do business when they should next meet. I am confident that the more these foreign ministers meet, the better they know each other, the sooner practical and working friendly relations will materialize.

Now what happened in the industrial war at home? A meeting of the "ministers" of labor and management was called by the President. Like the London Conference this labor-management get-together was a failure—no agreement resulted.

But can't we take a cue from the second meeting of the foreign ministers—the one they held at Moscow—the one that produced agreement? Because the first labor-management conference failed is not any reason we should give up such attempts.

I believe that the President should call a second labor-management conference or as many as are needed. The more they meet, the less their differences, the greater their understanding and agreement.

The Democratic Party has abandoned its number one program—social reform. It is true the President has urged the passage of legislation on such measures as the FEPC, full employment and unemployment compensation, but the controlling factor in the shelving, frustration, and defeat of these bills by Congress has not been the Republican Members. It has been the key and pivotal Democrats who, as chairmen and high-ranking members of committees handling these legislative matters, have opposed or encouraged opposition by their committees.

No, the criticism of Congress by the President in his message of January 3 was leveled against the members of his own party. It was an admission by its leader that the selfishness of warring factions within the Democratic Party had resulted in a sit-down strike by the reactionary Members. The President did a disservice to the liberal Members of Congress, Republican or Democrat, who have supported these particular measures of social reform.

Herein lies another opportunity for the Republican Party to accept a specific and a clear-cut leadership on a matter of vital importance to the common man. Our party can and should push through these measures of social reform. By so doing we will keep the faith of the people—a trust which the Democrats have broken. By so doing we will have proved ourselves by actual results instead of promises. By so doing we will have proved that it is now the Democratic Party that is controlled and plagued by reactionaries rather than the Republican Party. By so doing the Republican Party will have provided a leadership of imagination and initiative that rises above the level of ineffectual mediocrity.

It is my sincere belief that suspicion and lack of understanding are the greatest menaces to the solution of vital problems and issues of our country today. This is no time for careless criticism. This is no time for timidity. This is no time for selfishness. This is no time for suspicion.

This is a time for leadership, for imagination and initiative, for confidence, appreciation, and understanding of the position of the other fellow. This is the time to be specific—the time for courage to stand up and be counted. This is a time to be objective. Yes; we must know and understand each other.

The Democratic administration has revealed its ineptitude to meet these problems with courage and resourcefulness. In fact the record of the administration on critical domestic problems is admittedly a long list of failures. This admission is made by Democratic leaders with the excuse that their intentions have been good. We all know that the road to failure is paved with good intentions.

Unless the Republican Party can provide this leadership in a constructive, specific, and unselfish manner, there is little reason for optimism in the affairs of this Nation. The time for winning on the other fellow's mistakes and errors is over. Victory by default is hollow. This is a time for winning by performance, by performance that builds, progresses, and justifies confidence.

If we do this, the electorate will take the much-discussed reorganization of Congress into its own hands, it will return the control of the House to proved leaders, it will reorganize with Republicans.

Statehood for Hawaii Asked by San Francisco Chamber

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. FARRINGTON. Mr. Speaker, the board of directors of the San Francisco Chamber of Commerce adopted unanimously on January 31, the report of its world trade committee in approval of H. R. 3643, a bill to enable the people of Hawaii to form a constitution and State government to be admitted into the Union on an equal footing with the original States and passed the resolution which follows:

Whereas the people of the Territory of Hawaii have demonstrated beyond question their loyalty and patriotism to the United States;

Whereas they have expressed by majority vote their desire to assume the responsibility of statehood;

Whereas the policy of the United States Government is one of self-determination: that peoples be allowed to choose freely their own form of political status;

Whereas the Territory of Hawaii has attained the stature in every respect to qualify as a State; and

Whereas the Territory of Hawaii now meets the necessary requirements for statehood: Now, therefore, be it

Resolved, That the board of directors of the San Francisco Chamber of Commerce, after full study of the matter, recommend the approval of H. R. 3643 under which the Territory of Hawaii will become the forty-ninth State of the United States and it will form a constitution and State government to place it on an equal footing with the other States of the United States.

The Late Harry Hopkins

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. LECOMPTE. Mr. Speaker, the late Harry Hopkins, a dominant figure in the administration of the late President Franklin Delano Roosevelt, passed away very recently. While he was born at Sioux City, Iowa, he spent the formative years of his life at Grinnell, Iowa, and attended Grinnell College and never entirely severed all connection with Iowa. His father conducted a small-town, yet successful, harness shop or saddlery.

The late Harry Hopkins was perhaps closer to President Roosevelt than any other individual who was in any way connected with the administration and exerted a profound influence upon the policies of the administration. He was Secretary of Commerce, Administrator of WPA, adviser to the President in foreign relations, and, in fact, negotiated some of the agreements with foreign nations, and it appears that he was at all times at the President's right hand for aid and counsel.

I saw and was with Mr. Hopkins at Chicago in 1940 part of the time when he was the controlling figure of the Democratic National Convention when President Roosevelt was nominated for the Presidency a third time. My relations with Mr. Hopkins, while not intimate, were always cordial. I think he displayed at Chicago a technique that many great political leaders might envy and admire. He had complete control of that convention. During a most eventful period in the history of our Republic, Harry Hopkins had a big part.

A very fair estimate of this man appeared in the Grinnell (Iowa) Herald-Register, edited by A. L. Frisbie, a friend of many years who did not at all times agree with the Hopkins philosophy but, nevertheless, was prepared to make a fair estimate of Hopkins' contribution to our times.

Mr. Speaker, under unanimous consent to extend my remarks, I include an editorial from the Grinnell (Iowa) Herald-Register:

HARRY HOPKINS

There are many reactions in the public press as to the place which Harry L. Hopkins will hold in history, but that he will have a place in the history of these past troubled years no one will dispute.

As the confidant of the Nation's President he was entrusted with missions of the utmost delicacy and the general impression seems to be that he was worthy of the trust reposed in him.

The greatest criticism of Hopkins in public life seems to have arisen from the political angle. He was criticized for alleged WPA activities in connection with elections, which, however, he denied. He was blamed for participation in President Roosevelt's attempted purge of Senators who opposed him, which reacted a good deal like a boomerang. His handling of the political convention which nominated President Roosevelt for his third term was unpopular with many people.

These matters are mentioned as contrasting with some of his real accomplishments as the President's representative on various missions of international import.

No one questions the keenness of his mind and the sincerity of his devotion to his chief, in whose interests he gave up his health and went "the last long mile."

The white-hot vortex of Washington life in the hectic days preceding and during the war burned Harry Hopkins up and when the President died his life work was done.

Harry Hopkins will be remembered as the friend of the under dog. His sympathies and his efforts were for the underprivileged of this earth. This was his burning passion and whatever mistakes he may have made he never deviated from it.

He was not born here but he was a son of Grinnell and of Grinnell College, which shaped his life during its formative stages. He never forgot his early affection for the town which sent him out on his meteoric career. Grinnell people will not soon forget the incident when a distinguished reception committee, waiting to meet him at the train, came hurrying up the platform to find that Harry had gotten off the smoker and was chatting with his old friend Harley Harrington. The incident was typical of the man.

His college honored him, the Nation honored him, but through it all he was plain, wise-cracking Harry Hopkins and that is the way Grinnell will remember him; a man of great parts, a man of devotion, and for all that a very human sort of an individual.

Army and Navy Demobilization

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to Members of the House:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 19, 1946.

DEAR COLLEAGUE: Petition No. 19 which I filed last Friday pertains to H. R. 4729.

Briefly, this bill would compel the War and Navy Departments to discharge:

(a) All enlisted men with 35 points, regardless of age, marital status, number of dependents, or length of service.

(b) All who have received wounds for which they have been awarded the Purple Heart.

(c) All who have served as prisoners of war.

(d) Would give to all enlisted men the same terminal leave rights now possessed by only officers.

This legislation has been dubbed by the GI himself as their "junior GI bill of rights." It has been heartily endorsed and unanimously approved by every serviceman with whom I have talked, both overseas and in the States.

The reduction to 35 points should bring the total Army to approximately 1,500,000—the ultimate goal of the War Department for policing and reserves.

Since the GI was "lawed" into the Army, he feels that now, since the fighting is over, Congress should "law" him out, thereby ending all of the doubt, confusion, and promises.

As a former serviceman of World War II, I urge you to sign petition No. 19. "Let us put up—or shut up."

"The war is over, Congress,
That I shall repeat;
Grab the reins from the brass,
Climb in the driver's seat."

Yours for prompt action, I am
Sincerely,

FRANK L. CHELF,
Member of Congress.

Housing Shortage in Chicago

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of Tuesday, February 5, 1946:

THESE PEOPLE NEED HELP

Some weeks ago, the Daily News and three other Chicago newspapers published a questionnaire that readers in need of living quarters were invited to fill out and return.

Statistics rarely stir the emotions, but the tabulation of these questionnaires should make strong men weep—and maybe fight.

Few of those who wanted to move stated a single reason for their desire. On the average, they had 3 complaints with their present situation, and 1 family had 11.

According to the summary prepared by the Metropolitan Housing Council:

"The inference seems to be warranted that people will quite generally put up with, say, the absence of running water or heating facilities—but not when these have to be tolerated in the same situation with a condemned building, overcrowding, danger from rats, and the requirements of several small children."

That is a mouthful for the two-thirds of us, presumably well-housed, to ponder.

One-third of the 3,600 families who answered the questionnaire had to share bathroom facilities, often with more than one family, and in one case with five other families.

More than one-third presented the problem of two or more families sleeping in the same room.

About a sixth had no inside toilet facilities, or were compelled to share them with one or more other families.

A fourth listed one or more of the following difficulties:

No running water, no cooking facilities, no heating facilities, building condemned, sleeping rooms without outside light or ventilation.

Such were the conditions among the 3,600 who took the trouble to fill out these questionnaires and send them in. There was no inducement for them to do so except to make better known the conditions under which some people are obliged to live in the metropolis of the Midwest.

What do they want? Five-sixths want three rooms, four rooms, or five rooms. Many would take anything.

Three-fourths would pay between $45 and $55 a month; of the remainder, the greater part would pay more than $55. Ninety percent preferred renting to buying or building. Few want to build, perhaps because they do not believe it is now practical.

These 3,600 families are only a sample of a group many, many times larger, with similar needs and similar desires.

To supply their basic needs should not only be the desire but the determination of every public official, of every citizen, so placed that he can do any of the many things needed to get building, public and private, started in Chicago.

Most Portland Landlords Obey Rules, Survey Shows

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. ANGELL. Mr. Speaker, there recently appeared in a national publication an attack upon landlords which would lead one to believe that landlords as a class are predatory animals seeking only to gouge their tenants. I am glad to report that this characteristic does not apply to the landlords in my congressional district. Mr. E. B. McCutchan, Portland district OPA rent director, who has been in charge of that department in my district and who recently retired, reported upon the operations of his department which show Portland landlords, with minor exceptions, obey the rules of OPA. I include as part of these remarks an article appearing in the Oregon Journal under date of January 27, which shows how the landlords of my district cooperate in keeping rentals at a fair level. Unfortunately, a good many of the landlords in this area have been unjustly treated under the operations of the rent-control program and many of them have been compelled to rent their living units at a rental far below an amount that will permit them to maintain their properties and receive a modest return on their investment. Many of them have had to forego making repairs and improving their properties by reason of the small income which will not permit these expenditures. There should be a modification of rent controls so as to require the rent-control director to adjust cases where rents are too low, placing the income on a level with rentals received for like properties in the area and also permitting the owners to charge a fair and reasonable rental which would give them some return on their investment after meeting costs of maintenance and repairs. The article to which I refer is as follows:

TENANT TROUBLES CHECKED—MOST PORTLAND LANDLORDS OBEY RULES, SURVEY SHOWS

Are residential landlords waiting patiently in dark corners to gobble up prospective tenants?

It seems that around the Nation there is growing publicity revealing nefarious schemes concocted for squeezing a little extra from pocketbooks of homeseekers, large numbers of whom are returning veterans.

What about the landlords of Portland? That question is a quick way to start a flowing conversation.

E. B. McCutchan, Portland district OPA rent director, knows the score and points out, however, that the stories about attempts to beat rent ceilings spread like wildfire while the majority of landlords in Portland, who are following the rules, are forced to share the criticism more or less unfairly.

"Portland, as a whole, is the most fortunate major city on the Pacific Coast. Landlords have called no strikes or mass demonstrations against price ceilings and, as a whole, are obeying the law.

"The rotten apples that a first glance make the box look bad are mainly the new, wartime landlords who haven't absorbed ethics of the industry and want to make a killing," he explains. "We've had excellent backing of the Portland Realty Board, Apartment Owners' Association, and similar organized groups."

The pat on the back for landlords in Portland does not, however, whitewash the minority who seem to have irritated not a few local householders as landlords have in other cities.

In some instances new tenants have been required to pay from 6 months to a year in advance—but they ultimately received their money's worth except for what it may have cost to borrow the cash.

In a few cases, so-called security deposits have been as high as $150 to $200 and, for some reason, were entirely eaten up by alleged damages.

In other instances, where varying rates have been charged for the number of occupants, tenants have paid for four occupants when there were only two in the family. The tenant shared the blame for this type of overcharge in many cases by suddenly increasing the number in his family to get a little extra space.

Another landlord decided to add $15 to the rent for laundry service, but investigation showed the service was in another building.

The bulk of complaints now, OPA advises, are not from large apartment units but from single family dwellings where tenants were willing to pay above ceiling during the war. Now they wish to save money.

Evictions are for nonpayment of rent in more than half of all cases aside from house sales. The less desirable types of housing are becoming more available and bring fewer complaints.

It seems to add up to a fairly complimentary picture for Portland's landlords. Most have been following price ceilings, although costs of maintenance have risen at least 30 percent in most instances, according to the record.

Another catch is found in many major cities. Tenants advertise $150, even $250, reward to anyone who can find them an apartment. This reward naturally goes to the landlord who takes the highest bidder. Portland newspapers have not run such ads and the reward game has not flourished here, OPA says

At one time more than a year ago a series of advertisements did appear, telling of furniture to be sold to the prospective renter. This is an excellent racket in some cities.

An OPA investigator followed up the advertisements and discovered that in each case it was the tenant, not the landlord, who wished to sell furniture before moving. Portland was declared clean and pure on this one.

So it seems Portland landlords, as a whole, are an honest group, even though they violently protest ceilings, and are hewing in general to the letter of the law. Such is the opinion of OPA, which should know.

H. R. 4908

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. LUDLOW. Mr. Speaker, the Case bill, in my opinion, is a punitive antilabor bill. I will not support a bill that is anti on one side. I am for both management and labor. I want to help both and I will not approve a punitive antilabor bill, any more than I will support a punitive antimanagement bill. I had hoped that out of the long discussion would come a bill like the Voorhis amendment which was fair to both sides and to the public, but that was not to be.

A bill was forced through that had absolutely no committee consideration, which no members had ever seen and copies of which were not available when it was catapulted into the House by the Rules Committee. No one knew when it was introduced, its far-reaching meaning and implications, but the combination that wrote it and subsequently put it through the House was satisfied that it was a drastic antilabor measure. In the confusion and hasty consideration on the floor amendments have been added which make it more of a mystery than ever.

This certainly is no way to legislate. The bill should have been recommitted to the committee for hearings and normal committee consideration. The passage of this bill is reminiscent of the way the Smith-Connally bill was railroaded through the House by the same antilabor combination. The judgment of those of us who opposed the Smith-Connally bill was vindicated when both management and the public turned against it and demanded its repeal. Even its author repudiated it and asked that it be wiped off of the books.

What is needed in these trying and difficult times is legislation, fair to both sides and to the public, that will bring peace and cooperation in the relations between management and labor. The Case bill only adds to the strife. It illustrates what we always may expect when we legislate by impulse instead of by reason.

As an addendum to my remarks I present an editorial which appeared in the Washington Daily News on January 31 last and which seems to me to be a shining example of sound reasoning and common sense, as follows:

LOOK BEFORE YOU LEGISLATE

Congress, we say once more, is not prepared to pass a law that will do what the Wagner Act promised and has monumentally failed to do, namely "to diminish the causes of labor disputes."

Being unprepared and in a time of crisis, Congress is under pressure to pass hot and hasty legislation that could make bad matters worse.

Before the House today goes a watered-down version of President Truman's fact-finding bill. As a substitute for it, the Rules Committee has held the House may consider an entirely new bill introduced only 2 days

ago by Representative FRANCIS CASE, of South Dakota.

Some proposals in the Case bill may have merit. Others, in our opinion, are unfair and dangerous to labor. There have been no committee hearings on the Case bill. Citizens who oppose it have had no opportunity to state their objections. It cannot be perfected, or adequately considered, in a few days of limited debate on the floor of the House.

We believe the House should reject the Case bill. We doubt that passage of the President's fact-finding bill would do any real good in the present strike crisis. And there is grave danger that passage of ineffective, half-baked legislation now would delay or prevent the preparation of sound, fair, and effective legislation.

The present strike crisis may pass soon. We hope it will. But there will be other crises, without end, until Congress does its duty carefully and properly.

The first step should be a thoughtful study of the reasons why the Wagner Act has failed to keep its promise. Next, there should be thorough hearings on the Hatch-Ball-Burton bill, and all other responsible proposals for industrial peace, advocates and opponents being given full opportunity to be heard.

Then at last Congress would be prepared to legislate—to protect the legitimate rights of both labor and management, to protect the public against abuses of power by either, and to establish conditions under which collective bargaining can work without breaking down into civil warfare.

Terror Grips Red-Ridden East Germany

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. KNUTSON. Mr. Speaker, under permission granted I desire to insert in the RECORD an item from the Catholic News, of January 19, 1946, which has been called to my attention.

I believe that our Government is making a serious mistake in condoning acts of terrorism, even though they be committed by an ally. Personally, I cannot see any difference between such acts when committed by an ally and when committed by an enemy. In the final analysis they are exactly on the same level and should be treated alike.

As various facts come to light the American people are becoming increasingly distrustful of the Truman administration's policy of appeasement. We have surrendered to Russia on every point and at every conference. Perhaps it would be well if we stopped further conferences and become a little more realistic. A blood-thirsty tiger cannot be successfully appeased for any length of time.

The Truman administration would do well to remember that we have certain obligations to the vanquished foe and these obligations are not being observed.

The American people cannot understand why this Government should longer refuse to permit shipments of relief packages to the American zones in occupied Europe. Britain permits such shipments but the United States and Russia do not. Nor will this Government permit resumption of full mail service. Can it be that matters are so serious over there that it is not advisable to allow free exchange of news and views?

Can it be that the American policy in occupied Europe is designed to drive the German people to despair and ultimately into the arms of communism? I cannot see any other result and there can be none other.

The article from the Catholic News follows:

TERROR GRIPS RED-RIDDEN EAST GERMANY—NUMEROUS MURDERS, COUNTLESS OUTRAGES AGAINST WOMEN REPORTED THERE

AMSTERDAM.—New reports reaching here from the Russian-occupied zone of eastern Germany give further details of the regime of violence, death, hunger, murder, and rape that has changed a formerly prosperous area into a desert. Among the victims are many priests and ministers.

While the Russian front-line troops, the reports say, maintained a certain degree of discipline and refrained from the worst excesses, the occupation troops that followed "fell upon the land like wild beasts," killing untold numbers of defenseless citizens. Homesteads were plundered and those articles that could not be carried away were ruthlessly destroyed.

Although Stalin is said to have given orders forbidding any violence against priests and ministers, 62 priests are reported to have been murdered in the archdiocese of Breslau alone. Two older nuns were killed when they tried to shield younger sisters from the violence of Russian soldiers. In some villages, the reports say, not one woman, down to 12-year-old girls, escaped being ravaged.

The remaining peasants now receive some food after they have worked all day under a guard of Russian soldiers. Most of the farm implements have been carried away. In the larger communities there is a severe lack of food, particularly milk for children. Only in some isolated instances were Russian soldiers ready to furnish milk from their ample rations for starving children. Last fall it was estimated that of 100 new-born children in the city of Breslau 99 later died from lack of milk.

One Thousand Two Hundred Veterans at GWU Fail To Get Allowances

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose the following news item from the Washington Evening Star of February 6, 1946:

ONE THOUSAND TWO HUNDRED VETERANS AT GWU FAIL TO GET ALLOWANCES

At least 1,200 of George Washington University's 1,400 veteran students who entered classes this month have failed to receive their certificate of entitlement for allowances from the Veterans' Administration, according to Dr. Michael Dreese, of the university.

He said a few of the 50 veterans who dropped out of classes last year did so because they were unable to obtain their allowances permitted under the GI bill of rights.

Students who have not yet received their certificate of entitlement will be unable to collect their stipends for at least 30 days after it has been received.

Col. Thomas Rives, of the Veterans' Administration, has been invited to address the university's 1,800 veteran students tomorrow at 9 p. m. The meeting will be held either in the School of Government Building or the auditorium.

National Union for Maritime Workers

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. PATTERSON. Mr. Speaker, we have heard speech after speech on the floor of Congress and have had editorials in our newspapers discussing the need for labor unity. Yesterday in the city of Washington, a historic conference was concluded, at which time 7 maritime unions representing 200,000 seamen, licensed officers, longshoremen, and harbor workers concluded a 3-day meeting with unanimous agreement on steps leading to the formation of one national union for maritime workers.

The seven unions united in a call to a convention to be held in San Francisco, beginning on May 6, and their proposed program would establish a national organization empowered to promote national agreements, complete the full organization of the industry, coordinate economic action, and in other ways to work for the greatest unity among the member unions, which include: The American Communications Association, CIO; the Inland Boatmen's Union, CIO; International Longshoremen's and Warehousemen's Union, CIO; National Union of Marine Cooks and Stewards, CIO; National Marine Engineers Beneficial Association, CIO; Marine Firemen, Oilers, Watertenders, and Wipers Association, unaffiliated; and the National Maritime Union, CIO. Invitations are being extended to other unions as well, and at the convention the name and structure of the new organization will be decided upon, subject to ratification by the membership of the respective unions.

I think this is an encouraging portent of growing unity and cooperation in the house of labor, and as such is to be highly commended.

Lincoln Day Address of Hon. Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of

Hon. JOSEPH W. MARTIN, Jr., minority leader, House of Representatives, at the annual Lincoln Day banquet of the Republican Members of the House and the Women's Republican Club of the District of Columbia, Statler Hotel, Washington, D. C., Thursday evening, February 7, 1946:

Ladies and gentlemen, in behalf of the committee on arrangements I extend a cordial welcome to our many guests.

In meeting here to again pay tribute to Abraham Lincoln, we are particularly pleased to have as our principal speaker this evening the distinguished Governor of Pennsylvania, a man who in both war and peace has performed outstanding services for our country. He is one upo whom we are depending, in a large measure, to help bring about the restoration of this Nation to peace and prosperity through the election of a Republican Congress.

Governor Martin, we are very pleased that you have consented to come here and bring a message which will go to all Republicans throughout the entire United States.

Nineteen hundred and forty-six is a critical year for America. This is a year of decision in which we face the broadest questions of political philosophy, economic, and human problems of the most crucial importance. W must make far-reaching decisions in world affairs. We must establish principles of cooperatio.. We must find new solutions to old problems—which take on new significance and new meaning against the background of scientific achievement, and the foreshadows of a compelling and complicated future.

His contemporaries aptly describe Abraham Lincoln in two words: "Honest Abe." The guiding spirit of the Republican Party was a man famous for integrity.

So new and so vastly different are the prospects of the future, we must approach all decisions with clear policies and honest purpose. With a new devotion, we must determine that government of the people, by the people, and for the people shall again make America strong.

Every American citizen wants to turn away from the violences of war and face forward to the rewards of peace. Americans seek a fresh hope and a new opportunity for a richer, fuller life in the years that lie ahead. This is what America wants.

This is what America wants, but what is America getting?

America but recently stood at the pinnacle of world prestige and moral leadership. Our foreign policy, unstable as a weather vane, shifting with every political wind, has lost us the trust and confidence of other nations. Our pledged word to the small nations has been broken. Secret agreements, just now being revealed, have bartered away the rights and freedoms of helpless peoples. Thus, as a result, we see evidence on every hand of distrust and ill will in place of the faith and friendship which should have been ours. What has America done to its heritage of world-wide good will? Are we to lose even this last gift of America's fallen sons?

No longer do the oppressed people of Poland, Rumania, Estonia, Finland, Java, or Korea look to America for comfort in their age-long struggles for freedom.

We have poured vast wealth into South America to unite in a common bond of brotherhood all the peoples of the two American continents. Yet by meddling in their elections and by assuming the right to dictate to these nations in their internal affairs we have lost much of their good will. Distrust is our portion today in South America.

We Republicans have hoped for a foreign policy that would be sound and permanent. We wanted a policy that would be a permanent American policy, just as the British have a policy which goes on, though governments change; just as the Russians have had a policy which continued even after a Communist government replaced the czars. Nevertheless, constructive foreign policy has not emerged, and it cannot take shape until it is fashioned in the bright light of informed public opinion out of the pure American love of freedom and fair dealing. The American people will rally to worthy causes and objectives, but they want to make these great decisions as an informed people; they want to know all the facts, and not just the facts the self-annointed statesmen wish to divulge.

Now what about the situation at home? What confronts the returning serviceman? He wants a job. But he cannot have it because the country is divided in a bitter industrial battle. Great numbers of our people are out on strike and their absence from the workshops causes millions of others to lose employment.

What has the administration leadership done to relieve this dangerous condition? They have adopted policies which open the breach still wider. Merely as a sop to public opinion, the President recommended a fact-finding bill which practically everybody admits would contribute nothing to the solution.

Failure of the OPA to meet the situation realistically has deprived consumers of necessities; it has deprived workers of jobs and stifled the production vitally essential to defeat of inflation and the black markets.

As a result, when the serviceman wants a suit of clothes, he has to take what he can find, or go without. He wants a white shirt for $3. He has to take a sport shirt for $7. He cannot find a home for himself and his wife and perhaps a growing family with whom he is reunited after 4 long years. No houses to rent. No materials to build. And the price of houses goes sky-high.

He wants to buy surplus property from the Government. He is met by confusion and evasion. There are plenty of goods to be sold to speculators, but too few for deserving veterans. No wonder he is aroused. No wonder he demands a better deal. He, my friends, is America's future, and the future will not be and must not be denied.

Nearly 6 months have elapsed and we still talk about reconversion plans. Snarled in bureaucratic red tape are plans for business activity which wait only for a "go ahead" signal to put people to work to provide the essentials of life for all. Yet the bureaucrats fiddle while the people burn.

The administration talks about balancing the budget. Just sounding brass and tinkling cymbals. Their only proposal is to suggest more billions of dollars of new expenditures. So they continue on their spending—rolling up bills—bills which must be paid some day; paid, as a New Deal candidate for President once admitted, "by the sweat of all who labor."

The deadly poison of bureaucratic waste, irresponsible spending, deficit financing, and deceitful political expediency is pulsing in every vein and artery of the Nation's economy. It can be eliminated only through the election of Members of Congress who can and will purge our Nation of the deadly virus. America is beginning to see this truth; that is why the election of Republicans to Congress is first on the "must" list of millions.

Speaking of "must" lists. I am sure you have not overlooked the efforts to bring back the "good old days" of the New Deal when the White House clique ran things with a high hand.

Mr. Hannegan, who devotes some of his spare time to the job of Postmaster General, is reported to have called upon Bob Nathan, Ed Pritchard, Dave Niles, Leon Henderson, and others of the old palace guard to reestablish the old blackjack technique of bringing pressure upon Congress. He has set up a special group in the House to fight for political "must" legislation. Turn that one over in your mind. Hannegan's action is an attack upon the Democratic Congress by the man who is head of the Democratic national organization.

We have had 13 years of the New Deal. Their theme song today is the same as it was in 1932. The New Dealers still fight shadows of the past. They must talk of the past. They dare not face the facts of the present. They dare not ask for popular support on their record of achievements; that record is too bad, and the Nation knows it. Thirteen years! Certainly that is enough time for any party to make good. Thirteen years, and what do we find? Chaos in foreign policy; everybody suspicious and uncertain as to where we are going. At home, confusion in Washington, strife in industry, fear everywhere. The national debt approaching three hundred billions, and a contingent debt of three hundred billions more. Three hundred billions of national debt means a mortgage of more than $2,000 on every man, woman, and child in the United States, or a debt load of $8,000 on the average American family.

Experts have figured out that under the administration's budget, the Government will spend $130,000,000 every day in the fiscal year of 1947. That means for the wage earner with a wife and two children, that means for the farmer with a wife and two children, that the administration is going to spend $4 every day for each family—$4 a day of the workingman's wage—$4 a day of the farmer's income. How long do you think we can stand that?

Within the last few weeks the Nation has been shocked to its depths by the revelations of secret agreements of which it had not the slightest hint, but which it had been assured by administration spokesmen did not exist. You remember those solemn and reassuring words we were given that "there are no secret agreements." Now we are asked to make good on promises which even the Secretary of State says he did not know about.

The dangers of secret diplomacy and veiled government and deals in the dark diplomatic closets are not new. They have been the tools of oppression for centuries, and the administration, in pursuing these practices in government, is following in the pathways of the most dangerous despotisms of the past. Let me read to you what one philosopher of the seventeenth century wrote, then ponder a moment and see if it might not have been written in 1946, in the United States of America. Listen:

"It has been the one song of those who thirst after absolute power that the interest of the state requires that its affairs should be conducted in secret. But the more such arguments disguise themselves under the mask of public welfare, the more oppressive is the slavery to which they will lead. Better that right councils be known to enemies than that the evil secrets of tyrants should be concealed from the citizen. They who can treat secretly of the affairs of a nation have it absolutely under their authority; and as they plot against the enemy in time of war, so do they against the citizens in time of peace."

Now think of Yalta.

We have learned enough about the secret agreements at the Yalta Conference to feel certain it was a tragic blunder for the United States.

Apparently the most vital and far-reaching promises involving the interests of the American people were secretly given at Yalta. America has the right to know now what they were. All of them.

We stand before the portals of a new era. We must enter it at least knowing the problems and the decisions lying before us. We must have this knowledge and make these decisions as a united people. Otherwise our

fate may be decided for us by force. If the decisions of a nation are made by the leaders of a nation in secret, there is no alternative to the will of the people but coercion.

The months that lie immediately ahead will invoke decisions of the most fundamental character.

What kind of an America are we going to have? Shall it be an America in which individual opportunity will continue to exist alike for all? Shall it be an America in which freedom shall flourish, freedom of speech; freedom of radio; freedom of press? Shall we continue to have the two most precious freedoms of all—freedom of religion and freedom of education? Shall this be our beloved America of the future? Or will we live in an America in which we shall be regimented; an America controlled by Federal bureaucrats from Washington; an America in which individual opportunity shall have vanished; an America bound in the chains of some form of communism, fascism, or state socialism? These questions, my friends, concern every man, woman, and child on this continent. They concern, also, the peoples of other nations who look to America as their torch of life and guidance to a better day and a better life. Those questions will be answered in the elections next November.

The pattern is already set. We know precisely what kind of administration we will have if the New Deal persists in control of the Congress of the United States. We will have the same crushing bureaucracy, arrogance, and waste; the same deceit and double talk; the same weasel words and trick phrases; the same distortion and weird constructions of law; the same kind of secret government at home and secret diplomacy abroad that we have suffered under for these 12 and more long years.

As Lincoln had a supreme faith in the wisdom and common sense of an informed people, so do I have supreme faith in the wisdom and common sense of an informed electorate; but the very first requirement for an informed electorate is an honest, candid, frank administration that is willing to tell the people the truth, and the whole truth, about their domestic affairs and their foreign commitments. I believe the American people know now that the only way to get at that truth is to open the dark halls of this administration, to let the light into the nooks and crannies of bureaucratic intrigue and manipulations, to turn the wholesome light of publicity upon the New Deal in its conduct of our foreign relations. The only hope is to elect an honest, courageous, and intelligent Republican Congress.

I pledge you this, if a Republican Congress is given the responsibility next November, the American people will know the facts about their Government at home and their commitments abroad; they will know what burdens we have assumed in world affairs, what burdens we must assume, and what promises or contracts have been made in their name without their knowledge or consent.

It is eminently fitting that this fight to preserve American freedom should be turned over to the Republican Party, because our party was born to fight for freedom. It has always been the party of freedom. Today, as we honor the memory of our immortal founder, let us take new resolve to rededicate our party to the fight for freedom, not only for the people of our own land but for the people of every land.

How can anyone think of Lincoln without naturally thinking of the Negro race which he liberated. More than 15,000,000 people in our population are of the colored race. In the struggle to maintain free American government, we know the colored race will prove its courage, its valor, and its patriotism. Some of the outstanding heroes of our wars against aggression and oppression are men of the colored race. We have not forgotten such heroic deeds as that of Mess Attendant Charles Jackson French, who swam under shell fire for 2 hours through heavy seas towing a raft on which were huddled his wounded white comrades. He richly deserves a high Navy decoration for his heroism. The Negro race has every reason to be proud of its men and women who have distinguished themselves in war and peace. No race has been more loyal to America than the Negro—from the day Crispus Attucks fell fighting for freedom on the streets of Boston to this good hour. Of course, the Republican Party intends to aid the colored people in attaining complete freedom of opportunity. They are entitled to the right to work as is every other American, without being blocked by any artificial barriers. They have won that right by their loyalty and service to their country. Freedom to work must be preserved as the right of every American, be he white, colored, be he Protestant, Catholic, or Jew. There must be no privileged groups in America if we are to achieve the full promise of our destiny.

Freedom is the concern of the big man and the little man; it is the concern of the rich and the poor; it is the concern of the powerful and the weak. Lincoln wisely said that America cannot long endure half slave and half free, and such slavery can just as surely wreck America if it is political slavery as it can if it is economic slavery.

While the New Deal political monopoly throttles big business, it at the same time is suffocating little business.

Make no mistake, my fellow Republicans, the very foundation of American business is in the small community industries locally owned, locally managed, employing home people. Yet thousands of these small community businesses have withered and died under the New Deal, and thousands more of them are threatened with strangulation today. They have suffered more under the New Deal regulations than the big industries.

I warn you that you can no more wipe out or impair the Nation's small business without wrecking our economy and bringing ruin upon us than you could wipe out the farmers of America and find food and fiber for our necessities in untilled acres given over to weeds and desolation. There is a liberty that is necessary to business and to agriculture just as surely as there is a liberty that is necessary to the happiness of individuals. And the price of that liberty for business and for farm is, as the price of individual liberty, eternal vigilance. The portents before us today are too plain and too strong to be ignored. The trend toward communism on the one hand and fascism on the other must be met and turned back. The channels of free government, free economy, and free society must be reopened by a Republican Congress determined to clean out the rubbish of regimentation and bureaucratic red tape.

There is something very significant about the fact that over the last 13 years of its domination of American government, the New Deal has criticized large incomes, yet has constantly and consistently beer graduating its bureaucrats into twenty-five, fifty, and seventy-five thousand dollar-a-year jobs. There is always a New Dealer around when the plums fall. Curious, isn't it, that a party which says it is for the common man should find so many favors in the group it was supposed to fight.

In this forthcoming campaign we will see tempting subsidies and handouts, which have to be paid for by the people in heavy taxes, offered to maintain bureaucratic control of the Government. We must all be on guard against the wiles of the bureaucrat who would buy continuance of office by handouts of the taxpayers' money.

The cornerstone of freedom is equal justice. If equal justice under the law is reestablished in America it will be done only by the Republican Party through a Republican Congress. If we are to have officials who will construe the law and who will administer the law according to its plain intent, we must have a Republican Congress to see that it is done.

Both workingmen and employers have their just rights and those rights must be fully protected. No just right of any citizen or of any group of citizens can be preserved or served by the violation of the just rights of any other citizen or group of citizens.

One of the crying evils in America today is the broad shift from statutory to administrative regulations which are given the force of law. So long as the laws for the government of the people are made by Congress the people's liberties are safe. When bureaucrats, never standing for election to office, but hiding far back in the recesses of government, can issue administrative orders having the force of law, then the people's liberties are in danger. Government under laws enacted by the people's Representatives in Congress assembled is a government of, by, and for the people. A government operated by administrative orders where bureaus and commissions can be prosecutor, judge, and jury, is government of, by, and for the bureaucrats and their privileged friends.

The Republican Party today needs 27 additional Members to control the House of Representatives. We ask the people of America to send us these reinforcements. If they do, we guarantee that the way of life which has made this Nation the greatest economic power of all time shall be preserved. If they do, we guarantee to the people of America that communism, fascism, or any other form of state socialism will not flourish here.

We ask the American people to guarantee the continuance of American principles through the election of a Republican Congress. If the people give that guaranty, we will then enter upon an era of progress, prosperity, and hope that will bring a better and happier life to all Americans everywhere. The great American ideal—government by consent of the governed—shall once more light the way of men, and direct the genius of a great people to a rich and enduring peace.

Demobilization of the Armed Forces

EXTENSION OF REMARKS
OF
HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks, I include a letter written to the editor of the Stars and Stripes by two Purple Heart wearers, one of whom is a constituent of mine:

JANUARY 7, 1946.

To the EDITOR: In your paper, dated January 6, the editorial gave Lt. Gen. Lawton Collins' statement concerning the slowdown of demobilization. According to him, "troop requirements overseas during the first half of 1946 will exceed the rate at which the Army is capable of maintaining troops through replacements." This is, in our opinion, a feeble excuse for the number of men being sent overseas to relieve veterans. During the course of the war the draft boards managed to keep the "repple depples" well stocked with men to fill the gaps left by our wounded and killed. Perhaps you at home have the idea that since hostilities have ceased, there is no longer any necessity for speeding the return of the men who were sent over to represent the United States in total war. In

other words, since we are already here, it's not going to hurt us to remain a little longer than was at first thought necessary.

To go further, General Collins stated that the number of men still overseas who heard a short fired in this war is not very great. In our company at present—a line company—there are 130 men; of these only six have not seen combat. Perhaps the general had better go further than the Pentagon Building for his data before making statements to the press.

Both of the undersigned have been in the Army for 31 months, 15 of which have, and are being, served overseas in the Infantry. It is simple mathematics to determine the number of months combat each of us saw. This is not an isolated case; at least 10 percent of the men in infantry companies overseas are in the proverbial rowboat with us.

Both of the undersigned were in college at the time our greetings came, in fact we had only turned 18, 3 months previous to our induction. We both went into ASTP where we remained until the Army broke the promises made us. At this time, March 4, 1944, ASTP closed its doors on 90,000 of us, and we went into the Infantry. From then on it has been one hard road for which we have no complaints—we had company.

Let it be understood that this letter is not intended to bring sympathy. We are both proud of the fact that we shared in the glory of the Queen of Battle. Rather, let it be understood that the vicious propaganda being fed to you—the public—by the War Department is as much a crime as was the literary food fed by Goebbles, Inc., to the people of Germany.

In closing we want to say that it is our fervent hope that you at home will bring pressure to bear where it will help most. Stop believing the War Department when it says that there are no more combat troops over here. It's all unmitigated lies.

TWO PURPLE HEART WEARERS,
Company C, Forty-seventh Infantry.
DACHAU, GERMANY.

Effective Price Control

EXTENSION OF REMARKS
OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Leo Goodman, secretary, CIO cost-of-living committee before House Postwar Planning Committee, December 14, 1945, and Senate Small Business Committee, December 19, 1945:

FOR EFFECTIVE PRICE CONTROL

The CIO is very glad to have this chance to appear before your committee to urge the maintenance of price control and to point out some of the things that must be done if price control is to be of maximum service to this country.

It is generally known that labor is very much concerned about price control. It is not generally known that the CIO has had a committee working on price control since the middle of June 1943. This committee, of which I have the privilige of being Secretary, consists of six representatives of CIO international unions. In the last three and a half years, we have participated in frequent discussion of OPA price and rationing policies, and have studied carefully the regulations issued by OPA.

We have approached the problem of effective price control with the idea in mind that this agency has two responsibilities to the people of America:

1. To hold down the cost of living.

2. To maintain those price and cost relationships which will be conducive to prosperity and full employment when the war and the reconversion period are over.

BUSINESS CHARGES AGAINST OPA

We have observed the clamor from business and industry groups against price control as such, and against specific actions taken by OPA. Most of these groups have declared that OPA regulations were hampering or wrecking business because they either limit profits drastically, or eliminate them altogether. There may have been some few instances where OPA regulations were unnecessarily severe on business. But in most cases, the reports of industry earnings which are issued by governmental agencies, as well as by private research organizations, completely refute these charges.

The figures show that under price control there has been very generous profits both for big and little business, and for practically every type of business operation.

I am at a loss to know how much time to give to these figures in this statement because they have been presented to Congress on so many occasions, and they have been publicized widely. However, they are actually not common knowledge, primarily because of the determination of business groups to discredit the figures and to becloud the issues.

Last June, the CIO discussed these figures with the Banking and Currency Committee of both the House and the Senate. At about the same time, Mr. Bowles released some of these figures to the public and commented as follows: "Average profits, industry by industry, range from earnings, by a bare handful, only slightly in excess of industries' prewar profits to earnings 10 and 12 times what was realized by the industries before the war.

"For corporations of all sizes in all fields, Department of Commerce studies show profits before taxes in 1943 were about two and one-half times greater than in prewar 1939. Even after the payment of high wartime taxes, 1943 earnings were more than double earnings after taxes in 1939.

"In 1944, profits before taxes continued to rise above the record-breaking 1943 level. And earnings after taxes in 1944 were about the same as in 1943, despite the increased tax rates."

I want to emphasize that these high profits have prevailed in industry after industry which have, nevertheless, appeared before OPA and before Congress to shed the bitter tears of poverty and plead for even higher profits.

Now that the war is over, the story has changed a little bit. The plea for price increases is being made now, not so much on the basis that present prices are too low for present costs. Instead, industries are arguing that prices must be increased to anticipate cost increases which may take place in the future.

An example of this kind of an increase is the one currently being made for shoes at the manufacturing level. A survey made by the OPA in response to a request by shoe manufacturers showed that the 1945 rate of profit on civilian shoe sales is 8.16 percent. The rate of profit which would be needed in 1946 to satisfy the industry earnings standard would be only 2.9 percent. Nevertheless, OPA has already announced that the shoe industry will be given a price increase, effective around the first of the year, of 4.5 percent.

This increase to an admittedly highly profitable industry was made because the industry may make certain changes in styling in the months ahead and may incur certain costs in making those changes, and these costs may reduce profits below the prewar profits earned by the manufacturers as a group.

The industry people have advanced, as another argument in favor of this price increase, the fact that they are now going to be able to resume the use of the higher quality materials which were denied them during the war. These higher quality materials cost more, they contend, and therefore the price should be raised now that they are again available.

The fact that these higher quality materials are available is absolutely no guaranty that they will be used. The deterioration in shoe quality during the war has been notorious. I see no reason for assuming that the shoe industry will hasten to replace the low-quality materials with higher-quality materials without some pressure from Government. Where this pressure is to come from I am unable to see.

However, the whole argument over the cost of materials falls of its own weight when it is remembered that OPA raised the ceiling on shoes when the industry began substituting the low quality materials on the grounds that these were more expensive than the usual materials used by the industry. It seems queer price control to raise the ceiling when the industry goes to wartime materials, and to raise it again when the industry returns to its original materials.

Business Week of December 8, 1945, reports that manufacturers of low-priced shoes felt glum about the 4.5 percent increase that OPA has announced because they feel they need a 10-percent increase instead of the 4.5 percent given them. But, the magazine continues, privately they admit they have cause for satisfaction.

It cannot be that OPA doesn't know these things about this price action. As a matter of fact, representatives of the CIO spread these facts before the OPA price people, and the decision to make the increase was made in full knowledge of the facts. Why then was the increase made?

I am not in the confidence of the OPA, so I cannot tell why the increase was actually made. However, it is told about that the industry threatened to come up here on the Hill and get 15 percent increase in prices if OPA didn't agree to a reasonable increase on its own initiative.

Perhaps I should emphasize that I have selected this price action only as an example to indicate the kind of pricing being done currently. It is not the only one being made today, nor is it typical of OPA's procedures at this time.

One of the most effective ways of increasing profits has been to lower the quality of the commodity at the same, or even higher, prices. This practice may be called quality deterioration or up-grading depending on the circumstances in which it occurs. It could manifest itself in the sale of lower quality goods at each of the current price lines, while the price tags remained unchanged, or, as happened so dramatically in clothing, it could manifest itself in the complete disappearance of the low end price tags, while the quality of the goods sold at the remaining price levels became lower and lower. Since neither OPA nor the WPB ever set real quality specifications, the manufacturers and sellers both have had a practically free hand in this respect.

It must be pointed out that OPA did try to regulate price on the basis of quality standards in a number of fields, until Congress ordered OPA to stop it. In the food industry, the result was that consumers paid grade A prices for large quantities of canned foods which were undoubtedly of grade B or even grade C quality. That this was bound to happen with the Army buying practically all the high quality pack was clear even at the time Congress forbade the use of grade labeling.

Canned foods were not the only foods in which the up-grading took place. Butter

and meat were other foods which were sold at top price, regardless of whether the sales were actually top quality. The cost to the consumer was undoubtedly terrific. The windfall to the packers and sellers was undoubtedly also very large.

In clothing, the disappearance from the market of the low end items from each line has been very dramatic, and very expensive to the consumer. In women's dresses, for example, the $1.59 house dress early disappeared from the market. Or perhaps it would be better to say that the $1.59 price tag disappeared and that the dress stayed on the market bearing a $2.75 price tag instead. Who was to know the difference, or be able to prove that the difference existed? After all, there was no standard by which to measure the quality of either price line.

Month after month during 1943 and 1944, the BLS reported that clothing prices were going up, at least in part because of the complete disappearance of the low cost items. Perusal of the BLS monthly reports shows warnings on:

DATE AND ITEM

June 1943: Cotton underwear, pajamas.

July 1943: Women's percale house dresses, men's business shirts, chambray work shirts.

September 1943: Women's fur-trimmed coats, women's wool coats, children's shoes.

January 1944: Cotton and rayon dresses, girdles.

February 1944: Men's work shoes, men's and women's felt hats, women's rayon underwear, girdles.

March 1944: Work clothes, men's felt hats, men's shirts, men's shorts, men's pajamas, women's underwear, women's cotton night clothes.

April 1944: Women's inexpensive rayon dresses, girdles, women's percale dresses, men's and women's felt hats, business shirts.

May 1944: Girdles.

August 1944: Fur-trimmed coats, untrimmed sport coats.

September 1944: Children's clothes, underwear, house dresses.

October 1944: Women's cotton house dresses.

November 1944: Cotton house dresses.

An OPA statement made in February of 1945 stated that five-sixths of the increase in clothing prices was due to the disappearance of these low end price tags.

As an example of what this could mean in just one item, I quote from a trade publication for shoe distributors, Hides and Leather Shoes, which reported on April 15, 1944, that, "Footwear quality has declined under wartime pressure by an average of 29.4 percent, according to 440 shoe distributors who set the percentage of decline at levels varying from 5 to 77 percent."

The influence of this situation, profitwise, can be seen in the following figures: The cotton textile industry earned $28,000,000 per year before the war; at the beginning of 1945, the industry was earning profits at the rate of $365,000,000 per year.

The shoe industry earned 4.8 percent on sales before the war; during the first half of 1945 the industry was earning 8.1 percent on sales of civilian shoes. (Figures derived from sample study by OPA of firms making over one-half of all shoes.)

The apparel industry reported to OPA that between 1939 and 1944 sales increased 65 percent. Profits, however, increased 282 percent.

Over the same period of time, retail sales of apparel went up 93 percent by OPA's figures. The increase in profits on these sales, by OPA's conservative figures, was 360 percent.

This disappearance of low end lines, and deterioration in quality so that high prices were charged for lower quality than usual, with consequent penalty to the consumer and profit to industry, has taken place in practically all fields under price control. Not only must this situation be taken into account when analyzing the complaints of manufacturers and sellers; I urge that this committee give positive consideration to making recommendations for plugging this tremendous leak in the price-control dam.

DECONTROL

Just as we have advised with the OPA about policies during the war, we have made efforts to consult with OPA officials each time a change in the war situation has required a rethinking of price-control policies. Each time the program has been redeveloped, we have pointed out and argued against the inflationary aspects of the policies being adopted. Time and time again, we have repeated President Roosevelt's admonition that the way to hold the line was to hold it, not to find reasons for raising things a little here and a little more there.

The latest of these price-control developments is the decontrol program. This is the program, outlined in a directive issued by Economic Stabilizer Will H. Davis on July 13, 1945, for removing ceilings from items now under price control.

Incidentally, we first learned about the proposed decontrol program by reading the Journal of Commerce, not from the OPA. It is noteworthy that consultation by OPA with the groups which benefit from its price increase has been fulsome, while consultation with the representatives of those who have to pay the price increases has been haphazard and infrequent.

On July 27, 1945, after studying OPA's decontrol proposal and the directive issued by the OES, labor protested both the announcement of a decontrol plan at that time and the specific provisions of the plan which had been developed.

We pointed out that publication of a decontrol plan at that time would encourage all the anti-price-control forces in the country to press for the end of price control on specific items as well as for the end of price control in general.

We pointed out, too, that the directive would permit the decontrol of items which are significant in the cost of living if, at the time of exemption, these items were selling below ceiling prices. However, if these prices did later rise, ceilings would be restored only with difficulty, and at levels higher than those of the previous ceilings.

Under the plan, also, exemption is permitted for items which were not regarded as significant in the cost of living even if a future price increase was regarded as possible. However, no practicable definition was given to indicate which commodities, or how many of them taken together, significantly affect the cost of living.

Later events showed how sound our position actually was. However, immediate confirmation came in the form of the expressed opinions of OPA's own field people. For example, on August 14, 1945, a price executive operating in the outlying possessions wrote to the national office as follows:

"A large number of merchants here have started licking their chops in anticipation of the widely heralded intention of the national office to exempt a considerable number of so-called luxury goods from price control. We have thought the problem through very carefully for the past month, as I indicated in my last progress report, and have come up with at least a dozen arguments both pro and con for local exemptions. After considering all these arguments and after obtaining the best possible sample of community sentiment, I have decided as a matter of general policy that we will not fall into line as a matter of course with the exemption orders to be issued by the national office for the mainland. Atomic bombs and Moscow notwithstanding, this area is and will remain a tremendous inflationary bubble for a long time. After 3 years of listening to us talk about holding the line the community has become almost convinced of the salutary effect of our actions here and expects us to continue to hold the famous line so long as the need is evident."

The opinion expressed in this statement, and the description of the inflationary tendencies inherent in the situation, apply to Hawaii. However, experience and opinions of other price executives showed that the same tendencies existed in this country as well. For example, in August of 1945, the San Francisco office of OPA commented as follows:

"We have recently learned that decontrol actions are of two types—avowed and concealed. The avowed actions, are, of course, the exemptions and suspensions. There are also, however, actions in the other forms, which look like regular price actions, but are, in fact, actuated by a decontrol motive. The outstanding example to date is the automatic pricing formula under reconversion for manufacturers having a volume (annually of) under $50.000. It was a relief to us to learn recently that this action was a concealed exemption, and was taken for valid reasons with full knowledge that this would be its effect. One practical problem emerges, however. It is apparent that some orders and amendments will in the future be issued on a liberal basis with the real intention of effecting exemptions; others will be formulated under ordinary price-control standards. It is vitally important for the field to know which is which, as we should obviously take a different approach when we are administering a 'we don't really care' ceiling rather than a ceiling intended to effect tight price control. If the national office is scrupulous in giving us these explanations, it will be possible for us in the field to appreciate and evaluate national policy correctly. Otherwise, these looser pricing actions, which may be genuinely motivated by sound policy considerations, will look like mere surrender in the face of pressure.

"It is easy to recognize at this point the vital importance of price control in the future, particularly in such fields as food, clothing, consumer durable goods, consumer services, building materials, and construction services. We must also be prepared to face greater difficulties as a result of the removal of other controls which formerly helped us. As rationing dwindles, it becomes that much harder to hold the price line. The same is true of controls being dropped by other agencies such as WLB, WPB, ODT, and WMC. It is obvious that it will not be sufficient to relieve the pressures by decontrol in less essential fields; we shall also have to do a better job affirmatively in the fields which remain."

Now, as to direct operation of decontrol:

In August, food still needed price control; the public still wanted it. However, OPA was already in the decontrol business. The effects of its decontrol orders began to be felt immediately. For example, on August 1, 1945, one of the price executives out in the field reported to Washington as follows:

"The suspension of ceiling on several fresh-vegetable items resulted in increased prices and widespread consumer complaints. This was particularly true of snap beans, where prices advanced from a community ceiling of 17 cents to as high as 60 cents per pound. Lack of demand and increased supplies have now reduced this item to a price range of 19 to 35 cents per pound. Lack of more specific control on tomatoes continue to bring in consumer complaints against 4 to 43 cents per pound prices."

The administrative burden of decontrol and its effect on prices is serious. The effect of the decontrol policy, which may or may not have been anticipated by OPA, is best described in the words of the Deputy Administrator for Price, Mr. Jerome Ney:

"In recent weeks much time has been spent in discussing the advisability of taking decontrol action in specific instances

upon principles going beyond the provisions of Directive 68. As a result a heavy workload has developed in a number of the branches and this workload threatens to continue and even increase to the point where it may interfere seriously with day-to-day work to the deterirnent of over-all price control and to the disadvantage of industry in general."

EFFECTS OF DECONTROLLING

I have already shown the direct results of this policy as far as snap beans are concerned. You may recall that after the removal of ceilings the price of beans went from 17 to 60 cents per pound. Even after an increase in supply, the price, although it declined, remained higher than the previous ceiling, with some people still being required to pay more than two times the previous ceiling price.

In the case of citrus fruits, OPA removed ceilings on Nov.mber 19; the following day prices began to jump. OPA's field offices reported increases ranging as high as 100 percent. on the same qualities and sizes. For instance, the Chicago regional office announced that, "large California oranges long held to the OPA ceiling of $5.28 were sold for $9.95 per case on the first day following suspension of ceiling prices, by today were down to $8.20."

Spokane, Wash., reported on November 27 that Texas pink grapefruit has gone up 58 percent; in Seattle increases ranged to 68 percent. Similar increases were reported from all over the country on all citrus fruits.

On November 28, OPA turned down labor's request to reinstitute the price ceilings, prefering to "watch the prices" for another week. At the end of that week—that is, on December 5—OPA was sufficiently impressed with the seriousness of the situation to recommend to the Office of Stabilization Administration that the ceilings be reimposed. The Department of Agriculture and the citrus growers objected to this action, so it was decided to again postpone the decision another week. The result is that citrus fruits remain without price control during the pre-Christmas buying season—the period during which control was most needed and the people will pay a large sum of money because of the Government's eagerness to remove economic controls.

The newspapers told the story of what happened to the price of coconut when price ceilings were removed. This item sold before the war, according to newspaper reports, for $15 per thousand pounds; during the war the ceiling was maintained at $55 per thousand pounds. Recently the ceiling was removed and the price shot to well over $200 per thousand pounds. Candy manufacturers have found themselves unable to buy an item which is very important in their business. At the same time the people who held stocks of coconuts at the time of decontrol have cleaned up some very tidy windfalls.

Some of you may recall what happened to the price of Alaskan seal fur when, on August 15, 1945, OPA removed the price ceilings. The price had been held at a ceiling of approximately $45 per skin; when the ceiling was removed prices shot up. Recently sales were being made at $110 per skin.

I have dwelt at length on the decontrol problem because even after all that has already happened there seems to be no inclination to greater caution. Even the strictures of Mr. Ney, which I quoted above, are confined to decontrols beyond the provisions of the decontrol directive, No. 68. Decontrol under the terms of the directive proceed as before, even though it has been under these terms so much damage has already been done.

I could go on with many other examples to show what the effect of the removal of price ceilings has been. I think that the case is already clear. I think that one would be hard put to find the words to describe adequately the irresponsibility, the sheer economic criminality involved in the proposals now being put forth and actually before Congress at this time, that price control be abolished in toto, or that the decontrol of OPA be extended at this time.

RECONVERSION PRICING

In the field of reconversion prices, as well as in its going price-control program, OPA has proceeded as though the poverty claims of industry were correct, and its own knowledge of the situation could not be relied on.

The Labor Policy Committee of the OPA entered into the discussion of reconversion pricing in July of 1944. In September of 1944, after some discussion with the OPA of the reconversion price policy that it was already drafting, the CIO Cost of Living Committee recommended to OPA that reconversion prices be set at no higher than the 1941–42 level. We declared that it was the responsibility of OPA in this tremendously important area to protect the standard of living of the American people against further increases in the cost of living, and to provide a postwar price level conducive to full employment.

We urged that increases from these 1941–42 prices be permitted only after a manufacturer had operated under his old price for a period long enough so that reliable operating data could be obtained. Of course, our recommendations provided for exceptions to this policy where circumstances clearly required an immediate price increase.

We believed then, as we believe now, that industry would be well protected by the 1941–42 level, by the reserves amassed during the war, and by tax and other governmental guaranties against hardship during the reconversion period. We believe that after reconversion is over, the profits that would have resulted from production at 1942 prices, especially as they would be affected by operation at high levels of output and increased productivity, would have been at least ample for industry. They might even be so great as to threaten the stability of the entire Nation.

The recommendations we made on OPA reconversion pricing were not adopted. However, since we made those recommendations, reports have been issued by the War Production Board, the Department of Commerce, and the Office of War Mobilization which have at various points supported the validity of our position. President Truman evidenced the same kind of thinking which we had done when he suggested that industry make voluntary wage increases and then wait 6 months before asking for consideration from OPA of price relief.

OPA, too, has since admitted the validity of our position by pointing out, in its press release of November 18, 1945, that its reconversion policy is based on the 1941 levels of production, and that 1946 levels should provide the opportunity for higher profits than those which prevailed in 1941. Let me point out that even 1941 profits were higher than the prewar profits which OPA is required by law to protect. A recent study of 2,085 manufacturing companies made by OPA showed that their profits were 2.7 times as high in 1941 as in 1936–39.

In spite of this high-profit situation, arising out of postwar production prospects at even prewar prices, OPA has made price increases for the manufacturers of practically every reconversion commodity.

Washing machine manufacturers have been given a price increase of 7.7 percent.

Vacuum cleaner manufacturers have been given a price increase of 5.5 percent.

Lawn mower manufacturers have been given a price increase of 17 percent.

Metal toy manufacturers have been given a price increase of 14 percent.

Radio set manufacturers have been given a price increase of 12 percent.

Radio parts manufacturers have been given price increases which will bring in approximately $100,000,000 per year.

Fractional horsepower motor manufacturers may raise prices 9 percent.

Automobile manufacturers are being treated on an individual basis. Two of them have already received their increase factors: Ford, for whom increases will average about 6 percent, and Studebaker, for whom they run around 12 percent. However, there is already evidence to show that manufacturers who receive no increase factors, or whose factors may be low, will reap their windfalls through price increases for specification changes, rather than through admitted reconversion increases.

In all of these reconversion industries, production will be far higher than it was in 1941. The profits of these higher prices plus those resulting from increased levels of output, and from increases in productivity which will soon be felt, will yield profits so high that depression and unemployment are inevitable in the near future.

Most of the industries involved complain to the world in general and to Congress in particular that OPA is "ruining them." If there is any validity to that charge, it is that OPA's generosity in making price increases, rather than its ungenerosity in refusing them, may ruin American industry.

BASIS FOR PRICE ACTIONS

A. Secrecy of negotiations

It has been our position that fewer of these harmful increases would be made if OPA were required to reveal to the public the facts on which the decision to make a price increase is arrived at. Labor's repeated requests for public information have been just as repeatedly denied by OPA. Labor has been told that individual firms would feel aggrieved if OPA revealed its data to its competitors. And then we have been told that there would be objections from an industry as a whole when we have asked for data which did not reveal facts about individual firms. So the negotiations between OPA and the industry asking for a price increase is carried on in secrecy, with no chance for the public to get the real facts.

B. Insufficiency of data

This extreme solicitude for those wanting price increases has been shown by OPA in many other ways. Let me cite an example. In the case of radio parts, price increases ranging from 9.5 percent through 26.3 percent were made after OPA had had the following experience with the parts manufacturers. (The quote is from OPA's press release of October 11, 1945.)

"Despite repeated requests by the Office of Price Administration for the submission of cost data for use in computing the increase factors for radio parts, and despite assurances of representatives of the industry that such cost data would be supplied, cost data were not submitted to OPA as promised, OPA said."

As I pointed out above, the price increases (made after this refusal by the manufacturers to supply data) are expected to yield the manufacturers approximately $100,000,000 per year.

In our discussions with OPA, we have been told repeatedly of cases where OPA's accountants had to be sent from the Washington office to go over the books of an individual firm in order to get the data upon which a price increase was to be based.

C. Unverified data

OPA's decision involves the transfer of large sums of money from the pockets of the buying public into the treasuries of the sellers. The business which is asking for an increase might be expected to prove its case up to the hilt, before the regulatory

agency, even if not before the public as we have asked. Quite the reverse is true. Figures submitted by manufacturers who are asking for price increases are accepted by OPA without further review or verification.

How many millions of dollars have been added to industry prices in this manner cannot be estimated. I do know, however, that the automobile increases are being made on exactly this basis.

Frequently, however, the decision to make a price increase seems to be made with no relationship to what the figures show about the profits of the manufacturer. Let me quote from a series of OPA truck price increases, made during 1944 and 1915.

Corporation	Date	Percent increase	Reason [1]
Divco Corp., Detroit, Mich	Oct. 18, 1944	16	It appears that the applicant's over-all profit position is "unfavorable."
Chrysler Corp	May 5, 1945	9	The applicant's current over-all profits have a "normal relationship" to its over-all profits during the base period, 1936-39.
Diamond T Motor Car Co	Nov. 3, 1945	6, 11, 23	It appears that the applicant's over-all profits position is "very favorable."
General Motors Corp	May 11, 1945	27	No description in OPA's statement of consideration as to what the profit situation was

[1] Quotations ours.

D. Net worth adjustments

A type of statistical legerdemain which underlies all OPA's price determination is known as the adjustment for increase in net worth. That is, in judging the fairness of a particular price OPA inspects the return on the net worth of the industry which results from that price, as compared with the return on net worth earned by that industry before the war. If the net worth of an industry has increased during the war, a price increase may have to be made in order to protect the rate of return.

However, the net worth increases which have taken place have in large measure been the result of the accumulation by industry of large cash and bond holdings. These have resulted from large profits earned by an industry and become part of the new base; and the reason for additional price increases which contribute further to the profits of the industry.

E. General rescue

In presenting to Congress and to congressional committees their allegations about OPA's pricing cruelties, industry pressure groups generally have omitted any reference to the special price increasing mechanism which OPA has provided for those individual firms or groups of firms which are not satisfied with the specific regulations themselves.

Among these special mechanisms there is one referred to in OPA as the general rescue regulation. This regulation provides relief whenever a current price threatens to put any manufacturer out of business. Such a manufacturer may apply to the OPA regional and district offices for a price increase, which will assure him of recovery of the total cost of producing an item.

In our judgment, the regulation is so loosely drawn as to remove from under price control the products of any manufacturer who feels that his activities are not significant enough to invite careful OPA review of his pricing methods. It removes a large share of the economic pressure on an inefficient manufacturer to become more efficient. It underwrites a plant which is producing at less than capacity, when capacity production might be necessary for economic production. It provides for price control on the basis of self-regulation with only the most perfunctory and rubber stamp type of review by OPA. It is a surrender to a kind of price control which OPA had resisted in the past as being inflationary, and as price escallation rather than price control.

SUMMARY

In summary, we have seen for a period of 3 or 4 years the price-control agency, which was set up to hold the price line, yield again and again to pressure for price increases from industries and business groups which could show no economic justification whatsoever for the price increases. The evidence for this lack of need for price increases is contained in the financial statistics of every governmental agency which collects such figures.

These increases were made at the expense of consumers who were caught by war shortages and by the necessity of adjusting to other wartime conditions. They are made at the expense of the veterans and of every other group in the national economy whose living depends on full employment and prosperity, rather than on unemployment and depression.

We have often congratulated ourselves on the fact that the cost of living in this war has risen less than during World War I. There may be some cause for satisfaction in this comparison. However, this is indeed a weak test of the effectiveness of this crucial economic operation. We had as much right to expect victory on the economic front as on the military front. We have the right to test the increases in the cost of living by the necessity there may have been for making them. The evidence shows that the people of this country could have been saved billions of dollars in their own purchases and in the expenditures of the Government if price increases had been made only on the basis of need.

We are conscious of the fact that OPA made some of these increases only as the result of great outside pressure. We are conscious, too, that the pressure often came from individual Congressmen and groups of Congressmen, and that OPA at times yielded reluctantly because it could not stand up to the pressure exerted on it. It is neither our duty nor our responsibility to apportion the blame for pressure-made price increases as between OPA and some Members of Congress. This committee is in a far better position than we are to do that job.

We do request, however, that this committee use its influence on behalf of price control, conceived in the terms in which price control was originally adopted; that is, the protection of the consumer, the protection of the economy of the Nation as a whole, the protection of Government expenditures.

While OPA cannot undo much of the harm that has been done, we insist that OPA be permitted and required to maintain its specific price controls until there is clear evidence that price control is no longer needed, and to administer its price controls on the basis of protection for the country as a whole instead of a segment thereof, and prevent further damage to the consumer and to the Nation as a whole.

Strike Control

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. ANGELL. Mr. Speaker, pursuant to authority heretofore granted I include the following editorials with respect to recent strike legislation, one of which appeared in the Oregon Journal, Portland, under date of February 2, 1946, and the other in the Portland Oregonian on the same date:

[From the Oregon Journal of February 2, 1946]

A 2 TO 1 VOTE CAN OVERRIDE A VETO

E. T. Marr, secretary of the Oregon Federation of Labor, A. F. of L., has formally protested the strike-control bill introduced by Representative FRANCIS CASE, of South Dakota, calling it a threat to all liberties including freedom of speech and of the press. By a vote of more than 2 to 1, the House has indicated its preference for consideration of the Case bill as substitute for fact-finding legislation asked by President Truman and subsequently weakened by the House.

The Case bill is directed against all labor groups. It is inspired by a growing public resentment against creeping economic paralysis. The bill would establish a national labor-management board to help settle labor disputes construed to be contrary to public interest. It also would outlaw violent picketing and boycotts, provide for civil suits against violation of labor contracts, and make unions subject to injunction.

It is commonly predicted that the Case bill or one similar to it will pass the House. The practicality of the situation indicates a compromise to "turn off the heat." Politically, the Case bill is a "hot potato."

[From the Portland Oregonian of February 2, 1946]

THE STRIKE CONTROL BILL

The Case strike control bill may never become law in its present form, but the 258-to-114 vote by which the House of Representatives substituted it for President Truman's fact-finding legislation is indication that Congress finally is ready to do something about the national headache. The vote was a threat to union labor and an expression of lack of confidence in the Truman administration.

If the bill ever becomes law it will have to be over the veto of President Truman. There is no possibility that he would withstand the pressure of organized labor and the New Deal residue of the Democratic Party, without whose support he could not hope to win in 1948, whether or not he believes the Case bill good legislation. Yet, if this vote is a true test, Congress is sufficiently aroused to force through some measure which will greatly restrict the power of the unions.

Marquis Childs, in a column on this page, interprets the vote as the political reflection of a plot by organized industry to break organized labor. Unquestionably, Congress is in the mood to restrict, if not to punish, the unions. But this is not an attitude born overnight as the sole result of industry's efforts to lay all the blame on labor. It is the cumulative result of many labor excesses, of demonstrated impotency of the executive branch to meet the crisis strongly and impartially, of conviction no longer to be denied that America is on the brink of an economic

debacle which, if it occurs, will pull the whole world structure down with it and endanger the peace.

For many years Congress has been passing legislation to protect and advance the claimed rights of organized labor. If the pendulum swings the other way, labor cannot hold itself entirely blameless. Too often in the struggle between unions and management the interests of the public have been sacrificed.

The Case bill would require unions to be responsible for their actions, and it would authorize civil suits for damages against either employer or employees for violation of a labor contract. It would prohibit violent picketing and organized boycott, and subject unions to the liability of injunction. It would establish a national labor-management mediation board and require unions to give 30 days' notice before striking.

Some of these provisions adapt themselves to abuse, and safeguards should be erected. Fair-minded persons do not wish to see the unions destroyed, nor do thoughtful persons believe that they can be destroyed by this or any other legislation in our time. But with 1,200,000 workers already on strike, can anyone wish to continue to drift into disaster? The unions should have equal responsibility with management.

Butter Situation Critical

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, so many of us have taken the floor to protest critical shortages that have existed for some time in the hope that the situation would be corrected. I rise again to protest and call attention to the situation existing with one of our most important foods, namely butter. Apparently all I can do is raise my voice in protest against those policies which have been established by the OPA and which today are responsible for existing conditions.

I have a letter from a most prominent constituent who is a retail merchant. It is couched in strong language and I set it out solely for the purpose of bringing to the attention of this House the attitude of men in business toward the OPA and its pricing policies. Mr. Speaker, we can trace all of these shortages to OPA. I submit herewith a copy of a letter and have purposely omitted his name, so that the Government "gestapo" will not retaliate and attempt to put him out of business. The letter follows:

FEBRUARY 4, 1946.

DEAR LARRY: The enclosed booklet was of great interest to us fellows who are trying to serve the public. When you have people coming in offering to pay any reasonable price for butter and we have to refuse, it just isn't fair. People who work must have butter. The past 2 weeks have seen the biggest black market that I have ever seen in all of my years of business. It stinks. Why in h— don't they allow the law of competition to control the price and quantity of foods. For 100 years that law has worked. We fellows who are trying to do right get caught with unfair competition who are in the black market, with the result that they are taking our customers away. It just isn't right.

Mr. Speaker, I call attention to the charge that this OPA is responsible for a black market condition referred to by a man who knows just what the situation is because he is confronted with it every day. The time has come for Congress to take some action.

Mr. Speaker, I call attention to the fact that butter production and holdings have decreased to the lowest point on record. Obviously some action must be taken to correct this situation. We are confronted with a situation where consumers face an exceedingly low supply for several months to come and unless OPA corrects its policies many creameries which produced butter will go out of business. When these creameries shut down it will mean that hundreds of thousands of dairy farmers will find no market for their milk. It is well to remember in this connection that in 1941, 115,500,000,000 pounds of milk were produced. In 1945 it appears that the total production reached about 123,000,000,000 pounds. Notwithstanding this increased milk production the butter manufactured in 1945 was some 471,000,000 pounds less than in 1941. This represents a loss in butter production of about 25 percent and when Army needs were met civilians had 43 percent less butter last year as compared to 1941.

I call attention to a further pertinent fact, namely: that the production of butter during December of 1945 was 50 percent less than the corresponding month of 1941. This is indeed an alarming situation. Not only are the consumers short of this important food item but the markets for the farmers are steadily decreasing also and ultimately we will be faced with a critical condition on the farms and in the cities.

During the war emergency, specific price formulas were issued by Government agencies that were intended to divert production from butter to cheese, whole milk powder, evaporated milk, and so forth. Restriction orders were placed on the sale of whipping cream, fluid milk and coffee cream, ice cream, and the manufacture of certain cheeses other than cheddar, to insure the production of sufficient butter and other dairy products for the armed forces, lend-lease, and civilians. These limitation orders were terminated September 1, 1945, and a tremendous demand has developed for fluid milk and sweet cream. With prices of sweet cream at 80 cents to $1 per pound of butterfat, the butter manufacturer cannot compete with those prices when his product is fixed by the 1942 ceiling of 46 cents per pound of butter wholesale, Chicago.

It is interesting to note that approximately 850 creameries have ceased to operate since 1941. This represents about one-fifth of the creameries operating in the prewar period, and is evidence of a serious casualty in an important segment of the Nation's small businesses. It is a fair question to ask: Why did those creameries close? The answer is that the creamery industry is the only dairy producers' industry which was forced by Government controls to go through all of the war with less than normal total volume. The creameries were compelled to cease operation or face financial disaster because of a condition created by the Government.

Mr. Speaker, this is a matter which demands attention and the time has come for OPA to change its pricing policies regarding this important agricultural industry. It is one of the most important foods we have today, and it should be accorded every consideration by the governmental agencies which exercise jurisdiction over it at the present time.

The Order of St. Augustine

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which was delivered by Rev. Charles F. Hart, O. S. A., of St. Mary's Parish, Lawrence, Mass., over a local radio station:

THE ORDER OF ST. AUGUSTINE—CONTRIBUTION TO THE RELIGIOUS, EDUCATIONAL, AND CULTURAL LIFE OF THE COUNTRY DISCUSSED BY REV. CHARLES F. HART, O. S. A., SUB-PRIOR OF ST. MARY'S PARISH, IN A RECENT RADIO ADDRESS

The contribution of the glorious Order of St. Augustine to the religious, educational, and cultural life of this country, including the Greater Lawrence area which it has served for almost 100 years was discussed by Rev. Charles F. Hart, O. S. A., of St. Mary's Parish for a radio audience recently when he was guest speaker on the Catholic Truth period.

His address which contains many facts of particular interest in this community follows:

The name "Augustinian" is one which is familiar to most of the faithful of the archdiocese of Boston. In Lawrence and Andover, of course, they know this order because Augustinians have for almost a century been their parish priests. Others know the order through its mission band which has for the past 50 years been preaching retreats, missions, and novenas in their churches. There are some, too, in the archdiocese who know the order of St. Augustine because their sons or cousins or nephews have entered the order as priests or brothers. But, no matter how well people know individual Augustinians, it seems that they know little about the order, its history, its characteristic spirit, its numbers. They also know very little about the story of the Augustinians in the Boston area, how they came to make their foundations here, how long they have been here ministering in our midst.

The Order of St. Augustine is one of the so-called mendicant orders. Such orders are called mendicant because originally they supported themselves by begging. Only four such orders exist in the church; the others are the Franciscans, the Dominicans, and the Carmelites. As the name "Augustinian"

would indicate the order traces its foundation to St. Augustine. Doubtless there is no one who does not know something about St. Augustine. He was so versatile a saint and excelled in so many things that almost everyone reveres him for a different reason. For some he is the great sinner who became a great saint; he is for them the humble author of the Confessions. Others think of him as the majestic doctor of the church, the brilliant thinker who, because of his untiring labor in defense of the church, became known as the hammer of the heretics. Others still think of him as the great preacher, the kindly, lovable, simple man of God who taught them the truths of their religion in a language which everybody could understand. One could indefinitely relate the many-sided genius which he was; one would have to mention his fame as a philosopher, a psychologist, a man who penetrated the mysteries of religion, a theologian who is regarded as one of the world's great stylists.

Few people, however, seem to be aware that St. Augustine was also one of the founders of the monastic life. When he was 33 years of age, by the grace of God working through the wise counsels of St. Ambrose and through the prayers and good example of his mother, St. Monica, he returned to the faith of his childhood. He went back then from Italy to his home in north Africa. There he was joined by friends and disciples and with them he began to live the life of a monk. His sister imitated his example and founded a similar group for women. For all of these he wrote his rule. This rule of St. Augustine, one of the earliest in the church, shares with the rule of St. Benedict and that of St. Basil the honor of antiquity and venerability among all the various rules which have been composed for the guidance of monks and nuns. Some hundreds of other institutes have chosen it for their religious guidance. So great was Augustine's love for the common life that he continued in it even after he had become a bishop. After the death of the saint, many monasteries were founded in Africa, Europe, and Asia which followed his rule. These monks were called frequently the Hermits of St. Augustine, though they never united into one order. As a matter of fact, before the thirteenth century, there were no orders in the sense we know them—as great unions of religious—all living under the same constitutions and obedient to the same general superior. It was not until 1256 that Pope Alexander, desirous of obtaining unity among the various independent Augustinian monasteries, brought them together under one name and decreed that their organization was to be similar to that of the recently founded mendicant orders.

The history of the Order of Saint Augustine during the Middle Ages was a glorious one. There were at one time in Europe 30,000 Augustinians in 25 provinces. Augustinian scholars taught at Paris and Oxford. Augustinian missioners sailed with the first Spanish explorers to the New World. There was an Augustinian on the first ship that reached the Philippines. It was an Augustinian who founded the first university on the North American continent, that of Mexico. There were Augustinian missioners in Japan as early as the sixteenth century. Father Gregory Mendel, the world renowned discoverer of the laws of heredity, was an Augustinian. Unfortunately, the growth and expansion of the order was interrupted by the religious revolution of the sixteenth century and very many of the flourishing provinces of Europe were destroyed. It was only in the countries which remained completely Catholic that the order continued in its previous happy state, that is, in Italy, Ireland and Spain. The monastery, college, and university of the Escorial are conducted by the Augustinian Fathers. One hundred and seven Augustinian Fathers of the Escorial Monastery were murdered in the recent Spanish Civil War.

It was from Ireland that the first Augustinians came to this country. In 1794, just 5 years after George Washington was elected first President of the United States, Father John Rosseter came to Philadelphia from Dublin. Seven years later in 1801, the first Augustinian church, that of St. Augustine, was erected a few blocks from the Delaware River in Philadelphia. During the first 50 years of our existence in the United States, Saint Augustine's, Philadelphia, was the cradle and mother-house of the province. This latter title it had to eventually relinquish to Villanova. From this foundation missioners went forth through Pennsylvania, New Jersey, New York and into New England. There are at the present time over 50 Augustinian foundations in this country. There are houses of the order in the archdioceses of Philadelphia, New York, Chicago, Detroit, Milwaukee, Los Angeles, Boston and Havana, Cuba; and in the dioceses of Brooklyn, Camden, Ogdenburg, Albany, Lansing, San Diego, Rockford and Tulsa. In addition to its parishes and mission band, the order conducts many high schools.

Villanova College, located a few miles from Philadelphia, was founded in 1842. It is the oldest Catholic college in Pennsylvania and the leading Catholic engineering school of the East.

The Preparatory Seminary is at Staten Island, N. Y., the Novitiate at New Hamburg, N. Y., the Collegiate at Villanova, and the School of Theology at Washington, D. C.

The second apostolic delegate in the United States was Msgr. Sebastian Martinelli. He was an Augustinian and at the time of his assignment he was also created archbishop of Epheus in August of 1896. At this time he was serving his second term as prior general of the Augustinian order. He was made cardinal on April 15, 1901.

As long ago as 1818 an Augustinian, Father Philip Larisey, labored in this archdiocese. He came first to New Bedford, where he built a small church. Then for a few years he engaged in missionary work in Boston, where he built a small chapel which he named St. Augustine's of South Boston. Previous to 1818 he had done missionary work in Newfoundland. He was the first to preach in Irish in Boston. It is recorded that Bishop de Cheverus, of Boston, kept in his desk a document appointing Father Larisey, vicar general and administrator of the diocese, in case of the bishop's death.

Later on the Augustinians established parishes in Lawrence, Andover, Methuen, Ballardvale, and Wilmington. At the present time they have seven churches in Lawrence, of which St. Mary's is the largest and most beautiful in all New England with the exception of the cathedral in Boston. They also have the Immaculate Conception Church in Lawrence, which will celebrate its one-hundredth anniversary this year.

In the fall of 1848, the Reverend James O'Donnell, O. S. A., built St. Mary's Chapel on Oak Street, Lawrence. The holy sacrifice of the Mass was first offered there in January of 1849. The cornerstone of the present magnificent edifice was laid on August 19, 1866.

The present church was completed under the direction of Father Galberry and was dedicated on September 3, 1871. Father Galberry, O. S. A., became the fourth Bishop of Hartford, Conn., in 1875.

In August of 1859, Father O'Donnell introduced the Sisters of Notre Dame, who established the parochial school that has developed to such great proportions. These sisters, at the present time, administer to the spiritual education of the children of the four Augustinian parishes of Lawrence as well as to the children of St. Augustine's parish in Andover.

The Xaverian Brothers were invited in the year 1889 to teach the boys of St. Mary's parish. It would be impossible to compute the good that has been accomplished in St. Mary's parish under the guidance of these brothers, nine of whom now teach the older boys in our schools.

Rev. James T. O'Reilly, O. S. A., came to Lawrence in 1886. During his long pastorate of 39 years much was accomplished for Catholicity in the city.

The oldest Augustinian in the United States, and the second oldest priest in the archdioceses of Boston is the Reverend Daniel J. O'Mahoney who has spent 65 years in the priesthood and having passed his 4 score and 10 years is still active at St. Mary's. On the occasion of his sixtieth anniversary of his ordination Cardinal Dougherty of Philadelphia wrote the following:

"Upon my arrival in Manila in 1903, it was a happiness to meet yourself and the late beloved Father McErlain, your companion, and to learn from you, who had already labored in that difficult field, the state of affairs in that country and especially the difficulties which confronted all of us because of a schism and the effects of the insurrection first against Spain and then against the United States.

"It was due in no small measure to yourself and Father McErlain that the interests of the Catholicity in that country is in a flourishing condition."

The Very Reverend Mortimer A. Sullivan, serving his third term as provincial of the Province of St. Thomas of Villanova, is a native of Lawrence. There are 35 parishes in the province. Two hundred and fifty-four priests in the province devote themselves to educational, missionary, and parochial duties.

Loyalty to the church, to its teaching, and to its head and confidence in supernatural strength, gained through the sacraments, especially the blessed eucharist, are the sovereign remedies which the Augustinian Fathers of this archdiocese have ever recommended to the faithful.

They have always considered it a great privilege to be able to share in the good work of this outstanding center of religious faith. A manifestation of religious faith was exemplified, under the leadership of His Excellency Archbishop Richard J. Cushing, in the recent campaign for a Catholic hospital in Greater Lawrence. The present vital need of such an institution was realized by a doctor, who is an alumnus of Villanova College, and by Augustinian Fathers.

Archbishop Cushing, an apostle of charity to this city, promised, at the solemn pontifical Mass of thanksgiving, in St. Mary's Church on Saturday, September 22, 1945, a refuge for the old folks in appreciation of the cooperation and generosity of the people of Greater Lawrence.

The Augustinians remember with great pride the contributions which have been made by their brethren who have gone before them and who now enjoy the reward of their labors. They have confidence that the Augustinians of the future will continue to bring to the faithful, whose servants they are, the good tidings of the Gospel and the spirit of their illustrious founder, who said "Thou has made us for Thyself, O God, and our heart is restless until it rests in Thee."

Fifteen Billion Dollars More?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. ANGELL. Mr. Speaker, pursuant to leave heretofore granted, I include in my remarks the following article by Frank C. Waldrop, which appeared in a

recent issue of the Washington Times-Herald:

FIFTEEN BILLION DOLLARS MORE?

(By Frank C. Waldrop)

Money. Money. Money. Everybody cusses it, yet everybody collects it if he can. Nobody knows who invented it and very few people even claim to understand it.

And though practically everybody knows how to get rid of it, not so many know how to hold onto it. Strange stuff.

Through a great deal of luck, energized by brains and work, we Americans of the present day have inherited the greatest power of wealth ever known to man.

Our natural wealth is converted and made effective through the medium of money. And it could not be made effective in any other known way. No other invention has ever been brought forth for measuring and trading in values as efficiently as in terms of money.

It is also true that nothing can get away from you quicker than this same money if you don't have sense in using it.

Let's do a little figuring and see how our present generation of Americans are handling their money. We have just come out of a world war with a public debt now rising past $275,000,000,000.

Whether this capital debt will ever be paid off, nobody knows. But one fact we can all take a look at now: It costs us in the neighborhood of $5,500,000,000 a year just to pay the interest and service charges.

The war has produced some very interesting developments on United States money abroad in case you are one of those people who says, "Oh, well, after all we only owe the debt to ourselves. We spent it all right here at home so no harm is done to the total national wealth."

The latest figures show that between March 1941 and October 1945 we spent $46,040,054,000 on the lend-lease program. This represents a considerable amount of wealth of the United States distributed through lend-lease agreements with the following countries:

Australia, Belgium, Bolivia, Brazil, Canada, Chile, China, Columbia, Costa Rica, Cuba, Czechoslovakia, Dominican Republic, Ecuador, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, Iraq, Liberia, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Paraguay, Peru, Poland, South Africa, Turkey, United Kingdom, Union of Soviet Socialist Republics, Uruguay, Venezuela, and Yugoslavia.

The foregoing is just a list of nations with which we had formal agreements. It does not by any means signify that we didn't send lend-lease anywhere else in the world, or otherwise spent money abroad.

We also developed Army and Navy Establishments throughout something like 45 major depots around the world outside of our own borders and spent as yet incompletely totaled billions to maintain and supply them.

And of the billions of dollars worth of United States goods exported abroad for the maintenance of our fighting forces, by far the most will stay wherever it now is.

So chalk up X billions in United States wealth abroad over and above lend-lease yet to be totaled.

Even that isn't all. For now that the shooting is over, in come our handsome allies with their hands out again. Our Socialist British Allies are asking $4,400,000,000 and are grouching because they don't get more. Communist-tinged China wants $2,100,000,000 minimum. Socialist-Communist France is talking about $2,500,000,000 minimum. Communist Russia has suggested that she won't take less than $6,000,600,000. There are other countries lined up behind with hands out, too.

In all, we are asked to make direct loans of not less than $15,000,000,000 abroad to finance countries which publicly and officially denounce capitalism and the dollar sign.

Over and above that we are asked to be the principal underwriter of the international bank designed at Bretton Woods.

So you can see that the much-abused United States dollar is somewhat in demand abroad. And very popular, too. But the United States taxpayer who will have to finance all these glamorous enterprises—Oh, well! He's very rich, very generous. And he doesn't need it, anyhow.

Red River Lateral Canal

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following arguments in favor of the Red River lateral canal by Ed C. Burris, general manager, Shreveport Chamber of Commerce, secretary-manager Red River Valley Improvement Association:

It is gratifying indeed to have the privilege of coming before this Board in support of a project that means so much economically to the community in which I live and to the area that constitutes its trade territory. I first appeared before this Board approximately 5 years ago in support of this project. Since that time, world-wide event have precluded your honorable body from devoting any time or energy to civil projects except those of primary concern to our military program.

It is gratifying indeed that we can now once again turn our attention to those projects that have for their prime purpose the building and strengthening of the economy of our great Nation.

The Army engineers have been most conservative in their studies of navigation to Shreveport, La. They are to be congratulated for their conservatism, even though those of us who reside in communities, the fortune of which are at stake, would have you be a little more lenient in your analysis. We are proud, however, to observe that navigation to Shreveport has stood the acid test of your conservatism and has met with the approval of your district and division engineers.

We observe the Army engineers have selected the year 1939 as the basic year for their study. Each intervening year since that time has had more tonnage originate and terminate in the Southwest than was evident in that year.

A study of reports made by the engineers on navigation projects discloses that in past years four major factors were considered in arriving at the total benefits to be incurred. First, the tonnage available for shipment by water as of fixed year upon which the study was based. Second, undeveloped tonnage, that is, tonnage that the survey could not establish because of the inadequate opportunity of making proper contacts and proper analysis. Third, the future growth of the area. Fourth, other benefits such as drainage, recreation, and indirect savings; and, of course, balanced against these was the cost factor of construction, maintenance, operation, and amortization.

We observe that the ultraconservatism of your division engineer has precluded his use of some of the factors. He has based his entire report, as applied to this project, upon the first and fourth of these steps, leaving out entirely the undeveloped tonnage and future growth of the area. We believe these, too, should be considered by this Board when making your recommendations. These we shall discuss later.

Your engineers selected the year 1939 as the base year for your study—this is understandable though we believe it to be a comparatively light year. We can find no fault for your having accepted it as the basic year and, since it was so selected by the engineers, we believe that it should be adhered to quite rigidly all the way across the board in the course of your study. We emphasize this point because the opponents of this project have proposed that this Board consider the recent closing of one industry as a basis for refusing the acceptance of the division engineer's recommendations. We maintain this should not be done because:

1. Some base year has to be accepted.

2. If decreases are accepted, then increases would have to be accepted and a whole new study would evolve; and we all agree that this project has been in the hands of the engineers long enough. Therefore, we believe 1939 should be adhered to as rigidly as possible.

It shall be pointed out later today that percentage-wise, the over-all tonnage shipped into and out of the area has increased tremendously during the past 5 years and, accordingly, any decrease made possible by virtue of one industry having shut down would have been more than offset by increases in other industries, were a later year accepted.

Even so, I should like to place before your honorable body some information relative to the petroleum industry in our area. A locality that has produced oil since 1906 and has for many years produced some 28,000,000 tons of petroleum annually, has seen within the Louisiana section, to say nothing of the east Texas area, some 33 different refineries since 1927, the earliest available records. Now, as a matter of fact, there has not been 33 differently constructed refineries. The one that recently announced that it would be closed down has been reorganized three times previously and we have reasons to believe this may happen again. It has not been dismantled or destroyed.

Then, too, new oil fields are being discovered at frequent intervals, the latest having been announced on January 6 of this year in Natchitoches Parish, La., adjacent to Red River. New oil fields are contributory to new refineries and increased refining capacity, once shipping mediums are provided that will enable refineries to operate economically and ship their products to markets throughout the Nation on a competitive basis, the refining industry in the Red River area will become more stabilized and will undoubtedly increase in capacity.

Even though there have been 33 refineries since 1927, there never have been more than 10 or less than 5 at any one time. The daily crude capacity has never exceeded 70,000 barrels and never less than 44,000 barrels. The average for period was 53,000 barrels and for 1945, 50 530 barrels. Thus, the refining capacity has remained rather constant, despite periodic reorganization of various refineries.

We were most interested when analyzing the reports prepared by the Corps of Engineers comparatively with that prepared by the Department of Public Works of the State of Louisiana. We were first impressed by the relative closeness of their estimate in arriving at tonnage and savings to be incurred. On the other hand, we were equally as impressed with the differences that existed in the reports.

It is easily understandable that there would be discrepancies between the two reports because the studies were approached quite differently. There was available to the Army engineers information that was not available to the department of public works. On the other hand, the department of public works, with the aid of specialists secured from the University of Louisiana, together with the voluntary assistance secured up and down the river, were able to make a more detailed study in some directions than was possible for the representatives of this board during the brief period of time they had to devote to the project.

So we observe that the Army engineers have submitted approximately 300,000 tons per annum that does not appear at all in the report of the department of public works. On the other hand, the department of public works, on several different commodities, have shown an appreciably greater tonnage than was shown by the Army engineers. This, too, is understandable, if the approach to the problem is taken into consideration. The Army engineers analyzed waybills which were mostly, if not all, the waybills of rail carriers. Consequently, they could not indicate tonnage hauled by contract carriers and shippers who hauled their own products because they could do so more cheaply than was possible under existing shipping conditions.

As a result, the department of public works report shows some 90,000 more tons of cotton will be shipped by this medium than does the Army engineers. Their estimate on iron pipe and steel products is approximately 266,000 tons greater than was the estimate of the Army engineers. The department of public works shows 122,000 more tons of beverage than does the survey of the Army engineers and approximately 21,600 more tons of canned products and corresponding proportional increase in other products. These estimates have to do with shipments both north and south bound.

If these two studies were combined and if the top figures were accepted in each of the studies, there would be added to a gross overall tonnage available some 597,000 more tons than now exist in the present engineers' report, or a grand total of 1,789,000 tons. The figures are quite impressive, but even more impressive are the savings. The 597,000 tons additional represent a savings of $1,866,000 which, when added to the estimates of the Army engineers, brings the grand total to $5,061,000. Should not this Board accept this tonnage? It was arrived at honest men, experts in their field, after a careful survey.

The department of public works will justify their own estimates, but I should like to point out a few factors of interest. They were a little too conservative to satisfy many. The economic specialists working for that body went to rather extended lengths in their efforts to find every possible cost that could be deducted from potential savings. Take petroleum as an illustration: During the course of their analysis of shipping cost of petroleum products by barge as compared to other carriers, the construction, liquidation, and amortization, and operation of terminal facilities both at the point of origin and the point of destination, were included by the economists. An analysis of their work sheet will convince any individual that there is no padding in their potential tonnage or in their potential savings.

It is realized, however, by all, that during the short period available to them for their study, it was impossible for them to study all commodities and, consequently, only selected products were analyzed. This study was also confined almost exclusively to river points, rather than points of origin, 15, 20, or more miles from the stream, even though this would appropriately come within the territory involved. Much of the tonnage shipped to other cities within the area could appropriately clear through these river points were water navigation available, although it does not clear through these points at this time. Therefore, any study confined to river points cannot possibly include the total possible savings.

At best, such studies are merely indicators. They are not claimed by those who compiled them to be absolutely correct since many and varied forms of transportation by which tonnage is shipped makes it impossible to make a complete study, hence the variances in the two reports.

The engineers' report does not include undeveloped tonnage—we believe it should. Undeveloped tonnage might better be referred to as undiscovered tonnage—much of it was in existence at the time of survey, but was not discovered by those doing the research. It has been the previous practice of Army engineers in their analysis of every project that it has been my privilege to analyze, to give percentagewise, an allowance for undeveloped tonnage. In the reports we have studied this has varied from 15 to 25 percent. We are not disposed to indicate what allowances should be made relative to this project, but it does seem that in all fairness a similar, proportional, percentagewise allowance for undeveloped tonnage on this project would be sound. The experience of the engineers we believe has, with very few if any exceptions, justified such allowances. The tonnage on projects upon which they have made estimates has, after a short period, increased substantially beyond their estimate, the most glaring illustration of which is the intercoastal canal. Most inland waterways are carrying more tonnage than was estimated by the Army engineers during the course of their study and most of these studies included a percentage for undeveloped tonnage.

The trade territory of Shreveport includes a radius of approximately 100 miles, consisting of 25 parishes in northwest Louisiana, some 20 counties in east Texas, and 5 counties in southwest Arkansas. This is the area that can best be served from Shreveport as compared to any other major distributing point. The city of Alexandria, farther downstream, can best serve the whole of central Louisiana on products of which the cost of shipping constitutes a major portion of the selling price. A tremendous tonnage for that whole area would be developed were navigation possible. More especially would this be of value to the Federal Government in connection with maneuvers and the operation of Camp Polk, in central Louisiana, the last camp having been recently declared by the Army to be one of their permanent installations.

The Corps of Engineers, in making this study, made no allowance for future growth of contributory areas, although this has been previously practiced by the engineers in connection with such studies. It is fully realized that any projection of estimates into the future may prove a harzardous fallacy. Even so, the steady growth of the area in the past indicates continued growth in the future and points to an expansion over the life of this project that deserves consideration.

Such growth in tonnage may be influenced by several different factors: First, population; second, industrial expansion; third, distribution development; and then, of course, the discovery of new basic resources. We shall deal with each of these briefly.

To increase the number of people does not necessarily indicate a proportional increase in tonnage available for the proposed canal. On the other hand, one can scarcely deny that people do serve as an index for estimating tonnage. Therefore, the population growth of the area might prove of interest during the course of your deliberation relative to this project. From 1910 through 1930, over a period of 20 years, the increase of population in area tributary to Red River was 22.8 percent or slightly more than 1 percent per annum. Whereas, the growth during the decade of 1930 to 1940, the last available census report, was 13 percent gain for the period. I do not know what it has been since that time as we have no accurate estimate. There is no reason why this increase will not continue under any normal conditions and there is every reason to believe that the construction of this proposed canal would substantially augment this increase since it would make possible the erection and successful operation of business enterprises that, at the present time, must seek location elsewhere because of advantages made possible to them by transportation channels constructed at the Government's expense.

In our opinion, one of the prime factors deserving of consideration when approaching a project of this kind, is what effect will it have upon the economy of the area and of the Nation. For this reason, we believe that consideration of the future effect of this project upon the area tributary to Red River is of prime importance. The possible future tonnage should be given every consideration by the Army engineers in their study.

With each increase in population, existing avenues of distribution will handle more merchandise and new avenues will be established, if the population is to be adequately served—hence more tonnage will be shipped.

For example, nearly 2,000,000 people reside within the Shreveport trade area, an area that can best be served by Shreveport under present conditions, as against competitive distribution points. This population, percentagewise, is showing a substantial growth from year to year. This natural growth will call for increased tonnage by itself, but on the other hand, when a lower cost shipping medium is made available, so that in-bound freight can be brought into the communities along Red River at a lower cost than at present, the trade area will be extended. Furthermore, a greater percentage of the materials necessary to supply these people will be shipped through these river ports, thus adding to the future growth of the tonnage to be carried by the proposed canal.

There is within the Red River area vast basic undeveloped or only partially developed natural resources that will provide much tonnage for this proposed canal. Chief among these, perhaps, is the vast iron ore deposits near the head of the proposed navigation canal. A large $24,000,000 blast furnace was built by the Government during the course of the war, near these deposits. At the present time, private capital is making arrangements to construct auxiliary plants that will use pig iron from these great furnaces, thus developing and assuring the future of this enterprise. Once it gets underway, large quantities of these products will be shipped via this proposed canal. Then, too, economic studies have indicated that coal from either the Alabama, Tennessee, or West Virginia areas will be shipped by barge into the area to blend with existing coal supply so as to make a better coking coal. This is all future tonnage, but it is real. It's the type of tonnage that such canals will aid in developing and, by doing so, aid the great steel industry of America to further decentralize so as to be less vulnerable to attack in event of future wars.

There is an evident tendency to further decentralize industry throughout the United States. This trend will undoubtedly gain momentum during the years immediately ahead. The construction of this canal will serve to bring into the area adjacent to Red River many of the heavier industries that look to water transportation as their prime medium of shipping. These new industries, many of which are making inquiry now as to localities throughout the area, plus expansion in the existing pulp and paper industry, plus the developing of the iron industry and steel-fabricating industry, as well as industries that will utilize other basic resources of the area,

give substantial assurance of a more than average growth over the life of this project.

The engineers have allowed on other projects as much as 25 percent of the established tonnage as of the date of the survey for future growth and development. Therefore we believe you would be justified in allowing 25 percent additional tonnage for future growth on this project. This would be in keeping with previous practices of the engineers, and would, we believe, prove extremely sound in the years ahead.

There is one other factor that we would like to call to the attention of this honorable board. That is, the cost of financing this program. It is estimated by the engineers that this project would cost approximately $42,000,000 and that the annual cost of interest on this project based at 3 percent would be $1,355,000. You will observe that the rate is 3 percent. Under current conditions, we believe this project could readily be financed with bonds bearing 2 percent or less. This would make possible an annual savings of approximately $450,000 or a sum equivalent to approximately 14 percent of the full estimated savings in the engineers' report. We would recommend that the Board of Engineers for Rivers and Harbors reanalyze the cost of financing since a substantial savings might be possible and thus provide a broader margin in the economic justification of this project.

We assure you that we offer no criticism of the conservative methods used by the division engineer in arriving at his recomendation, but we do believe that this honorable body would be justified in adjusting this estimate of the cost of financing so that the project may have the full benefit of its sound economic position.

In conclusion, we respectfully recommend: First, that the Army engineers adhere to the fixed year, a basic year, in the course of their study so as to avoid the necessity of further survey. Second, that you allow a minimum of 15 percent of the established tonnage for undeveloped or undisclosed tonnage. Third, that you make a similar allowance of at least 20 percent of established tonnage for future growth. Fourth, that you reanalyze the interest rate, that is the cost of financing, and adjust your cost of amortization accordingly and; fifth, that this honorable board increase the benefits allowed to the valley by this canal as a drainage measure (see Department of Public Works report) and that recreation and natural defense be considered during the course of deliberation.

In presenting this paper, I have dealt primarily in broad, though factual principles. I have left for presentation by the paper that is to follow, much detail that will substantiate these principles.

Loan to Great Britain

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions of the Houston Cotton Exchange and Board of Trade submitted January 30, 1946:

Whereas there is before the Congress of the United States a proposed long-term loan to Great Britain involving substantially over four billions of dollars, and we believe that the economic welfare of this country is to be greatly enhanced by the approval of this loan; and

Whereas in the present demoralized condition of the world, we believe it highly essential to the restoration of all the nations that we do everything possible to preserve Great Britain as a first-class power, not only because they are our natural allies but more especially in this work of restoration and rehabilitation our nation can not do all the things needed by itself. We believe also that enlightened self-interest dictates the necessity of aiding this country so that they in turn may contribute to this great work which is so vital. There is no question but what this loan will be of enormous benefit in opening to us the export and import markets of all nations; and the consequent prosperity derived from this more than justifies the risk which is involved: Therefore be it

Resolved, That the board of directors of the Houston Cotton Exchange and Board of Trade wishes to go on record as unanimously approving the ratification of this loan.

The Disposal of Surplus Property Should Be Investigated Thoroughly

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. CURTIS. Mr. Speaker, if there is anyone that contends that the disposal of surplus property is being handled efficiently and in accordance with the intent of Congress, I have been unable to locate such an individual. Reasonable people are finding just cause for complaint when they attempt to buy any of the surplus property offered for sale by the Government.

Certainly something is wrong with this entire set-up. What conniving is going on back of the scene in connection with the disposal of surplus property that makes it impossible for a veteran, a farmer, a small-business man, or an educational institution to secure what they need. Why was it, that the Honorable Guy Gillette, a former Senator from the State of Iowa, resigned after wrestling with this problem for some time. Mr. Gillette's honesty and integrity is unquestioned, and the question has been asked Why would not he go on with the handling of surplus property? Great hope was placed in Mr. Stuart Symington, who was made Surplus Property Administrator. It was predicted that he would display great organizational ability and would set up an efficient program of disposal. Now Mr. Symington is leaving. I think that it is time to ask the question, what is wrong?

It might be well to recall the circumstances concerning the passage of the original Surplus Property Act. It was late in the summer of 1944. The Congress was in recess and a call was sent out to hurry to Washington and enact a Surplus Property Disposal Act right now. Most of the New Deal legislation is put through at the last minute, and under the threat and plea that a crisis or emergency exists. That was true when Congress acted upon the Surplus Property bill. Congress was urged to rush the legislation. Whenever the Congress is forced into a position where the battle cry is "Rush the legislation—don't read it," the legislation usually results in the creation of a bureau and a vast delegation of authority to that bureau, instead of the Congress approaching the subject and writing a law concerning it. This is not an accident, it is exactly what the New Deal bureaucrats want. It gives the bureaus power to regulate and control. It makes it possible for a bureaucrat to say to his stenographer, "Miss Jones, take a law."

A returned veteran, who wished to again take up farming in Nebraska and who was unable to buy any farm machinery from dealers, because of the strike and other work stoppages, writes as follows:

I've also tried to buy from the Office of Surplus Property which is a total flop as far as benefiting the veteran, then I find in the paper where the recent sale at Fort Crook, Nebr., brought in the most money of its kind in the United States, which alone proves little benefit do we get out of it, and anyone should understand that a veteran's financial standing isn't very high in comparison to the public who has benefited from the high wages and prices.

An enterprising business concern in Nebraska set out to create a new industry to employ veterans. Those gentlemen needed certain equipment and they proceeded to Omaha, Neb., to contact those agencies handling surplus property. I wish to quote a portion from that letter leaving out, of course, the names:

We are attempting to set up a small factory to employ returning veterans. We have already rented a building, hired one veteran as foreman and have several other veterans ready to go to work. Our factory is going to be utilized in building not only our own store fixtures but various related items. We need a complete set of shop equipment including lathes, table saws, band saw, jig saw, sander, etc.

The first of this week we made a trip to Omaha to attempt to buy equipment. While there, we contacted the Reconstruction Finance Corporation located at 601 Woodmen of the World Building, Omaha, Neb. The first individual we contacted informed us that he had nothing and we passed to another individual who likewise had nothing and we were taken to a third individual who also had nothing but who referred us over to another branch of the Reconstruction Finance Corporation located next to the Town Hall Theater and the same procedure was repeated with the exception that they referred us back over to a fourth person at 601 WOW Building where we again met without success. In both of these places there were a lot of high-priced RFC employees and stenographers, apparently doing very little, if anything.

All this happened on January 14. On January 16 the following ad appeared in the World Herald and I suppose in every other paper in the country. This is the identical office that we attempted to buy this scarce equipment from. They were listing exactly the items that we attempted to buy. Now obviously, either they don't know what they are doing in the office, they don't know what merchandise they have on hand, or they are just wasting a lot of the Government's money running these ads.

In the State of Nebraska most of our counties have a veterans' service office.

This was set up by the Legislature of Nebraska and it is not financed by Federal funds, but local funds. The situation in respect to the disposition of surplus property of veterans is so bad that one of our outstanding service officers, from a Nebraska county, recently wrote the Surplus Property Division of the Reconstruction Finance Corporation at Omaha, as follows:

I have this morning received your circular designated as OM List No. C-3, January 21, 1946, containing 16 pages of surplus steel, aluminum and brass in bars, sheets, and tubing, being offered for sale.

Although we were promised on October 29, and thereafter by letters from your office, that we would receive listings of all surplus property being offered for sale through your office, yet this far, the listings which I have received have all been of the nature of the one above referred to—namely, property in which no one in 1,000 veterans in this vicinity is at all interested. This is particularly irksome in view of the fact that in the Omaha World Herald of January 22, 1946, you ran a large paid advertisement, listing many articles of surplus property now available and for sale, including such items as paint, and similar commodities in which the veterans in this State are interested. Is there any reason why you can send circulars on nonwanted material, and not give us information on the items in which veterans are interested? Thus far the circulars I have received describing surplus property available have been limited to such items as steel sheeting, bulk plumbing supplies (in quantities much too large for veterans to handle), oil dealers' supplies, and horses in Wyoming.

The service officers of this State are familiar with the property needed by the veterans in their community, and if we could be advised of the sale of such commodities as you listed in the World Herald yesterday, we could get the information out to the veteran through our local papers, and by other means available. Nothing is accomplished, however, by your circulars advertising for sale surplus property in which not one in a thousand of the veterans can possibly be interested, and withholding from us information on those items in which the veteran is vitally interested.

The disposal of surplus property is such a disgraceful failure that many people are alarmed about it. Only this last week in a conference sponsored by the Labor Department the following resolution was passed:

Whereas the administration of the Surplus Property Act has operated to the disadvantage of veterans of World War II, and to the advantage of larger business firms; and

Whereas the military services have failed to act as expeditiously as possible in declaring property surplus; and

Whereas in actual practice the process of obtaining surplus goods is so onerous, complicated, and involved that it is practically an impossibility for the individual veteran to make purchases; and

Whereas in the disposal of surplus property no actual preference has been given to the veteran; and

Whereas it is essential to the economic well-being of millions of veterans that they be afforded a real opportunity to make purchases of such surplus war goods: Now, therefore, be it

Resolved by this conference of representatives of the Governors of the States and Territories called by the Retraining and Reemployment Administration and assembled in Washington this 5th day of February 1946, That—

1. Congress take such steps as are necessary to insure that a continuous and vigorous procedure of declaring property surplus be immediately instituted by the armed services.

2. Congress designate one agency to be charged with the disposal of war goods in quantities suitable for individual purchase. That a streamlined procedure be established to the end that veterans may acquire surplus war goods with a minimum of effort, travel, and cost.

3. Congress provide that veterans be given a preference over all other, including governmental units; and be it further

Resolved, That the Retraining and Reemployment Administration be requested to bring this matter to the attention of Congress and take any steps within its power to effect the provisions of this resolution.

Under the provisions of the GI bill of rights, which this Congress has passed, the colleges and universities of the country are playing a very important role. They are unable to get the surplus property that they need to better serve the veterans. The colleges do find out that there is much inefficiency, blundering, incompetency, and negligence in the handling of surplus property. The head of the physics department of one of our fine midwestern colleges, in a letter to the president of the board of trustees, which was passed on to me, said:

We have been supplied with a property list, issued from the RFC, coming from the Office of Surplus Property, Aircraft Division, Educational Disposal Section, which gives specific names and catalog numbers of items that are now available.

You will be interested in some of the facts concerning the above property lists which are of great concern to a college science department which is supposed to be working with basic science and not with trade-school problems. In the first place, this list, which is identified as exhibit A by the RFC, carries such things as brake assembly, bulb, air filter, ignition harness, etc., the whole being useful only as museum pieces now and are of little value for instruction in a physics class. The whole list contains only seven items which are of any practical use in science work, namely, some of the gyroinstruments. It seems that the colleges may become places for dumping scrap iron from the Air Forces.

The most significant thing about the list, exhibit A, is the type of material not listed thereon. There are no pieces of electrical equipment of any kind listed—such things as radio sets, radio components or repair parts, cricuit-building materials, electric meters, radio tubes—all of which are essential in teaching electronics. There are no optical units listed; such items as discarded lenses, sighting telescopes, sextants for teaching navigation are all desirable items in class and laboratory work.

I have talked recently with many ex-servicemen, both officers and enlisted personnel, and they tell of seeing large quantities of such things as the above articles being destroyed. They tell of large piles of optical, electrical, and mechanical equipment which are found around any of the airfields, but which are not made available to anyone. I do not see any reason why such material cannot be passed on to the colleges for they will not be able to get such practical equipment in any other way for a long time to come.

It appears to me that if a small businessman wants to secure some surplus property to retail to his customers, that he is faced with passing the buck, changing rules, and a good old runaround. He would have every reason to believe that it was never intended that he should have any of this surplus property. It looks like the game is to wear a potential purchaser out, to the end that he becomes disgusted and quits trying to buy any surplus property. The small businessmen, as well as the farmers, veterans, and colleges, are not getting the surplus property that Congress intended that they should get.

Mr. Speaker, an appropriate committee should at once conduct a searching and fearless investigation of the entire program for disposing of surplus property. The responsibility for efficient and honest administration in the sale of surplus property is something that cannot be escaped by this administration. Is the majority trying to permit this whole program to be cleaned up, or are they going to let a huge scandal break?

The Future of Alaska

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. ANGELL. Mr. Speaker, pursuant to leave heretofore granted, I include in my remarks the following editorial which appeared in the Portland Oregonian January 28, 1946:

THE FUTURE OF ALASKA

In his annual message on the State of the Union the President proposed that Alaska be granted statehood as soon as the people of the Territory express such a desire. A few days before Mr. Truman's message reached Congress news dispatches from Seattle told of hundreds of ex-servicemen booking passage to Alaska in search of new economic opportunity.

These events are closely related. They also are of great importance to the Pacific Northwest. Alaska is, in effect, a continuation of this region. The Northwest is the gateway to Alaska. Alaskan prosperity will help the Northwest. With the new land of continental United States now greatly restricted, Alaska stands as one of the last vast frontiers under American sovereignty.

Yet our treatment of Alaska is not something of which we can be proud. The natives of the Territory are the victims of the highest tubercular rate in the world; there are fewer natives in Alaska now than when we acquired the Territory from Russia in 1867. Alaska has neither economic nor political independence. The Territory is administered from the Department of the Interior in Washington, D. C., 5,500 miles away. Most of its resources are held in absentee ownership, either in Seattle or in Wall Street.

In August of 1944 the late President Roosevelt returned from Alaska and said he had met many soldiers there who hoped to settle in the Territory after the war. He announced an intention of setting up aids to help these men get started. Yet nothing has happened. Secretary Ickes submitted an inadequate plan to Congress, which consisted of nothing more than an expansion of the old-line bureaus under his aegis. It offered no tangible

assistance to veterans, and Congress wisely rejected it.

In a new book on our northern rampart, Opportunity in Alaska, published by the Macmillan Co., George Sundborg points out that "had the Nation been settled at the leisurely pace which has prevailed in Alaska, we would not yet have reached the Alleghenies. Time—not just the clock and the calendar, but the time that measures ages—has been standing still in the North."

Mr. Sundborg, a veteran Alaska newspaperman now living in Portland, goes on to insist that soldiers going to Alaska need genuine guidance and help lest they lose their savings. He adds that this guidance and help are not now in prospect.

In 1944 President Roosevelt compared Alaska and Scandinavia. He pointed out that Alaska is a land of vaster distances and greater natural wealth than the Scandinavian peninsula. Yet Scandinavia has 12,000,000 inhabitants, Alaska fewer than 75,000. Why is this? One definite reason, according to Mr. Sundborg, is the lack of either political or economic sovereignty in Alaska.

The salmon pack constitutes the Territory's single most valuable resource. Yet of Alaska's 434 fish traps, 396 are owned by people who are not residents of Alaska. This means that the wealth of the Territory is sluiced off; it does not permanently benefit the people who live in Alaska. In addition, the canneries bring up thousands of nonresidents to butcher the fish and can them. Most of these men receive their wages in Seattle. None of the money which they earn is spent in Alaska.

Mr. Sundborg has pointed out, too, that Alaska has the highest shipping rates in the world. The average family in Juneau, one of the southernmost cities in the Territory, pays $250 a year in ocean freight rates on its food alone. Mr. Ickes, despite many protestations of liberalism, has not moved to end the economic monopolies which have regarded Alaska as sort of a private colonial empire.

In October of 1946 the residents of Alaska will vote on statehood. This may well be the decisive moment in the Territory's modern history. Some elements in Alaska are opposing the referendum. Today Alaska, according to Gov. Ernest H. Gruening, is "the most lightly taxed entity under the American flag." The Territory has no sales tax, income tax, or property tax. The opponents of statehood fear that status as a State would force the levying of local taxes. Advocates of statehood reply that as long as Alaska is held in political serfdom by the Interior Department, it will be treated as a colonial empire—"our India," as one young Alaskan put it.

We cannot regard with pride our record to date in the North. The death rate from tuberculosis among Alaska's Indians and Eskimos is 650 per 100,000 population annually; this contrasts with 45 in the United States. The white man took to Alaska germs to which the natives had no hereditary immunity. Our duty to provide adequate hospitalization and treatment has not been fulfilled, claims Washington's Senator WARREN G. MAGNUSON.

Foreign Service, publication of the Veterans of Foreign Wars, states that thousands of veterans of World War II plan to settle in Alaska. So long as we continue to hold our vast domain in the North in political and economic vassalage, we are not fulfilling our obligation to these soldiers who have such high hopes. It is desirable that President Truman begin at once studies of the transportation facilities, communications, and similar services necessary to make colonization in Alaska a genuine possibility.

The Nation should not let soldiers lose their stakes in Alaska. The day when cheechakos could be allowed to rush headlong into the Northland is gone. And we have a special obligation to settlers who have served their country on the field of battle.

Food Production in North Dakota

EXTENSION OF REMARKS
OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, yesterday this House of Representatives passed an appropriation of $3,000,000 for a part of the Missouri River program which is located in North Dakota. This is the beginning of a great irrigation program that will finally lend stability to this northern and western country.

There have been drought periods when the lands of the West and North, as well as the South, failed miserably to produce their share in the Nation's food supply, and consequently the people in these areas were obliged to call upon the national treasury for assistance.

There have been other seasons when the productive capacity of North Dakota has rivaled any state in the Union. The history of North Dakota in the purchase of bonds during the war is one of the brilliant records among the many States of the Union. This brilliant record was made possible because it has been favored by abundant rainfall for the past few years. It will not always be so favored—the law of averages works against us.

With the beginning of the great water program, made possible by the appropriation yesterday, it will be only a question of years until this country will utilize the waters of the great Missouri River to make it self-secure against these recurring drought periods.

Those of you who so graciously supported the program yesterday, which included the Garrison Dam and its reservoir, might be interested to read the record of North Dakota's production last year. Under unanimous consent, I include herewith compiled figures which tell this interesting story of food production in North Dakota at a time when the Nation was so badly in need of it:

NORTH DAKOTA FARMERS GROSS $533,814,000—EACH AVERAGES $7,600 AS CROPS, PAYMENTS SHATTER ALL RECORDS

(By Lorne Wilde)

North Dakota did it again in 1945.

For the fifth consecutive year, farmers of this State came through with production of "bumper" proportions, smashed record after record, established another all-time high in the gross value of the foods and fibers taken from the soil.

North Dakota's 69,649 farms this year produced gross wealth from the soil of the State amounting to $512,814,000. In addition Government conservation payments, flax incentive payments, and subsidies paid to producers of milk, beef, and lambs received by the farmers exceeded $21,000,000, for a grand total of $533,814,000.

That is an average of more than $7,600 a farm.

That's the highest gross ever received by North Dakota farmers, comparing with $483,174,000 in 1941, the previous high record.

In 1945, North Dakota farmers produced the State's greatest wheat crop and the State's greatest potato crop.

In addition, the State:

Led the Nation in the production of flax.
Led the Nation in the production of barley.
Was second in the production of wheat.
Was fourth in the production of potatoes.
Was third in the production of rye.
Was third in the production of wild hay.
Ranks among the leading buttermaking States.
Is one of the high meat producing States.
Ranks high in the production of poultry and eggs.

That is a remarkable record, but the cumulative record of the last 5 years—the critical years of the war when an all-out production of foodstuffs was of vital concern to the Nation—will go down in the books as something phenomenal.

North Dakota never, previous to 1941, had two truly bumper crops in a row. Each of the last 5 years has produced superlative results in yields and quality.

The gross cash wealth produced in the last 5 years amounts to $2,046,812,000. Here is the record by years:

1941	$248,559,000
1942	353,035,000
1943	449,230,000
1944	483,174,000
1945	512,814,000
Total	2,046,812,000

In those 5 years North Dakota contributed to the national supply 1,736,328,000 bushels of wheat, corn, oats, barley, flax, rye, and potatoes

It produced 3,663,000,000 pounds of beef, pork, mutton, and lamb—live marketable weight; 85,000,000 pounds of turkeys; 242,843,000 pounds of chickens; 2,907,000,000 dozen eggs and 11,156,000,000 pounds (about 5,500,000,000 quarts) of milk.

The following tabulation shows the 5-year record:

	Bushels
Wheat	774,890,000
Corn	114,734,000
Oats	370,028,000
Barley	289,349,000
Flax	49,987,000
Rye	37,725,000
Potatoes	99,605,000
Total	1,736,328,000
Livestock produced:	*Pounds*
Cattle	2,048,000,000
Sheep	334,000,000
Hogs	1,281,000,000

The following table shows the gross value of North Dakota farm crops for 1945 and 1944, based on the assumption that one-quarter of the oats, one-half the barley, one-tenth of the corn grown for grain, and one-tenth of the loose hay is sold for cash, the remainder being fed to livestock.

The crop figures are based on the Government's final estimates on production for 1945 (with the foregoing exceptions) times the average price for each item—to the farmers—as of November 15. The livestock figures are for the amounts and values of livestock marketed or to be marketed in 1945, as estimated by Ben Kienholz, United States Federal statistician for North Dakota.

The prices used were: Wheat, $1.52; oats, 60 cents; barley, $1.04; corn, 95 cents; rye, $1.63; potatoes, 80 cents; hay, $6.60.

	1945	*1944*
Wheat	$246,070,000	$224,666,000
Corn	903,000	1,726,000
Oats	12,373,000	10,870,000
Barley	27,955,000	29,531,000
Flax	37,908,000	21,670,000
Rye	3,941,000	2,000,000
Potatoes	18,928,000	18,788,000
Hay	1,036,000	2,228,000
Other crops	5,000,000	5,000,000
Total crops	354,114,000	316,479,000
Cattle	48,000,000	42,137,000
Hogs	21,200,000	42,252,000

	1945	1944
Sheep	36,500,000	36,742,000
Dairy	39,500,000	40,427,000
Turkeys	5,800,000	4,970,000
Chickens	11,500,000	10,544,000
Eggs	16,600,000	15,382,000
Wool	6,500,000	3,259,000
Other products[2]	1,000,000	982,000
Total livestock	148,700,000	166,695,000
Grand total	512,814,000	483,174,000

[1] Other crops include sugar beets, grass and clover seeds, soybeans, buckwheat, peas, beans, millet, and truck crops.

[2] Other products include horses sold for cash, honey, hides, and other items.

The 1944 livestock figures are the revised figures of the United States Department of Agriculture.

Address by Attorney General Clark at Meeting of Tennessee State Bar Association

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, February 9 (legislative day of Friday, January 18), 1946

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by our very able Attorney General, Hon. Tom Clark, on the 1st of November 1945, at Knoxville, Tenn., at a session of the Tennessee State Bar Association. The remarks of the Attorney General are very enlightening and interesting, and I hope they will be widely read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been my good fortune to serve in the Cabinet of the President of the United States for some 4 or 5 months. You know the Cabinet room is a very historic room. When you walk into the west entrance there, you see before you a rectangular room with a fireplace at the end, with a mantel over the fireplace, and above the mantel is a portrait of one of the great Presidents of the United States, Woodrow Wilson. [Applause.] He seems to look down on the deliberations of the Cabinet and see put into effect the great policies and principles for which he stood twenty-odd years ago. And on the left side of this portrait is a portrait of Madison, and next to that is a portrait of Jefferson, the founder of democracy. And the Cabinet table is a very interesting table. It is made out of pure mahogany, a table some 30 feet long, some 6 feet wide, tapering down to square corners at the end, and by the center of that table sits the President of the United States. On his right sits the Secretary of State, and next to the Secretary of State sits the Secretary of War, and next to him sits the Postmaster General, and next sits the Secretary of the Interior. On the President's left sits the Secretary of the Treasury, and next to him the Attorney General, and then the Secretary of the Navy, and the Secretary of Agriculture, and last the Secretary of Labor.

I have been there and have seen the problems that have faced the Cabinet. I have heard them discussed there, as we say down in Texas, just throwing it out on the table with the cards up. I have seen the President grasp the issues involved. I have seen him probe the facts in order that he might see both sides. I have seen him understand the problem. I have seen him decide the issues, and decide them with that rare judgment, with that uncanny accuracy that comes from one who, like you and me, is of the people, a great Missourian who has that common, ordinary horse sense that today leads us to victory in the peace. I think that today we should thank God that in the White House we have Harry S. Truman. [Applause.]

Tonight I thought I might tell you just a few things about the Attorney General. I'm just brand new there, you know; I haven't been there long. I started out in the Department in 1937. I think I met Charlie McCarthy in 1938. Back there then, we had to room two or three of us to an office. I remember many times when Charlie left town, he'd come back and his office would be moved, and I remember many times when mine was moved while I was out of town, and we would have to scramble around and try to find the files that we had been working on. That's how crowded your Department of Justice was.

You know the Attorney General has many problems. He has many petitions that are presented to him; he has many pleas that are made in behalf of persons; and he has many that are made against persons. One of his most arduous tasks is the selection of judges. There are some people who think that the Attorney General, in selecting a person to recommend to the President for a judgeship, just reaches his hand down in a hat and kind of shuffles the cards and comes up with a name. That is far from the truth. We watch the districts very closely. We have a department that does nothing but watch the districts with reference to judges, the circuits with reference to circuit judges, the Justices of the Supreme Court, and the United States attorneys. Of course many times we do not know, we can't foresee that a vacancy will occur. For example, a vacancy might be caused by a death. But many times we can foresee those things, and long before that vacancy might occur we have already been canvassing the field to see just who might be fitted for that type of work.

While I am your Attorney General, it shall be my purpose to recommend to the President for the trial bench those who have had trial experience, those who have had the hard knocks in the courtroom, those who have learned, as the Saturday Evening Post said, to wrestle with juries, those who have had the practical experience. In addition to that, we shall look into the background, into the education, into the home life, into the social aspects of each of the various persons who might be recommended for positions. And when we come to the conclusion that a certain person has those attributes, those qualifications that in our opinion will permit him, in fact will demand from him, that he allow that simple, everyday, ordinary justice that the litigants in that court deserve, that is the person whom we will recommend to the President of the United States to be made a trial judge.

Now as to the circuit bench. We intend to recommend for that bench those who have had experience in court, those who have presided in the court. I don't mean by that particularly the Federal court; I don't mean to say that we are going to elevate only trial judges from the Federal bench, although I do believe in promotions. But we shall go into the State benches, as we did in Nevada not long ago when we took the Chief Justice of the Supreme Court and put him on the ninth circuit out in California. And as to the Supreme Court. As we did in the case of Mr. Justice Burton, we shall seek out that type of man who has had the experience that will enable him to deal out that type of justice which litigants in that court are entitled to receive.

As you know, my office is a pretty big office. It has 27,000 people. Down in Texas we'd call it like being in the tall cotton. It's sort of ornate when you come into it. You walk in and you have this reception room, and then you have another room where the secretaries stay, and then you have a room as large as this room here where there is a private office, and behind it you have a little office where you do your work. Of course, Charlie knows that the Attorney General does very little work; he depends on his assistants to do that. Then behind that little office you have a small library room. Next to that you have a sitting room. And I'm going to let you in on a secret; up above the sitting room there is a little bedroom.

Now that bedroom has created a story. When Bob Jackson was appointed Attorney General, after he was confirmed he took a little vacation. After you get confirmed by the Senate you are entitled to a vacation. [Laughter.] I have been through that two or three times, and I know. Well, just before Bob was there, Mr. Justice Murphy was the Attorney General, and Mr. Murphy had just gone on the Supreme Court of the United States. Well, two ladies came in to see the Attorney General while Bob was gone. One was a very charming movie actress and the other was the beautiful wife of a Georgia politician who was very prominent in party circles. Of course, the office was a bit flabbergasted because of these beautiful ladies calling on the Attorney General, and also because the Attorney General was out of town.

Now Hugo, the executive assistant to the Attorney General, is the man who handles the hot problems that the Attorney General wants to pass on to somebody else. He saw these ladies and he was a little bit perturbed, but he was showing them through the offices, thinking that perhaps he might satisfy them. He got back to this little library I was telling you about, after leading them through the various offices, and they didn't seem to be very well satisfied. So he decided to do something that had never been done before, and that was to show these two ladies this little bedroom. As he came into the sitting room he said, "You know, there is another room to this suite of offices that the Attorney General never uses. It's a room that was just sort of an architect's dream. The Attorney General never has any time to use it, but you ladies have been so nice and you have been so considerate because the Attorney General is out of town that I want to show you this room." So he took them up the staircase of 10 or 12 steps. This room is very secluded and has no telephone, and that is one of the best things about it. As they walked in he was showing them the room. There was a couch and the blankets were in order and the sheet was turned back sort of like they turn them back in the Waldorf-Astoria and the ladies looked around the room. Miss de Havilland was the movie star and she has a very discerning eye. She was looking around and she walked over to the couch and looked at it. Then she looked at Hugo and said, "You say the Attorney General never uses this room?" He said, "Yes; never uses it." She said, "Well, how did this hairpin get here?" [Laughter.]

A few days later the Attorney General came back to town, as Attorneys General will do, much to the consternation of some of the help. Hugo was going over the long list of things that had happened. You can't imagine what a long list it is until you happen to be there some day. When I get there in the morning, although I have only been gone this one day, I'll venture to say the list will be 8 or 10 pages long. As I said before, Hugo was going down that list, and he came to the notation he had made about the two beautiful ladies calling on the Attorney Gen-

eral. He said, "You know, Mr. Attorney General, I am somewhat embarrassed at this. But these two ladies came, and I was trying to take care of your business, and I thought I'd just show them that I was really going all out—and I took them up in the little bedroom. What do you think! Miss de Havilland found a hairpin up there."

Mr. Jackson burst out laughing—you know he's mighty quick on his feet—and he said, "You know, Hugo, that's the best story I ever heard on Frank Murphy." [Laughter.] Yesterday I sat next to Mr. Justice Murphy, and I told him about using this story. He didn't verify it, but there was no denial, so I take it that I have his consent to use it. [Laughter.]

One of the most important things in the Attorney General's office, I think, and a thing that is possibly much in the minds of lawyers today, is the enforcement of the antitrust laws and the laws that affect business. I was reared in that division, so I thought I might bring you a few words about the policy I hope to carry out.

Heretofore the Anti-Trust Division investigations have been made largely by the attorneys in the Anti-Trust Division. We'd take boys who had been out of school a short time, put them in a group of three or four, put a man of experience above them, and send them out to investigate a case. I don't intend to do that while I am the Attorney General. I intend to use the Federal Bureau of Investigation on antitrust cases. The reason I am doing that is twofold. One is that I mean business on this antitrust. I mean to go after it on a Nation-wide basis. I don't mean to use groups. I mean to use the full facilities of the Department of Justice to see that so long as the Congress keeps the antitrust laws on the books, they will be enforced. They'll be enforced in a practical way. I don't mean by that that we are going to have any witch-hunting; we're not. We're not going to have any so-called fishing expeditions. We are going to have just everyday, hard-fighting practical law enforcement of the antitrust laws and all other business laws. So long as the Government can stay out of business, I think it is to the great benefit of the people as well as of business, but I intend to use the antitrust laws to see that business keeps open the channels of trade and gives to every person the right to go into business, the right to mantain the type of business, so long as he does not violate the law, that he wants to maintain, and to keep those channels clear.

In that regard, I do not intend to permit, so long as I am the Attorney General, any business or any industry to be indicted by criminal indictment or information that has engaged in practices for many years, practices that are publicly known, practices that have for many years had the sanction in good faith of the lawyers that have represented that business or that industry. In other words, so long as industry has followed a practice that is so publicly known and has been so publicly followed, and that has the approval of that industry's business and is known to the Department, I intend to go by the civil remedy of injunction, rather than by the grand jury or by criminal information.

I do not want you to think for a minute that I intend to be soft in this regard. I do not. Whenever there is any price fixing, any present willful intent to violate the statute, I intend to present those facts to a grand jury or to request the United States attorney to file criminal information against those who are culpable in that regard, but I do not intend to use the indictment or the criminal information to hit business over the head in order to make it comply with my ideas of economic policy. I intend to enforce the statute as it is written, and give business a fair deal and a fair roll of the dice, as we say down home.

In that regard, I invite the lawyers of business to come to Washington or to come to the United States attorneys and talk over their antitrust problems with them. If you have a problem that you want to talk over, some problem that you are doubtful on, as to whether it is legal, we will be glad to talk with you and to give you our ideas. I don't mean by that that we are going to give you a rubber stamp or we are going to legalize something that is not legal. I mean by that that we are going to attempt to work with you in an effort to help business to carry on in such a way that it may know what the Government's idea is with regard to the antitrust laws under which that business works. So much for the antitrust laws.

The second thing that I intend to spearhead is the collection of taxes. You know the person who fraudulently evades his taxes, whether they be income taxes, or processing taxes, or any other type of taxes, that are due to the Government is taking money from your pocket and mine. I intend to make those people pay, and I intend to do it by criminal prosecution. I mean by that, that I intend to present or have presented to grand juries those facts that come to my attention with regard to the violation of the income tax or any other tax laws of the United States, in an effort to bring to justice those who do not pay the lawful taxes that are assessed against them. We have been doing that now for some 3 or 4 months. Soon after Mr. Vinson was appointed Secretary of the Treasury he and I and the Secretary of Agriculture and Chester Bowles, the OPA Administrator, had a meeting in which we decided on this policy. We shall continue that policy. There are those who think that they can evade taxes, but they can't get away with that. They are going to get caught up with sooner or later.

Now, there is a policy that has brought the Government in quite a lot of taxes ever since it was announced, and that is the policy of what is known as voluntary disclosure. If you have a client who has a bad conscience and knows that he has violated the law and owes some taxes, and you bring him in to the internal revenue collector and say that he owes so much for so many years—if that is done, we won't go after him criminally. If he owes that tax, he will have to pay it and the fraud penalty incident to it, but there will be no criminal prosecution if he comes in and makes a clean breast of it. But if he doesn't, when the intelligence service catches up with him, you can bet your bottom dollar that he will be prosecuted to the limit of the law. We intend to try to get the limit on that type of law violation.

In my office, besides the rooms I have described, there is another room. It is a circular room that has a door that goes into each of these offices that I have described, so that if you want to keep people in two or three different offices and take them out without their seeing one another, you can carry them out through this room. I usually carry them out through that room, because written on the walnut panels that mark the walls is this phrase: "The Government wins when justice is done." So long as I am the Attorney General, that shall be the motto of the Department of Justice. The Government wins whether the defendant is found guilty or not, so long as he is given a fair trial. The Government wins when justice is done. We represent both sides. As your Attorney General, I am the people's lawyer. I am not the lawyer to persecute; I am the lawyer to represent all the people. I don't care whether they be Democrats, whether they be Republicans, or what they be, I shall represent them all. I shall attempt to get the facts as they exist, and after getting the facts and hearing both sides, if the defendant's side wishes to be heard I shall proceed, regardless of what the consequences might be or what the uproar might result in. In other words, I intend to carry out just the motto that "The Government wins when justice is done."

The Attorney General has a lot of pleasant things to do, too. Some of you may have read the story about me in the Saturday Evening Post. I wasn't characterized there as the people's lawyer; I was characterized there as the President's new lawyer. I'm proud to be the President's lawyer, because I have the greatest client that ever lived, the President of the United States. No lawyer could have a finer client, no lawyer would work any harder for a client than he would work for that client. But at the same time, as I told you, I feel that I represent the people, that I'm the people's lawyer. In that article they had me making pancakes and had me, I think, standing up there flapping some flapjacks. Down in Texas we used to call them battercakes. Well, you know since that time I've gotten the fifth griddle-skillet. I had about 10 letters that said I used the wrong kind of utensil. They had noticed that I used a skillet rather than a griddle to fry these pancakes, so yesterday I got this combination griddle-skillet, which was made by the Dow Chemical Co. of magnesium. It is very light. I didn't know what was in the package until I opened it up and it was a combination griddle-skillet. They were taking no chances on whether I was wrong or whether I was right in using a skillet. We also got a lot of pancake flour, and I have a lot of new recipes that came in. I haven't tried them all out yet. Some of them call for corn meal and some of them call for buckwheat and some of them call for plain flour. It's just a conglomeration.

In addition to that, you will remember the writer mentioned something about little trinkets that were given to the Attorney General. One was a little watch. I don't have it with me; I gave it to Mary. Mary is my wife. I thought it was more appropriate for her. It's a little black watch, about a couple of inches long and an inch wide, and when you open it the face shows up, and it winds itself when you open and close it. It's a beautiful little thing. I had been down in what we call the great hall and shaken a few hands, about a thousand or fifteen hundred, and a gentleman came up, and said, "I just want you to have this to carry through your term as Attorney General." I was shaking hands, so I took it and put it in my pocket. It was just a little note of some kind. I thought. I get a lot of them, and some are nice ones, and some are sort of bad. It brings you down to earth when you get those. So when I got upstairs I took my coat off and threw it on the desk, and I heard it thump, which reminded me of the gift. I looked in my pocket and pulled out this package, and it was a beautiful watch. It was in a little Dunhill sack.

I wondered who gave it to me. There is a statute on the books that prohibits one in the Department of Justice from giving a superior a gift and prohibits the superior from accepting a gift. There are a great many people within the Department—so I wondered just who it was that gave it to me. I asked Edgar Hoover to check into it, and he said he had no clues, but he'd see what he could do. In 2 or 3 weeks he came back and said he had found out who had given me the watch, and it was not a person in the Department. The way he found out was that there were only three of those watches, although they didn't cost but $8 apiece, and one went to the President of the United States, one went to Bob Hannegan, and the third one went to me.

I was with Mrs. Truman and some other people the other night at a little dinner, and I wanted to check up on it just to be sure, although I have the utmost confidence in the FBI. I have found out that they can really do things I never dreamed they could do. In fact, they gave me their bullet-proof car. I

don't know why they gave it to me. I was talking to Edgar one day about it and I said, "I suppose you thought I was hotter than you were, and that's why you gave me the car." I asked Mrs. Truman about the watch and she took out of her purse one that was exactly like mine. That night I gave mine to Mary. [Laughter.] I follow the steps of my boss.

When I came into the Department, I didn't realize that the juvenile delinquency in the United States had increased so much in recent months. One day a man came into the office from a Midwest city, and he told me about an indictment that had been returned against his boy, 17 years old, who had been paroled by the Army to go to school. He was going to school, and his daddy was a very fine man. But this boy got in with an ex-convict and was induced to join in on a scheme to sell airplane tickets.

The third man in the scheme was an employee of one of the air lines. This employee would issue these tickets—of course they were not paid for—and give them to the ex-convict, and the ex-convict would give them to the boy and the boy would cash them at an air-lines office. Of course he couldn't go back to the same air-lines office twice, because he would be caught up with pretty quickly, so they suggested that he go over into another State, which he did, and then into a third State. The FBI caught him after he had cashed some twelve or fourteen hundred dollars' worth of these tickets. So he stood indicted for this felony in the United States District Court. His daddy sat there and told me, "You know, I've been busy in war work, I've been trying to help get the war won, and I've lost my boy. If anyone should be punished, it should be me, because he didn't know what he was doing. I've neglected him during the last 3 or 4 or 5 years. I didn't know just what was going on." I picked up the phone and called the United States Attorney in that district and asked him to look into the case and see just what the conditions were and just what type of person this boy was and what his daddy was and the rest of the family. I found out that the boy had never been in trouble before. I found out that, in all probability, if he got over this hump he would be a law-abiding citizen. So today that boy is not in the penitentiary, and he's not in a reformatory. Today he is on probation, and he is serving in the active Army of the United States. He is not in school but in the active Army. I hope and I am sure that he will be a good citizen.

There are thousands of boys like that, and there are thousands of girls. I asked Edgar Hoover to get me up some figures about it. Much to my surprise, I found that in one offense by girls 16 years of age and under, the percentage had increased 357 percent for the first 6 months of 1945. Another offense, larceny, by girls 16 and under, had increased 105 percent. I found out that for the first 6 months of 1945 of all crimes of all types, by all persons, 54 percent were by boys and girls under 21 years of age. So I thought it was time for somebody to do something.

I think it would be a great idea if the bar associations of the United States could get together and have a program that might help in saving these boys and girls. I don't have anything concrete to suggest, other than that perhaps you might establish some youth center, sort of like the USO. I suggested this to some New York lawyers and radio executives, and they now have several youth centers in New York where these boys and girls can go and kick up their heels rather than doing it in the back seat of a stolen automobile as they do now. I think that you could do something that would be of great benefit to your country if you would look into this situation. Perhaps the youth centers are not the answer. But figure out some answer, something that the lawyers can devote themselves to that will be a monument to them, a monument to the citizenship of tomorrow, because these boys and girls are going to be the men and women who run the country tomorrow. We must help them. Some of them are not as fortunate as your boy or my boy, or your girl or my girl. I hope that this bar association will appoint a committee to look into this deplorable situation. Edgar Hoover and I will be glad to give you every cooperation. In these percentages, I am not speaking of Federal crimes. I am speaking of all crimes, including State crimes.

We have a lot of problems in Washington besides cooking pancakes and one thing and another, and we need a lot of good suggestions in the Department of Justice. We are trying to run a law office. It's a pretty big one. I'm just a small-town lawyer. I need the help of the lawyers all over the country.

When I first came into the Department, I was a little bit scared to talk to the Attorney General. Not that I was afraid of him, but I just was a little bashful about talking to him. When I became Attorney General, I set up outside of my office what we call a suggestion box, and I wrote a little note to all the employees of the Department of Justice and had it mimeographed. I told them that I was setting out this suggestion box and that I had the key to it and nobody else would have it, and that I hoped they would give me their suggestions for the betterment of the Department. If they could sign them, fine, because I knew then that they meant what they said; if they couldn't sign them, they should send them in anonymously and I would consider them anyway.

One night I went out and scooped up these suggestions and took them home with me, and I was looking over them along with some other stuff that was official business. About midnight I came across this letter, written on the typewriter. It said:

"DEAR MR. ATTORNEY GENERAL: You should not wear bow ties. Besides, the bow ties that you wear are too loud.

"Your wife does not have the proper hairdo. The wife of the Attorney General should have a very dignified hairdo, and I would suggest that she go to the beauty parlor and have her hair done over."

Well, Mary had gone to bed and I didn't want to show that to her and disturb her rest the remainder of the night, so I waited till the next morning. She was very much interested in that last paragraph. I decided I would check up on this note, so I called the FBI around and they checked into it. The next morning Edgar came around. He had the letter with him, and he said, "Well, we've checked the typewriters and we have pinned it down to four or five typewriters, but there are about 10 or 15 lawyers that use those typewriters, through their secretaries, and we don't know just whether it is the lawyers or the secretaries. So," he said, "I sent it over to the fingerprint section and I've found out who it was."

"Who in the world was it, Edgar?" I asked.

He said, "Well, I'll tell you. It was your boy, Ramsey." [Laughter.]

Now the reason that I am wearing a bow tie tonight is that Ramsey is in the marines. He's about 3 inches taller than I am, and I am no person to cope with him, but I do want to have your suggestions. If you can't come to Washington and come to see me when you are there, I hope you will write me. Of course, if you can come there and bring a little bit of Tennessee like I saw today, it would really make my heart glad to see you and to get your suggestions. But if you can't, write me. I want to hear about it if you have any suggestions to offer for the good of the Department of Justice. I intend to carry on the Department just like you would want your law office run. It's your law office. I'm just your leader there. I want you to feel that it's your law office. I don't want you to think by that that you can run it, because you can't, but you will get a fair deal, your client will get a square deal, and the people will be dealt with as they should be.

It is a great personal privilege to be here today and tonight. It's always good to meet with lawyers. You know we get our heads so far in the public trough sometimes that we lose our perspective. When we get out and meet with folks such as you, we get our outlook back, we get to seeing things as we should, and for that reason I deem it a particular privilege to be here and to meet with you. So I bid you goodnight. [Applause.]

The Case Bill

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 8, 1946

Mr. HOFFMAN. Mr. Speaker, the New York Times editorial of February 8 points very mildly to the futility of snap-blanket legislation. That editorial reads as follows:

THE NEW LABOR BILL

Wholly apart from the merits or the contents of the Case bill, the most significant thing about it is that the House, for the first time in several years, has passed by a large majority a measure to which the spokesmen for organized labor were known to be opposed. The House has done this only two or three times since the passage of the Wagner Act, more than 10 years ago. In June of 1940 it passed, by a vote of 258 to 129, sweeping amendments to the Wagner Act. In December 1941, just a few days before Pearl Harbor, it passed by a vote of 252 to 136, the Smith strike-control bill. In June of 1943 it passed the Connally-Smith bill. The first two bills were buried in committee in the Senate and never came before that body for action. The Connally-Smith bill originated in the Senate and so became law. The action of the House in passing the Case bill yesterday by a vote of 258 to 155 means that the present wave of strikes has once more stung Congress into action.

Wholly apart from its contents, however, the Case bill is one more illustration of how not to legislate. It was put before the whole House without study or hearings by any committee. Drastic amendments to it were made on the floor. In this respect it was not unique. The Smith strike-control bill of 1941 was slapped together and passed without so much as a week's study or debate. The Connally-Smith law, still on the books, was also largely written on the floor.

Yet most of the very people who criticize the new bill on this ground, as they criticized its predecessors, fail to recognize or to acknowledge that the trouble goes much deeper. Congress and the administration have had more than 10 years in which to appoint an authoritative and impartial commission to recommend a rounded program of labor legislation. Neither of them has ever done so. The members of the Labor Committees of the House and Senate, respectively, are usually placed on those committees because they are "pro labor"—that is, because they want only the legislation that the unions ask for. They do not represent the opinion of either the House or Senate as a whole on what labor legislation is desirable. For more than 10 years they have systematically opposed every bill, regardless of its merits, to which organized labor raised the slightest objection. The Senate Labor Committee has made it its business to see that even labor

bills approved by more than a two-thirds majority of the House never see the light of day again and never come to a vote in the Senate. This is not a picture of majority rule or of proper democratic process.

As to the merits of the Case bill, they are, as one might expect in the circumstances, mixed. On the one hand it proposes some reforms that are long overdue. Surely it is time that some Federal legislation spoke out against the use of force, violence, or intimidation by either side in a labor dispute; or the unlawful destruction or seizure of property; or the violation of labor contracts. This the Case bill does. Surely unions that are guilty of such practices should be deprived of the special protections of the Wagner Act, whether or not any positive penalties are imposed on them. Insofar as the Case bill directs the National Labor Relations Board to take cognizance of such conditions it does what the Wagner Act should have done from the beginning. Similar comment may be made regarding the Case bill's provisions against boycotts, and its more specific removal of foremen and other supervisory employees from the provisions of the Wagner Act (though the language of the original act in this last respect is plain enough if the NLRB had been content to interpret it sensibly.)

Other provisions of the bill are more dubious. It is uncertain whether some of its provisions could be enforced. It sets up machinery in some respects modeled on the War Labor Board and in some respects on the Railway Labor Act. A realistic appraisal of the record of WLB and a study of the Supreme Court decision against the Toledo, Peoria & Western Railroad raise serious doubts whether this machinery would work as its sponsors intend.

The bill declares that the term "employee" shall have the same meaning as in the Wagner Act—almost immediately after it has given it a different meaning from that in the Wagner Act. One of the greatest mistakes of all is the failure not only to guard against jurisdictional disputes between the new National Mediation Board and the NLRB, but the failure to repeal the Smith-Connally Act, as part of the new measure, though the Case bill both duplicates and contradicts the Smith-Connally Act.

The Case bill has, however, some good provisions to build on. Let us hope that it is not buried, like its predecessors, in a Senate committee, but is made the basis for sincere study and considered amendment in such a committee and that the result, without too much delay, is allowed to come before the full Senate.

In the Washington Post of February 9 is the following:

MORE BOLD THAN WISE

The 258-to-155 vote of the House for the Case strike-control bill is more important than the bill itself. We hope that the bill will not become law in its present form. But we welcome this evidence of determination in Congress to provide more effective governmental machinery for dealing with strikes and for enforcement of fair play in the collective-bargaining process. We think that the House membership has accurately reflected the temper of the country in speaking out boldly and resolutely on this controversial issue. Its salutary action would have aroused far more enthusiasm, however, if the wisdom in the bill had matched the determination behind it.

While the measure starts with the key problem of effective mediation, it would turn this task over to an independent board composed of labor and employer representatives as well as public members. Mediation is the task of Government, not of unions and management. In our opinion, the mediation agency should be composed of the country's leading experts in the settlement of industrial disputes, and they should represent only public authority. What the House proposes is a peacetime WLB. At best the WLB was only a makeshift war agency. We think the problems now confronting the country call for an agency to guide the collective-bargaining process on a peacetime basis and solely from the public point of view.

No less serious is the mistake of backing up this board by force. The courts would be authorized to enforce its orders by means of injunctions for the maintenance of existing working conditions or the postponement of strikes for a period of 30 days. That is in deference to the absurd notion that a "cooling off" period may somehow prevent employees from striking. What is desired, of course, is merely time for a governmental agency to step in and use its good offices to adjust employer-employee differences before a strike occurs. This obviously cannot be obtained by force. A mediation board which started out by using force would end its usefulness forthwith. All it can do is to direct employees not to strike or employers not to change working conditions while negotiations are going forward. Since the board would unquestionably have public support in such undertakings, any party refusing to cooperate would bring automatic punishment upon itself—perhaps the penalty of losing its case. But, in any event, a mediation board cannot start out by using force.

We have previously expressed the opinion that some provisions of the bill are desirable and constructive. The bill would authorize suits for breach of contract. It would outlaw violence and threats of violence in connection with hiring and firing and picketing. It would penalize the destruction of property in strikes and use of the boycott to induce recognition of a union or compliance with its demands. Likewise it would remove "supervisory employees" from the groups whose bargaining rights are protected by the National Labor Relations Act.

Taken as a whole, however, the bill is a patchwork. Being an illegitimate offspring of the Rules Committee, sent to the floor without the approval of any legislative committee, it is by no means finished legislation. For that the Labor Committee is perhaps as much to blame as any other group because of its failure over many years to report out constructive labor-disputes legislation. In effect the action of the House is a rebuke to its Labor Committee for dereliction of duty.

The Senate Committee on Education and Labor is likewise notorious as a graveyard for legislation dealing with labor disputes. Will it now continue to keep its head in the sand until the Senate finds it necessary hastily to patch together a labor-disputes bill, as the House has done? The committee has a chance to render a great national service by rewriting the House bill in line with sound principles of mediation and fair play in collective bargaining. But there is no indication that the Senate or the public will wait indefinitely. The committee has the alternative of bringing out a reasonable and courageous bill or of risking, because of its own inactivity, the enactment of rash and undigested legislation.

Mr. Speaker, the House has no excuse for not considering amendment of the basic law, NLRA.

In March of 1940 and on February 1, 1946, there was printed in the CONGRESSIONAL RECORD the National Labor Relations Act and proposed amendments. The House just will not take time to give study to much-needed legislation.

Farmers Condemn Strikes in Essential Industries

EXTENSION OF REMARKS

OF

HON. E. H. MOORE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Saturday, February 9 (legislative day of Friday, January 18), 1946

Mr. MOORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Grady County Farm Revolt," dealing with the action of approximately 300 Grady County farmers at Chickasha, Okla., who met in protest against strikes in essential industries which work hardships on them. The editorial was published in the Daily Oklahoman of January 29, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRADY COUNTY FARM REVOLT

About 300 Grady County farmers met at Chickasha Saturday to voice indignation against strikes in essential industries that work hardships on them. A resolution was passed warning Congressmen that the farmers will vote against those who do not "act at once to protect our Nation, by forcing labor and management to live up to their written contracts."

Since management has not been accused of living up to its contracts, the shoe seems to fit the steelworkers' union, which had a wage contract extending to October 15, 1946, one provision barring strikes during that period.

United States Steel had offered the workers an average wage of $51.60, besides overtime for a 40-hour week, or $2,683.20 a year. The union leaders turned down this offer. The workers had already had more than 33-percent increase in wages since 1941—more than offsetting any increase in cost of living.

It is safe to say that no Grady County farmer works an average of less than 60 hours a week, and $2,683.20 a year looks like pretty big income, even though living costs may be slightly higher in the big cities.

The situation at General Motors, General Electric, International Harvester, and other struck plants is much the same. General Electric had experienced no real labor trouble in 24 years. Wages are now 51 percent higher than in 1935. But CIO moved in, and now there is a strike.

At the International Harvester Co. there had been a period of 22 years without strikes. There were works councils in which labor and management sat down around a table in the good old American way and talked things over when trouble threatened. But the Wagner Labor Act forbids this method of talking things over, and now the workers of the UFE union of CIO are on strike, though the average wage was boosted from 85½ cents an hour in 1941 to $1.16 an hour, excluding overtime. They have made 42 different demands, including a 3 weeks' vacation each year on pay, eight holidays, closed shop, guaranteed annual wage, and other things. The result is that 10 factories are closed, and not even repairs are available.

Steel, of course, is the key industry, and if the steel strike is continued long, this will close down all farm-implement factories—in fact, most of the important industry in the country.

The Wagner Labor Act was gotten up by a man who was born in Germany and has spent all his life in New York since coming to this country. He knows nothing of the temper of the American people—particularly he knows nothing of the problems of the farmer. His point of view comes out of the old Bismarck days and the program which finally gave birth to the monstrosity of national socialism. His law is one of the most pernicious pieces of legislation ever foisted upon the people and made possible by the cowardice of legislators, who feared the pressure blocs of labor bosses.

It is scarcely necessary to argue this case. The undeniable facts are so obvious that they make their own argument.

The farm crops all over the Nation are threatened with great depreciation, spoilage, and lack of facilities for tending and harvesting them. That is the immediate problem of the farmers. The issue extends to a greater sphere however, for it covers the entire population and threatens the lives and health and welfare of all of us.

If the farmers all over the Nation will take up this cause, they can win a great and important battle for themselves and for the Nation.

Economic Adjustment Our Present-Day Problem

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 6, 1946

Mr. WHITE. Mr. Speaker, our national economy is out of adjustment, an unfavorable condition the Congress and the national administration has been working to correct ever since the last war and even before that. Many factors must be resolved in any successful program that will bring business and industry into an equitable adjustment. The present unstable conditions and the unfavorable results of the plans the administration and the Congress have devised and followed to restore a stable national economy has demonstrated, as I see it, the futility of any effort that fails to provide a sound, adequate, workable money system and the maintenance of free and fair competition.

Without going into a detailed discussion of the cause and effect of the many factors that have contributed to the existing unstable economic conditions. I commend for consideration a valuable treatise that reached me among the many pronouncements arriving daily in the congressional mail from thoughtful and earnest citizens seeking to enlighten and assist the Members of Congress in protecting and preserving the priceless heritage we enjoy—good government.

AMERICAN ECONOMIC STABILITY

(An address delivered by A. W. Robertson, chairman of the board, Westinghouse Electric Corp., before the Economic Club of New York, Hotel Astor, November 29, 1945)

One who expresses himself on economic matters today would do well to provide a fox hole, or at least a shield, to fend off rockets of criticism. This is particularly true when a businessman speaks. So I present my shield in the words of Pericles: "We need no Homer to praise us; rather, we have opened the whole earth and sky to our enterprise and raised everywhere living memorials to our fortune."

Where else but in America is each new baby a potential derby winner and at maturity is able to look forward to an old age of comfort and honor?

The national economy in broad outline consists of the sum total of all our efforts, whether playing, working, spending, or saving, as well as the emotional effort which we put into life. In fact, all of us, from our birth to our death, affect it and are conditioned by it—the white-collar worker, the man in overalls, the taxi driver, professional man, artist, farmer, businessman (big and little), banker, technician, housewife, Government and civil-service employee.

The world is suffering from the economic dislocation of war. The United States didn't pay the full economic price for the war while it was being fought, so we must pay for it after it has been won. No doubt, millions of our people will rebel against doing what the payment will require. Economic, social, and political convulsions as powerful as an earthquake are undoubtedly future possibilities.

In order to narrow somewhat the broad implications of the subject, I propose to take on The Rules Are Obsolete. As an approach to the subject, let us first consider the course we have followed to this point in our lives.

In the days before our economic life became so complicated and individuals became so dependent upon each other, the rules didn't matter greatly. Life then was like the boyhood game of one old cat, which, as I remember it, consisted of a batter, a pitcher, a catcher, and fields, and was so simple even the family dog could play it. Life is no longer so simple.

In recent generations we have given up the economic independence that was the source of pride of the pioneers for the dependence that arises from membership in a highly specialized civilization. The self-sufficient Jack-of-all-trade citizen of our grandfathers' day has become the highly specialized citizen of today. Our plan of life encourages diversities and differences, and we need common standards to bind us together.

The division of employment and of interest took place gradually and peacefully. Man did what he wanted to do rather than what he must do, and did it better. The mechanic found machines to work on. The outdoor man found outdoor work; the clerk, paper work; and the manager found plenty to manage. As a result, the over-all economy of the world was greatly changed. As specialists we added wealth and luxury to life; created comforts and conveniences unknown before. We reduced the effort necessary to produce goods. Mass-production methods of manufacturing were discovered. Some of the results are worthy of special note.

During the last 50 years the quality of our mechanical conveniences has risen and the price has dropped continuously. This brought luxury products within the reach of all. It enabled the employer to pay higher wages for less work. Fifty years ago the average wage earner worked 55 hours a week for $10. The early part of this year he was working 45 hours a week with an average pay of $50. Yet the prices of many products have been steadily reduced due to the fact that manufacturing output has multiplied as the power used in manufacturing increased and improved techniques were adopted. This is a world's record.

As stated in a recently published occasional paper of the National Bureau of Economic Research, "we know little that is comprehensive and accurate about the changing relations between production and labor" even though the ratio of these two quantities is an index of a basic condition of human existence.

Our homes became rich with comfort: central heating under thermostat control, light from a push button, power from a floor plug, ice cubes in every glass, automatic cooking while we shop, luxuriant baths, vacuum cleaners, and air conditioning—all wonderful luxuries furnished by specialists—but to keep them going we became slaves to the serviceman and to the factories in far-off cities. We learned this only too well during the manpower shortage of the war.

This specialization changed our manner of living. Great cities grew and grew and boasted of their size. Mass transportation, mass working, and mass living became general. Most citizens depend entirely upon other people for the necessities of life. They work at special jobs for wages and spend the money so obtained to purchase necessities and luxuries. It has been said that the modern city is only 3 days removed from hunger, and that means 3 days from revolution and bloodshed. If this is too short, make it 3 weeks.

The farmer became a specialist, too. He is now a wheat grower, a corn raiser, a potato specialist, a cotton grower, and so forth; seldom a general-purpose farmer supporting himself. As long as the intricate pattern of specialized functions fitted into basic human needs our economy grew and developed at amazing speed. Like Jack's bean stalk it almost reached the sky. But, as our standard of living grew higher each year, it also became more complicated, because of more specialization and more things added to those we had. The complexity grew geometrically. If we had three times as many luxuries, we had nine times as much complexity. This was an outgrowth of work—an economy of action.

As more and more effort, and therefore more and more of the economic product or value, was reflected in luxuries, conditions became more and more sensitive to change. In a rich society there is a surplus of luxury products—furniture, radios, clothes, etc., which the people can do without at will, thus stopping all flow of goods in this particular field without complete ruin; whereas in a bread-and-butter economy things continue to function on a low grade of subsistence, or famine and starvation result.

However, as long as the ratio of production to the expenditure of labor was on the favorable side and we were making more than we were spending, in the terms of Benjamin Franklin's illustration "with an income of $200 and an expenditure of $199," all was well, with happiness and prosperity on every hand. A national economy resembles a top in that the faster it spins the more stable it is. During this giddy period of rising well-being, with more and more for less and less effort, we did not clearly realize our complete dependence upon each other. And when I say each other, I mean groups of men that seem to have no connection whatever to each other. Certainly the city man has no conscious knowledge that he depends for well-being upon the cotton grower or the shepherd on the mountain sides of Arizona. And much less does the cotton grower realize that he is dependent upon the city man.

However, during the depression we reached the stage that resembles Franklin's example of spending $201 with an income of $200 with resulting unhappiness and instability. Our spinning economy top began to show signs of running down and to show a dangerous loss of balance. The city girl who made artificial flowers for milady's hat was jobless when hats were not bought. A farmer found himself with wheat that no one wanted. Fear gripped the country.

Even so we did not fully sense what our dependence on each other meant. Dependent groups were too far apart, separated by both geographical miles and emotional experience. We did not accept the full implication that each of us in this highly specialized and complex society is his brother's keeper.

As the danger of falling from our high estate attracted attention, remedies were suggested. Obviously our economy didn't bring wealth, happiness, and prosperity to every citizen. Some were born poor; others attained poverty; and some had it thrust upon them. Honor and wealth were not evenly divided. Much fault could be found with the results of life, and it was easy to forget that bad as it was it is the best in the world, and the United States of America is the only country where workmen rode in automobiles and their wives wore silk stockings.

We must not lose sight of the fact that it is the state of affairs that we had used all our efforts to produce. Man's ambitions since the dawn of history have been directed to making things for his comfort and to relieve him from effort, although paradoxically the only worth-while fun he ever has is in work or effort which he sometimes designates as sport or play. He finally attained an environment almost wholly mechanical, or at least of man-made contrivances.

Many of the suggested remedies were untried so that it was difficult to refute the optimistic claims of their sponsors. Since our affairs had outgrown the book of rules and, since there was no duplicate of America in the world, weaknesses and faults were misunderstood and misinterpreted. It is perhaps not to be wondered at that the remedies suggested were about as sensible as a witch's brew or the medical advice of a radio commentator. Champions of the unfortunate arose in numbers. It was a pleasant role for people with a mission, for who could question the statement that the hungry should be fed, that wrong should be corrected?

Some of the remedies tried were distinctly harmful. We tampered with the money standard. The measure of value was the dollar. It was the common denominator of all effort and of all value and wealth. We changed this unit of value to the advantage of some and the disadvantage of others. Life became a mathematical problem in which new unknowns were being constantly introduced. Changing the unit of value had an effect something like using a rubber cord for the linesmen at a football game. When it is retracted it is in favor of the offense; when it is stretched it is in favor of the defense. Its use effectively prevents a fair game, or as a matter of fact, any game at all.

We followed this by increasing the quantity of money out of all proportion to things and services, following a course that had caused a complete break-down of the sound economic life of other nations. In other words, we invited a runaway inflation. This abnormal condition was made dangerously explosive by financing a large part of the colossal expenditures of the war through the banking system. We printed currency and exchanged bonds for new bank deposits and in these and other ways pushed our supply of funds up to two and one-half times the size of the money supply of 1940. This supply is now the tremendous sum of $163,000,000,000. It was only $67,000,000,000 5 years ago. We have produced a financial bomb which threatens to blow our economy to destruction.

Other remedies to cure the real or fancied ills appeared on every hand. We did not follow the laborious and painful road of honest effort to find what was wrong. It was pleasanter to listen to the plans of those who knew how to improve things without either study or work. Volunteer masters of ceremonies were common. We began to change from an economy based on work to one of catch phrases. "A few selfish men" became responsible for all our troubles. "The ill-fed, ill-housed, and ill-clothed" were not responsible for their condition. Taxes were levied against "those best able to pay"—in the eyes of the tax collector—and "pump priming" and "mural painting" recommended. Our economy was weakened by termite terms. We talked a better life.

A plan will share the wealth; a declaration will end want and fear; the unfit shall become fit by fiat. "We planned it that way" and expected it to work even though our wise men confessed that they didn't know too much about the anatomy and functioning of our economy, and swung like a pendulum from an economy of scarcity to an economy of plenty.

One ever-present remedy was Government intervention. You know the phrase, "If you don't do something about it, Government will." That was intended to carry the strong implication that Government would be able to do the right thing. The hurricane of managed economy roared in a wind of words round an area of low pressure centered over Washington. It may not blow itself out in our time.

During this period we talked ourselves into a high state of alturism with justice and champagne for all, and at the very same time were guilty of action of great injustice. Remedies were oftentimes surprisingly superficial and literal. Killing little pigs or paying farmers not to plant their fields or boondoggling, pretzel bending, window trimming, tea tasting, or what not, or the present drive to raise wages of former war workers regardless of production or circumstances are scarcely basic cures. These remedies may have served the purpose of an aspirin tablet, relieving the economic pain, but they are certainly not true remedies that cure the cause of our distress.

The scourge of ideologists descended upon us like a cloud of grasshoppers. They insisted that if we would only think differently all of our woes would end. One of the most verbose of all preachers of ideologies is Harold J. Laski. During preparation of this talk I imagined a debate with Laski. If you would see a headline "Laski Debates Robertson," you would know who won without reading further. It would be Laski. However, wait until you hear the whole story of this imaginary debate. The subject is Economic Stability, but as in all good arguments we are not going to discuss the subject.

Laski will argue with ability and conviction that American ideology is so wrong that America couldn't have given England in her months of need $25,000,000,000 of war material and other vital necessities nor could it have supported Russia in her desperate plight. And with its wrong ideology it could not possibly have carried on successful warfare on two fronts thousands of miles apart. If you listen closely to him you would begin to think that with so wrong an ideology America must have lost the war.

I, on the other hand, shall attempt to prove that on a diet of soggy boiled potatoes, brussels sprouts, and stringy beef, England could not have presented an unbroken front to the enemy no matter how hard pressed. And on such a diet she never could have produced the peerless leader with his ability to pronounce the ringing phrase at the psychological moment. I am convinced the English diet could not support such people and such deeds. Whatever the outcome, I prefer my argument.

I have joked about ideologists, but do not misunderstand me. I know we need to learn more about our complex economy so that we may help to keep it in equilibrium through the changing years. In the past we have fortunately survived technological change, shifting standards of morality and ethics, wars, and industrial revolutions. If we could only use our dynamic balancer, we could find out what is wrong in a minute. But, alas, the economy of life is not only the product of material things, money transactions, etc., but there is a strong element of emotion emanating from the human beings that are living in it which affects everything. Economy is a part of living and as long as we are alive the show must go on no matter how poor the performance. We can't stop it as we would a machine and examine it and determine what is wrong before running it again.

Any opinion is little better than a guess, but I think the root of our present troubles, in addition to the threat of inflation, is our dependence upon others without a clear comprehension of what this implies. I know this approach leaves unanswered the threat to civilization in the atomic bomb, the spending-to-guarantee-prosperity problems, the mature-economy bugaboo, the saving-is-antisocial cult, destructive taxation, and so forth, but this is only one speech on one evening by one man.

As our lives have grown more complex and our need of common standards more imperative, we may need more rules to guide us, which probably means more government in our affairs, although I shudder at the thought. Most of us think of government rules as preventing us from doing something rather than helping us to do it. However, that is not always the case if the rules are wise and wisely enforced. When our grandfathers jogged along the country road behind the plow horse, they didn't need traffic laws and red and green lights at intersections, because there wasn't enough traffic to justify them. Now traffic laws are absolutely necessary, and they expedite and do not slow traffic. Can you imagine how far we could get on a national highway if we traveled forward on the left side as well as the right side and picked our way through approaching vehicles? Everyone and every vehicle would necessarily be reduced to a snail's pace, with traffic jabs innumerable.

The English common law, on which most of our known rights and duties rest, was based on a simple economy. Certain things were yours; and I couldn't steal them from you or interfere with them without punishment. There was no need to recognize the deeper interdependence of society. The concept of freedom was simple. It meant keeping out of jail. Practically no one depended greatly on anyone else. Each person was relatively self-sufficient. All this is changed.

The man who works for 20 years at a machine in a shop of his employer, tending the monster with loving care, has some kind of a right to work at that machine if there is work for it to do. In an inarticulate manner his employer and fellow workmen recognize this right.

Striking workmen in crowds exercise rights which no individual has. In other words, 10 or 10,000 may do something as their right which one man could not do without committing a crime. This is now accepted in all society, and we commonly use the phrase, "the right to strike." Obviously it is a vague term and needs definition. For instance, may the milkman who delivers milk to my door, which my granddaughter needs to sustain life, strike and prevent anyone from delivering milk, thereby causing the death of the child? Could the milk company refuse to deliver it? Society cannot safely be at the mercy of groups of men or organizations. Freedom has taken on a new definition.

The thought of a few men having control of the atomic bomb jogs us into a realization that their power should be curbed, but what difference is there between having your business blown to atoms and having your business ruined by the same group of men preventing you from using your property? In both cases you suffer equal loss. We need to realize that power to destroy must be curbed wherever it is found, or freedom will be lost.

How could we live in a city if the employers of the electric power company, or the company, refused to furnish electric power, which is absolutely necessary if the life of a city is to continue for 24 hours? As a people we seem to shrink from facing issues of this kind. Perhaps we don't want to admit how utterly helpless we have become. As far as I am concerned, the man who takes from me by force what is not rightly his is a

robber even if a vote is taken on it or his number is legion. Tyranny may be exercised by the many as well as by one.

Imagine, for instance, meeting two robbers on the Brooklyn Bridge at night. They place a gun against my body and demand my wallet. And if I had the temerity to question their right to the wallet (which under the circumstances takes considerable imagination), the robbers might answer, "We want to be fair about this matter. We will submit the question to popular vote." Then they vote on whether or not they shall take my wallet. The two vote "yes," and I utter a quavering "no," whereupon my wallet goes to the majority. But the fact remains that it was taken from me by force and a strong arm.

We need to awaken to the fact that there is no end to the business organizations or groups of people who can, by the simple act of stopping work and preventing others from doing their jobs, hold up the rest of society and extract any penalty they wish. We need to acknowledge duties as well as rights. The company which delivers milk to my home has a grave responsibility which it cannot escape. Society at large should know and evaluate this fact, and employment and remuneration should reflect it. Unless there is public acceptance of duties as well as rights, our economy will slow down by right checkmating right until we are literally doing more and more and producing less and less, and the unbalance will become so chronic that we may ultimately run down entirely.

To keep going, and go we must, the modern specialized workman must know his rights and duties in terms of modern social needs. It is equally imperative that the employer know his rights and duties in terms of social needs. And all of us, whether employer or employed, must recognize and accept the fact that certain rights and duties are fair, reasonable, and necessary to the well-being of society. Here is the point where a common standard of understanding must be found if we are to escape the disunity inherent in the diversity of our interests. Due to the confusion of rights without duties, the time of citizens is taken up in disputes that cannot be settled because of lack of accepted standards. Alleged rights are insisted upon. Duties are unknown. Liberty is threatened.

It is also necessary that we establish some simple, local, and inexpensive method of determining defined rights and duties. Remedies cannot be applied until our ills are diagnosed in terms of rights and duties. There are plenty of rules controlling corporations and employers. The Interstate Commerce Commission and legislation regulate the railroads. The public-utility laws and other legislation regulate public utilities. Our banks are regulated, and industry generally is regulated by countless laws.

Is it not time that we, the people, insist on everyone and every organization standing in line and waiting its turn? A little unrest and confusion may be overlooked in our swiftly changing world, but in the end order is of necessity the basic element in our economic stability.

Nation-wide Mapping Program

EXTENSION OF REMARKS
OF
HON. E. P. CARVILLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Saturday, February 9 (legislative day of Friday, January 18), 1946

Mr. CARVILLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Nation-wide Mapping Program Should Be Encouraged," published in the October 1945 edition of Surveying and Mapping, a publication of the American Congress on Surveying and Mapping.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATION-WIDE MAPPING PROGRAM SHOULD BE ENCOURAGED

(EDITER'S NOTE.—The following is an excerpt from an address by Gov. E. P. CARVILLE, of Nevada (now United States Senator), at the Conference of State Governors, Mackinac Island, Mich., July 3, 1945.)

It behooves us well to employ every possible means, and pursue every practical step to conserve and intelligently develop our seemingly boundless natural resources. If that be done, we, of the present generation, may reap the greatest benefits, and at the same time retain a heritage of permanency for our progeny. It is just common sense to do so.

I do not believe we have reached the danger point as yet. We have not reached the stage of a "have not" Nation, and we do not want to reach that stage. Currently we have ample resources to carry on for some years to come, but let us take heed.

In this light, it would be a constructive and pregressive step for each State to effectuate a systematic method of checking, or taking stock, of its natural resources in all their categories. Let us survey the various fields and know definitely what supplies are visible, what are potential supplies, and what prospects we should have for newly found supplies.

One important step leading to the development of a program of conservation should be immediate action to overcome serious handicap caused by the lack of adequate maps of those regions containing our natural resources. Few people realize that the greater part of this country is inadequately mapped; and in the Western States especially, vast areas have never been properly charted.

We should promote a program to complete the mapping of this country at an early date; for until this is done, it will not be possible for us to inventory and catalog our resources and plan for their efficient use. At present there is a great deal of activity in many of the States to develop a Nation-wide mapping program, and this work should be encouraged.

E. P. CARVILLE.

A Look Ahead in Agriculture

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a speech which I delivered on January 26 at a State meeting of county agricultural conservation associations held at Salina, Kans.:

It is pleasant to be in Salina this week and discuss with farmers important questions and issues of interest to all of us. We meet here in a friendly and peaceful atmosphere about as far as one can get from the turmoil and strife prevailing throughout most of the outside world, and even in some parts of our own country today. Yet, the fact that we are meeting under these favorable conditions cannot blind us to the fact that no matter where we live today we cannot escape being affected by what is going on in other parts of the world.

We have won a great war. The fighting is ended but as yet there is no peace. Strife and disorder still exist in many lands and labor troubles threaten our own country. Victorious nations are not yet considering peace treaties. People in half the world are destitute, hungry, and homeless. The great problem for the next 50 years is to rebuild this shattered world and to exercise the will and devise the machinery to keep the peace.

America emerged from the war as the world's most powerful Nation. That power brought us responsibility. We may wish that we didn't have this responsibility but there is no way we can escape it.

The devastation of war has accentuated the contrast between material conditions in this country and the rest of the world. Here we have everything. Many countries have nothing. The average per capita income of those engaged in agriculture in India is $22 per year. In China the returns are not much better. The poorest Kansas WPA or FSA client in the depression and Dust Bowl days lived in luxury compared with normal living conditions on collective farms in Russia and on individually owned farms in many other parts of Europe. With us the big question just now is how soon will we get a new car, or radio, or electric washing machine. In many parts of the world the big question millions of people are asking themselves is, Will we get through the winter without freezing or starving? If the world is to be rebuilt, we shall have to help whether we want to or not. If the world is to have peace, we shall have to furnish the leadership whether we want to or not. If democratic governments are to continue in the world, it must be through our example and leadership. We must do those things because there is no one else who can do them. If worst comes to worst and there is a third world war, the whole world may go down together if scientists and military men are to be believed. They talk of atomic bombs, not just the puny little bomb that wiped out Hiroshima, but superbombs many times as powerful and dropped by planes able to fly across the widest ocean and return without refueling.

But I will say no more on that now, because I did not come to talk of world affairs or military and diplomatic matters. I came to discuss agriculture, but no discussion of agriculture, either from a domestic or international standpoint, is worth two cents unless it is made against the background of world conditions as they exist today.

What do the years ahead hold for agriculture, and, more specifically, for the Kansas farmer? What can we expect during the next 5, 10, or 25 years? For the last 5 years a combination of favorable weather, skilled utilization of labor-saving machinery, and, most of all, good management, hard work, and long hours on the part of the individual farmer and his family, has resulted in the greatest aggregate agricultural production in our history and by far the greatest output per man in all the world's history.

It is a record of which every farm family and every American may well be proud. During this 5-year period the American farmer increased his production by more than one-third over the average of the previous 5 years. He supplied the men in our fighting forces with the finest rations ever consumed by any army or navy. He contributed vast food supplies for the use of the armed forces and the civilian population of our allies, and fed our people at home better than they had ever been fed before. In addition, the farmers of this country and Canada created a commodity surplus, without which it would be impossible to carry the world through this winter without mass starvation. If we recognized achievements in

agriculture as we have in industry and in the military service, then most American farmers would deserve an E award and millions of farmers would be wearing the Distinguished Service Medal.

And the end is not yet. For industry 1946 is a year of reconversion. For agriculture it is still a wartime year if a hungry world is to be fed. This means for farmers continued hard work, long hours, and full productive efficiency.

But reconversion in agriculture must come and this is probably the last year when full wartime production will be needed. Our Army and Navy are rapidly being demobilized. Agriculture in the war-torn countries will be the first industry to recover and, with favorable seasons, production there will soon return to normal. As industry reconverts it finds an expanded and waiting market for everything it can produce. Agriculture, on the contrary, will find its market reduced. Even if domestic demand continues high, as it well may, military outlets will largely disappear and exports will shrink. Perhaps when it comes, farmers may welcome a relaxation of the pressure to produce under which they have labored. Many of them will want to rest and rebuild their land and they might well seize for themselves and their families the opportunity for rest and relaxation which they have so richly earned. Then, too, we cannot expect a continuation indefinitely of the favorable weather conditions which have proved such a godsend during the war years. Inevitably, there will be some years of poor yields and lower-than-average production.

All of these factors may postpone but they cannot prevent the arrival some time in the future of our old bogey, agricultural surpluses. Call it what you will—overproduction or under-consumption—there will be times in the future when the supply of agricultural products will exceed demand to an extent which will surely affect market prices. I know thoughtful farmers are looking ahead to that time with some misgivings and apprehension and it is not too early to be thinking of how we are going to meet that situation when it arises. We are fortunate in the fact that Congress has established by law a stabilization of prices on most commodities during this reconversion period. Stability of prices for the basic crops is provided by the 1938 Triple A Act as amended, and price supports for many nonbasic commodities are provided in the Steagall amendment which will be applicable during the 1946, 1947, and 1948 crop years. We are fortunate in the fact that this legislation eliminates the necessity for emergency action now and gives time for careful and deliberate consideration of postwar agricultural policies.

However, the fact that we have the AAA as to basic crops and the Steagall amendment as to many nonbasic ones, does not mean price support on unlimited production. As to the basic commodities, there are provisions for marketing quotas if supplies get out of hand. In the case of the Steagall commodities, while there are no restrictions in the law as to the quantity upon which the price can be supported, it is implicit that it may be necessary to establish some limits on quantity, either by law or regulation, since a guaranty of 90 percent of parity will probably stimulate production beyond demand in the case of some commodities.

In view of the cataclysmic political and economic changes which have taken place in world and domestic conditions during and following the war, it is likely we will want to review and reconsider our entire agricultural program between now and the end of the period covered by the Steagall amendment. We have behind us almost 17 years' experience in agricultural marketing and price stabilization legislation, beginning with the Agricultural Marketing Act of 1929. This experience has been invaluable in showing what can and what cannot be done through stabilization and price supports. We know so much more now than we did in 1929 that we can legislate much more intelligently and effectively than we could then.

One of the questions which actual experience has settled beyond a shadow of a doubt is that prices cannot be supported above market levels indefinitely without control of production or marketing, or both. It can also be said that the amount of control and regimentation necessary is directly proportional to the extent by which it is attempted to raise prices above the market. We might, for example, attempt to support the price of wheat at $3 per bushel but unless all other prices, both industrial and agricultural, are advanced in proportion, we would soon be in trouble. There would be shifts from other crops. Industrial workers would start coming back to the farm. Acreage allotments and marketing quotas would have to be put into effect. Producers in new areas would produce without allotments. Producers in old areas would have their acreage and allotments cut down. The surplus would pile up. The costs to the Treasury would mount. Export markets would be lost. Feeding and industrial uses would be eliminated and consumption generally go down as production went up. Controls would increase, everybody would be unhappy and finally the whole program would break down.

I do not believe farmers want that kind of support prices. Neither do they want to again be in a helpless position when a situation like that of 1931 and 1932 confronts them. Indeed, if there is any one principle which has been accepted by the American people during this 17-year period of experience in agricultural legislation, it is that of support prices. In spite of the fact that support-price programs have not always been successful, they have received the endorsement of both major political parties and, undoubtedly, will be continued in some form or another. What we must do now is to apply the lessons learned in the past and make these programs more efficient and effective.

There are differences of opinion, of course, but if I am any judge, what farmers generally want is stability of prices at a fair level. They feel that extremely high prices which cannot be maintained are in the end just as detrimental as low prices. Since we have already spoken of wheat, let me ask what is a fair price at which to stabilize wheat prices? I think that's the most important question confronting wheat producers today. Do they want to stabilize at a price so high as to reduce consumption and destroy the export market? Do they want to have unrestricted production and take their chances on the matter, or do they want stabilization somewhere in between? If so, what is a fair place at which to stabilize the price? Should it be at parity or above, or below? How much flexibility should there be? That is, should a large crop be stabilized at a lower price than a short crop? Should prices be related to the cost of production? Should cost as related to volume be considered? How much control would producers be willing to accept in return for stabilization? All of those questions can properly be taken into consideration in working out a postwar wheat program and, certainly, the experience which we have had during the last few years puts us in a good position to give the correct answers. It seems to me that the ultimate answer depends upon final agreement as to what relationship between price and volume will give the most favorable return to the producer with a minimum amount of control. I shall not take time to go into the mechanics of proposed wheat programs because with the experience already available the mechanics can be easily worked out when we decide upon the principles which we want to apply.

This discussion of prices naturally brings up the question of parity which is receiving much consideration just now. It is of greatest importance for agriculture to hold onto the parity concept. It is our means of relating agricultural prices to other prices and keeping agricultural purchasing power constant. I don't think that necessarily means that we must hold strictly to the 1909–14 basis. There have been many changes in agricultural production since that time. The cost of producing some agricultural products has increased.

In the case of others the use of labor-saving machinery and technological advances have resulted generally in lower costs per unit. The fact that there have been changes in cost and working conditions on the farm since the base parity period has brought about a considerable demand for a revision of parity. Several proposals to change the parity basis have been tentatively suggested by farm organizations. I think we might well consider revisions but I do not believe we should be in too big a hurry to make drastic changes. We are interested in wheat out here. I think the present parity formula is favorable to wheat. However, there are commodities such as dairy products and beef cattle, to name two of the most important, where conditions have changed enough since the 1909–14 period that a parity price based on those years does not now seem adequate. If a formula could be worked out which would take into consideration changes in production costs and other factors affecting these commodities, it should be given consideration. Of course, parity is only a yardstick. It does not actually affect prices except as they may be supported on the basis of parity or some percentage thereof. If there is to be a general price-support program on farm commodities, however, it is important that the price relationship between the various commodities be equitable and economically sound. For instance, if the parity price on wheat resulted in a support price on that commodity which was more favorable than the support price on dairy products, then we might expect a shift from dairy production to wheat, which would result in overproduction of that commodity. That would be good for neither dairy products nor wheat.

Of course, what we would all like is fair farm prices on a stable basis without the necessity of any Government support price or controls. If buying power at home and abroad is sufficient to result in a good demand for farm commodities, that is the best possible kind of farm relief. For that reason farmers are particularly interested in general governmental and business policies. If we have full employment in this country at good wages, and if there is a flourishing world trade, we may confidently count upon a sufficient amount of buying power to result in good prices for farm products. For that reason, farmers are interested in domestic policies which result in business prosperity and full employment and they are directly interested in international policies, especially insofar as they bring about more prosperous international trade.

I know of no possible way by which the wheat farmers of this country can maintain a normal wheat acreage or make the most efficient use of their land and machinery unless there are export outlets. The same thing is true of cotton farmers. Export outlets for pork and lard and for certain kinds of fruits have contributed to agricultural prosperity in the past. However, we have been and are still pursuing a somewhat contradictory policy in that we are trying to raise the general level of prices in this country above world levels and at the same time are attempting to increase exports. Standing alone, the two policies are incompatible. At the present time there is a sharp conflict of policy between the State Department, which urges that we promote foreign trade by letting the price of export commodities drop

to the world level, and the policy of Congress and the Department of Agriculture in attempting to maintain domestic prices above world levels. If we are going to have high domestic prices in this country, and attempt to export on a world market which is lower than the American market, there would seem to be only one method which could make this possible. That is some form of a two-price system. The State Department, however, takes the position that two-price systems are not practical because they bring about trade wars and dumping. There is some historical basis for this argument. However, in my opinion there is an answer to this argument and a way to operate under a two-price system and still avoid trade wars and dumping. That is through the medium of international trade agreements. As all of you know, an international wheat agreement between the four big exporting countries of the United States, Canada, Australia, and Argentina, and the importing country of Great Britain, was entered into some time ago. Its operation, however, has been suspended during the war. There is talk now of a new agreement which would not only embrace the parties to the previous agreement but other importing countries as well. If there could be an international agreement upon prices and percentage allocations to nations of the international wheat market, then it seems to me that the objection which has been raised to a two-price system would not apply. There have been proposals also for international agreements in cotton and they could very well be formulated as to sugar, rubber, and other international commodities.

This Government has invited a number of other nations to join with it in a world-trade conference for the purpose of bringing about freer and more profitable world trade. We may think that we are not interested in world prices and world trade in commodities other than those which we export, but I do not believe we can overlook the fact that historically, agricultural prices in this country have generally followed world prices. The collapse of farm prices from 1929 to 1933 was a world collapse. The increase in farm prices which took place during and following the First World War was a world increase. In recent years and during the present war, our agricultural prices have not followed world prices so closely because we have maintained them at artificial levels. Undoubtedly, however, expanding world prosperity and better world prices will be directly reflected in better prices and markets for American farm products.

The biggest domestic danger confronting us today is inflation. It offers just as many dangers economically as the atomic bomb does militarily. None of us likes price controls. We want to get rid of them and other war-time controls as soon as possible. The lifting of price controls now would, undoubtedly, result in higher prices for some farm commodities. Temporarily, it might look like a good thing. In the end, it would be a snare and a delusion. And increased costs of the things farmers buy would more than absorb any profits. No phase of inflation causes more grief than that affecting land values. Any substantial increase in farm prices now would mean higher land prices. So far farm land prices generally are not badly out of hand but in some localities they are approaching the danger point. It is well to remember that the big increase in land values 25 years ago came after the war, not during it.

The surest preventive of inflation is a plentiful supply of goods. The sooner people get back to work the sooner we can get rid of price controls. Every production day lost through strikes means we are taking a big chance on inflation and further postpones the day when we can get rid of ceiling prices.

From where we stand today things look good for farmers as far as the immediate future is concerned. They will be good in the long pull if we don't make too many mistakes. Industrial prosperity for the next few years means good markets, not quite so good perhaps as during the war, but good. If world trade can be expanded and world living standards increased, there is hope of increasing exports, particularly if Europe gets back on its feet, as it will in time with our help. The emphasis which is being placed on food and nutrition in this country and throughout the world, as exemplified by the setting up of the United Nations Food and Agriculture Organization, means much. The more interest the consumer takes in food and nutrition, the larger the portion of his dollar he will be willing to spend for food. The people in this country who ate better during the war than ever before will probably continue those new food habits if they have the buying power.

All this does not mean automatic prosperity. There will be periods of hard times ahead. That is where support prices and stabilization will come into play. That is where farmers will have to exercise good judgment, not only in their individual operations but in cooperating with each other in production and marketing. That is where full advantage must be taken of new and more efficient farming methods and of improved varieties of crops and breeds of livestock. These things can and will be done. Along with them must come increased attention to soil conservation. I wish I had more time to go into that now. Yes; and we must pay more attention to human conservation on the farm. We must have better schools, better farm-to-market roads, and better hospitals and medical care for rural people. We know there will be more of other things which make for easier and better living. Rural electrification, for one, and all the conveniences which come in its wake, conveniences which will soon come to be necessities.

One thing more I want to see on the farm. That is more leisure, especially for the farm wife. Labor-saving devices in industry have meant more leisure. For farmers I don't think that has been generally true. Certainly, during the war years it hasn't. It has meant more production but still the same long hours. But after this year, when the pressure to produce will slacken, what about shorter hours on the farm? Industry has a 40-hour week. That doesn't look practical on the farm just now, but certainly the long hours of the past can be cut down as labor-saving machinery comes into general use.

And what of the atomic bomb? What is going to come out of the chaotic world situation today? Is it going to make our hopes for better agriculture in a better world impossible of realization? Perhaps so. I think it depends on many things. I have already said a lot hinges on the leadership which this country may be willing to offer. That leadership, if it is to be effective, demands sacrifices on the part of all of us. It means that we have to put as much effort in winning and holding the peace as we did in winning the war. To do that we must be strong morally, economically, and militarily.

But strength alone is not enough. We have got to learn to cooperate better with our fellowmen, both at home and abroad. Isn't that pretty much the answer to our strike problem? Isn't it the answer to international difficulties? Recently I attended the meeting of the United Nations Food and Agriculture Organization at Quebec. Forty nations were represented. They worked together on the vital problems of food and agriculture which are of concern to everyone. They agreed upon a program and set up a permanent organization. To me this was an inspiring occasion. If the nations of the world can get together on the vital subjects of food and agriculture they can get together on other things. Sir John Boyd Orr, who was elected as Director General, described the organization as the world's answer to the atomic bomb. It seems to me he had something there. Isn't strength, courage, vision, and, above all, cooperation between nations, the only possible answer?

Semper Fidelis

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following self-explanatory letter from General Vandegrift to the publisher of the Washington Post:

HEADQUARTERS UNITED STATES MARINE CORPS,
Washington, D. C., February 1, 1946.

Mr. EUGENE MEYER,
Editor and Publisher, the Washington Post, Washington, D. C.

DEAR SIR: On December 12 there appeared in the Washington Post an editorial entitled "Semper Fidelis," dealing with the alleged shelling of a Chinese village by a detachment of United States marines on December 4. Although the report upon which the editorial was based was admittedly fragmentary, the editorial was written in a manner tending to disparage the good name, and good faith, of the Marine Corps. For that reason I requested that further comment be withheld until fuller and more accurate information became available.

Through a naval court of inquiry which investigated every phase of the incident I now have that information. In justice, I believe that it should be published.

In the first place, this atrocity which your editorial writer compared to the German invasion of Poland and the conduct of the Japanese in the Philippines entailed no bloodshed whatsoever. Property damage was limited to the breaking of two window panes. The shells (from a single 60-millimeter mortar) were not fired into the village but were carefully placed outside its walls, as a step in what appeared to be the only practicable method of trying to apprehend murderers and recapture stolen weapons, and to insure against possible recurrence of murderous assaults against Americans.

To understand why it was considered necessary to resort to such an expedient, one must understand something of the locale where the incident took place. It is a region which for many years has been without effective civil government. Although the traditional Chinese village system still has some ability to regulate, according to custom and usage, the affairs of the inhabitants of each individual village as among themselves, it is incapable of regulating transient persons who are not amenable to the moral suasion of the village elders; or, for that matter, of villagers who engage in activities of questionable nature, so long as they do not affect adversely the village group or one of its members. Moreover, the village system rests on no visible or tangible organization. Thus, in this region in general, and particularly in the sections lying outside the limits of towns and villages, there is no local civil government

in the sense that it is understood in this country.

Constant warfare over a period of years has affected the stability of the population. In the absence of an effective civil government, bandits, brigands, dissident groups, and irregular armed bands have been free to operate with no restraint other than that imposed from time to time by the presence of organized military forces. Consequently, the whole population has come to recognize and respect force and little else. Manifestations of hesitancy in the administration of affairs, or even of what we in this country might call leniency or kindliness, are apt to be looked upon as evidences of weakness or incompetence which in many cases are promptly taken advantage of.

This, then, was the setting. What follows is a factual, chronological account of exactly what happened, based on the testimony of witnesses, both American and Chinese.

About noon, December 4, 1945, two marines stationed at an outpost at bridge 74, on the Peiping-Mukden Railroad, set out to hunt rabbits. This was legitimate recreation, and they had obtained permission from the noncommissioned officer in charge. They had just shot a rabbit when they were approached by three Chinese of ordinary appearance. These stood by while the marines picked up the rabbit. As they turned to go back to their camp, the Chinese fell in behind them, followed them for a moment, and then without warning fired several shots from an automatic pistol, instantly killing one marine and wounding the other, who fell to the ground feigning death. The Chinese fired once more into each of the bodies and then searched them, taking carbines, ammunition, and personal effects, after which they set out in the direction of the village of Ta-tien-chuang, about 400 yards away.

The wounded marine, with the assistance of a Chinese boy whom he encountered en route, made his way back to the outpost.

A report was immediately submitted to the platoon command post at An-shan village, 2½ miles away. A party consisting of two officers, an interpreter, and about 25 marines was assembled which followed the murderers toward the village of Ta-tien-chuang. The officer in charge halted the party outside the village. Patrols were dispatched to each side to intercept and examine anyone who might leave it, whereupon the officer in charge and the interpreter entered the village.

The officer in charge, through the interpreter, informed the villagers that he wanted the men who had done the shooting and the weapons they had taken delivered to him within 30 minutes. In the event this was not to be done, the inhabitants should clear the village immediately, because if the murderers or information concerning them was not delivered, he would shell the village to rout out the latter.

At the end of 30 minutes the murderers had not been surrendered. Neither had the inhabitants evacuated the village. Moreover, it was growing dark and any chance of apprehending the fugitives was rapidly diminishing. The officer in charge, therefore, directed the firing of the mortar with which the party was equipped.

His purpose was twofold: To bring the inhabitants out of the dense village into the open where he could question them and search them for firearms; and to remind the community, which appeared to him to be harboring the assailants, that force was available and would be used, if necessary, to prevent assaults upon marines.

The field of fire was plainly visible to him. The fire was not directed into the village but into the open ground before it. All of the 25 rounds which were fired fell, as was intended, outside the wall surrounding the village. As previously stated, no civilian inhabitant was in any way injured, and property damage was limited to the breaking of two window panes in a building adjacent to the wall.

The party of marines did not at any time enter the village nor invade the domicile of any of its inhabitants in the effort to apprehend the fugitives. After searching and questioning the inhabitants who emerged from the village following the firing, the marines, deeming further action impracticable because of darkness, returned to the outpost at bridge 74.

Upon receipt of reports of the incident by the general officer in command, marines were ordered to remain clear of the vicinity. Chinese Central Government forces subsequently moved to secure and organize the village, following which a United States Naval Court of Inquiry was convened to investigate the entire incident.

In view of the circumstances detailed above, it is apparent that the action of the officer involved in this incident was designed to apprehend the perpetrators of an unprovoked, cold-blooded, and brutal murder of an innocent American, and to recover stolen weapons which might later be turned against other marines. It was the type of positive action which appeared to him to be indicated as a means of promoting the future safety of other marines. Considering all the circumstances, it occurs to me that any course of action short of that which was followed might have left something to be desired as regards the discharge of the officer's responsibilities to his men, to their parents, to their wives and children, and to the Nation which called them into service.

These marines were members of units moved into North China from combat duty on Okinawa. The proximity of peril no longer sustained them. They fought against the feeling of homesickness which developed among fighting men when the more obvious tasks of the war had been completed, and, at the same time, shouldered the grave responsibilities which were assigned to them in China. In a delicate and confusing situation, they have performed their tasks with exceptional tact and intelligence.

To what values, asks the Washington Post, rhetorically, are marines faithful? Is there in all the land a man or a woman who entertains a genuine doubt that they are faithful to the corps with which they serve and to the ideals and interests of the Nation which called it into being? Who does not know that they are unsurpassed in their devotion to duty and in their service to the Nation? Certainly there are many who feel as I do: that these men merit, not hasty and intemperate criticism, but the respect, admiration, and appreciation of us all.

Respectfully yours,

A. A. VANDEGRIFT,
General, United States Marine Corps,
Commandant of the Marine Corps.

Site for UNO Headquarters

EXTENSION OF REMARKS
OF
HON. CLARENCE E. HANCOCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. HANCOCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun for February 8, 1946:

EXPERTS CHALLENGE GOVERNMENT'S RIGHT TO COMPEL LAND SALES FOR UNO CAPITAL—CONSTITUTIONS CITED TO SHOW ACQUISITIONS MUST BE FOR SPECIFIED USAGE AND THAT CONGRESS CANNOT DELEGATE ITS RULE

(By Malcolm Johnson)

In the opinion of legal experts, as expressed to the New York Sun today, the Federal and State Constitutions may preclude the United Nations Organization from obtaining title to land for a permanent home site in Westchester, Conn., or anywhere else in the United States, except by direct negotiation and purchase from the individual property owners.

The letter of the Constitution of the United States, of the Constitution of the State of New York, and of the Constitution of the State of Connecticut thus was brought into bold relief to make it uncertain as to whether the Federal Government, or the governments of the two States, have any legal right or power to transfer private property for a capital for the UNO.

One authority, recognized by jurists as unexcelled in this particular field, told the Sun that, in his opinion, it may very well turn out that the only legal way in which the UNO may acquire land would be by negotiation between the UNO and the individual owners. "And in that event," he concluded, "neither the State nor the Federal Government could compel an owner to sell."

POWERS OF CONGRESS

There is but one reference in the original American Constitution to the matter of acquisition of private property by the Federal Government. Article I, section 8, paragraph 17, says that Congress shall have power "to exercise exclusive legislation in all cases whatsoever over such district—not exceeding 10 miles square—as may, by cession of the particular States and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the legislature of the State in which the same may be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings."

In the New York State Constitution, bill of rights, article I, section 7, it says "(a) Private property shall not be taken for public use without just compensation. (b) When private property shall be taken for any public use * * *."

The Connecticut Constitution says, article I, section 11: "The property of no person shall be taken for public use, without just compensation therefor."

FOR FOREIGN USE

The first point in question is that of whether the land and buildings would be for Federal use, or for the use of foreign powers. That the United States would be a member of the group of powers is an argument which one authority will not concede as squaring the matter with the Constitution.

Assuming, for the sake of argument, that the Federal Government should succeed in acquiring the desired land. Under the Constitution, Congress may buy land with the consent of State legislatures for arsenals, forts, or "other needful buildings." But then Congress has sole sovereignty. And so here's a legal tickler: Can Congress delegate its sovereignty to an outside power? Up to now, the Supreme Court has always said no. "That sovereignty cannot be delegated or abrogated to any outside agency—absolutely not," one legal expert emphasized today.

QUESTION OF SOVEREIGNTY

Looming largely in the discussion is article 7 of the proposed Convention of the United Nations which is the draft of a constitution for the world body. This tentative provision

states that "the zone shall be entirely under the control and authority of the United Nations." Of course, this provision has not been ratified by the UNO and perhaps never will be. But it is assumed, since it has been proposed, that the spirit in the UNO is that UNO's capital shall be sovereign, beyond outside control. Thus, it is held, that while it is all very well to assume that the UNO will waive sovereignty, it is another thing to have the British, French, Russian, Chinese and other individual governments do so officially. The decision here, a very important one, must rest with the official action of UNO, in regard to any provision in its constitution such as the proposed article 7.

Next, the New York State Constitution says that the legislature may condemn land "for public use." This means for the public use of New York State and its citizens—and nothing more. If the land goes to the UNO how can that be interpreted as being for New York's public use? Here alone, according to another view, is the basis for suit by the property owners. In the event the State, without Federal request, attempts to obtain the land through condemnation, the owners could sue on the grounds that it is not for public use, as defined by the law of New York and Connecticut. In this same event, there would arise the pretty question of whether the State or the UNO would govern the area.

UNO ARGUMENTS

The parties speaking to The Sun, on both sides of the question, asked that they remain anonymous because of the possibility they may be called in cases arising from the issue.

Unofficial spokesmen for UNO emphasized two points in their argument. They maintained that the question of sovereignty was not involved, that the Federal Government could treat the Westchester-Connecticut domain of the UNO in the same manner that it treats the individual foreign embassies and legations in Washington. By this it is meant that the Federal Government would not yield sovereignty but would "waive" it, thus tacitly admitting a degree of extraterritoriality to the UNO district. As to the condemnation of the property, that is the taking of it from the private owners, these UNO spokesmen revert to the doctrine of eminent domain, contending that the Federal Government may take any property anywhere in the United States upon legal payment for the same.

Such a stand as the above did not impress other experts. These could not see anything analogous in the matters of foreign governments buying or leasing land and buildings in Washington or other cities for their diplomatic and consular needs and of the United States Government itself setting up a vast exclusive district mainly for foreign governments in States distant from Washington. In the first instance the foreign governments deal directly with the private owners, and no one has ever claimed for the Federal Government the power to sequester private property to provide homes, offices, highways, and parkways for the representatives of foreign governments. Furthermore, Washington is the Federal capital, built on land not seized or sequestered by the Federal Government but voluntarily ceded to Congress by the States of Virginia and Maryland.

BALDWIN PUZZLES

The Constitution-minded observers were quite puzzled by the statement attributed to Governor Baldwin, of Connecticut, after a visit to the State Department, that Connecticut would retain its sovereignty over any UNO district in the State of Connecticut. How, they asked, can anyone get around the constitutional provision that once a State legislature assigns property to the Federal Government the sovereignty is vested in the Federal Government and Congress is compelled to govern in exactly the same manner as it governs the District of Columbia?

One commentator interjected the thought here that the hopes and aspirations of the UNO cannot, in law, preclude anticipations that the UNO may change its nature, may at some time decide to move its seat of government, or may dissolve. He asked: What is the legal status of UNO? Or does it have a legal status as now constituted? And assuming the UNO should acquire this property in the United States by whatever means—either through condemnation proceedings or by direct purchase from the owners—what would happen if in the future the UNO should move or be dissolved? If the UNO possessed title, how could the land be recovered? And by whom? By purchase, and if so from whom? What nation or group of nations? By condemnation again, and if so, how? And how, if sovereignty has been surrendered, could this land be policed in time of emergency, such as war?

EMINENT DOMAIN

The Sun called to the attention of Harry T. Dolan, Special Assistant to the Attorney-General of the United States, the constitutional points thus raised. It did so because Dolan, in charge of the condemnation section of the lands division of the Department of Justice, directs the largest field office of the Government, which had acquired $200,000,000 worth of property in this area since 1939. He has written numerous articles on the subject for the University of Virginia Law Review and has lectured before legal associations. Speaking informally, Dolan said that it must be recognized that problems novel and knotty will arise should the affair get to the courts but, of course, he could not venture opinions.

On the question of eminent domain it was interesting to note that Dolan, some weeks ago and entirely without connection to the UNO matter, spoke to the Nassau County Bar Association on this subject and the association reprinted his address in a booklet.

It is a widely held proposition, supported by acts of Congress and judicial decisions, that the Federal Government holds, inherently, the power to take what it wants for Federal purposes, paying for it according to due process. As has been noted, UNO people stress this doctrine and attribute to it a finality. Yet it is most interesting to note that the present, celebrated Ickes-Pauley affair in Washington centers upon a suit to determine whether or not the Federal Government or the States involved control tidelands oil. Noted also is the fact that the Federal acquisitions must be for constitutional Federal purposes and even the most liberal-interpreting justices of the Supreme Court have been careful in setting forth that the Federal Government may not act "arbitrarily" in exercising the so-called implied powers.

A DECISION IN 1875

In his address, on the subject of eminent domain, Dolan said in part:

"The power of eminent domain derives from the sovereignty of the United States and is to be distinguished from the powers granted by the Constitution. Although the power of eminent domain was well known when the Constitution was adopted, there was no express provision incorporated granting this power to the Federal Government. The power is inherent and an attribute of sovereignty and does not require specific authority from the States. For fear, however, of antagonizing the advocates of State rights and possibly from doubts whether a power which had not been specifically granted in the United States in the Constitution could exist independently in the Federal Government, there was an early reluctance to exercise this power on behalf of the United States. In 1875 the Supreme Court first definitely established the right of the United States to exercise its power of eminent domain adversely in Federal courts within the States. On August 1, 1888, the first Federal condemnation statute was enacted which authorized the exercise of this inherent power by all officers of the Federal Government authorized to acquire land. Numerous Federal statutes were passed during the First and Second World Wars authorizing the seizure or requisition of private property for public use."

FIFTH AMENDMENT

"The power of eminent domain has been variously defined. A composite of judicial opinion might be summed up as the inherent sovereign power to appropriate any property within its geographical limits for use in any of its constitutional activities, upon making just compensation therefor. The power is essential to the independent existence of the sovereign and cannot be eliminated or abrogated by contract. The power is without limitation, except as the people limited it by constitutional inhibition. The principal and important inhibitions arise out of the fifth amendment, which forbids the taking of private property for private purposes or without making just compensation therefor. This requirement of compensation serves the purpose of transferring through taxation the burden of the public improvement from the individual owner to the public. The power is not limited to private property but includes all public property as well which is owned or held by the States, counties, cities, or other political subdivisions and the words 'private property' in the fifth amendment have been construed to include the property of the States and their instrumentalities when taken by the United States.

"The power, though implied from the fifth amendment, is not, however, the creature of statute of constitution. It cannot be abdicated and is as broad as are the legitimate functions of the Federal Government. It may be exercised in aid of any such functions and when so employed is synonymous with public use."

Of historical interest, and perhaps also of legal interest, is the fact that the acts of Congress and the Supreme Court decisions cited, came immediately after the Civil War when the theretofore dominant State Rights Party was disenfranchised and practically unrepresented in Congress and the Supreme Court. Today not a few Republican leaders and governors in the North are as strongly State rights as their opposite numbers in the South. In very recent years two New England States challenged the Federal Government's right as to control of water power, and the Federal Government then declined the issue. It is well known legally, but apparently not generally, that decisions of the Supreme Court remain subject to reversal by succeeding courts.

EMINENT DOMAIN OF STATES

One interested party called attention to a contention that the very wording of the seventeenth power of Congress definitely established that the Federal Government did not hold eminent domain in the matter of the property of the Thirteen Original States, which included New York and Connecticut. Concerning Special Assistant Dolan's notation that the doctrine of eminent domain was not in the Constitution because of the matter of State rights, he pointed out that it was not in the Constitution because there could not have been any constitution or any Federal Government had the document, offered to the Thirteen States for ratification, granted to the Federal Government the right of eminent domain in those original States. The 13 sovereign States did not yield an iota of their rights of eminent domain.

The framers of the Constitution and the ratifying States understood this thoroughly. Therefore, after the Government of the United States had been formed and was functioning, Congress had to go to the States and ask that the States give the Federal

Government the land upon which to build and establish the Capital of the Nation. Also it was stated expressly that when the Federal Government wanted land for military and naval establishments, for customhouses, post offices, and courts, outside of the area of the Federal Capital, Congress had to have the authority of the legislatures to acquire such land. It is held to be self-evident that had eminent domain resided in the Federal Government, the Constitution would not have stated specifically that property in the Thirteen Original States could not be acquired by the Federal Government without the express consent of the States and for express purposes. Territories ceded to the Federal Government and lands it acquired by purchase, such as Louisiana, may be something else.

If the UNO decides to go through with a request for the Westchester-Greenwich area, undoubtedly the procedure will be a Federal one, with Congress asking the States of New York and Connecticut for the condemnation of the private property for needful buildings. It is not expected that Congress or the Government will attempt to move directly through the Federal courts since the proposition of setting up what must be great Federal districts in States distant from Washington, without consulting the legislatures, would constitute a mountain of political and legal dynamite.

After such a step the issue is joined nationally and in the States of New York and Connecticut.

Boiled down, there are two fundamental legal problems involved: (1) Does the power exist for either the Federal or State governments to acquire this land for this specific purpose of UNO through the right of eminent domain? (2) Can the sovereignty of Congress or the States be surrendered to foreign nations? There are doubts by experts as to the first, and there is an overwhelming opinion that the second can't be done short of amending the Constitution of the United States.

Methodist Peace Commission on Military Training

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. CASE of South Dakota. Mr. Speaker, my attention has been called to the statement presented to the House Committee on Military Affairs by the Reverend Charles F. Boss, Jr., executive secretary of the Commission on World Peace of the Methodist Church. Believing that the statement will be of interest to the Members of the House generally, and other readers of the CONGRESSIONAL RECORD, under permission granted, I place it in the RECORD at this time:

Mr. Chairman and members of the Committee on Military Affairs, I am Charles F. Boss, Jr., executive secretary of the Commission on World Peace of the Methodist Church, and am speaking officially for the commission. I have been a member of some international conferences, both in Europe and in this country, serving also at the United Nations Conference in San Francisco as an accredited observer and consultant to the United States delegation.

May I be permitted first of all to express the appreciation of our Commission on World Peace, and of the Methodist Church, for the patient, thorough, and courageous consideration which you are giving to policies of grave importance to our Nation and to the world in these days of world-wide tension, disorder, and distress.

The commission on world peace is an official agency of the Methodist Church. It holds a similar organizational relationship to the church as the board of missions, the board of education, the board of temperance, and other boards of the church.

CREATED BY THE CONFERENCES

Its organization and purpose are determined by the general conference, which is the highest authoritative body of the denomination. Part of its membership is elected by the general conference upon nomination by the council of bishops, the remainder being elected by the six jurisdictional conferences of the Methodist Church, which cover the United States. Its membership is composed of bishops, pastors, and laymen. There are youth representatives elected by the official youth organization of the denomination.

Decisions and actions adopted by the commission are released as actions of the Commission on World Peace of the Methodist Church.

The headquarters of the commission are in Chicago. Our educational cultivation covers the work of over 22,000 pastors serving 40,000 churches.

Many official groups within the Methodist Church, such as the Woman's Division of Christian Service, the National Conference of the Methodist Youth Fellowship, annual conferences (as for example, the Virginia conference), have taken action in opposition to peacetime compulsory military training. As yet, no official group within our church, to my knowledge, has taken action in support of peacetime compulsory military training.

OVER-ALL POLICY INVOLVED

Mr. Chairman, it is our conclusion that the issue of compulsory military training cannot be decided wisely when considered in segmental form, but only when considered in relation to the whole problem of our foreign policy and international plans for world security.

The report of Gen. George C. Marshall was presented to the Nation by the press under the headline "Prepare or perish." The implication of the report was that we must prepare for war or perish. I believe that General Marshall, as all great soldiers, shares the hope of mankind that war may be abolished.

General MacArthur, at the Japanese surrender ceremonies said, "war is no longer an alternative" for man. He said, "We have had our last chance. If we do not now devise some greater and more equitable system, Armageddon will be at our door." The central question of our day is not how to prepare for war but, in this age of atomic energy, how to prepare for peace—lest we perish.

During recent months the science of atomic energy has been disclosed to the world, and with it the potential power for destruction, first observed at Alamogordo and later by the terrible flashes which wiped out the cities of Hiroshima and Nagasaki.

Further, an array of top scientists of the world have jolted us out of our inertia by presenting convincing evidence that the potential destructiveness of atomic warfare could be the virtual destruction of an entire nation in an hour's time. The potential destruction of new scientific discoveries—not only the atomic bomb—is demonstrated as being so vast as to include the possibility of chain reaction which might turn this planet upon which the only human life exists, so far as is known, into a planet barren and lifeless. Confronted with the potentialities of these discoveries, so clearly demonstrated by science and interpreted by scientists, where lies the value of a slogan, such as, "We must prepare for war"?

NO KNOWN MILITARY DEFENSE

Scientists have stated that there is no known defense against an attack with such weapons; clearly the preparation cannot be the obsolete strategies and techniques of a preatomic era. These cannot prevent us from perishing. Our hope lies in a different direction.

The abolition of war from the world is an end which is highly desired by persons of all points of view, in all nations. Gentlemen of the committee, there is no halfway house; there is no midway point at which we can stop. Our objective must be the complete abolition of war from the world.

It is significant that Franklin Delano Roosevelt, late President of the United States, wrote the following words in preparation for the Jefferson Day address, which he never lived to deliver: "We seek peace—enduring peace. More than an end to war, we want an end to the beginnings of all wars—yes, an end to this brutal, inhuman and thoroughly impractical method of settling the differences between governments."

He went on to say: "Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together, in the same world, at peace." Then before he closed he said, "The work, my friends, is peace, more than an end of this war—an end to the beginnings of all wars, yes, an end, forever, to this impractical, unrealistic settlement of the differences between governments by the mass killing of peoples."

CONDITIONS CHANGE

It is possible that someone may ask, "But, did not Mr. Roosevelt recommend the adoption of peacetime compulsory military training"? He did. We must remember, however, that his recommendations were made in advance of the testing of the atomic bomb, and the terrible destruction demonstrated at Hiroshima and Nagasaki, a fact confirmed in the press just a few days ago by Dr. Vannevar Bush.

Furthermore, the late President's death preceded the San Francisco Conference, ratification of the Charter by the Senate, and the progress since, which will culminate this coming January in the meeting of the General Assembly and the organization of the various sections of the United Nations. No man knows what the late President's mind would be now in the light of developments.

The scientists are right. Failure to abolish war is certain to result in atomic warfare with its potential devastation and destruction in practically all nations of the world. Under such conditions what could military victory mean? Granting that some life on this planet would survive, what a throw-back to civilization we must contemplate. But, fear of the atomic bomb will not of itself bring peace. International organization must be brought into line with known principles which support the peaceful solution of man's problems.

GIVE THE PEOPLE AN ALTERNATIVE

It is clear that the pressure for peacetime compulsory military training is not primarily due to an upsurging demand from the people. Rather, it comes as a proposal from the top with a power drive for its enactment on grounds of security, strength, bargaining power in international negotiations, and reserve manpower for war emergencies.

I would like to add here for the RECORD, if I may, Mr. Chairman, the result of the poll of the National Opinion Research Center of the University of Denver: I will not give all the details but merely summarize by saying that when the people are given an alternative, as

for example, the universal abolition of conscription by agreement through the United Nations, they vote by strong majority for the alternative. What does this mean? It means that the people turn to compulsory military training only because they have not been confronted with an alternative.

Outstanding educators have presented grounds of opposition to this position hence we are not adding to the details. In passing it may be said, however, that the history of peacetime compulsory military training in Europe, and past experience, give no ground for such hope.

Consideration of the chief arguments for the passage of peacetime compulsory military training legislation led our Commission to the conclusion that security, strength, successful international negotiation, and manpower, in an age of atomic energy and with the facilities of the United Nations Organization, are not best attained by the means proposed.

Prepare or perish. Since this means unilateral preparation for possible war it is strange language to come officially from within a Nation which this very year was host to the United Nations Conference on International Organization at San Francisco; a Nation whose Senate ratified almost unanimously, the United Nations Charter; a Nation which thereby pledged itself to those goals, principles, and organizational plans for cooperation by which the peoples of the United Nations are determined, as the Preamble of the Charter states, "to save succeeding generations from the scourge of war which twice in our lifetime has brought untold sorrow to mankind."

The security of the United States or any other individual nation is bound up with the security of all nations.

It is, therefore, essential that the United States, already the wealthiest, strongest, the most powerful Nation in the world, should exercise restraint and great wisdom, putting forth its ablest leadership for the development of enduring international friendship, trust, and mutual confidence among nations; yes, leadership to the end that justice, cooperation in providing employment, higher standards of living, expansion in production and in world trade—and, a richer share of the educational, scientific, and cultural achievements of mankind—might furnish the basis for lasting peace.

To this end, therefore, we ought not to take unilateral action so radical as to break America's history-long precedent as a stronghold of freedom and democracy, and as the sanctuary of refugees from the oppression of compulsory military training.

LEAD IN AIMS WE PROFESS

There is only one way to establish confidence among the nations; that is to give leadership in securing international agreements on matters of reduction and control of armaments, including the universal abolition of conscription by all members of the United Nations, making peacetime conscription illegal for Germany, Italy, and Japan, and by supplying necessary forces to carry out genuine international police service, and then by faithfully living up to the agreements we ratify.

It seems illogical to argue, as some Government officials do, that if we break American precedent by adopting what we believe all nations should agree to reduce or abolish we will be in a stronger position to bargain with Russia and others to unite with us in the universal abolition of conscription. It is not only illogical; it appears to be pure rationalization.

There is, gentleman, an unsound principle frequently used in support of huge military establishments; it is that successful foreign policy is that policy which is backed by great military and naval power. Gentlemen of the committee, if the 48 States or the Thirteen Original Colonies had built upon this policy, where would the Union be today?

No; a successful United Nations Organization is in direct ratio to our willingness to establish international policies in an organization designed to abolish war; an organization in which we have solemnly agreed, by our ratification of the Charter, "to refrain * * * from the threat or use of force" over our neighbors "inconsistent with the purposes of the United Nations." Ideal, you say? So was the Federal Union ideal, but our forefathers had faith to believe in it, to support it, and to make it work.

Question from a member of the committee: "But did we not have a civil war to preserve the Union?"

Answer: Yes; the States became divided. I think, however, the South and North might present different views with regard to the economic and other causes of the Civil War. If the nations do not build their agreements upon the basis of justice, or if they continue oppression of racial or religious groups for the exploitation of native peoples and continue international economic warfare, we could have a civil war on a world scale, even with the United Nations or a world federation or world government.

The preparation we need is preparation for peace. We contend that the enactment of the proposed legislation would create, not security, but a false sense of security which might quiet the fears of those who believe that, even in the age of atomic bombs, radio controlled rocket shells, and supersonic planes, national isolationism, and an adequate unilateral national defense against all comers, is possible.

In the light of atomic scientific warfare the proposals to train teen-age youth appear as obsolete as the shining armor displayed in London Tower, or a year's training with bow and spear following the advent of gunpowder.

Peacetime compulsory military training in an age of atomic bomb warfare may prove to be only an obsolete appendix, more likely to be a source of infection and danger to the body politic, than a source of national health and robust strength in a freedom-loving, democratic America. Our true security rests in successful cooperation through the United Nations for the security of the world.

America's strength has been in its inner impulsions of love of liberty and its support of free institutions founded in a democratic inheritance and tradition. This tremendous reserve strength of character, purpose, and achievement has appeared in emergencies of wartime as well as during the years of peace. Of course, the Nation must be on guard lest it perish through overconfidence, arrogance, or decay, but we are not convinced that the way to preserve this vital strength and loyalty lies in radical departure from the very foundations which have made us strong.

COMMISSION'S FORMAL STATEMENT

With such considerations before it, the Commission on World Peace therefore, on November 16, unanimously adopted the following statement:

"We live in a most critical time. Mankind now has the means to destroy itself utterly. The possibility of an all-engulfing catastrophe is not, however, a ground for despair. The issues of history are in the hands of God whose purpose of good is beyond defeat. We may strive on in full confidence that we shall know at the last a joy and good beyond anything we have dreamed and hoped for.

"This conviction as to the outcome of life does not, of course, relieve us of responsibility for the course of events in our time. We must do all we can, under God, to prevent another war, knowing that war at the atomic level might mean the release of forces that would leave this earth as barren and lifeless as the moon.

"We rejoice in the existence of the United Nations Organization which offers the opportunity of international cooperation for world security and survival. This organization must now be made to work for the ends of justice, security, and peace. There is no other way whereby the peace can be won.

"In the present world situation the quest for security by individual action must give way to united efforts toward security and justice for all peoples. Military policies in all nations must be evaluated in terms of this fundamental principle. We oppose individual action by any nation to maintain a vast naval and military establishment, including the provision for military training. For any nation to take individual action in this direction indicates a lack of trust in international cooperation and invites other nations to turn to similar individual and separatist action as a means of defense.

"Accordingly, we urge the Government of the United States to instruct our delegates in both the General Assembly and the Security Council to seek, through international agreement, reduction and regulation of armaments and universal abolition of peacetime compulsory military training. This is necessary to prevent a race in armaments whose end might well be the destruction of civilization and possibly mankind itself. Specifically, we urge the establishment of international control over atomic power.

"Further, we strongly oppose the adoption by the United States of compulsory peacetime military training before it has undertaken through international agreement and action to make such training unnecessary.

"Fear and distrust between nations must be removed. In particular, there is need for the most earnest effort to promote understanding and friendly relations between the United States and Russia. War between these two great powers is unthinkable; it would mean mutual annihilation. This is not a time for angry, irresponsible speech or writing. It is a time for patient, persistent effort to find the answer to crucial international problems. Friendship between the United States and Russia would hold the promise of security and peace for all mankind."

We do not, of course, assume that we represent the opinion of every individual Methodist. We are submitting the following:

I am presenting as item 1 the statement adopted by the Council of Bishops of the Methodist Church just 3 days ago. There are 33 active bishops in the Methodist Church. They supervise the work of the Methodist Churches in the United States. They are responsible for appointing nearly 22,000 pastors to the 40,109 churches which they serve, some of these pastors in rural territories serving two or more churches. Bishop Charles C. Selecman, Dallas, Tex., is the chairman of the council; Bishop William C. Martin, Topeka, Kans., served at acting secretary in this session; Bishop Paul B. Kern, Nashville, Tenn., was chairman of the committee which drafted the statement.

STATEMENT OF THE BISHOPS

"With a solemn sense of responsibility to our Nation and to our Church, the bishops of the Methodist Church desire formally to express their conviction that the passage of a law requiring universal peacetime military conscription or compulsory training is unwise. We believe that the protection of this Nation and all other nations must be achieved through international agreement and cooperation and not by the unilateral action of any one people. We express our confidence in these principles and processes initiated at San Francisco. We call upon our Government to take the lead in implementing them into a united world structure. It should not rely for its defense upon independent standing armies but upon the broader base of an international security

guaranteed by all nations for the benefit of each nation.

"We believe that universal military conscription in times of peace is:

"1. A denial of the spirit of the Atlantic Charter;

"2. A betrayal of our historic democratic tradition;

"3. A possible step toward bureaucratic fascism by setting up a powerful military caste in this country;

"4. A threat to the moral life of our youth subjected in a crucial year to an extended period of unwelcome futility and character disintegration.

"The proposal is untimely in an age whose patterns of life and national defense are as yet unfixed because, (1) new and revolutionary scientific discoveries are making obsolete traditional methods of defense, (2) such an unprecedented step may lead to a false sense of national security, and (3) the present tension in our international relationships will be heightened by any move which leads to suspicion of our national aims and will result in protective rearmament upon the part of other nations. This is the path to war and destruction and not to peace and national safety.

"We call upon the Congress of the United States to give to the world a decisive demonstration of faith in the possibility of achieving a world unity resting upon good will and mutual respect rather than upon force and material power. The practice of the principles of the Christian religion still remains our ultimate and most practical security.

"We reaffirm with deepening conviction the words adopted by the general conference of 1944: 'The time is at hand when the church must rise in its might and demand an international organization which will make another war impossible.'" (Adopted by the Council of Bishops of the Methodist Church at Buck Hill Falls Inn, Pennsylvania, December 5, 1945.)

Mr. Chairman and members of the committee, this action of the Council of Bishops of the Methodist Church, which was practically unanimous, makes it apparent that this movement is no minority movement in our church; nor is our opposition a passing fancy. It is a steadily growing and developing movement of opposition.

OTHER METHODIST EXPRESSIONS

2. The editorial policy of the Christian Advocate, the official paper of the Methodist Church, is in opposition to the proposed legislation. The circulation of the Christian Advocate is approximately 350,000.

3. Editorials opposing peacetime compulsory military training have appeared in the Michigan Christian Advocate and Zions Herald, the latter published chiefly for the New England States, and in the Alabama and New Orleans Christian Advocates.

4. The Woman's Division of Christian Service of the Methodist Church, which represents some 3,000,000 women members, has taken action in opposition to peacetime compulsory military training.

5. The National Conference of the Methodist Youth Fellowship, the official agency of a half million Methodist youth, who are organized in every Conference and State, has taken action in opposition to the compulsory military training measure.

6. The Association of Schools and Colleges of the Methodist Church, through its executive committee, on November 15, 1945, adopted the following resolution:

"The National Association of Schools and Colleges of the Methodist Church expressed itself at its last annual meeting as being opposed to the enactment of any law by the United States Government during the wartime which would establish compulsory universal military conscription for peacetime. Since no formal announcement has been made by the United States Government that the emergency has ended, we want to renew our protest against peacetime conscription.

"The total program for universal military training that has been requested threatens the continuation of our traditional program of higher education in the United States and endangers the perpetuation of our democratic way of life. We earnestly request that those agencies, such as our educational institutions, that are devoted to the cultivation of attitudes leading to peace may be kept free from any handicap such as will come through universal military training." (Certified true copy by Boyd M. McKeown, secretary.)

Respectfully submitted.

CHARLES FREDERICK BOSS, Jr.,
Executive Secretary,
Commission on World Peace
of the Methodist Church.

Resolution of New York Lumber Trade Association

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include a resolution unanimously passed at the annual meeting of the New York Lumber Trade Association held in New York City on January 23, 1946:

Whereas the major problems confronting the Nation's domestic economy at the present time are that of stimulating construction of housing, reconversion of industrial plants, maintenance and repair, and modernization; and

Whereas it is necessary that this problem be solved without delay; and

Whereas one of the principal obstacles in the path of a solution of this problem is lack of production of lumber and building materials; and

Whereas in our opinion the chief obstacle to the stimulation of production of lumber and building materials is the unrealistic policies being pursued by the Office of Price Administration: Therefore, be it

Resolved, That the members of the New York Lumber Trade Association strongly criticize the Office of Price Administration, particularly the lumber and building materials branches for—

1. Failure to heed the advice of the lumber industry advisory committees;

2. For the issuance of unrealistic and unworkable price controls;

3. For pursuing unreasonable enforcement policies;

4. For failure to restore normal differentials in pricing of different items so as to insure speedier and better production for home building and housing now that the war is over;

5. For failure to make provisions for compensation to wholesalers; and

6. For pursuing an unreasonable and inflexible absorption policy in respect to retailers.

We therefore recommend that there be a change in policies and personnel of the Office of Price Administration insofar as they control and affect the lumber industry, or as an alternative that the agency terminate on June 30, 1946.

Another Voter Speaks

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

MAUSTON, WIS., *February 6, 1946.*

Mr. STEVENSON.

DEAR SIR: Your bill H. R. 3939 is one of the most intelligent lines of decent and humanitarian thoughts, I have yet heard from any Congressman.

Either everyone has closed their eyes to the suffering of cancer and TB or they haven't bothered to think out a course to be followed in bringing these diseases under control. I am confident that both could be conquered in a short time if the funds were available.

You might at the same time give some consideration and thought to a health-insurance program—not necessarily the President's compulsory plan, but a plan whereby we middle-class folks are not shoved on the brink of bankruptcy by necessary continued expensive medical treatment.

I have changed my mind on compulsory military training since the atomic bomb. The old ways of warfare and military training are outmoded, to my mind.

What we need now is a highly up-to-date, specialized Army, at a rate of pay which would make Army a career. Thirty-dollar-a-month privates can only be depended upon for the value they put upon their services.

Routine training can be, and was, well taken care of in the National Guard program. They didn't let us down, but their obsolete equipment at training camps did—an expensive program, yes; but I believe personnel could be reduced considerably.

Also give the revision of the social security some thought. There are many old farmers who would retire if they could depend on a small monthly compensation. Their small savings wouldn't allow for too many years of retirement, and the pension plan of the State deducting from your estate is unfair to those who have been hard-working, frugal, proud people.

Keep up your good work.

Sincerely,

R. M.

Stalin's Charge Against the Capitalist System

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. RANKIN. Mr. Speaker, in his speech on last Saturday Premier Stalin said that the "capitalist" countries of the world were responsible for the last two World Wars. In other words, the system of Government we have in the United States of America was responsible for all the world's ills. The intimation being that communism, which is based upon

Carl Marx, atheism and hatred for Christianity, and which makes every individual the slave of the state, would cure all the world's ills overnight.

He gives no credit in his speech for what we did in the recent war and for the untold billions of dollars worth of supplies that we furnished him. He did not refer to religion a single time, nor did he make any reference to UNO.

Mr. Speaker, what does he mean by a capitalistic country? He means a country in which a man may own his own home, his own land, his own factory, his own farm, or his own filling station, and where a man is free to work where and when he pleases.

There is no more freedom in a Communist country today than there is in the penitentiary of Michigan, Mississippi, New York, Ohio, or Texas. If it had not been for the materials this country furnished Russia, and sacrifices of American fighting men, Hitler would have long since been dining in the Kremlin at Moscow.

I say an attack like that on this and other capitalistic nations that really won the recent war is unjustifiable from every standpoint.

In order that everyone who reads this RECORD may understand just what this Communist dictator did say, I am inserting the following excerpts from his address.

The matter referred to follows:

Comrades, 8 years have elapsed since the last elections. This is a period rich in events of a decisive character. The first 4 years passed in strenuous work of the soviet people in the fulfillment of the third 5-year plan.

During the past 4 years the events of the struggle against the German and Japanese aggressors developed—the events of the Second World War. Doubtless, the war was the main event of that period.

It would be incorrect to think that the war arose accidentally or as the result of the fault of some of the statesmen. Although these faults did exist, the war arose in reality as the inevitable result of the development of the world economic and political forces on the basis of monopoly capitalism.

Our Marxists declare that the capitalist system of world economy conceals elements of crisis and war, that the development of world capitalism does not follow a steady and even course forward, but proceeds through crises and catastrophes. The uneven development of the capitalist countries leads in time to sharp disturbances in their relations and the group of countries which consider themselves inadequately provided with raw materials and export markets try usually to change this situation and to change the position in their favor by means of armed force.

As a result of these factors, the capitalist world is sent into two hostile camps and war follows.

Perhaps the catastrophe of war could have been avoided if the possibility of periodic redistribution of raw materials and markets between the countries existed in accordance with their economic needs, in the way of coordinated and peaceful decisions. But this is impossible under the present capitalist development of world economy.

CAUSES OF TWO WORLD WARS

Thus, as a result of the first crisis in the development of the capitalist world economy arose the First World War. The Second World War arose as a result of the second crisis.

This does not mean, of course, that the Second World War was a copy of the First. On the contrary, the Second World War is radically different from the First in its character. It must be kept in mind that the main Fascist states—Germany, Japan, and Italy—before attacking the Allied countries had abolished at home the last remnants of the bourgeois democratic liberties, had established a cruel terrorist regime, had trampled under foot the principles of sovereignty and freedom of the small nations, declared the policy of seizure of other peoples' lands as their own policy, declared for the whole world to hear that they strove for world domination and spread of the Fascist regime throughout the world.

Thereby, in the seizure of Czechoslovakia and the central part of China, the Axis states had shown that they were prepared to carry out their threats at the expense of the enslavement of all the freedom-loving people.

In view of this circumstance the Second World War against the Axis Powers, as distinct from the First World War, assumed from the very beginning an anti-Fascist liberating character, having also as one of its aims the reestablishment of democratic liberties.

The entry of the Soviet Union into the war against the Axis Powers could only strengthen and did strengthen the anti-Fascist and liberating character of Second World War. On this basis was established the anti-Fascist coalition of the Soviet Union, the United States of America, Great Britain, and other freedom-loving countries, which subsequently played a decisive part in the rout of the armed forces of the Axis Powers.

ORIGIN OF WORLD WAR II

What about the origin and character of the Second World War? In my opinion, everybody now recognizes that the war against Fascism was not, nor could it be, an accident in the life of the peoples; that the war turned into a war of the peoples for their existence; that precisely for this reason it could not be a speedy war, a lightning war.

As far as our country is concerned, this war was the most cruel and hard of all wars ever experienced in the history of our motherland. But the war has not only been a curse; it was at the same time a hard school of trial and a testing of all the people's forces. The war was with us at the rear and at the front.

For us this was an excellent school of experience, heroism, honesty, and devotion. [A few words inaudible.] This war has shown many of our Soviet people in their real light and thus helped to judge them as they deserve.

These were the "positive" sides of the war. For us it has a great importance, because thus we had an opportunity to pass judgment on our party and our people.

During the war we were obliged to judge the activities of the representatives of our party, to analyze them, and to draw the necessary conclusions. So our conclusions, which will be drawn now, will be certainly right. And so, what is the balance of the war? What are our conclusions?

FOE LOST BEFORE HE BEGAN

There is one general conclusion, and on this basis all other conclusions can be drawn. The general balance of the war lies in the fact that even before the war was begun the enemy lost the war and we, together with our allies, were the victors. We have achieved a complete victory over the enemies.

But this conclusion is too general and we cannot stop there. Obviously to smash the enemy in such a conflict as the Second World War—in a war as never occurred before in the history of mankind—was to achieve a historic world victory. However, in order to understand the great historic importance of our victory, it is necessary to go further.

Now victory means, first of all, that our Soviet social system has won, that the Soviet social system has successfully stood the test in the fire of war and has proved its complete vitality.

As is well known, the assertion often has been made in the foreign press that the Soviet social system is a risky experiment, doomed to failure; that the Soviet system is a house of cards, without roots in real life, and imposed on the people by the organs of the Cheka (secret police) and that it would be sufficient [two words inaudible] for this whole house of cards to smash.

Now, we can say that the war has refuted all the assertions of the foreign press as without foundation. The war has shown that the Soviet social system is a truly popular system, issued from the depths of the people and enjoying its mighty support. The Soviet social system is a form of the organization of society that is fully capable of life and stable. Moreover, the point now is not whether the Soviet social system is or is not capable of life [some words inaudible] none of the skeptics any longer dares to come out with doubts as to whether the Soviet social system is capable of life or not.

HAILS SOVIET SOCIAL SYSTEM

The point is that the Soviet social system has proved to be more capable of life and more stable than a non-Soviet social system, that the Soviet social system is a better form of organization of society than any non-Soviet social system.

The assertion has been made in the foreign press that the multinational state represents an artificial structure, and in the case of any complications the disintegration of the Soviet Union is inevitable, that the Soviet Union would meet the fate of Austro-Hungary. Now we can say that the war has proved these statements of the foreign press false and devoid of any foundation.

The war has shown that the Soviet multinational state system has successfully stood the test, has grown still stronger during the war and has proved a completely vital state system. Now we can say that the analogy with Austro-Hungary cannot be substantiated, since our multinational state has grown up, not on a bourgeois foundation, which fosters feelings of national mistrust and national animosity, but on a Soviet foundation, which, on the contrary, promotes the feeling of friendship and fraternal collaboration between the peoples of our state.

Moreover, after this war no one dared any more to deny the vitality of the Soviet state system. Now, it is no longer a question of the vitality of the Soviet state system, since there can be no doubt of its vitality any more. The point now is that the Soviet state system has proved an example of a multinational state system where the national problem and the problem of collaboration among nations are solved better than any other multinational state.

Third, our victory implies that it was the Soviet armed forces that won. Our Red Army had won. The Red Army heroically withstood all the adversities of the war, routed completely the armies of our enemies and emerged victoriously from the war.

WORLD'S MISGIVINGS RECALLED

This is recognized by everybody—friend and foe. The Red Army was equal to its great task. But the matter did not stand like this some 6 years ago in the prewar period. Many recognized authorities in the art of war abroad stated frequently that the condition of the Red Army filled them with great misgivings, that the Red Army was badly armed and had not the requisite commanders, that its morale left much to be desired, that it might perhaps serve for defense but would be useless for an offensive, and that in the event of a blow from the German troops the Red Army would fall to pieces like a colossus with feet of clay.

Such statements were made, not only in Germany but also in France, Britain, and America. Now we can say that the war has made these statements look ridiculous. The

war has shown that the Red Army was not a colossus with feet of clay but a first-class modern army with completely up-to-date armament, most experienced commanders, and high morale and combat qualities.

One should not forget that the Red Army is that same army which routed completely the German Army—the terror of all the armies of peace-loving states. It should be noted that there are fewer and fewer critics of the Red Army. And, in addition, the foreign press begins to publish more and more frequently statements about the high qualities of the Red Army and the skill of its soldiers and commanders.

This is understandable after the victories at Moscow and Stalingrad, and, of course, Kursk and Begorod, Kiev and Kirovograd, Minsk and Bobruisk, Leningrad and Tallin on the Vistula and Niemen, the Danube and the Oder, at Vienna and Berlin. After all this, it is impossible not to recognize that the Red Army is a first-class army, which could teach others quite a lot.

This is how we understand concretely our country's victory over its enemies. This is a rough summary of the war. It would be a mistake to think that one could win such a historic victory without preparing the whole country beforehand for active defense. It would be no less erroneous to assume that this preparation could be carried out in a short time, 3 or 4 years.

It would be even more erroneous to think that we had won a victory only, thanks to the courage of our troops. It is impossible to win a victory without courage, but courage alone is not enough to finish the job and overpower an enemy that possesses a large army, first-class armament, well-trained officer cadres, and fairly well organized supplies.

To be able to meet the blow from such an enemy, to counter it, and later to inflict on him a crushing defeat, it was necessary to have, in addition to the unprecedented bravery of our troops, completely modern armament in sufficient quantities and well-organized supplies, also in sufficient quantities. But this in turn demands the possession in sufficient quantities of such things as metals, equipment, and tools for enterprises, fuel for the work of the enterprises, transport, clothing, etc.

Can it be said that, before its entry into the Second World War, our country already possessed the minimum supplies necessary for satisfying in the main all these requirements? I think we can give an affirmative answer. The preparation of this enormous task involved the carrying out of three 5-year plans of national economic development. It is precisely these three 5-year plans that helped to create these material positions.

RECALLS DEFENSE PREPARATIONS

In this respect our country before the Second World War, say in 1940, was several times better off than in 1913 before the First World War. What material possibilities were at the disposal of our country on the eve of the Second World War? In order better to understand this, I will give you a brief report on the activity of the Communist Party in the preparation of our country for active defense.

If we take the data available for 1940 and compare them with those of 1913, the eve of the First World War, we see the following picture:

In 1913 our country produced 4,220,000 tons of pig iron, 4,230,000 tons of steel, 29,000,000 tons of coal, 9,000,000 tons of oil, 21,600,000 tons of marketed grain, 740,000 tons of raw cotton—such were the material resources of our country with which it entered the First World War.

This was the economic base of old Russia, the basis which it could use to conduct the war. As for the year 1940, in that year our country produced 15,000,000 tons of pig iron, almost four times as much as in 1913; 18,300,000 tons of steel, four and one-half times more than in 1913; 166,000,000 tons of coal, five and one-half times more than in 1913; 31,000,000 tons of oil, three and one-half times more than in 1913; 38,000,000 tons of marketed grain, 17,000,000 tons more than in 1913; 2,700,000 tons of raw cotton, three and one-half times more than in 1913.

Such were the material resources with which our country entered the Second World War.

This was the economic base of the Soviet Union, the base which it could use to conduct the war. As you see, the difference is colossal. Such an unprecedented development of a country from backwardness to progress. It was a leap into an advanced country, from an agrarian country into an industrial one.

GAINS BEGAN IN 1928

These historic transformations were achieved in the period of the three 5-year plans, starting from 1928—the first year of the first 5-year plan. Before that, we had to occupy ourselves with the restoration of industry that had been destroyed and with healing the wounds of the First World War and the civil war.

If we take into consideration the fact that the first 5-year plan was completed in 4 years, and that the execution of the third 5-year plan was interrupted by the war in its fourth year, it appears that the transformation of our country from an agrarian into an industrial country required only 13 years.

Thirteen years is an incredibly short period for the realization of such a gigantic task. This, indeed, explains the fact that the publication of these figures aroused disputes in the foreign press. Friends decided that a miracle had taken place. Foes declared that the 5-year plans were Bolshevik propaganda and inventions of the Cheka. But since miracles do not exist in this world, and our Cheka is not so powerful that it could abolish the laws of social development, public opinion in Europe had to reconcile itself to the fact.

The point now is: What was the policy by the aid of which the Communist Party succeeded in securing these material resources in our country in such a short period?

First of all, it was by the aid of the Soviet policy of industrialization of the country. The Soviet method radically differs from the capitalist method of industrialization. In capitalist countries industrialization usually starts with light industry, since light industry requires smaller investments and the turn-over of capital is quicker, and it is easier to obtain profits than in heavy industry.

LENGTHY PROCESS INVOLVED

Only after a considerable time has elapsed, in which light industry accumulates profits and concentrates them in banks, only then comes the turn of heavy industry, and a gradual transfer of accumulated capital into heavy industry starts, creating the conditions for its development.

But this is a lengthy process, requiring a long period of time, several decades, during which one has to wait for the development of the light industry [some words inaudible].

It is clear that the Communist Party could not take this path. The party knew that war was approaching, that it was impossible to defend the country without heavy industry, that it was necessary to begin the development of heavy industry as quickly as possible, and that to be too late in this task meant to lose. The party remembered Lenin's words that without heavy industry it would be impossible to safeguard the independence of our country, that without it the Soviet system could perish.

Therefore, in our country the Communist Party reversed the usual path of industrialization and began the industrialization of our country with the development of heavy industry. This was very hard but not impossible to achieve. A great help in this task for us was the nationalization of industry and banking, enabling us to transfer money speedily into heavy industry.

It would have been impossible to achieve, without this, the transformation of our country into an industrial country in so short a period of time.

Second, a factor in carrying out our policy was the collectivization of the rural economy. Here our aim was to give to the country more bread, more cotton. And it was necessary to change from small-scale peasant economy to large-scale agricultural economy, for only the large-scale farm is in a position to apply new, modern technique and to use all its achievements to increase production.

It was necessary to make large-scale agricultural economy a collectivist one. The Communist Party could not adopt the capitalist method of developing the rural economy not only because of reasons implicit in our principles, but also because the capitalist type represents a slow development and implies a ruination of the peasants.

That is why the Communist Party embarked on the road of the collectivization of the rural economy through uniting individual peasant properties into a new form—a "kolkhoz." This collectivization proved itself a beneficial experience, not only because it did not involve the ruination of peasants but also, and in particular, because it gave the chance of covering the whole country—within a few years—with a net of large-scale collective farms.

Without collectivization we would not have been able to eliminate the age-old backwardness of our agriculture in so short a period of time. It cannot be said that the party's policy did not meet with resistance in this respect. Not only backward people, who always resist everything new, but also many others of the party systematically held back the party and tried in all sorts of ways to drag it on to the usual, capitalist line of development.

These were machinations of Trotskyites and rightists, participating in the sabotage of the measure of our Government [a few words missing].

PARTY ALWAYS IN THE LEAD

The further merit of the party consists in the fact it "was not sleeping over the chestnuts" and was following the road it once entered. It did not adjust itself to the stragglers and at all times kept its leadership.

There can be no doubt that only thanks to this firmness and grit did the Communist Party come out on top, not only in industrialization but in the collectivization of agriculture as well.

The question now arises, was the Communist Party able to utilize correctly all these material conditions to increase war production and to supply the Red Army with the necessary equipment. I think that it was able to do so, and to do so with the maximum success. If one does not count the first year of the war, when the transfer of the industry to the east retarded the full swing of mass production, then, in the course of the three main years of the war, the party was able to achieve successes which gave it the possibility not only to supply the front with sufficient quantities of artillery, machine guns, rifles, planes, tanks [some words inaudible] our equipment being not only not inferior in quality to the German but on the whole being superior to the German.

Our tank industry in the last 3 years at least produced on the average over 30,000 tanks, self-propelled guns and armored cars per year. It is also known that our aircraft industry produced in the same period about 40,000 planes per year. It is also known that our artillery industry produced annually in the same period about 120,000 guns of all calibers, about 450 000 light and heavy

machine guns, over 3,000,000 rifles and about 2,000,000 automatic rifles.

HUGE MUNITIONS PRODUCTION

It is also known that our mortar industry in the period 1942–1944 produced on the average about 100,000 mortars per year. It is obvious that in the same time a corresponding quantity of artillery shells, various kinds of mines, air bombs, and rifle and machine-gun ammunitions was also produced.

It is known that in 1944 alone more than 240,000,000 shells, bombs and mines were produced and more than 7,400,000,000 cartridges.

Such is the general picture of the supplies for the Red Army in regard to equipment and ammunition. As you see, it does not resemble the picture which the supplies of our armies presented during the First World War, when the front experienced a chronic shortage of artillery and shells, when the Army fought without tanks, and when one rifle was issued for every 3 soldiers.

Regarding supply of the Red Army with food and uniforms, it is generally known that the front not only did experience no shortage in this respect, but even had the necessary reserves.

That is how the matter stands with regard to the work of the Communist Party of our country during the period before the outbreak of the war and during the war.

PARTY'S IMMEDIATE PLANS

Now a few words on the plans for the work of the Communist Party in the near future. As is known, these plans are confirmed in the very near future. The fundamental task of the new 5-year plan consists in restoring the areas of the country which have suffered, restoring the prewar level in industry and agriculture, and then exceeding this level by more or less considerable amounts.

Apart from the fact that in the very near future the rationing system will be abolished, special attention will be focused on expanding the production of goods for mass consumption, on raising the standard of life of the working people by consistent and systematic reduction of the cost of all goods, and on wide-scale construction of all kinds of scientific research institutes to enable science to develop its forces.

I have no doubt that if we render the necessary assistance to our scientists they will be able not only to overtake but also in the very near future to surpass the achievements of science outside the boundaries of our country. As far as plans for a longer period are concerned, the party intends to organize a new mighty upsurge of national economy, which will enable us to increase the level of our production, for instance, threefold as compared with the prewar level.

To achieve this we must endeavor to see that our industry produces 50,000,000 tons of pig iron per year, 60,000,000 tons of steel, 500,000,000 tons of coal and 60,000,000 tons of oil.

Only under such conditions will our country be insured against any eventuality. Perhaps three new 5-year plans will be required to achieve this, if not more. But it can be done and we must do it.

Such is my brief account of the work of the Communist Party in recent past and its plan of work for the future. It is up to you to judge whether the party has worked and is working correctly, and whether it could not have worked better.

Some say that victors should not be judged, that they should not be criticized, or checked. This is not correct. Victors can and must be judged, they can and must be criticized and checked.

This is good, not only for the cause but also for the victors themselves. Why? Because there will be less conceit and more modesty. I consider that the election campaign is the judgment of the electors on the Communist Party as being the party of the rulers.

The results of the elections will signify the verdict of the electors. Our party would not be worth much if it were afraid to face this verdict. The Communist Party is not afraid to receive the verdict of the electors.

NEW UNITY IS STRESSED

In the election struggle, the Communist Party does not come forward alone; it enters the elections together with the nonparty people. In former days Communists had an attitude of a certain mistrust toward nonparty persons. This is explained by the fact that the "nonparty" banner frequently masked certain bourgeois groupings, who did not find it advantageous to present themselves to the electors without a mask. Such groupings existed. There was such a state of affairs in the past but now times have changed.

Nonparty people are now separated from the bourgeoisie by a barrier which is called the Soviet social system. This very same barrier unites the nonparty people with the Communists into one common collective of Soviet peoples.

Living in one common collective, they fought together for the strengthening of the might of our country. Together they fought and shed their blood at the fronts for the sake of the freedom and greatness of our motherland. Together they forged and created the victories over the enemies of our countries. The sole difference between them is that some of them are members of the party and others are not. But this difference is only a formal one.

What is important is that both Communists and nonparty people are fulfilling one common task. Therefore, the block of Communists and nonparty persons is in my view a natural and common cause.

In conclusion, permit me to express my gratitude for the confidence which you have shown me in nominating me as candidate for Deputy to the Supreme Soviet. I will try to justify this confidence.

Capt. Mildred McAfee Horton

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mrs. SMITH of Maine. Mr. Speaker, the resignation of Capt. Mildred McAfee Horton, USNR, from her duties as Director of the Women's Reserve marks the completion of 41 months of devoted service to the Navy and to the Nation. Captain Horton was the first Wave and was commissioned a lieutenant commander in the Navy August 3, 1942, 4 days after the Women's Reserve was authorized by Congress. Since that time Captain Horton has participated in all phases of the formulation of plans and policies affecting the Women's Reserve and her vision and imagination contributed in large measure to the effective utilization of Waves in many types of billets. Under her leadership the Women's Reserve expanded until at the time of the surrender of Japan there were 86,000 Waves, nearly eight times the original number the Navy had estimated was needed.

At that time Waves were serving at 900 stations in the United States and Hawaii. These represented nearly every type of naval shore activity, including hospitals, navy yards, air stations, supply and ammunition depots, district headquarters, and communications activities. Approximately 20,000 Waves were serving in the Navy Department and the Potomac River Naval Command and Waves composed 55 percent of the uniformed personnel in the Navy Department in Washington. The high standards of performance which were set by members of the Women's Reserves, many of whom were engaged in duties which they had learned in the Navy and which were formerly reserved for Navy men, are a lasting tribute to Captain Horton.

From the original four ratings of seaman, yeoman, storekeeper, and radioman open to Waves, enlisted women today have qualified for 38 different ratings. To supplement the civilian skills which these women brought to the Navy an extensive training program was set up which at its peak included a large recruit school for enlisted Waves in New York City, a midshipmen's training school in Northampton, Mass., and advanced schools at more than 40 naval activities. The advanced schools included preparation of enlisted women for duties of pharmacist's mate, hospital apprentice, aviation machinist's mate, aviation machinist's mate—instrument, aviation metalsmith, parachute rigger, radioman, storekeeper, yeoman, cook, baker, mailman, gunnery instructor, key punch operator, link trainer instructor, chaplain's assistant, control tower operator, aerographer's mate, barracks master-at-arms, camera repairman, link celestial navigation trainer operator, sound motion picture technician, and pigeon trainer. Advanced schools for officers prepared them for duties in supply, aerology, technical and administrative radar, communications, air combat information, Japanese language, chemical warfare, ordnance, photographic interpretation, aircraft recognition, and link celestial navigation instruction.

For her services as Director of the Women's Reserve, Captain Horton received the Distinguished Service Medal in November 1945. The citation reads as follows:

For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as Director of the Women's Reserve of the United States Naval Reserve, from August 3, 1942, to August 31, 1945. Qualified professionally and intellectually for this unique service, immediately purposed toward the full utilization of women in the nation's organized war effort, Captain Horton was directly instrumental in the initiation of plans and policies affecting the administration, welfare, and public relations of members of the Women's Reserve, and was in large measure responsible for procedures motivating their effective performance in the continental United States and the Fourteenth Naval District. Keenly perceptive of the potentialities of an ideal, she inspired in the general public her own confidence, translating her experience-based theories into actuality in the generally recognized acceptance of women as an integral part of the naval service. Under her capable and devoted leadership, the standards of integrity, loyalty, and enthusiasm were met by 86,000 members of the Women's Reserve, reflecting the highest credit upon Captain Horton and the United States naval service.

Captain Horton was admirably qualified by virtue of her civilian experience to serve as Director of the Women's Reserve. As president of Wellesley College, she was known in educational circles throughout the country. Previous to her appointment to that position in 1936 she served as dean of college women at Oberlin College. During the war Captain Horton has been on leave of absence from her duties at Wellesley.

The new Director of the Women's Reserve is Capt. Jean T. Palmer, of Omaha, Nebr. Captain Palmer, in civilian life, was a graduate of Bryn Mawr College and business manager of the Association of Junior Leagues of America. A Wave officer since the establishment of the Women's Reserve, she worked with Captain Horton in setting up the initial organization. Ten months later she became assistant for the Women's Reserve to the director of enlisted personnel, and for her services as an adviser on all matters of policy affecting enlisted women in the Navy she received a citation and commendation ribbon from the Secretary of the Navy. Captain Palmer was appointed Assistant Director of the Women's Reserve in November 1945. Captain Palmer will have as her assistant Commander Grace Chaney.

Wheat Shortage

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. HOPE. Mr. Speaker, on Friday I pointed out in the House that the greatest immediate difficulty as far as the wheat situation is concerned is a breakdown of transportation. I pointed out at that time that farmers in the Wheat Belt are anxious to sell their wheat but are unable to get cars to do so. I pointed out also that because of this lack of transportation, some wheat is becoming unfit for human consumption.

In further support of this contention I submit herewith an extract from an editorial in the Denver Post for February 7:

Some western wheat growers declare the wheat shortage situation is exaggerated and wonder if the object is to justify the imposition of more bureaucratic controls. Carl Smith, a member of the Denver Livestock Exchange, who is extensively engaged in farm and livestock operations in western Kansas and Nebraska, says the shortage is one of freight cars, not wheat. He insists Washington can get plenty of wheat if it will provide the railroad cars to get it out of western Kansas and Nebraska.

"The Government has been appealing to farmers to let loose of their wheat," Smith said. "They've been trying to do that but they can't get cars to ship it. I had 75,000 bushels of wheat piled on the ground at Goodland, Kans. It got wet before I could get it shipped. I have 50,000 bushels in storage in western Nebraska. I can't get cars. The railroads want to move this wheat but they say their cars are tied up by the Government. The whole situation is so nonsensical. If one department of Government wants wheat, all it has to do is get another department to get the cars to move wheat that is available."

Achievements of American Agriculture

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. HOEVEN. Mr. Speaker, we too often lose sight of the great production record of agriculture during the war. The American farmer under an unusual handicap of labor and machinery shortages has met every production goal and more besides. The following editorial taken from the Sioux City (Iowa) Journal gives us a picture of the remarkable achievements of American agriculture during the past few years:

FARMERS BREAK RECORDS

Establishment of new production records was so much the order during the war period that only passing attention was given to any individual achievement in that line. Everyone knew, of course, that American farmers were keeping pace with the accomplishments of other war workers, and doing it under an unusual handicap of labor and machinery shortages.

Now that we are into the postwar period, there is time to pause and consider the remarkable achievement of American agriculture in the last 9 years. Records show that our farms have been made to yield higher than average crops during that number of seasons. In some of these years weather conditions were unusually favorable, aiding efforts of the farmers; in others just the reverse was true.

Last year, for example, was one of the worst seasons of recent years for producing a large corn crop. Yet the 3,018,410,000 bushels produced was close to the record 1944 crop yield, and 25 percent higher than the national average only a few years ago.

Planting a year ago was seriously delayed by wet weather. Farmers were unusually short of manpower to meet such delays. But machinery was recruited, the corn planted, and use of early maturing hybrid strains helped to produce a big crop. It is true, of course, that a lot of corn was damaged by frost, a condition not considered in Government crop statistics.

Corn, being the leading crop in this section, gets first attention in a survey of farm production records. But it should be noted that yields for all farm crops in 1945 was fully 30 percent above the 1923–32 predrought average. Acre yields of oats, potatoes, and sugarcane reached new high records last year.

Certainty of increased heavy demand for foodstuffs in this country and abroad has influenced the Government to propose an increase in land under cultivation of 9,169,100 acres for this year. Larger plantings of sugar beets, dry beans, flax, and some feed crops are asked. A 10-percent reduction in soybean acreage is suggested, due to some restoration of some foreign sources of oil-bearing crops.

Will it pay the farmers of the Nation to continue their efforts and turn in another record crop? Government sources anticipate a decline of about 10 percent in farm prices during the year, plus an increase in production expenses, chiefly in the cost of machinery and in transportation. Net farm income is likely to be about 15 percent below the 1945 peak, it is expected, provided, of course, that farmers do not organize and insist on no decrease in their take-home pay.

Reign of Terror in Poland

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a telegram that was sent to the Secretary of State, Hon. James F. Byrnes, by the Polish-American Congress of Chicago, Ill., and also copy of a statement that appeared in the American press throughout the country, dealing with the political murders and the reign of terror going on in Poland:

FEBRUARY 1, 1946.

Hon. JAMES F. BYRNES,
Secretary of State, Washington, D. C.:

We commend you for voicing America's disapproval of the political murders of democratic elements taking place in Russian controlled Poland. The Polish-American Congress has consistently warned our American Government ever since the Yalta Conference that it should take a firm stand in demanding elections be held immediately in Poland and not when all the democratic leaders will have been liquidated. Your expressed concern over the deplorable conditions in Poland has the approval of all fair-minded Americans.

CHARLES ROZMAREK,
President, Polish-American Congress.

Secretary Byrnes is to be commended for voicing America's disapproval of the political murders of democratic elements now taking place in Russian-controlled Poland.

Ever since the Yalta Conference the Polish-American Congress has consistently warned our American Government that it should take a firm stand in demanding that the elections in Poland be held immediately and not when all the democratic leaders have been liquidated.

The accusation made by the Moscow-appointed Polish Ambassador in Washington that General Anders is responsible for the reign of terror in Poland is not only ridiculous but malicious.

General Anders is in Italy, whereas the Russian-installed Polish puppet government and the Russian Army are in full control in Poland. Liberty is slowly bleeding to death in prostrate Poland. Countless thousands of patriotic Poles are being rounded up. They are either being executed or deported to Siberia, where a fate worse than death awaits them. Instead of a general political amnesty, additional arrests have occurred. The secret police, backed up by the Red army, have put the quietus on all opposition.

All this amply explains the reason why Poles and Jews are fleeing from Russian-occupied Poland into American and British zones of occupation and are deliberately avoiding entry into Russia or Russian-occupied Germany.

Warning to Labor

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mankato Free Press, Mankato, Minn., entitled "Warning to Labor":

WARNING TO LABOR

The thinking, working, loyal members of labor unions are having a valuable lesson disclosed to them in the action of the House of Representatives, in according such strong support to the so-called Case bill and in beating off all attacks and efforts to amend that measure.

Observers are generally agreed that this is a strong bill. It imposes definite curbs on strikes and takes away from labor unions valuable rights against injunctions which have been won only after long years of struggle and effort. Probably over the long pull it would be regrettable if such stringent legislation should become law. However, the Members of Congress supporting this bill feel that they have the full support of a majority of their constituents in sponsoring such legislation.

That is the point that some of our radical labor leaders have forgotten. It is the point that thinking members of unions should remember. Labor was not able to elect a mayor in Detroit, strongly union though that city may be. Labor could not, by itself, elect a President. Labor can make gains and win greater consideration and rights only in cooperation with the public as a whole. And when labor's policies become hostile and damaging to the public as a whole, there is the strength, the support, and even the demand for Congress to impose stringent curbs and restrictions on the freedom of action of union labor.

Granting that it might be a mistake to pass legislation as drastic as the Case bill, the measure has served a useful purpose if it awakens a majority in the ranks of labor to the dangers they are facing. In the future labor may choose a leadership that will respect rather than flout the rights of the general public.

"Honest Abe" and Honest Government

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. WOODRUFF. Mr. Speaker, tomorrow, February 12, America will observe the birth date of one of our greatest statesmen and our greatest souls, a man whose faith in God and his fellow man made him a benefactor to the human race which will cause him to be remembered for all time. He is one of America's immortals.

In Lincoln's Day his contemporaries needed but two words to describe his spirit, his principle, and his guiding star of statesmanship. That description was, "Honest Abe."

Abraham Lincoln believed in government of, by, and for the people. He knew the real meaning of government of, by, and for the people. Therefore he gave his Nation that kind of Government. His great concern always was to preserve, uphold and advance government of, by, and for the people.

What a long way, and what a sad way we have drifted from Abraham Lincoln's concept of government, under which the people were permitted always to know what commitments were being made for them to fulfill, and why such commitments were made. The Nation has, within the past 2 weeks or 3, been shocked to its depths by the revelation that the protestations regarding the Yalta meeting by the then President of the United States, Franklin D. Roosevelt, and numerous other spokesmen of that administration, were meaningless, and intended to deceive the people. We have learned, that neither Mr. Churchill, when he stood before the Parliament and solemnly gave it the unqualified assurance that no secret agreements had been reached at Yalta between the Big Three nations, except the granting of three votes in the World Council to Russia, nor Mr. Roosevelt when he gave his Nation the same assurance by implication, stated the truth. It is entirely possible that Mr. Churchill did not know of the agreement between Mr. Roosevelt and Mr. Stalin in which the Kurile and Sakhalin Islands were given over to Russia.

The Yalta Conference was some 6 months before Japan surrendered. Therefore the Kurile Islands and Sakhalin Island were under the sovereignty of a power which had not yet been defeated, and which had not surrendered to the United States. Mr. Roosevelt was, therefore, at the time of Yalta, without any more power or authority, constitutionally or otherwise, to turn the Kurile and Sakhalin Islands over to Mr. Stalin than would any other private citizen of the United States have been. There is nothing in the Constitution, and certainly under any sane concept of international law, there could be no possibility of the President's war powers embracing the power and authority for him to dispose of the territory of one sovereign nation by grant to another sovereign nation before the first sovereign nation had been defeated or had surrendered.

The Kurile and Sakhalin Islands are important not only to our future defense in the Pacific, but to our open-door policy in China. It was in those islands that the springboard of the Japanese successful attack upon the Aleutians was located. Will they in the future again be the springboard from which another attack will be made upon us? The Kuriles lie between the Aleutian Islands off of our Alaskan coast and Japan, which is now under our sovereignty.

If Mr. Roosevelt made a secret agreement with Mr. Stalin granting Russia the right to occupy and possess the Kuriles and Sakhalin without either the constitutional power or any power under international law, and without the advice and consent of the United States Senate, the act was not that of a clear-minded man, and the only conclusion is that Mr. Roosevelt was so sick at the time of the Yalta Conference that he was not fully aware of the implications of his acts.

My point in this discussion is not merely a criticism of Franklin D. Roosevelt. There is another point, very vital and very much more disturbing, involved in this matter. Let us for a moment consider the aspects presented to America within the last 2 weeks.

Secretary of State James F. Byrnes has advised the country that he knew nothing of this secret agreement between Mr. Roosevelt and Mr. Stalin at Yalta until sometime after VJ-day. In that interim Stalin had moved his troops into the Kuriles and Sakhalin, and had literally and actually taken forcible possession of islands which were then under the control and sovereignty of the United States of America. We are now the sovereign power in Japan. The Japanese Emperor and his government are merely executives operating under the policies and orders of Gen. Douglas MacArthur, who represents the sovereign power of the United States in Japan, and whose decisions, in event of disagreement between the Allies, shall be final.

After this revelation relating to Secretary Byrnes' lack of knowledge of this secret treaty, and his statement that he did not even know when President Truman first learned of the secret Yalta agreement, President Truman nonchalantly stated at a press conference that he had known of the agreement since before the Potsdam Conference. He further said the agreement was a document in writing, and that the document was in his personal files at the White House. He further hinted that there were other secret agreements at Yalta which he observed would be revealed to the American people at the proper time. It was intimated that he would have to get the permission of Mr. Stalin and the British Government before he would feel at liberty to advise the Congress and the American people what other secret agreements had been entered into binding them to courses of action wholly without their knowledge and consent. Mr. Truman went even further at that press conference to say that he made foreign policy and that the State Department merely carried it out, and his attitude was by unmistakable implication that it was not necessary for the State Department to know about secret agreements unless the Chief Executive chose to inform this Department.

Incalculable damage has been done by this series of developments to the people's confidence in their Government. Who are the people to believe, and what are the people to believe, if they cannot believe the most solemn assurances of their Chief Executive and State Department spokesmen? What may we have been committed to if a secret agreement as bizarre and irresponsible as the grant of the Kurile and Sakhalin Islands to Stalin by Mr. Roosevelt 6 months before we had achieved sovereignty over them could be carried through and kept secret by Mr. Truman for all these months?

The time—the proper time—for the American people to know about these secret agreements is now. The people are entitled to know about all secret agreements now. Any pretense that the secret agreements must be kept secret because of military security has now completely vanished. It vanished on VJ-day. Therefore when Mr. Truman takes the position, as he apparently does, that the American people and their Congress cannot know about these secret agreements binding upon them without the permission of Joe Stalin in Russia and the British governmental officials, such an attitude becomes both incomprehensible and indefensible. The American people are entitled to know the commitments made in their name by their public servants and any assumption by any Chief Executive that secret diplomacy agreements reached in the dark recesses of mysterious diplomatic intrigue are so sacred the American people cannot know about them, at once brings to mind a statement once made by that seventeenth century philosopher, Baruch Spinoza, who declared:

> It has been the one song of those who thirst after absolute power that the interest of the state requires that its affairs should be conducted in secret. * * * But the more such arguments disguise themselves under the mask of public welfare, the more oppressive is the slavery to which they will lead. * * * Better that right counsels be known to enemies than that the evil secrets of tyrants should be concealed from the citizens. They who can treat secretly of the affairs of a nation have it absolutely under their authority; and as they plot against the enemy in time of war, so do they against the citizens in time of peace.

Any course by any Chief Executive which involves concealment of facts or deception of the American people concerning agreements made in their name, and binding upon them, is indefensible from any standpoint. It is bad government. It is bad practice. It is bad world relations, and it is bad for the morale of our own people.

These United States of America are not a private institution of any man, President or other. Mr. Truman's first duty and first loyalty are to the people of the United States, and neither he nor any person in the State Department owes a greater duty, or a greater loyalty, to the Soviet Government or to the British Government than he does to the people of the United States. Any doctrine that Mr. Truman owes it to the departed Mr. Roosevelt to deceive the American people, or to keep from them facts which are of vital importance to them, is indefensible, and the people should raise their voices against it now.

Woodrow Wilson condemned secret diplomacy. Our whole scheme of Government is based upon open, honest, candid diplomacy. Europe and the Orient have been embroiled in suspicions and wars for a thousand years and more because of secret deals and agreements. We are beginning to realize that George Washington knew what he was talking about when he advised this Nation to be wary of becoming entangled in that sort of diplomacy and intrigue with the countries of the old world.

We must regain as soon as possible the concept, the spirit, and the kind of government to which "Honest Abe" Lincoln was ever faithful, government of, by, and for the people.

Case Strike-Control Bill

EXTENSION OF REMARKS
OF
HON. ROBERT K. HENRY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. HENRY. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I would like to include an editorial which appeared in the Waukesha Daily Freeman, Waukesha, Wis., under date of February 8, 1946.

CASE STRIKE-CONTROL BILL

Passage of the Case strike-control bill in the lower house Thursday indicates that Congress is becoming conscious of the duty it has to prevent the American public from being victimized by Nation-wide strikes like those which are gradually strangling our economy. Unfortunately, however, the measure will have rough going in the Senate where there is no coalition of Republicans and Democrats to see it through.

The Case bill makes no attempt to deprive unions of any rights to which they are, or ever have been entitled. By making them amenable to civil rights in the case of contract violations, it makes the status of unions the same as that of employers. There should never have been any difference. It provides that injunctions may be issued against unions when they use force or violence in their picketing. It does not deny them the privilege of striking to enforce their demands when other means of obtaining a settlement have failed.

Passage of the Case bill would be so much in the public interest that Congress should proceed forthwith to enact it into law, over President Truman's veto if necessary. It is not an attempt to break the unions. It is an honest effort to prevent unions from breaking the country. With the entire reconversion program hanging in the balance as a result of the present wave of strikes, the need is urgent for a law which not only will restore industrial peace now but will prevent similar battles in the future.

Why a British Loan?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

WHY A BRITISH LOAN?

President Truman day before yesterday sent Congress a message repeating the conventional arguments for the proposed "loan" to Great Britain and asking Congress for a hurry-up O. K. on the loan.

The transaction would add up to $4,400,000,000. Of this, $650,000,000 would go to clear the lend-lease slate between the United States and Great Britain. The other three and three-quarter billions would constitute the loan. Interest would be at 2 percent. Neither principal nor interest payments would begin until 1951. In years when times were sour in Britain, we would just forget about the interest.

TRUMAN'S MESSAGE

This deal, says the President in his message, will grease the wheels of international trade, enable Britain to recover from the war more quickly than it could recover under its own steam, promote business between the United States and the British Empire, avert a trade war between Britain and this country, and in various other ways speed the mopping up of the war's financial and economic wreckage.

With all of the above, we disagree.

Let's reduce this proposition to human, individual terms, so that anybody can understand its implications. Suppose the family black sheep went around and promoted various loans from the substantial members of the family, then blew the money on race horses. The second time he came around for loans, he might get them. But if he blew these loans as he blew the first ones, his third money-raising trip around the substantial part of the family would probably net him little if any jack.

UNCLE SHYLOCK RIDES AGAIN

We helped England out of World War I. We put up 2,000,000 men for the western front, and loaned Britain about six and one-half billions—which in those days was not hay. Britain repaid some of the money, then quit paying, and set up Empire preference tariffs against our goods, while British statesmen called us Uncle Shylock because we made some mild objections to all this welshing.

And now, here we go again. We extended $29,000,000,000 worth of lend-lease goods to the British Empire during the late war. That is to be washed out, along with the $12,000,000,000 in lend-lease that we gave other nations.

We also contributed about 3,500,000 men to the war in western Europe—three times as many as Britain contributed—and pulled Britain's Far East Empire out of the fire virtually single-handed, except for Burma. The British are back in Hong Kong now.

But as if this were not enough, Britain's Socialist government now wants another "loan" of about $4,000,000,000—and Parliament had the supreme gall to pretend to be hesitant about accepting the "loan" on the ground that the terms were too harsh.

If Britain gets the $4,000,000,000, what argument can there be against "loaning" Russia the $6,000,000,000 Stalin told some Congressmen he wanted? Then why not "loan" France the $2,500,000,000 it is reported willing to accept? After that, why not just tell Iran, Iraq, and every other nation that wants some of our money to come and get it?

This money, we should all bear in mind, will not be manna from the skies or stage money pulled out of a wizard's hat. It will come from the pants pockets of United States taxpayers, which means all of us directly or indirectly.

We throw this two bits' worth of ours into the loan argument because we believe it, not because we fancy that any winged words of ours can block the British loan.

President Truman thinks it good politics to follow along with the Roosevelt-Morgenthau gibberish about one world, and all that. It looks as if Congress will O. K. this loan, which on World War I precedent will be nothing but a gift, and as if the people won't

be able to do a thing about it until and unless they can change control of our Government at the polls.

It seems to us that the sensible thing to do would be teach England that war is a horrible and costly jag, by letting England sweat out its World War II hang-over unassisted.

WE SHOULD SPEND THE MONEY HERE

As for the four or ten or twelve and one-half or twenty billions we're thinking of "loaning" out on dubious terms to dubious borrowers—if we must spend that money, why not spend it in our own country? Why not split it about 50–50 between a real long-range national-defense program and generous bonuses for our own veterans of World War II?

At least, our veterans would spend the money in this country. Even the money they spent wastefully would stay here. Foreign debtors may, as promised, buy a lot of United States goods with this "loaned" money; but if they don't pay it back, we will merely have given them the goods.

We think our World War II veterans should join the American Legion in overwhelming numbers, and go out after these bonuses.

Wages and Prices

EXTENSION OF REMARKS
OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks, I include three editorials from the January and February issue of Extension magazine published in Chicago. These editorials come from the pen of Mr. S. A. Baldus, and appeared in the February issue:

THE TRIUMPH OF FAILURE

Because the national labor-management conference, set in motion by President Truman, adjourned after 4 weeks with disagreement on all major issues and without setting up the much-talked-about machinery for settling labor disputes, the conference has been declared a complete failure. We hold a contrary view. It was at least 50 percent successful in that management, presenting as always, a united front, came out of the conference with flying colors. Its greatest victory was that with the help of several of the representatives of labor, it succeeded in keeping the wages question—for the settlement of which the conference had been called—from being discussed.

But as far as labor is concerned the conference was indeed a failure. Labor didn't score a single point. The reason for its defeat is that organized labor is badly disorganized—a house divided against itself. There is no unity among the different labor groups whose leaders, swayed by jealousies and personal ambitions, are engaged in iternecine rivalries, pursuing tactics that are harmful rather than helpful to the rank and file of workers. Then, too, they seem to be lacking in wit and intelligence. Take, for example, their present demand for more wages. As one group phrased it, "We want 52 hours of 'take-home' pay for 40 hours of work." Whoever invented that slogan ought to have his head examined. It's about as sensible as asking for 135 cents of change for a dollar. Such ill-advised and poorly considered claims have the effect of putting workers generally in a false light with the public and fastening the stamp of unreasonableness on their demands.

Confining ourselves to the wages question, labor leaders seem to be entirely oblivious (or shall we say—ignorant) of these fundamental facts.

1. That every demand for more wages was invariably preceded by an increase in prices and living costs. Prices went up first; then came the demand for more wages.

2. That every increase in wages was promptly followed by another increase in prices and living costs.

3. That in not a single instance did wage increases ever catch up with the increase in prices and living costs. In not a single instance was the increase (grudgingly granted—and generally after strikes costly to labor) sufficient to meet the advance in prices and living costs.

In the 60 years since organized labor came into existence—and in spite of the tens of thousands of strikes for better wages—organized labor has never won a single clear-cut victory, even as regards the quantity of its wages, to say nothing of their purchasing power. A few basic wage facts clearly show this. According to statistics compiled by Williford I. King—in 1910 over half of the families in the United States had an income of less than $800 a year; over 80 percent of the families had an income of $1,200 or less—most of them less.

Thirty years later—in December 1939—the average weekly earnings of all those engaged in the manufacturing industries amount to $26.27 a week, $1,366 a year. This doesn't show much progress as regards the size of the wage worker's pay envelope, in spite of all their strikes during 30 years, does it?

Then came the war, and with it improvement in the wage situation. In January 1945, when war production was at its height, the average weekly earnings of those engaged in the manufacturing industries, before deductions for taxes, social security, etc., and on the basis of time and a half for work in excess of 40 hours, averaged $47.52.

But the war is over and the drift is back to the prewar level of wages. The present minimum wage is 40 cents an hour—$16 for a 40-hour week—$832 a year. The enactment of a wage law stipulating 65 cents an hour would mean a wage base of $26 a week, or $1,352 a year, which is less than the earnings of those engaged in the manufacturing industries in December 1939. Where is the progress?

And in the meantime the cost of living has risen progressively so that today an income of $2,250 is considered as minimum for the maintenance of a fairly decent standard of living for a family of five. Even $1 an hour—$40 a week, for all workers would fall short of this standard.

What we should like to impress upon labor leaders, and workers generally, is that there is no salvation for them in a mere quantity wage. They may ask, as some are doing now, for $2-a-day increase, or a flat 30-percent increase in wages, but it would inevitably be taken away from them through the medium of higher prices. The labor leaders of the two respective groups may be right when they insist that the wage increases they are demanding could be paid without increasing the prices of automobiles or steel products but, and this is the important point, the prices of a thousand other items of consumer goods produced outside of the automobile and steel industries would go up. The cost of living would increase. And then where would they be?

"LET THERE BE LIGHT"

Last month we tried to impress upon labor leaders and workers generally that the quantity of wages is not the important thing, that no real benefits can or will ever accrue to them from a larger number of dollars in their pay envelope as long as the purchasing power of the dollar is low—that is to say, if the prices of the things they must purchase in order to live and the prices of the things they produce remain high. To merely demand more dollars of low purchasing power is stupid, and gets labor nowhere.

And the worst part of it is that demanding a larger quantity of dollars and launching strikes to gain this objective has placed labor in the unenviable and altogether false position of being held responsible for high and still ascending prices and mounting living costs. Actually there is no connection whatever between wage increases and prices. Certainly they are not cause and effect. Let us never forget that in all cases prices went up first; then came the demand for more wages. But labor, especially organized labor, is too blind to see, and too obtuse to stress this easily demonstrable fundamental fact.

This writer has examined, computed, and correlated hundreds of sets of statistics pertaining to wages and prices covering a period of 50 years, and has found absolutely nothing to justify the claim, so persistently publicized, that the excessive wage demands of labor are responsible for rising prices and increases in living costs. To prove the point we select only one from a hundred items for which relevant data are available—showing conclusively that wages or wage increases are not the cause of high prices—namely steel rails.

In 1898 the price of steel rails was $17.62 a ton. In 1901 the United States Steel Corporation was organized. In 1902 the price of steel rails was raised to $28 a ton and kept at that price until 1913. After the war broke out in 1914, the price was increased to $40 a ton in 1917, and to $57 in 1918. Then it was dropped to $54.42 in 1920. In 1923 the price of steel rails was fixed at $43, and held at that figure until 1932. It went down to $36.38 in 1935. The ceiling price of steel rails was $43; it was recently raised to $46 by the OPA. And the same price gyrations are observable for all the other steel products.

The point we want to emphasize is that the wages of the steel workers had absolutely nothing whatever to do with these sundry price increases and fluctuations. The wages of steel workers have always been notorious as the lowest in industry. Up to 1915 the wages of workers in steel plants ran as low as $2 to $2.50 a day—for a 12-hour day. Between 1917 and 1920 wages varied from $3 in 1917 to the highest point—$5.06 in 1920. (The 12-hour day and 7-day week—84 hours—which had been in effect for years, was not abandoned until 1924.) In April 1938 the average weekly earnings of steel workers was $22.28. From these few data it is clear that the high prices of steel rails cannot be attributed to the high wages paid in the steel production industry.

Take any other group of factory workers in whatever line of goods production they may be engaged—suits, shoes, shirts, hats, ties, gloves, dresses and wearing apparel for women and children, suitcases, paints, rugs, carpets, furniture, pottery, etc.—and you will find that the comparatively small increases in the quantity of their wages do not account for the considerable increase in the prices of the goods they produce. We must look elsewhere for the seat of the trouble.

A VENTURE IN FACT FINDING

It is a great mistake to imagine that the present controversy between labor and management is of concern and interest only to a few thousand corporation managers and officials and to a few million organized wage earners. No. It is the most important topic that has ever been presented to the American people; it vitally concerns all of us—every man, woman, and child—for the reason that the outcome of the controversy will determine the economic destiny of this and the next generation.

Reduced to its simplest terms, the present fight—for it is nothing less than a fight—is a desperate attempt on the part of labor to

break the shackles of the centuries-old "iron law" of wages which the so-called classical economists formulated a century and a half ago, and which, alas, hireling economists have defended ever since, namely, that those who work are entitled to nothing more than a mere subsistence wage—that is to say, just enough wages to enable them to meet the cost of living. The corollary of this "iron law" of wages is that the usufruct of labor and all the emoluments and perquisites belong exclusively to the employers of labor.

These, therefore, are the two basic and interlinked questions: Is labor entitled to nothing more than a bare subsistence level of wages, and is it right—is it just that enormous profits be garnered by those who own or control the various industries and enterprises? Let it be understood that we are friendly to legitimate capitalism; we hold that productive capital is entitled to a fair and decent reward; but we put the emphasis on "fair" and "decent." During the past 50 years, however, a system has been developed under which profits are collected not only on capital actually invested but also on fictitious and nonexisting capital. The statistics show that the amount of fictitious and nonexisting capital entered upon the books of corporations is vastly greater than the amount of capital actually invested in the various industries and business activities. The determination to make a profit on this fictitious and nonexisting capital has fastened on our country the twin evils—high prices and low wages. In short, prices are high and wages are low because the industrial and other corporations are grossly overcapitalized.

What do we mean by overcapitalization? We mean the capitalization of corporations on the basis of an inflated valuation, that is to say—capitalized for an amount largely in excess of the real value of their properties and assets. It is an ingenious system perfected by that sinister genius and rugged individualist, J. Pierpont Morgan.

This is how the system of overcapitalization works. When Mr. Morgan organized the United States Steel Corp. in 1901, he caused to be issued nearly a billion dollars of securities—stocks and bonds—in excess of the actual value of all the properties and assets of the several companies merged into this one gigantic corporation. We can give only a few examples to illustrate the procedure. One of the companies whose plants and assets had been liberally valued at $19,000,000 was capitalized for $80,000,000. Against another company whose properties were valued at $33,000,000, $200,000,000 of securities were issued. Against the properties of another company whose total assets amounted to $100,000,000, $492,000,000 of stocks and bonds were issued. And so on for all the other companies taken into the consolidation.

From that time on the overcapitalization of all kinds of industries and enterprises became general. Manufacturing, mining and mercantile industries, railroads, transportation systems, public utilities, etc., were organized, or reorganized, on the ingenious basis of overcapitalization. Prices and profits were computed—not on the amount of money invested in whatever properties, but on their fictitious valuation—on an amount of imaginary capital that had no existence and was not employed in production—and therefore was not entitled to any reward. But in order to continue to reap a profit on this nonexisting capital, and also pay dividends and interest to the holders of the securities—stocks and bonds—issued against an investment that was never made, it was necessary to do two things—keep prices high and wages low. There you have the answer.

The point to be emphasized here is that the thing that determines the amount of overcapital—and the issuance of stocks and bonds—is profits. According to Prof. Edward Sherwood Mead, "We may define overcapitalization as that condition in which the par value of the securities of a company exceeds their actual value based on profits." In short, profits are used as the basis for computing the amount of overcapitalization. The greater the profits—the greater the overcapitalization. And the greater the overcapitalization, the higher the prices; and the higher the prices, the lower the purchasing power of wages.

Why was the system of excessive overcapitalization put into effect? The answer is simple—to disguise the immense earnings and to conceal the enormous profits that were being made. This is the line of reasoning that was followed. If a plant actually worth $500,000 made a clear profit of, say, $60,000 in a given year, this was computed not as 12 percent on $500,000 but as being the equivalent of 6 percent on $1,000,000—and which, according to capitalistic logic, justified raising the capitalization to $1,000,000. And if the following year (on account of the increase in prices) the profits were $120,000 this would be computed not as 24 percent on $500,000, nor as 12 percent on a mythical valuation of $1,000,000, but as 6 percent on an arbitrary and fictitious valuation of $2,000,000. And so on.

We have merely scratched the surface. This is no attempt to tell the complete story of the dastardly economic crime of overcapitalization, and the terrific penalties that the people in the role of wage earners and consumers have been paying and will be compelled to pay in all the years to come, in order to maintain and support the ingenious and outrageous free-enterprise system of overcapitalization through which prices have been kept high and wages low.

Our concluding comment is that unless the fact-finding committee recently appointed by President Truman will make an intelligent and honest effort to get at the root of things, by going back to their beginnings, nothing of permanent worth will be accomplished.

The Inflation Problem

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. LeFEVRE. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an article by Mark Sullivan which appeared in the New York Herald Tribune dated February 10.

Mr. Speaker, I feel that Mr. Sullivan's article is most timely and involves one of the most important problems facing us today. We all agree that we must keep down inflation and to do it we have to increase production. We cannot increase production with a continuation of strikes. I have tried to impress that fact on the labor leaders in my district when they criticize my vote for the Case bill. I know the great majority of the people, workers as well as employers, who sincerely want to see the Nation's domestic economy pull out of this paralysis, agree that legislation was necessary.

The Case bill may not be perfect, but it surely is a start in the right direction. If it becomes necessary to keep price controls a while longer, let us insist that the OPA pursue realistic, workable, and reasonably flexible policies.

FULL PRODUCTION OF GOODS HELD BEST WAY TO BAR RISE IN PRICES—MARK SULLIVAN CALLS DELAY IN OUTPUT GREAT DANGER TO UNITED STATES—SAYS OPA CEILINGS SEEK TO PREVENT RESULT OF INFLATION, NOT TO CURE ITS CAUSE

(By Mark Sullivan)

WASHINGTON, February 9.—President Truman has asked Congress to extend price control—as the law now stands it would expire June 30. He asked further that Congress act promptly, so that businessmen may be able to estimate well in advance what prices they must pay for materials, and what they may charge.

For promptness of decision, one way or the other, the argument is obvious. It would be an unnecessary addition to our troubles to let business and industry remain in doubt. As of today the common assumption is that control will be extended. But in the debate ahead there will be strong argument that the better and quicker way out of our troubles would be to let prices go free.

Public understanding of the coming debate may be helped if there is agreement on the underlying factors, including the meaning of familiar but loosely used words. This writer has received a reproving letter from Mr. Ralph Saylor, of Pottstown, Pa., who has gone to the dictionary and found "inflation" defined as "the excessive and abnormal coinage of money and currency."

DEFINITION IS HELD SOUND

A dictionary is not an authority, though it is commonly accepted as such, even by courts. A dictionary is a record of usage, and because it is that, definitions change in successive editions. A future dictionary, recording present usage, may say that "inflation" has as many meanings as in fact it has in the talk and writing now current. To each person the meaning of a word is the meaning it has when it arrives in his brain through his eye or ear.

In the definition quoted the word "coinage" is obsolete, for most of our money and currency is not now coined of metal but printed on paper. Yet essentially the definition is sound. Inflation means an excessive and abnormal quantity of money.

By that definition it is misleading to ask, "Will we have inflation?" It is here now. Stark figures show it. Before the war the amount of currency in circulation—that is, money in people's pockets and merchants' tills—was a little more than $7,000,000,000; today it is more than $26,000,000,000. Before the war the amount in checking accounts in banks was some $27,000,000,000; today it is some $69,000,000,000.

In the light of these figures the phrase used by many, including President Truman, "preventing inflation," is misleading. What is meant is averting the consequences of inflation. And the particular consequence many have in mind is rise in prices. The problem is how to prevent, or at least ameliorate, rise in prices.

Facing that problem, we encounter a formidable condition, namely, scarcity of goods. The twin condition—scarcity of goods coupled with abundance of money—is a perfect mechanism for causing high prices.

For cure, we have put official ceilings on prices. But that—and this is important to grasp—is merely an attempt to prevent the result, it is not a cure of the cause. For curing the cause, the surest practicable way is to increase the quantity of goods. Upon this there is growing agreement, and this agreement, eliminating many fallacies, is the starting point for sound decision and effective action.

Full production of goods by industry is our great need, the postponement of it our great danger. For the postponement, there are several causes. The most obvious is the strikes. But, assuming the strikes will be ended somehow, the question to be decided

by Congress, in replying to President Truman's request for extension of price control is: Would the extention work for greater and prompter production of goods in the greatest possible quantity, or the contrary?

CONGRESS FACES DILEMMA

Answering that question, Congress faces a dilemma and a paradox. Ending price control would most certainly result in an increase of prices. But to that, advocates of the ending make a reply. They say that the increase in prices would be only temporary; that presently, with goods being produced in great quantity, prices would gradually fall.

The difference between temporary effects and long-term ones is at the heart of the debate, with the two frequently confused. Advocates of continued price control say that the continuation would be only temporary, that as soon as goods are produced in great quantity the control would be dropped. That position is taken by Price Administrator Chester Bowles. To this, opponents say that the continued control will of itself prevent production in great quantity, because control checks freedom of enterprise.

The debate is confused by the existence of a school of thought which believes in price control for its own sake, and believes generally in greater control by Government over many phases of industry. If the ending of price control were left to this school of thought, the ending would be never. The school does not include President Truman. No one could question the sincerity of his belief, frequently expressed in plain words, that Government controls, not only of prices, but others, should be ended as soon as practicable.

Warship "Iowa" Makes Record

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith a splendid article relating to ships of the United States Navy which took part in World War II and which bear the names of Iowa landmarks:

WARSHIP "IOWA" MAKES RECORD—FIGHTING VESSEL ACTIVE IN DRIVE AGAINST JAPAN

When the history of World War II is written ships of the United States Navy bearing names of Iowa landmarks will play a prominent part.

Foremost among the 22 ships bearing names of cities, counties, and rivers of the State, was the 45,000-ton battleship *Iowa*.

One of the most powerful units of the fleet, the *Iowa* was commissioned on February 22, 1943, at the New York Navy Yard. On March 24, 1943, she put to sea on her shake-down cruise with 3,000 officers and men.

The *Iowa* carried the late President Roosevelt to north Africa for the historic conference with Winston Churchill and Joseph Stalin at Tehran, Iran, in November 1943.

JOINS PACIFIC FLEET

On January 2, 1944, she sailed from Chesapeake Bay for the Pacific. Passing through the Panama Canal, the *Iowa* arrived at Funafuti, Ellice Islands, and took part in the amphibious assault against Kwajalein Atoll in the Marshall Islands. On February 4, 1944, when the operation was completed she entered the anchorage at Majuro Atoll.

On March 18, 1944, the *Iowa* sortied from Majuro Island and helped bombard Mille Atoll. There she received her only damage of the war. Two Jap shells struck her, one bursting on the deck with small damage and the other entering the ship's side, bursting in an empty compartment. The only casualty was one man with a cut face.

In support of Task Force 58, the ship was in position with carriers of the group, on March 30, 1944, as they launched air strikes on Palau and on Woleai Islands, of the Caroline group. The next action found the same force setting course for Humboldt Bay, New Guinea, where they supported landings by striking at Hollandia, Aitape, and Wakde during the period of April 22–28.

SERVES AS FLAGSHIP

Turning northward, approach was made on Truk and on the 29th air strikes were carried out. Two days later with the *Iowa* serving as flagship the island of Ponape was bombarded.

The Marianas compaign, culminating in the invasion of Saipan, Tinian, and Guam, found the *Iowa* still in the support units of Task Force 58 carrying on air strikes against those islands and in the bombardment group that blasted Tinian on June 13.

There followed, June 19–21, the battle of the Philippine Sea, often called the "Marianas turkey shoot" by Navy fliers who shot down nearly 500 planes and inflicted severe damage on Jap carrier and fleet units.

SUPPORTS OPERATIONS

July 1944 was spent in Marianas' waters, supporting operations on Saipan and Guam and carrying out an air strike on Palau on the 24th. Early in August the force retired to Eniwetok.

Under way again early in September, now a part of the Third Fleet, the *Iowa* arrived for an attack on the middle Philippine Islands on September 12. Turning eastward, she struck the Palaus on September 17 in support of the landing operations on Peleliu Island. Four days later, in position 80 miles offshore, air strikes were made against Luzon.

Moving southward on the 24th, the Visayas Islands were again targets for the carrier planes, followed by retirement of the force to Saipan and then Ulithi Atoll.

SERVES AS PRESS SHIP

In October 1944 the *Iowa* commenced serving as press ship for the fleet. From her modern radio broadcasting room, teletype, and wirephoto facilities, the leading newspapermen and radio commentators of the United States and Allied Nations transmitted first-hand news of the war at sea.

On October 10 the *Iowa*, with other units of Task Force 38, arrived in position off Okinawa and began a series of air strikes against the Ryukyus and Formosa.

On October 18 aircraft were launched from a position north of Luzon for attacks on that island in preparation for the Leyte invasion. At the beginning of the battle for Leyte Gulf the *Iowa* steamed in toward the central Philippines, with carrier-launching aircraft which attacked the Japanese central force headed for San Bernardine Straits.

CONTINUES SUPPORT

During the remainder of October and through November the forces of which the *Iowa* was a part continued to give air support in the Philippines area with repeated strikes. Air attacks from the fast carriers were continued through December, but the *Iowa* suffered shaft trouble and was ordered to the States for navy yard overhaul, arriving in San Francisco January 15, 1945.

Leaving Hunters Point drydock, San Francisco, March 19, 1945, the *Iowa* joined Task Force 58 off Okinawa. On May 12, the force retired briefly to Ulithi, but returned to the area off the Ryukyus and struck southern Kyushu with repeated air strikes. About June 13, retirement was made to Leyte.

Departing from Leyte July 1, the support force, with the *Iowa* serving as flagship, moved into position off Japan for sustained air attacks upon the homeland which continued intermittently until August 15.

ATTACKS STEEL MILLS

The first air strike was made on Tokyo on July 10. The next against northern Honshu and Hokkaido on the 14th. On July 15, the *Iowa* did her part in blasting the steel mills and other targets of Muroran, Hokkaido. On the 17th she bombarded Hitachi, Honshu. The *Iowa* fired more than 600 tons of ammunition in these two bombardments.

Rejoining the carriers again, they struck Tokyo on the 18th. The next air attack was on July 24 against the Dure-Dobe area. These attacks continued throughout the remaining days of July, and included the Nagoya and Tokyo areas.

On August 15 word of the Japanese surrender halted air attacks prepared for the Tokyo and Nagoya area.

On August 27, 3 years to the day after her launching, with her log reading 190,313 miles, the *Iowa* dropped anchor in Sahami Wan, an open bay, 30 miles southwest of Tokyo. On August 20 she moved into Tokyo Bay, and there acted as one of the support ships for the first landings on the Japanese home islands on August 30.

Along with the *Iowa*, the heavy cruiser *Des Moines*, the frigates *Burlington* and *Davenport*, the gunboat *Dubuque*, the cargo ship *Red Oak Victory*, and the net cargo ship *Keokuk* were taking part in important actions around the world.

Christened with names of counties of the State were the following: Cargo ships *Muscatine* and *Appanoose*, the attack cargo ship *Union*, and the attack transports *Clay*, *Fayette*, *Fremont*, *Warren*, *Wayne*, *Adair*, *Shelby*, *Grundy*, *Clinton*, and *Audubon*.

Bearing names of rivers were the gasoline tankers *Maquoketa* and *Nodaway*.

Marine Corps Record in Demobilization

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. CASE of South Dakota. Mr. Speaker, at the time General Eisenhower and Admiral Nimitz reviewed the status of the demobilization in the Army and the Navy for Members of the Congress at the Library auditorium, I was struck by the fact that nobody said anything about the Marine Corps.

I said as much to the majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], who promptly suggested to Admiral Nimitz that a statement on the situation in the Marine Corps be prepared for me. I discussed the matter with Admiral Nimitz and with Brig. Gen. Merritt A. Edson, United States Marine Corps, pointing out the then prevalent questions about the large body of marines in north China.

Subsequently, a statement on the status of demobilization in the Marine Corps

was prepared for me by the Commandant of the Marine Corps, which I desire to place in the CONGRESSIONAL RECORD for its historical value and general information.

It will be noted from the statement that the Marines have reduced from a peak of 484,000 men at VJ-day to 301,070, as of January 11, and that as of that date, the Corps has discharged 48,000 more than originally planned and was 6 weeks ahead of its demobilization schedule.

On the other hand, the marines who went into China were obliged to remain longer than was anticipated, with the result that high-point men among them were not released as early as men of similar service in Japan, where replacements were made more easily.

The crediting of points for discharge is the same in the Marine Corps as in the Army, but the Marine Corps has been able to reduce its separation score more rapidly at times. The present critical score for discharge in the Marines is 45 points.

The letter and statement from General Vandegrift referred to are inserted at this point with permission of the House:

HEADQUARTERS, UNITED STATES MARINE CORPS,
Washington.

The Honorable FRANCIS CASE,
House of Representatives.
Washington, D. C.

MY DEAR MR. CASE: Following Fleet Admiral Nimitz's statement to Members of Congress concerning Navy demobilization, you requested information relative to the Marine Corps' demobilization system, particularly as it applies to China.

Pursuant to that request I am sending you the information herewith by Brig. Gen. Merritt A. Edson, United States Marine Corps:

(a) The Marine Corps point system for discharge is identical with the Army's insofar as the crediting of points is concerned. The Marine Corps has, however, been able to reduce the critical score for separation slightly earlier than the Army.

The Marine Corps point system has universal application within the corps. This means that, regardless of whether a marine is serving within the continental United States, a Pacific island, Japan or China, the same rules, and requirements for separation are applied to him.

The present discharge score is 50 points for male officer and enlisted personnel.

(b) At the time the Marine Corps forces entered Japan and China, those forces contained a large percentage of high-point men who had participated in fighting across the Pacific.

The initial Marine Corps occupying forces in Japan and China were of almost equal strength. In the case of Japan, there has been a reduction in the strength of Marine Corps forces as a result of which almost all high-point men have been withdrawn.

On the other hand, in China there has been no substantial reduction in Marine Corps strength, with the result that high-point men have remained in China longer than they did in Japan.

Two other factors aggravated this condition. For a while it appeared that the marines would be withdrawn from China at an early date. Therefore, only small numbers of replacements were ordered to China until it became evident that the marines would be there longer than was contemplated originally.

I know you understand that the time required to transport men to China as replacements and thereafter to return the high-point men who have been relieved from China to the United States for separation, was a controlling factor in the speed with which men from China could be discharged.

(c) More than 11,000 replacements have arrived in China since the 1st of December. Some of these replacements were obtained through redistribution of low-point personnel in the Pacific. The majority were shipped from the United States. Additional replacements have recently arrived at other destinations in the Pacific and more are en route.

As a result of the replacement program, the majority of the 50-point men in the Marine Corps, including those from China, will be discharged in January and practically all of the remainder will be discharged in February.

(d) The Marine Corps has already announced that on February 1 it will reduce discharge requirements from 50 to 45 points. Pursuant to this reduction, 28,000 additional men will become eligible for discharge on February 1.

Whenever the Marine Corps tasks permit further point reduction in order to speed separations, such reductions will be made. No announcement thereof will be made until shortly before the effective date in order that the expectations of those to be separated will not be frustrated by unforeseen contingencies which might arise.

(e) The Marine Corps strength on VJ-day was approximately 484,000.

Between that time and January 11, 199,640 personnel, or about 41 percent of the VJ-day strength, were released. During that period the Marine Corps discharged 48,000 more personnel than original plans indicated could be released.

I am pleased to advise you that at this time the Marine Corps is actually 6 weeks ahead of its planned demobilization schedule.

Sincerely yours,

A. A. VANDEGRIFT.

Data on U. S. Marine Corps demobilization

(Compiled as of Jan. 11, 1946)

Marine Corps strength VJ-day	484,631
Demobilization by months:	
August	4,135
September	19,555
October	44,605
November	61,238
December	54,007
January (1–11, inclusive)	16,100
Total	199,640
Joining since VJ-day:	
Selective service	[1] 6,957
First enlistments	9,210
Reenlistments	[2] 1,057
Total	17,224
Marine Corps strength, present	301,070

[1] Last call on selective service in November.
[2] Included in both VJ-day and present strength.

PRESENT DISTRIBUTION

Marine Corps strength in United States, available	119,461
Eligible for discharge, 50 points	6,926
Eligible for discharge, but retained (specialists)	419
Eligible for discharge, other than on points	993
Eligible for overseas duty	26,069
Not eligible for overseas duty	72,541
Women's Reserve	8,303
Arrived from overseas, not reflected in strength returns	3,210

PRESENT DISTRIBUTION—continued

Marine Corps strength overseas	129,770
Fleet Marine Force:	
China	45,981
Japan	25,152
Other Pacific	50,343
Total	121,476
Non-Fleet Marine Force:	
Pacific, island commands, security, etc	6,150
Atlantic	1,234
Total	7,384
Ships detachments approximately)	5,000
Nonavailables (hospitalized, recruits in training, in transit, etc. (approximately))	46,839
Total	301,070
Overseas, eligible for discharge—50 points	23,209
In transit to United States (approximately)	20,000
Under orders (approximately)	3,209
Planned rate of return from overseas	59,101
January (majority of 50-point men will be discharged this month)	24,219
February (practically all 50-point will be discharged)	6,102
March	11,149
April	8,039
May	7,596
June	1,996

NOTE.—At present, Marine Corps demobilization is 6 weeks ahead of the planned schedule. Forty-eight thousand officers and men have been sparated from the corps in excess of the scheduled demobilization plan.

Relative strengths of Regulars, Reserve, and selective service:	
Regular Marines (voluntary enlistments)	77,041
Reserve Marines (voluntary enlistments)	177,000
Selective service	47,029
Total	301,070
Recruited and reenlisted (Jan. 1 to 9, 1946, inclusive)	1,219

The Wheat Problem

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the suggestion that the country meet what apparently is an extreme shortage of wheat by shifting from white-flour bread to dark bread is causing the country great concern. This is especially true in that section of the country where wheat is the major crop and where most of us are familiar with the fact that there is no shortage of wheat.

Under unanimous consent, I include herewith a statement taken from the St. Paul Pioneer Press in which Mr. Thatcher, one of the great cooperative leaders and authorities on farm questions, offers a solution for this problem:

WHEAT LOANS BY FARMERS PROPOSED—THATCHER SUGGESTS GOVERNMENT BORROW GRAIN IN EMERGENCY

(By Alfred D. Stedman)

Government borrowing of wheat from farmers to smash the current relief shortage was proposed to President Truman's special Cabinet committee in a surprise move Wednesday night by M. W. Thatcher, cooperative grain leader of St. Paul.

The surprise plan for cracking the wheat shortage, so that millions of starving people in the war-torn countries can be fed, was submitted to Secretary of Commerce Wallace, who is a member of the President's special supercommittee on wheat. Secretary Wallace has started to work on the plan.

It offers a way out of controversial remedies proposed, such as requiring a shift from white flour and bread to brown flour and bread, which Wednesday caused Philip W. Pillsbury to protest directly to the President.

The proposal by Thatcher, who is general manager of the Farmers' Union Grain Terminal Association, is brand new and is a wide departure from all of the other plans that hitherto have been under intensive study in Washington.

Thatcher is understood to have discussed the plan directly with Washington by long distance telephone Wednesday.

Under the plan, the Government would call upon farmers throughout the West who still hold wheat to lend it to the Government. The Government would pay nominal interest or none at all on the loans of wheat. The loans would be repaid to farmers, not in the form of wheat but as cash at full face value of the wheat, whenever the farmers wished it repaid.

Since wheat is at ceilings, the value would not change unless the ceilings were changed during the period of the loan.

The genius of the surprise plan is that it goes to the heart of the income-tax difficulty which now is encouraging large numbers of farmers to hang onto their wheat until a new crop is in sight next summer or fall.

About 85,000,000 bushels are estimated to be held on farms in North Dakota alone, and the total in all States is about 200,000,000 bushels.

The income-tax trouble is that, if farmers should sell their wheat holdings now, and then under later pressure from the Government should sell their new 1946 crop before January 1, they would concentrate the income from two crops in 1 year. That would run their income taxes up in the surtax brackets. As a result, some would have virtually to give away the return on a considerable part of the two crops. But by choosing just when to take repayment in cash of the loan of wheat, the farmer could take it at such a time as to assure that he would pay taxes on income from only one crop of wheat in 1 year.

The situation is illustrated by the case of a farmer having in storage on his farm wheat worth $8,000. If he should respond now to Government pleas to sell, then should raise another equally valuable crop this year and also should respond to Government pressure to sell that before next January 1, he would have a 1946 taxable income of $16,000, which would run his taxes into high figures. But if he should lend his $8,000 crop to the Government, he could accept payment on it this year and pay a tax on the $8,000, and then lend his second crop to the Government and accept repayment of that next year, again paying the tax on the income from one crop.

Ultimately, however, the farmer would have to pay a tax on 2 years' wheat crops in 1 year, for there is no loophole in the plan for missing a year's taxes. However, farmers are not looking for recent bumper crops and high prices to continue indefinitely. So they expect the tax problem would largely solve itself.

The present tax situation is due to three factors. The first two are the big yields and the good prices that have combined to increase Federal income taxes. The third is the fact that many farmers held over their 1945 wheat crop into 1946, either in order to take advantage of lower income taxes this year, or in expectation of higher wheat prices or through difficulties in getting rail transportation.

It is to crack loose the dam-up of wheat on the farms that Thatcher now has proposed his novel plan of asking farmers to lend their wheat.

Thatcher also asserts that further steps will be necessary. These include, he says, cracking the jam of railroad transportation, and letting farmers know definitely and promptly that wheat price ceilings are to stick. These steps combined with the wheat borrowing should get the wheat moving to seaboard in the volume needed by the Government for relief, he says.

Thatcher has called the National Association of Grain Cooperatives, of which he is president, to meet in Chicago Friday and Saturday to consider united recommendations to meet the shortage. Thatcher declares there is enough wheat to meet the needs, and that the problem is to get farmers to release it. That is the purpose of the unusual proposal for Government borrowing of wheat that he now has worked out.

One of the plans hitherto proposed has been for calling the Government's loans on wheat, in order to get the wheat as collateral or induce farmers to sell.

Farmers Know the Farm Facts

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. GILLIE. Mr. Speaker, during the war, whenever the American people wanted a fresh insight into the progress of the Allies action on either the diplomatic or battle fronts, they heard it from Churchill. Our administration kept it dark. It seems that in peace also we are going to have to get our news from British sources.

While we have been aware of the suffering and hunger of the war-torn countries of Europe, we also have been led to believe that the billions we appropriated for UNRRA and the military occupation forces were adequately handling the situation. Remember the recent campaign of Mr. Lehman?

Now from the tongue of Lord Halifax, speaking before the food processors and distributors of America at Atlantic City, we learn "that we are not far off from famine in Europe." Immediately thereafter President Truman announces that our Nation's food supplies must be rationed. An ironical twist is that Secretary of Agriculture Anderson, who has blown hot and cold on the food shortages, during this meeting failed to say a word about the food crisis. In fact, from his report the food representatives were hopeful over the outlook.

Naturally, we are all willing to do everything we can to relieve the suffering of the stricken populations of Europe.

Farmers of this country know the farm facts of life. If the administration were to learn them, perhaps both domestically and abroad our food shortages could be alleviated.

The farmers, however, have serious cause for confusion over what the administration will do next on farm policies. But they are not confused about farming. Feed for the farmer and food for the family table are two different things. You cannot have beefsteak or fried chicken without first having feed on the farm. It takes the farmer to know how to get these things produced. We were not getting enough milk and butter recently because the farmer was not getting enough for his butterfat. He sent his milk to the ice cream manufacturers. There is an unprofitable price ceiling on butterfat. Under the price ceilings, the farmer could make more after paying for his feed, the cost of growing it, and feeding it to his cows, by selling whole milk. For the same reason, corn is not reaching the feed market—administration red tape and unreasonable price controls.

The administration must realistically appraise the farmer's problem which is based on supply and demand, with a legitimate profit, or we will flounder into deeper water. In a few short weeks the farmer will be working his ground for the coming season's planting. What can he expect from the administration? More ceilings and controls on his production, or a freer rein to produce the crops essential to the health and well-being of this country and the people abroad.

Dental Health for the Nation

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. OUTLAND. Mr. Speaker, in recent years two bills authorizing the appropriation of Federal funds for dental research have been introduced into the Congress and have failed to pass. It is inconceivable to me that Congress could have overlooked the importance of such measures; that Congress could actually fail to consider legislation that would be of such direct benefit to every human being, that could quite conceivably have to do with lengthening our lives and those of our friends, relatives, and acquaintances.

Dental defects are the most common of all physical ailments. At one time or another all of us, as has nearly everyone alive, have suffered pain, discomfort, and direct or indirect impairment to our total health, as a result of dental troubles. In many sections of our country dental manpower is shockingly inadequate. Many Americans cannot pay the price of dental health. Such things must be remedied.

The prevention and control of dental disease needs perfecting. This depends on research. It came as a surprise to me to find out that we actually know relatively little about the causes of decay of the teeth and diseases of their supporting structures, though many tooth-paste ads have tried to convince me that my cavities resulted from a failure to use that particular product.

There are two bills now before the Senate Committee on Education and Labor which would immeasurably aid dental health in this country. If the Senate would act, these bills will eventually come to us in the House of Representatives for consideration.

S. 190 provides for a Federal appropriation to equip a National Institute of Dental Research in the United States Public Health Service. This institute would seek every means to promote and stimulate research and would itself work on the causes, diagnosis, and treatment of dental diseases. The institute would endeavor to coordinate other research so that its results could be used most effectively.

Additional appropriations are authorized, in this measure, to foster dental research in other public and private agencies, and to provide grants-in-aid to universities, hospitals, and laboratories.

S. 1099 authorizes appropriations to enable both the Surgeon General of the United States and State and municipal health authorities to engage in an active campaign of dental-health education, to institute and maintain dental-health programs, and to care for school children. This also is of major importance for past research has demonstrated that dental defects in later life will be much less prevalent if the individual has had superior treatment as a child.

One of my constituents, Dr. Harry R. Hancock, of Santa Barbara, Calif., an outstanding dentist and a member of the California Dental Association, wrote the following in a letter to me regarding the need for the passage of S. 1099 and S. 190:

> Dental decay is not as spectacular as some of the diseases for which we spend huge sums on research, but certainly it is more universal and economically it is much more costly to our people. We cannot afford, it seems to me, to pass up any chance at controlling this health menace.

Health is as necessary to us as the food we eat or the air we breathe. If there are human beings who cannot secure health because they cannot afford it, if health can be supplied to all our people more efficiently with the Government's aid, then it is one of the first responsibilities of the Government to do all in its power to make a healthy Nation possible. I cannot believe that the Congress will refuse to face its primary duty to the people.

Governors of South Dakota, Wyoming, and Nebraska File Brief With United Nations Organization on Subject of Locating the World Capital

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. MUNDT. Mr. Speaker, in view of the great wave of protests which has developed over the recommendations of the UNO site committee that the new world capital be located in an area taken from Connecticut and New York after uprooting the residents and business establishments from that historic and densely populated area, I believe the Congress and the country will be interested in reading the following brief, which is now on file with the United Nations Organization in London:

BRIEF ON THE SUBJECT OF LOCATION OF THE PERMANENT HEADQUARTERS OF THE UNITED NATIONS ORGANIZATION

(Submitted in behalf of the beautiful Black Hills mountain country of South Dakota, Wyoming, and Nebraska—Presented to and filed with Dr. Stoyan Gavrilovic, chairman of Interim Site Committee of United Nations Organization, at New York, N. Y., January 31, 1946, by M. Q. Sharpe, Governor of South Dakota, for the States of South Dakota, Nebraska, and Wyoming in which States is the beautiful Black Hills mountain country)

INTRODUCTORY

None of the committees or subcommittees of the United Nations has yet discovered the location which the United Nations need for their permanent headquarters. In the northeastern part of the United States of America to which their investigation has been limited they can only take the best they can get; they are unable to get what the United Nations need. The reason for this is that what the United Nations need for a permanent headquarters does not exist in the northeastern United States. It does not exist along either of the coasts of the United States nor within the range of influence of any single great city of the United States. This brief will show that it does exist within the beautiful Black Hills mountain country of South Dakota, Wyoming, and Nebraska. Keep in mind that we are going to speak of what the United Nations need; not what is the best they can get in some restricted area.

In formulating this brief we shall assume that the United Nations Organization will succeed and will be a permanent world government growing in its importance and dominion as the nations commence to experience the benefits of centralized world control. We shall assume that the United Nations Organization is destined to be a great, continuing, growing influence for good throughout the world and throughout the future. The steps that it takes now and the direction which those in charge now give it must therefore be considered with the ever-present idea of a great, powerful, growing organization with world-wide jurisdiction and control.

With these introductory ideas in mind we take our first step in reasoning on the subject of where the permanent headquarters ought to be.

WHAT IS THE WORLD ENTITLED TO FROM THE VIEWPOINT OF TRAVEL DISTANCE TO AND FROM ITS PERMANENT HEADQUARTERS?

If a spot could be found which by mathematical computation could be determined as being more equally convenient from travel-distance standpoint to all the nations of the Organization than any other spot on the globe, it would have to be accepted as the proper spot if this one factor alone were involved. This spot exists in the midcontinent area of the United States of America, according to the world map which we heretofore submitted to the Preparatory Commission of the United Nations Organization as a part of our invitation to locate the headquarters in the beautiful Black Hills mountain country. (See world map and array of arguments on file with the United Nations Organization Secretariat.)

It must be assumed that all the nations of the world will travel to and from their headquarters. In years to come some nations now weak will grow in strength and power; some now strong will decline; changes will occur in these factors but changes will not occur in the land mass or distances between land areas on the globe. Therefore, a location having the indisputable permanent factor of being the most equally accessible to all the member nations should be one of the first and continuing considerations of those vested with the power of deciding this important question for all time to come. The midcontinent area of the United States of America holds this indisputable permanent factor. The map proves it. It exists that way because of the shape of the land mass of the world and the way such land mass is divided into nations.

The beautiful Black Hills mountain country is almost in the center of mid-continent North America. A headquarters there would be within two or three hundred miles of British-Canadian territory; within a few hundred miles of Russian territory; close to all South American countries; more conveniently located to all the nations of the world considered in the aggregate than any other spot that has been investigated for the location. Move to any other location and you are penalizing some country of the world with extra travel, for the benefit of some other country. You are the trustees of this important decision now and for the future. Recognizing this self-evident factor of the decision and giving it due consideration and weight hereafter is one of the duties with which the people of the world have entrusted you.

IN ADDITION TO ITS FAVORABLE GEOGRAPHICAL LOCATION THE BEAUTIFUL BLACK HILLS MOUNTAIN COUNTRY HAS CLIMATIC AND HEALTHFUL LIVING CONDITIONS UNEXCELLED ANYWHERE IN THE WORLD

The most favorable location from viewpoint of geography may not alone control the decision. Other factors must coexist with it. Those who will attend at the world headquarters permanently or transiently should have good climatic conditions and healthful living conditions. Few places on earth equal and none surpass the beautiful Black Hills mountain country in the possession of both of these. Their climate is a Temperate Zone climate. It has all the distinctive seasons of spring, summer, fall, and winter. You can choose your own altitude from the surrounding grassy plains at an elevation of 2,400 feet to the tip of Mount Harney, 7,242

feet. The country is one of varied terrain, from level plains to rolling hills, to mountain country, with long flat valleys, mountain plateaus, abundantly covered with forests of giant ponderosa pine and other forest trees. Rivers, lakes, and mountain streams furnish the finest of pure water. This variety of elevation, terrain, and land coverage by great forests modifies any extremes of heat or cold so that the beautiful Black Hills mountain country possesses one of the most equable, salubrious, and energizing climates to be found any place on earth.

The statistical arguments as to health show South Dakota as number one State of the Union. Its soldiers and sailors in the recent war were the healthiest of all furnished by this country for the war. There has never been an epidemic of any kind in the beautiful Black Hills mountain country.

As you proceed with your investigation and analysis of the important subject of location of permanent headquarters, note those two important factors for the beautiful Black Hills mountain country: 1. Most favorable location from viewpoint of equality of travel distance; 2. Unexcelled climatic and health conditions.

THE NATIONS OF THE WORLD SHOULD HAVE ATTRACTIVE INTERESTING SCENERY AND RECREATIONAL FEATURES AT THEIR PERMANENT HEADQUARTERS

In the last normal year of tourist travel before the war more than one million tourists visited the beautiful Black Hills mountain country. These came from all over the United States, from Canada, Mexico, South America, Honolulu, and to some extent from the world at large. The reason they came is that they had learned of the attractive, interesting scenery and the pleasant living and travel conditions. Tourist travel to the beautiful Black Hills mountain country has been growing greatly each year as the knowledge of its content and environment spreads.

Generally the scenery can be described as grand, majestic, colossal, towering, impressive. The things that produce these reactions upon you are: long flat valleys girdled with pine, birch, aspen, cedar, oak and numerous other beautiful trees; towering mountain peaks of gray granite whose jagged outlines stick up into the sky through belts of deep green ponderosa pine forests; forest floors like a Brussels carpet from the accumulation of ages of the annual shedding of needles and bark by the forest trees; beautiful crystal mountain streams and lakes, with their fishing, boating, surf riding, and elegant resorts, hotels and cabins rapidly growing to meet the ever-increasing tourist travel; ski ways for winter sports; granite natural statuary resembling castles, towers, pinnacles and pillars of heroic size; the beautiful and interesting Mount Rushmore statuary of the faces of Washington, Lincoln, Jefferson and Roosevelt carved out of the mountain side to the scale of men 460 feet tall; beautiful and interesting underground caves of limestone, exposing crystals, prisms, and colors of rare and interesting beauty, many of these developed with lighting and pathways for miles underground. Here are found gold, silver, tin, manganese, mica, agate, beryl, bentonite, feldspar, and other precious and useful substances. Herds of buffalo, deer, elk, antelope, big horn sheep, and flocks of pheasants, ducks and partridge are a part of this area which is, literally, 5,000 square miles of country filled with all the interesting specimens of the animal, mineral, and vegetable kingdoms, and within easy travel distances of cities like Denver, Omaha, Cheyenne, Minneapolis, Chicago. Located within the area itself are many thriving, growing cities and towns of smaller size. All these, together with the numerous resorts, camping, boating, bathing, and recreational sites, are connected by a fine system of State highways open for travel and kept in good travel condition the year around.

The beautiful Black Hills mountain country has an individuality and a unique setting in midcontinent America, which for years has made it the wonder and delight of all who see and experience its many attractive, pleasant, and interesting features. It is cosmopolitan in its physical content and environment, containing mining, lumbering, agriculture, herding, milling, manufacturing, processing, transportation, and communication facilities of modern kinds. All the great occupations and professions of man are active within the area. It is reputed to contain the richest 100 square miles of territory on earth.

Location of the permanent headquarters in this beautiful Black Hills mountain country will afford all the attractive interesting scenery and all the pleasant wholesome recreational opportunity which any normal person should desire. The ever growing tourist traffic and vacation enterprises throughout the area prove this with increasing certainty each year.

THE WORLD HEADQUARTERS SHOULD BE IN AN ENVIRONMENT WHERE THE NATIVE PEOPLE ARE AGREEABLE TO THE GRAND OBJECTIVES OF THE UNITED NATIONS

The midcontinent area of the United States is the last great empire building operation of the world at large. Into this area during the past 100 years have poured many thousands of Englishmen, Frenchmen, Belgians, Dutch, Spanish, Germans, Scandinavians, Russians, Italians, Greeks, Austrians, Yugoslavians, Czechs, Chinese, Japanese, Ethiopians; in fact, all the great blood strains of Europe, Asia, and Africa. Here are found numerous nationals of the white, yellow, brown, black, and red races of the world. We have a population of conglomerate origin. Throughout the years they have developed this great midcontinent area with the newest of culture, science, invention, education, commerce, and industry known to the world. They have done this working together as equals under the constitutions and laws of the country. They have all had a voice and a hand in shaping its direction and accomplishment. As citizens they have been equal in fact as well as in legal rights. This great fusion of the blood strains of the world has laid the foundation here for a "world race" which is certainly one of the objectives of the United Nations Organization looming up majestically for future attainment. How appropriate a location for the permanent headquarters of the United Nations.

In this area there is now and always has been a complete freedom of religious belief and practice. There is a complete separation of the church and the state. Although the region is predominantly Christian in religion, only a few years ago the South Dakota Supreme Court held that a statute providing for reading of the Bible in the public schools was unconstitutional and prohibited the attempt, because of a constitution which guarantees complete freedom of religion and separation of church and state.

Equality of race, religion, and opportunity is an established fact and not merely an ideal in this area.

No more appropriate spot will ever be located by any committee of the United Nations, so far as equality of race, religion, and nationality are concerned. It is an inviting prospect for the permanent headquarters. It presages harmonious relations with the entire area and success for United Nations objectives from the beginning.

THE UNITED NATIONS CAN HAVE IN THIS BEAUTIFUL BLACK HILLS MOUNTAIN COUNTRY CERTAIN CONDITIONS WHICH IT NEEDS AND WHICH IT WILL HAVE MUCH DIFFICULTY IN FINDING ANYWHERE ELSE IN THE UNITED STATES

The United Nations needs and ought to have a zone containing at least 100 square miles which would be ceded to it and be internationalized so that it would have complete authority and control without restriction from any nation in the world. It should have an independent site, of at least this size, and with all the other factors heretofore specified in this brief. It should own this site.

In the beautiful Black Hills mountain country are many such sites which can be ceded to the United Nations in short time together with unrestricted access to the site. There are many such sites with such sparse permanent settlement that the few people occupying them can easily be persuaded to exchange them for other locations or to sell them so that complete possession can be given to the United Nations Organization as rapidly as it is ready to make use of them. Very little inconvenience will be caused to anyone.

It is reasonably certain that if the United Nations Organization selects one of those sites in the beautiful Black Hills mountain country and desires cession of complete sovereignty over it that the Congress of the United States and the Legislature of South Dakota will immediately give favorable consideration to the request with possibly one reservation. That reservation would no doubt be that if the United Nations Organization abandons use of the site as a permanent headquarters for a period of 5 years or more the site will then revert to the Nation and State with the same sovereignty as before the cession to the United Nations.

WHAT ARE THE OBJECTIONS TO LOCATING THE WORLD HEADQUARTERS IN THE BEAUTIFUL BLACK HILLS MOUNTAIN COUNTRY?

It appears from the foregoing pages of this brief that the beautiful Black Hills mountain country does hold within it all the really important physical features of an ideal location for a permanent headquarters. The only objections ever expressed against the site, we think, are trivial and no august body, charged with the future success of this world organization will ever be much influenced by them. Nevertheless, we shall state them and show their triviality and inapplicability, and how easily time will obliterate them.

If any of the cities of New York, Boston, Philadelphia, or Chicago were located within 50 miles from the beautiful Black Hills mountain country there is little doubt that it would now be the selected site for permanent headquarters. It has everything else in the criteria of the United Nations Organization except a large city. Is the proximity of a large city an essential? Would it add anything to the abilities of those who will be charged with the duties of world organization and administration, to do the important work entrusted to them? Will it add to their thinking or working ability in any way? The answer is plain. It will not. On the contrary it will detract from them; it will be a continuing invitation to distractions from them; it will overshadow what ought to be the most important center of the world, with its own already established importance, world connections, and size. History proves this beyond doubt. Few of the great movements in racial progress or development have originated from the great cities.

When Buddha was assembling the beautiful principles announced in his eight-fold path to righteousness, which are still the delight and solace of more people than follow any other religion, he sought the seclusion of the countryside and abandoned the great cities of his empire. Under the quiet of the Bo tree he announced them.

When Mohammed was evolving the mild, dignified philosophy of Islamism, those ideals

which presage general peace and quiet and the recognition of equality of all persons according to their own personal merits, he frequently retired to a small cave in the foothills to contemplate. There from 611 to 622 he evolved those great principles which still direct the conduct of a large portion of the world's population.

When Jesus was slowly assembling the majestic concepts of the kingdom of heaven and the principles of conduct leading to it, he went about the humble homes of ordinary people, he frequented the lonely areas by the Sea of Galilee away from the distractions and turmoil of the world.

The treaty of Westphalia (1644–48) was formulated at two small towns, Munster and Osnabruck, not only as a treaty of peace but to end an era of religious warfare and inaugurate a world-wide attempt at tolerance.

The Council of Trent (1545–63) met in a mountain country 44 miles northeast of Verona (at that time a greater distance than two or three hundred miles is today) and there accomplished the chief definitive work of Catholic reform.

In this country we early passed by New York and Philadelphia to select an isolated site on virgin territory for our permanent Capital at Washington, D. C.

In fact all great cities were wilderness originally. History proves definitely that proximity to a large city is not an essential or even a favorable element for production of great ideals requiring thinking, study, analysis and courageous pioneering work.

We might just as well face the real facts and they are that the only reason for wanting proximity to a large city is for the purpose of social life, entertainment and fun. It is the age-old temptation to follow the flesh pots and wine casks of riotous living which detract from, rather than add to, our ability to think, work, and act accurately and courageously.

Those in charge of United Nations destinies should put the location of their permanent headquarters on a higher plane than this. In the beautiful Black Hills mountain country they can find the natural grandeur and majesty appropriate to the headquarters of a world organization which we hope will be the salvation of the world and its continuing advance along the line of racial equality, development, and civilization. We submit that a decision to that effect would at once radiate throughout the world the idea that the United Nations Organization is approaching and making its important decisions with sincerity and singleness of purpose; that purpose being always at every step to do the very best thing to attain the great objectives expressed in the Charter.

The only other objection we have ever heard against the beautiful Black Hills mountain country is to the effect that there are no facilities there ready for immediate occupation and operation of the general headquarters. While this is not a correct statement of fact, and while we can furnish ample facilities for temporary use, we propose to answer the objection in a way more beneficial to United Nations operations.

It seems to us that there is a present tendency in United Nations operation to proceed with too much haste. There seems to be a propensity to try to hurry everything along the lines of setting up some new business corporation or some new industrial organization. We respectfully submit that there is no need for haste and that too much haste may breed distrust among the members, may preclude smaller nations from asserting their various interests, and may prevent attainment of the right decision on many important questions in the formative period of the Organization's existence. The United Nations Organization, or its members, is in charge of the world. The enemies of its ideas are under complete restraint. Therefore, why not give to these important questions the research, analysis, and time for decision to which they are most certainly entitled.

We suggest that the Organization did very well at San Francisco during its stay there. It has been doing very well at London and could continue there temporarily until its facilities at the new site were made to its own order and convenience. It could move to Stalingrad for a temporary stay, then to Peiping, then to Paris. Maybe it would be a great thing for the various nations of the world to see their capital and government in actual operation in their midst for a short time. Maybe it would show them that it was theirs; that they were a component part of it; that its capital and government could operate in their midst successfully. Gradually the Organization can be assembling its personnel, composing its procedure, and accumulating the experience which will enable it to go ahead methodically and efficiently when it occupies its permanent headquarters. We did this in the original establishment of permanent capital of the United States and it proved both practicable and successful.

We respectfully submit, therefore, our answer to the objection of no facilities for immediate use, as follows: (1) We can provide them if early occupation is an essential; (2) it would be better to construct them to your own order and design from the start and gradually occupy them as you developed the international zone of 100 square miles of territory.

WOULD THE UNITED NATIONS ORGANIZATION BE WELCOME TO THE BEAUTIFUL BLACK HILLS MOUNTAIN COUNTRY?

We have heretofore advised the United Nations Organization of the signing of a joint declaration by the governors of 10 sovereign States of midcontinent North America, specifically asking the Organization to establish headquarters in the midcontinent area and pointing out the many advantages of doing so from the viewpoint of United Nations success. This is the largest block of official influence that has so far issued from the United States of America on the regional location of the permanent headquarters.

One of the first invitations to be lodged with the United Nations Organization was that of the beautiful Black Hills mountain country signed jointly by the Governors of South Dakota, Wyoming, and Nebraska in which sovereign States the region lies. During all the time the matter has been considered we have in various ways shown our desire to have the permanent headquarters located in this area.

Therefore, there is no doubt on the question: The United Nations Organization would not only be welcome, but we are anxious to have you locate your permanent headquarters in the beautiful Black Hills mountain country.

We respectfully submit, therefore, that this brief establishes the fact that the most appropriate and the best decision which the United Nations Organization could make for the permanent benefit of the Organization and the successful attainment of its majestic objectives, so far as selection of its permanent headquarters is concerned, is to select the beautiful Black Hills mountain country, which always welcomes you here.

Dated January 30, 1946.

DWIGHT GRISWOLD,
Governor of Nebraska.
M. Q. SHARPE,
Governor of South Dakota.
LESTER C. HUNT,
Governor of Wyoming.

Tennessee Valley Authority Electric Light and Power Rates

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1946

Mr. RANKIN. Mr. Speaker, 12 years ago today the Tennessee Valley Authority entered upon its first contract to distribute power generated on the Tennessee River to the people of that area. That great organization has grown until it is capable of generating 12,000,000,000 kilowatt-hours of electricity a year.

As coauthor of the bill creating the TVA, and one who has fought its battles in Congress from that day to this, I am proud of the wonderful record it is making.

It has proved to be the greatest development of ancient or modern times. It has done more for the power consumers of America than anything else that this Government has ever undertaken, in supplying a yardstick to show the American people what electricity is worth and what it should cost the ultimate consumer in every section of this country.

Before the creation of the TVA, the private power companies were buying power from the Government at Muscle Shoals at a little less than 2 mills a kilowatt-hour and selling it to the residential consumers at an average of more than 9 cents a kilowatt-hour. The average residential consumer in that area used from 30 to 40 kilowatt-hours a month. The average commercial consumer used less than 100 kilowatt-hours a month and paid about the same rates for it as did the residential consumers.

The farmers got no electricity at all.

Today the average residential consumer in that area is using 156 kilowatt-hours a month and paying an average of 1.81 cents a kilowatt-hour, and the commercial consumers are using an average of 392 kilowatt-hours a month and paying an average of 2.01 cents a kilowatt-hour.

Tens of thousands of miles of rural power lines have been built in the TVA area, which includes every one of the 10 counties I represent. Hundreds of thousands of farmers throughout the area are being served with TVA power at TVA rates, bringing to them light, hope, inspiration, and relief from drudgery. It brings them everything the man in the city has—except the noise and city taxes.

Again I say it is the greatest single development of ancient or modern times.

At this point I am inserting a table of electricity sales, statistics of the TVA for the month of November 1945.

Please study it carefully and compare its figures with the electricity consumed and rates paid by the people you represent.

Then you will begin to understand what the TVA really means.

(The matter referred to follows:)

Electricity sales statistics, retail distribution of electricity at TVA resale rates, November 1945

Distributors, grouped according to fiscal 1945 gross revenue	Wholesale purchases		Number of customers			Residential customer statistics				Commercial service	
	Kilowatt-hours for month	Mills per kilowatt-hour	Total month	Percent rural for month	Added during month	Number of customers	Average kilowatt-hours per customer during month	Average cents per kilowatt-hour	Percent using less than 25 kilowatt-hours [1]	Kilowatt-hours per customer-month	Cents per kilowatt-hour, month

Who Can Give Away Part of United States to UNO?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a thought-provoking article by George E. Sokolsky, well-grounded and highly respected news commentator. This article appeared in many of the Nation's newspapers Friday, February 8:

WHO CAN GIVE AWAY PART OF UNITED STATES TO UNO?

(By George E. Sokolsky)

Who can give the United States away? Who can give any part of it away? Who has the authority to deed it to another country or any group of countries? The Constitution of the United States says nothing on the subject.

Yet, the fact is that the UNO wants to take 42 square miles out of the United States to make it a separate and distinct country, a foreign settlement, an extraterritorial area governed by foreigners and not subject to the laws of this country. Who has the right to authorize the seizure of American land in the States of Connecticut and New York?

Judge John Bassett Moore, America's greatest authority on international relations, defines extraterritoriality thus:

"Owing to diversities in law, custom, and social habits the citizens and subjects of nations possessing European civilization enjoy in countries of non-European civilization, chiefly in the east, an extensive exemption from the operation of the local law. This exemption is termed 'extraterritoriality.'"

Of course, the actual premises of embassies and such buildings are acknowledged as extraterritoriality by mutual consent and common practice. But 42 square miles is not a building, nor can one regard 1,500 persons and their families and hired help as ambassadors. All these people will live in America; none will live under American law. As Judge Moore says:

"Under this system, jurisdiction is exercised by foreign officials, most frequently the diplomatic and consular officers, over persons of their own nationality."

COULD HAVE OWN POLICE

In the past extraterritoriality has existed in Borneo, China, Japan, Korea, Madagascar, Muscat, Morocco, Persia, Samoan Islands, Siam, Tripoli, Tunis, Turkey, and Pacific islands. Under this system, if an American were kidnaped and killed in the UNO 42 square miles, no American court would have jurisdiction unless especially called in for that specific purpose by the UNO authorities. If they so desired, the UNO would have the right to set up their own police force or maintain their own army in Connecticut.

I lived under extraterritoriality for 13 years. I have, in my own house in Shanghai, given refuge to men who today are prominent in the Chungking government but who could not be arrested by their own government, because they were in my house, which was extraterritorial.

Once at a dinner party in the French concession in Shanghai Chiang Kai-shek had been loosely discussed. Chiang wanted to arrest some of those present. One, who afterward became Chiang's Minister of Foreign Affairs, hid in my house. Chiang knew where he was, but he also knew that no warrant would serve, as my house was extraterritorial. The writ of the country did not count.

The American Minister to Siam, Mr. King, in the course of a note maintained "that the provision in the British treaty that 'British subjects, their persons, homes, premises, lands, ships, or property of any kind shall not be seized, injured, or in any way interfered with by the Siamese,' applied equally to United States citizens under the most-favored-nation clause and that the entire jurisdiction over the interests of the United States in Siam belonged exclusively to the consulate general of the United States."

KINGS IN OWN RIGHT

And we all lived that way. We were little kings in our own right. The government of the country where we were situated had no authority over us, no civil, no criminal jurisdiction of any kind. All we had to do was to keep out of the friendly American court in Shanghai. I have seen Chinese abused and humiliated in their own country because extraterritoriality made the foreigner, the alien, a king in another's land.

What law will obtain in this 42-square-mile enclave in Connecticut? Will it be English common law, the Code Napoleon of the French, or the barbaric police jurisdiction of Soviet Russia?

We are letting ourselves in for a lot of trouble. There is no reason why UNO requires 42 square miles of extraterritorial territory. There is no reason why the wives and children, the stenographers and personal servants of all the delegations should enjoy special privileges and exemptions. American soil must remain American everywhere, under all circumstances, and let him who signs away an inch of it be cursed a traitor.

Loan to Britain

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. WOODRUFF. Mr. Speaker, for many weeks now—in fact since the end of the war—you have been hearing much about lending money to Britain to finance the future of the new British Socialist Empire. Distinguished visitors from England, and some of them not so distinguished, have been reminding us over and over again that just as it was our duty to help the British win the war, it is now our duty, with our money, to help them recover from it.

Well, it has finally been announced, after a series of secret conferences in Washington, that we are going to lend money to the British, and a lot of it. It adds up to $4,400,000,000.

Now this so-called loan was first disclosed from London. It was all kept secret from the American press until after the British newspapers had announced it the day before the American people were informed. This has been the technique employed in giving information to us regarding matters vital to our interests.

The announcement was one of those long legal documents that would frighten a lawyer and terrify a banker. The important thing about this document is that it tells everything about the so-called loan except what it really is, a gift by the American people to His Majesty's Socialist Government, a gift of $4,400,000,000 to finance a Socialist experiment. You can finance a lot of socialism for nearly four and a half billion dollars.

Now, this loan which we are giving the British does not tell the whole story of our financial aid to Britain. It is only a small part of the whole story. Only $4,400,000,000. The loan agreement also contains a clause which cancels lend-lease to Britain to the tune of $29,000,000,000.

To be sure, the British paid us back an exceedingly small part in reverse lend-lease. They paid back about $4,000,000,000 in goods and services, including charges for transporting our troops and equipment in their ships and on their railways. That leaves a balance of $25,000,000,000 which the agreement now disposes of as a gift, and not a loan, although it was made under the fictitious name of lend-lease.

Let us not forget the $6,500,000,000 which Great Britain owes on her debt growing out of the First World War, upon which she has not paid one dollar since 1933. This, together with the $25,000,000,000 of lend-lease and the proposed gift of $4,400,000,000, makes a grand total of $35,900,000,000. This does not include the billions upon billions of dollars in interest on this huge amount which we had to borrow in order to loan to the British. This interest must be paid each year until such time as we reduce the national debt in this amount. At 2½ percent the interest alone amounts to $918,750,000 per year. Just how many years' interest must we pay before we have reduced our debt sufficiently to liquidate the $35,900,000,000 gift to Britain? It will be a tidy sum in the aggregate, I would say, our taxpayers will have to dig up before our taxpayers will have worked and earned enough beyond their living expenses to pay this part of our national debt.

Under the circumstances, the most important point to remember about this so-called new loan is that it opens the door for every country in Europe and Asia to come to us and demand a gift camouflaged as a loan. Soviet Russia already is reported to be interested in accepting as much as $6,000,000,000 from us. There are rumors that China will be needing about $10,000,000,000 of our money also. France already has received a credit from us of $3,500,000,000 and is now asking for more. There is even talk of lending money to Italy to help her over the rough spots ahead. Do not be too surprised if before long we are asked to furnish the money with which to build up a new Germany.

In the case of Russia we may have to let her have some of our money if we give the British this $4,500,000,000. She was our ally too. She made many sacrifices during the war and suffered more destruction in property and manpower than anyone else. True, she looked with complacence when Hitler started the war. True, Russia fought the Nazis, but only after they had invaded her in violation of the solemn treaty of peace between them. Uncle Joe Stalin can, of course, put up a very good argument that if we can afford to contribute money for the reconstruction of Britain we can just as well afford to help in the reconstruction of Russia.

Stalin can do even more than ask for a loan. He might well force us to make one. He can argue, with what would appear to the Russian mind to have some degree of truth, that by lending money to Britain, and refusing it to Russia, we are starting the formation of a bloc of western powers which may some day turn against the Soviet Union. He can say that if we want Russia to be friendly with us, how about a little friendly loan—or gift.

Now if our Government, after a free and open discussion, decided it would be to our benefit to give money to the British to help them finance their new form of government, that would be quite another thing. But let us be honest with the American people. Let us not call a gift a loan when it is not a loan—but is an outright gift. Let us be honest with ourselves, especially when we are dealing with the money of the American people, the money for which in the years to come they must down the years work to earn.

You do not need to take my word that this so-called loan is a gift. You do not need to take anybody's word. Just look at the agreement itself, and recall the statements of the British visitors who came here to negotiate it.

The agreement sets an interest rate of 1.62 percent on the so-called loan, we must pay 2½ percent for the money which we loan to her. But payments on principal and interest are not to begin until 5 years after the loan. Then there is a joker in the agreement under which the British do not have to pay any interest at all, if they find making such payments will financially embarrass them.

The principal negotiator of the loan for the British was John Maynard Keynes, a new-style economist who advocated repudiation of the debt the British owed us from the last war. He also

was one of the principal advocates of deficit spending during the depression, and was influential in persuading President Roosevelt that you can spend your way to prosperity with money that you have not got. When Keynes arrived in the United States a few months ago to discuss aid to Britain he openly admitted that a gift, rather than a loan, would be welcome.

Keynes was followed to this country by the Socialist leader, Harold Laski, and the Red Archbishop of Canterbury who both sneered at the old-fashioned successful business economy of the United States when compared with the future glories of British socialism.

Now under our old-fashioned business economy, which was successful enough to furnish the materials of victory throughout the world in two World Wars, we usually consider that a loan should be backed up by security.

You have all heard the phrase about "the British Empire on which the sun never sets." Well, that phrase applies equally well to the new British Socialist Empire. They have many military bases on this side of the Atlantic and in other parts of the world, most of which were built by we Americans at our expense, which will be helpful to us to keep them and us out of another war. They have islands and bases in both the Atlantic and the Pacific, many of the former at our very doors, which would be useful to us in establishing military and civil aviation routes to all the parts of the world we are expected to protect.

Have you heard any talk from the British about putting up any of these bases or islands as security for a loan from us, just to prove that they might be thinking of really paying us back? You have not, and neither has anyone else.

The British also hold about $5,000,000,000 in securities in American business and industry. Was there any suggestion that they put up these holdings as security for a loan? Not that you or I or anyone else ever heard of.

The principal argument of those favoring the gift or a loan to Britain is that the money eventually will come back to us.

The British will take the money, the argument runs, spend it for American goods, and then pay us for those American goods with the money we gave them. The money will come back to us, but the goods it buys will go to Britain. It looks to me as though someone will be holding the bag—and it will not be the British.

The reasoning behind this argument is like the idea that our tremendous public debt does not really matter because we owe the money to ourselves.

Now, let me try to explain in simple terms how this arrangement with Britain will work. Suppose you have a grocery store. I want to buy something at your store but I have not any money—at least I tell you I have not. So I persuade you to lend me $5. I then spend the $5 to buy groceries from your store. You get the $5 back but I get the groceries. It is all as simple as that.

International dealings are not much different from dealings at the corner grocery store. Grocery stores extend credit to their customers, just as we as a Nation have done in the past. But if the owner of a grocery store gave money to his customers with the belief that he would get it back just because his customers spent it in his store, he would soon go out of business. It is the same in international dealings.

Some believe there are reasons why we should lend money to Britain on a sound business basis. But there are many reasons why we should not give money to Britain, or to any other nation. We have been giving more than plenty during the war through lend-lease and relief. It is time we received something in return.

This so-called loan to Britain will not go into effect until it has been approved by Congress. Its terms were arrived at in secrecy—secrecy over how the money you contribute to your Government in taxes is to be spent by a Government that plans to promote socialism.

It is time for open discussion on how your Government is planning to spend your money abroad. It is time for open discussion on how the new British Socialist Government plans to spend your money. It is time that the American people who have slaved and sweated to achieve victory should know how our resources are to be used to preserve the peace.

R. M. Davis, West Virginia Businessman, Proposes Business Manager for the Federal Government

---

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. RANDOLPH. Mr. Speaker, Congress by the passage of the recent reorganization legislation, has indicated its desire to give to the President of the United States the opportunity to initiate realinement of agencies and bureaus. This would be done in an effort to bring order and coordination into the operation of our hodge-podge of Federal activities.

We need, as I indicated in my remarks during the debate on H. R. 4129, October 3 and 4, 1945, to eliminate the overlapping functions and duplications found in our sprawling governmental structure.

We are, also, aware of the necessity for the operation of our Federal Government, at the lowest possible cost commensurate with a responsive program of efficiency for the best interest of our Nation and the well-being of our citizens.

Mr. Speaker, in connection with this important subject matter I herewith include a most noteworthy letter, from a business leader in my district:

MORGANTOWN, W. VA., *February 8, 1946.*
HON. HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: For a long time we have recognized that the most difficult position for any man to hold in this world is that of President of the United States. The duties of the office have increased enormously during the period of World War II and the problems the President faces today are so complex and baffling that only by specialization can we possibly hope to solve them. He should be relieved of many of the tasks besetting him in these times, particularly matters of financial concern which require expert analysis and administration. We should remember that the Government of the United States is the largest financial organization in the world and has become a permanent multibillion dollar corporation.

Never before in the history of this country has so much uncertainty existed in the minds of the people as to what the future holds for them. With a national debt of nearly $300,000,000,000, with taxation at the highest level in our history except for the year 1945, the people are entitled to know now just what kind of a plan the Government will have to offer in solving the complex problems that we are now faced with.

Something must be done to hold the continued faith and confidence of the people in our Government and in private enterprise. Without further delay, the President and the Congress should pass the necessary legislation for the appointment of a business manager for the Government of the United States. Such a person should be appointed by the President, for life or during good behavior, with the approval of both Houses of Congress. He should be subject to removal from office only by joint action of the President and the Congress, and then only on charges of misfeasance or malfeasance in office. These safeguards are absolutely necessary to give him the required independence of action and to protect him from political interference. The business manager should be a man who has had a wide business experience in positions of progressively increasing administrative responsibility. His salary should be set at $150,000 per year with all expenses paid. This will aid materially in getting a top-flight man who will be interested in the position on a permanent basis.

One of the first duties of the business manager would be a complete overhauling of our national financial structure. In the performance of this duty, he must not be subject to restrictions by either the executive or legislative branches of Government. Then he should develop a 20-year program of taxation and amortization of the national debt. Let labor and management and the people generally know what their taxes are going to be over a long period of time, subject to such revisions as may be necessary to meet emergencies, and you will provide one of the most stabilizing factors in labor-management relations. Let the people know that some concrete plans are being made to reduce the national debt and you will eliminate one of the most important reasons today for inflation and the threat of further inflation.

We have heard a great deal during the last 13 years about Government planning for the future. Let's first have some real long-range planning to put the finances of this country in some understandable form. We shall then have a firm foundation upon which to build other long-range plans, such as transcontinental highways on a self-liquidating basis which I proposed to the President and Congress in the year 1933. This may seem to be advisable for the general welfare.

In addition, the business manager must have authority to supervise the budgets of all Government Departments, even the armed forces. This must include the power to institute sound business practices in the expenditure of all Government moneys to eliminate duplication of effort and inefficiency by the various agencies of the Government. A decided drop in the number of persons on the Federal pay roll would be inevitable with a consequent saving of millions of dollars to the taxpayer.

Let me implore you, therefore, to give serious consideration to the required legislation to carry this proposal into effect. Neither labor nor management can offer any objection to a plan which has for its ultimate objective the stabilization of financial conditions in the country whereby both the employer and the employee can plan for the future. In this way, the general welfare of all the people of our country will be served.

Very sincerely yours,

R. M. DAVIS.

P. S.—A copy of this letter has been sent to each Member of Congress.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. HOFFMAN. Mr. Speaker, the House February 7, passed what it calls a labor bill, but in one respect it was just as unfair to labor as the Wagner Act is unfair to employers. If it is passed by the Senate and enforced, it will destroy unions, but in my judgment it will not pass in its present form. I voted against it. I will vote for and will continue to advocate legislation regulating unions.

Am printing herewith copies of two bills I introduced, dealing with public strikes and interference with interstate and foreign commerce.

February 7, the House passed the Case bill, designed primarily, it was said, to lessen the causes of labor disputes and to minimize strikes, the injurious and economic results thereof. The sponsors of the bill and the Committee of the Whole refused to accept an amendment adding a new section designed to prevent strikes, affecting public-service corporations, which supply some of the necessities of life, such as power, light, electricity, transportation, and communications. The amendment which was rejected by the proponents of the bill and the committee is carried in H. R. 5114 printed herewith and marked exhibit A.

Proponents and the committee also rejected an amendment drawn to limit the penalty imposed by the Case bill for violations of sections 11 and 13. The penalty imposed for violation of those two sections deprives an employee throughout his life of the right to join a union, to bargain collectively, to be represented by a union. Such a penalty is expressly forbidden by the eighth amendment to the Constitution of the United States, which prohibits cruel and unusual punishment.

Such a limitation was embodied in bills H. R. 4951 and H. R. 5202 offered some time ago and which, had they been enacted, would have accomplished the same result. They will be marked exhibit B and exhibit C and printed herewith.

EXHIBIT A

H. R. 5114

A bill to aid in maintaining essential public services by public utilities by requiring collective bargaining contracts to include provision for adequate notice of intention to strike

Be it enacted, etc., That when used in this act—

(1) The term "public utility" includes only a public utility which is engaged in commerce or whose operations are such that a slow-down or stoppage thereof would burden or obstruct commerce or the free flow of commerce.

(2) The terms "employee", "representatives", "labor organization", and "commerce", shall have the meaning assigned to them in section 2 of the National Labor Relations Act.

(3) The term "strike" includes any concerted action which results in a slow-down or stoppage of work.

SEC. 2. After the date of the enactment of this act, no public utility shall enter into any contract with any labor organization concerning the wages, hours, or other terms or condition of employment of any of the employees of such public utility, unless such contract provides that such employees will not engage in any strike until after the expiration of 60 days from the date on which they or their representatives give to such public utility written notice of their intention to strike together with a statement of their reasons for such intended strike.

SEC. 3. If any employees of a public utility engage in any strike which continues for more than 24 hours, in violation of a provision required by section 2 of this act to be included in the contract with respect to such employees, whether or not such provision is included in the contract, or in violation of a provision in a contract with respect to such employees, entered into before, on, or after the date of the enactment of this act, which prohibits a strike or requires the giving of notice before engaging in a strike, then, from the time of the beginning of such strike until the expiration of 12 months after the termination of such strike—

(1) the employees who engage in such strike shall not be entitled to any rights, privileges, or benefits under the National Labor Relations Act, with respect to their employment by such public utility;

(2) the labor organization with which such contract was entered into by such public utility shall not be recognized as a labor organization, or as a representative of employees, under the National Labor Relations Act insofar as any matter relating to the employees of such public utility is concerned; and

(3) the National Labor Relations Board shall not require such public utility to bargain with such labor organization as the representative of any of the employees of such public utility.

SEC. 4. If such strike continues for more than 24 hours, the employees engaged in such strike shall cease to be considered employees of the public utility.

EXHIBIT B

H. R. 4951

A bill to make certain labor practices and boycotts unlawful

Be it enacted, etc., That it shall be unlawful for employees of any person who is engaged in business as a carrier of property for hire, to attempt, by means of a concerted refusal to transport the property of, or to transport property to, another person—

(1) to induce or require such other person to recognize, deal with, comply with the demands of, or employ members of, any labor organization; or

(2) to induce or require employees of such other person to become or remain members of any labor organization;

in any case in which the property to be transported is to be transported in interstate or foreign commerce, or in which such concerted refusal directly affects interstate or foreign commerce.

SEC. 2. It shall be unlawful, by means of a strike against any person, or by means of a concerted refusal to work on, handle, or otherwise deal with articles or materials belonging to any person, to induce or require, or to attempt to induce or require, another person to recognize, deal with, comply with the demands of, or employ members of, any labor organization, in any case in which such strike or concerted refusal directly affects interstate or foreign commerce.

SEC. 3. It shall be unlawful for any labor organization, or for any officer of any labor organization, to induce or require, or to attempt to induce or require, any of the members of such organization to perform any act which constitutes a violation of section 1 or 2.

SEC. 4. Whoever violates any of the provisions of sections 1, 2, or 3—

(1) shall upon conviction thereof be punished by a fine of not less than $100 nor more than $1,000, or by imprisonment for not less than 30 days, nor more than 1 year, or both; and

(2) in case such violation is by a labor organization, shall upon conviction thereof cease to have and cease to be entitled to the status of a representative or labor organization under the National Labor Relations Act, for a period of not less than 90 days, nor more than 6 months.

EXHIBIT C

H. R. 5202

A bill to protect employees and employers engaged in interstate and foreign commerce

Be it enacted, etc.—

FINDINGS AND POLICY

SECTION 1. The Congress hereby declares that—

(a) It is the policy of the United States to foster free competitive enterprise, the investment and the protection of private capital in trade and commerce, and in the development of the natural resources of the United States.

(b) All Americans able to work, seeking and finding work, shall be protected in the exercise of their right to work.

(c) All individuals, copartnerships, corporations, associations, and organizations creating and maintaining jobs shall be protected in the right to hire and give employment to any individual without interference through force or violence by any individual or organization of any kind.

SEC. 2. Whenever any act mentioned in this or any subsequent section shall obstruct or interfere with interstate or foreign commerce—

(a) It shall be unlawful for any person, alone or acting with another or others, directly or indirectly, by force, coercion, intimidation, or by show or threat of force, or attempt to use force, to force or attempt to force any person to become, be, or remain a member of any labor organization; or, by force, coercion, intimidation, or threat of force, or attempt to use force, to force or attempt to force, any person to refrain from engaging in or remaining in employment, or, by force, coercion, intimidation, or by show or threat of force, or attempt to use force, to interfere or attempt to interfere with any employee or other person on his

or her way to or from employment, or while seeking employment, which in any way contributes to the production of anything which may become an article of interstate or foreign commerce.

(b) It shall be unlawful for any labor organization or the officers thereof, or for any other organization or the officers thereof, to commit any of the acts herein made unlawful when committed by a person or a group of persons.

SEC. 3. Interference in the manner prescribed in section 1 with each employee or other person is hereby made a separate and distinct offense.

SEC. 4. In addition to any other penalty imposed by this act, every person or organization violating the terms hereof shall be liable to every employee or person deprived of employment by violation of section 1 for double the amount of damage suffered by such employee or other person, which said damages shall be not less than the sum of $50, together with the costs of such suit, including an attorney fee of $25, which said damages shall be recoverable in any Federal court sitting in the State where such violation may occur, and jurisdiction of such actions and of the persons and organizations involved therein is hereby conferred upon such courts.

SEC. 5. Any person violating any provision of this act shall, for each act, be subject to a fine of not more than $1,000 and imprisonment of not more than 1 year.

SEC. 6. If any provision of this act, or the application of any provision, to any person or circumstances shall be held invalid, the remainder of the act, or the application of such provision, to any person or circumstances other than those as to which it is held invalid shall not be affected thereby.

Peacetime Sabotage

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1946

Mr. PITTENGER. Mr. Speaker, from time to time some administration spokesman talks about economy and the taxpayer and he usually indicates that he is for both at the same time. Observation leads us to note, however, that neither economy in public expenditures nor the taxpayer amount to very much in the eyes of the average New Dealer. To use the old phrase, "They aren't worth a continental." This does not refer to their intrinsic worth or value which is indispensable to any New Deal program which always includes more jobs, bigger jobs, and in the language of one of the late New Dealers, "Spend and spend and tax and tax." In other words, there must necessarily be a waste of public funds, or else there is no fun.

We have pointed out on many occasions that this reckless and irresponsible policy of wasting funds is going to ruin the Government, but administration leaders do not seem to pay any attention to it. I was talking the other day with a high grade, competent person in one of the newly created Government Departments. This party is rated as a person of executive capacity, able to take shorthand and typing and look after business matters and is on the pay roll for only $3,000 in New Deal money. I quote this party:

> My job is all right and I have no kick about the pay, but it is in one of those reconversion bureaus where I have absolutely nothing to do. There are a lot of other people who are also on the pay roll, and they have nothing to do. My, but time hangs heavy on our hands, and we think it a crime to take our pay checks when we don't give the Government value received.

This is a true story and illustrates just what is going on under the New Dealers down here at Washington.

It is unpleasant for me to tell these facts Mr. Speaker, but people are entitled to know them. They are evidence of what a man said the other day, namely the bureaus and departments have gotten so big here that they not only run Congress, but they also run their own bosses.

I quote from a statement furnished me by our colleague the Honorable JOHN TABER, of New York, in which he says:

> I wish to call your attention to a table which I placed in the RECORD of February 7, 1946, on page 1111, indicating an increase of 116,982 man-years, or 125,000 new jobs in civil agencies of the Government, excluding the Army and the Navy, as proposed in the President's 1947 Budget estimates.
>
> These positions would require an increased pay roll of $232,000,000 and seem to me to indicate better than anything else the attitude of the administration toward spending.

Now, Congressman TABER is recognized as one of the outstanding men in the United States who believes in fair dealing, stating the facts correctly and protecting the American people against all irregularities and misdeeds. He is pointing out what amounts to 125,000 new jobs when the war is over, and we ought to be decreasing these plum trees and replanting the orchards with wheat and corn and other productive increments. Mark you, he says that he has not even gotten to the Army and the Navy which notoriously waste the taxpayers' money at every opportunity. In wartime we called their expenditure necessary, and no one questioned them. In peacetime I feel they will find out too late that a different yardstick is in existence.

HENRY WALLACE AND HAROLD ICKES

It made me feel sad yesterday, Mr. Speaker, when I read an article from the Houston Chronicle of Houston, Tex., under date of January 27, 1946. This referred to the fact that the Department of Commerce has boosted its budget estimate $77,000,000 as between the fiscal years of 1946 and 1947. Now the Secretary of Commerce is the Honorable Henry Wallace, long recognized as a God-fearing son of Iowa, than whom there are none greater in their love for the common people and their desire to benefit all of our neighbors. I was surprised to learn that Mr. Wallace's budget estimates for peacetime purposes had been boosted. He surely ought to be able to borrow a few thousand employees from one of those wartime agencies which has been theoretically abolished. Of course, its name has been changed but everything else remains the same. This story in the Houston Chronicle just shows how the bureaucrats who work under Henry Wallace are bigger than their boss, because a man of his progressive and liberal tendencies, if left to his own inclinations would never be guilty of the charges made in the Houston Chronicle.

Then there is that outstanding and distinguished Secretary of the Department of the Interior the Honorable Harold Ickes, "Honest Harold" for short. The Houston Chronicle relates that Mr. Ickes' Department picked up $212,000,000 more for the fiscal year of 1947. This is just another case where a God-fearing man like Secretary Ickes has become submerged and is likely to become a victim of a watery grave of bureaucracy. This is the time and place Mr. Speaker, when both of these distinguished gentlemen, Henry Wallace and Harold Ickes, need the protection of Congress.

Lest I do anyone an injustice, I quote from the Houston Chronicle, of Houston, Tex., January 27, 1946, as follows:

HENRY AND HAROLD SCORE HIGH IN BUDGET BATTLE

(By Norman W. Baxter)

WASHINGTON, January 26.—There are broad smiles these days in the Department of Commerce and the Department of Interior and a few sly grins in the Bureau of the Budget. For the three uppercrust survivors of the Roosevelt administration—Henry Wallace, Harold Ickes, and Director of the Budget Harold Smith—have succeeded in playing a tune on the first Truman peacetime budget that has all other Washington bureaucrats slighty dizzy and entirely envious.

There is no question as to who gained the most ground. Honest Harold has picked up $212,000,000, or 140 percent, in funds allotted to his Department from VJ-day through fiscal year 1947, the budget for which has just been announced. Mr. Wallace, who got a slower start, has managed to boost his budget estimate approximately $77,000,000, or 89 percent, as between the fiscal years 1946 and 1947. The answer may lie in the fact that Mr. Ickes has had uninterrupted practice, while Mr. Wallace has only come back to the budgetary orchestra in the last year. There is, however, no denying the fact that they are both good—good at raiding the Treasury, particularly with the help of social-minded Budget Director Smith. Any other member of the President's Cabinet or agency head will admit this ruefully. In many respects Mr. Wallace's accomplishment is the more remarkable, since some of the budgetary gains that he has registered run into several hundred percent. Here are some shining examples:

THREE HUNDRED PERCENT INCREASE

The funds allotted to the office of the secretary in the Department of Commerce are 300 percent above any previous year in the last two decades. The most money the Budget Bureau ever allowed for this purpose heretofore was $2,467,000, when Herbert Hoover was President. Mr. Wallace has been authorized to seek congressional sanction for $7,685,000 for his own secretarial force.

In its heyday, when the Bureau of Foreign and Domestic Commerce had agents all over the world—as it now no longer has—it was never permitted to ask for more than $5,334,000. Mr. Wallace has been given the green light on $11,670,000 for fiscal year 1947, which is more than 400 percent above the amount

this same Bureau has had in any year since 1941.

The Bureau of the Census has been given a pat on the back to ask for $33,500,000, approximately 300 percent more than it got in each of the two previous years, and $11,400,000 more than it was granted in 1940, the year of the last decennial census, when every resident of the United States has to be counted. For $33,500,000 Mr. Wallace plans only a manufacturers and business census.

ONE THOUSAND TWO HUNDRED PERCENT UP

The real hurdle that Mr. Wallace cleared was in the estimate for field offices of the Department of Commerce. Three years ago the Bureau of the Budget refused to allow any money for these field offices. Budget Director Smith said they were not needed. The cost was then approximately $500,000. The funds at that time were restored only through congressional intervention. This estimate now has been upped to $6,500,000, an increase of more than 1,200 percent.

Both the field offices appropriations and the census funds will be spent principally for manpower—in other words, for patronage to help Mr. Wallace in his campaign for President.

Budget Bureau spokesmen have sought to make it appear that the tremendous additional sums granted Commerce resulted from the presence in that Department of the Civil Aeronautics Administration. The administration does get the largest single share of Commerce appropriations—$69,508,000 for 1947—but its percentage gain between 1946 and 1947 amounted to a picayunish 33 percent.

HOOVER BADLY BEATEN

There is a fiction around Washington that Herbert Hoover really got the money from Congress for the Department of Commerce. He did pretty well for it, both as Secretary and as President. He shoved its appropriations up from $21,100,000 in 1924, when he was Secretary, to a high of $58,795,000 in 1930, when he was President. But Mr. Wallace, if Congress lets him get away with it, will beat the Hoover high by more than $100,000,000.

Mr. Ickes must have done some real suffering during the war years. The expenditures of his Department, exclusive of war expenditures, got down to $65,000,000 in the fiscal year 1943, $159,000,000 in 1944, and a low of $151,000,000 in 1945. It looked as if he would get along on about the same amount in the present fiscal year, 1946, when along came VJ-day. Mr. Ickes dashed up to Congress and got supplementary authorizations and appropriations which jumped him $90,000,000 (exclusive of war expenditures) within the single year. And then, in the Budget which the President has just submitted to Congress, he ran the total up to $363,000,000, an additional gain as between '46 and '47 of $147,000,000. When you compare $363,000,000 with $151,000,000 it looks as if Mr. Ickes' Department might put on some weight. More than $163,000,000 of the total for the fiscal year 1947 will go to the Bureau of Reclamation, which in 1946 had only about $45,000,000 of anticipated expenditures.

KNOW THEIR WAY AROUND

Of course both Henry Wallace and Harold Ickes had two advantages over their associates in the higher echelon of the Truman administration. They knew their way around Washington, and they were old friends of Harold Smith, the Director of the Budget, who is a good man to know. Under the Government budget procedure the various departments and agencies make their case for the appropriations they think they will need to the Bureau of the Budget. The Budget Bureau in turn presents the figures to the President, but no Chief Executive has time for any complete and detailed analysis. If the Budget Bureau eliminates or slashes a department's request, it takes a virtual earthquake to overrule Harold Smith. If, on the other hand, Harold Smith knows you and smiles on your monetary desires, the battle is half won. It evidently did Henry Wallace and Harold Ickes no harm to know Director Smith. Their two departments alone got more than $200,000,000 of the $458,000,000 increase which was made in the general expenses of the Government for fiscal year 1947. This means that these two old Roosevelt boys got almost as much in the way of increases as did all the remaining 50 or 60 other departments and agencies of government who were not on such intimate terms with Harold Smith.

How Wallace and Ickes pulled out the plums

Year	Department of Commerce				Department of the Interior
	Office of the Secretary	Bureau of Foreign and Domestic Commerce	Census	Total	
1938	$1,016,000	$3,127,000	$2,208,000	$39,513,000	$127,000,000
1939	2,135,000	2,750,000	2,065,000	44,710,000	160,000,000
1940	1,292,000	3,079,000	22,100,000	51,408,000	213,000,000
1941	1,233,000	2,184,000	18,140,000	34,524,000	212,000,000
1942	1,483,000	2,268,000	7,060,000	74,809,000	213,000,000
1943	1,584,000	1,853,000	5,311,000	82,091,000	165,000,000
1944	1,388,000	1,853,000	5,442,000	68,592,000	159,000,000
1945	1,600,000	1,520,000	11,250,000	72,500,000	151,000,000
1946 [1]	1,946,000	2,445,000	11,401,000	86,929,000	216,000,000
1947 [1]	7,685,000	11,670,000	33,500,000	163,956,000	363,000,000

[1] 1946 and 1947 figures for Department of the Interior are estimates, other figures for Interior are expenditures. Commerce figures are all estimates.

must lie idle. In this connection there is submitted the first-hand observation in a letter from a good farm woman in Utah:

SNOWVILLE, UTAH, *January 29, 1946.*

Hon. COMPTON I. WHITE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. WHITE: In 1938 I married a dry farmer and came to Juniper, Idaho, to live. It is a lovely little valley with the pine-covered Black Pine Mountains to the west and cedar hills to the north and east. I immediately loved the place, and told my husband I would be happy to make my home here. But little did I realize the problems this would make.

There was something strange about this valley. Scattered about among productive farms were other farms being deserted. In answer to my questioning I was told that they were being sold to the Resettlement Administration.

"Why did the previous owners want to sell them?" I asked. It seemed foolish to me because I had seen them harvesting their last crops, which averaged about 20 bushels to the acre. "Weren't they making a good living?"

Then it was explained to me that these people were harvesting the biggest crop they had ever had, probably due to newer types of farm equipment. If they hadn't already sold their farms before this they probably wouldn't have done so at all. Life hadn't been easy for them. No wells—they hadn't drilled deep enough. We have a very good well at 150 feet, and there are others here now. But at that time wells were few and water had to be hauled 5 or 6 miles, not only for human use but for stock as well. No wonder life was discouraging.

I had heard of the Resettlement Administration before this and thought it a good plan. But here it seemed to be misapplied. What the people needed was help in getting wells and the expensive dry-farm machinery rather than removal from their land. Our farms now are averaging 30 bushels to the acre. These idle acres would do as well.

Two years ago we built a $6,000 home here. It was rather foolish, in view of the fact that we have children who will need to attend school. But we still had hopes that, somehow, the community might grow and reassume its school and church activities.

Next fall our little boy will start to school. Others in our community have already reached this milestone. This means renting or buying a home in town—a divided home, family, and business. The nearest town offering a suitable wintertime occupation is 75 miles.

The six or seven families who live here at least half of the time are not sufficient in number to maintain school, church, or social activities, nor to encourage any community projects, such as electrification and telephone system.

So, if you can help us by getting an amendment to the Bankhead-Jones Farm Tenant Act passed whereby this land might be sold, we would be everlastingly grateful to you.

Respectfully,

ROSALIE B. CAMPBELL.

Practical Farming Versus Technical Farming

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO

Wednesday, February 6, 1946

Mr. WHITE. Mr. Speaker, our departments are loaded up with technical men who try to apply preconceived notions of farming and land use. In carrying out the well-intentioned programs set up by Congress, the Government administrators pay little attention to changing business and financial conditions. When hard times are with us, and the average farm fails to pay, these Government agents proceed on the assumption that depressed financial conditions are permanent and direct their efforts to the conversion of so-called marginal land and the concentration of farmers in the more fertile agricultural areas. Now, when times are good, food is short, and prices are high, good productive land

Impeachment of Federal Judges

EXTENSION OF REMARKS
OF
HON. HATTON W. SUMNERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. SUMNERS of Texas. Mr. Speaker, permission having been granted, I

present for printing in the RECORD a timely, forceful editorial recently appearing in the Washington Post which is self-explanatory. This editorial is followed by excerpts from a report submitted by the majority of the Committee on the Judiciary in support of the bill referred to in this editorial:

[From the Washington Post]

IMPEACHMENT

A curious substitute for impeachment of judges believed to be crooked has been applied by the House Judiciary Committee. By a vote of 12 to 8 the committee adopted a report branding former Federal Judge Albert Johnson, of Pennsylvania, as a "wicked and malicious judge" who is guilty of "high crimes and misdemeanors" in at least 10 cases. The effect of a subcommittee's investigation was to drive Judge Johnson from the bench and induce him to give up all retirement rights. Now the committee's report has utterly discredited him, no doubt with ample justification.

All this has been accomplished, however, without a trial of the man who is reported to have so shamefully betrayed his trust. The committee says that it did not request impeachment because the result would be only to remove the judge from office and he had already resigned. Was not the real reason the fact that the Senate has no time to conduct impeachment trials? We regard the outcome of this case as another emphatic demonstration that the impeachment procedure as a means of dealing with lower court judges accused of wrongdoing is rapidly becoming obsolete.

Obviously the Senate doesn't have time to try such impeachment cases. It cannot drop legislation on urgent national and international issues to sit for days or weeks as a court. That is why the House has tried on two occasions to provide a new arrangement for the trial of Federal district and circuit judges who may be impeached by that body. The impeachment charges would be heard, under this plan, by three judges selected by the Chief Justice of the United States from the circuit courts of appeals, with the right of the accused judge to appeal to the Supreme Court. That arrangement would have the great advantage of affording a fair hearing to accused judges and of relieving the Senate of a burden that it can no longer reasonably bear. The manifest unfairness of condemning judges without trial should induce the House once more to pass the bill in question and give the Senate another chance both to redeem itself and to escape from an unreasonable burden.

TRIAL OF THE ISSUE OF GOOD BEHAVIOR OF CERTAIN FEDERAL JUDGES—CONSTITUTIONALITY

This bill depends for its constitutional warrant not only upon the universally recognized inherent power of Government to protect itself, which power constantly is being exercised in removing civil officers subject to impeachment by other methods, including judicial procedure, but also upon a specific provision of the Constitution, article III, section 1:

"The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior * * *."

This is the definite specific provision that when a judge does not behave himself well he forfeits his right to hold his office. This is a justiciable question which belongs in a court and nowhere else.

It would be helpful in the examination of the constitutionality of the bill if it be held constantly in mind that the provisions of this bill have no connection with or relationship to the provisions of the Constitution with reference to impeachment. It also would be well to have constantly in mind that there is no constitutional provision with reference to the impeachment of a Federal judge as such. If the good-behavior provision above quoted were stricken from the Constitution, that would not affect in the slightest degree either power or procedure, or anything else under the impeachment provision. At no time in the impeachment proceedings of a Federal judge are the Senators sitting as a court of impeachment influenced by, nor do they consider in the least degree, the "good behavior" condition in the judicial tenure clause. The only provision under which a Federal judge may be impeached is found in article II, section 4, of the Constitution:

"All civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors."

There is nothing in the Constitution about impeaching a Federal judge, as such. Federal judges are subject to impeachment solely because they are civil officers. Whatever rules of construction apply to other civil officers with reference to their being subject to judicial procedure for their trial and removal, apply equally to Federal judges. If other civil officers subject to impeachment under the provisions of the Constitution may also be removed by court procedure, it follows that those civil officers who happen to be Federal judges may also be removed by court procedure. Federal judges are not distinguished from other civil officers. They are no higher, no lower, no different. They are all in the same impeachment class together.

When we separated from Great Britain, we brought into our Constitution from the British Constitution, which was also ours by virtue of our having been a part of that Government, the provisions of the British Constitution with reference to impeachment, and those with reference to good behavior of Federal judges. At that time, as it is agreed among commentators on the British Constitution, and recognized in practice, the power to remove by impeachment did not exclude the ordinary processes of government, including the institution of ouster proceedings in the court by a writ of fiere faceas. Applicable here is the well-recognized rule of construction that that which has been brought from another jurisdiction comes into the new structure modified by the construction which obtained at the time of its taking, in the jurisdiction from which it came. It is not necessary to rely on that construction, however. With uniformity unexcelled in governmental history from the beginning of procedure by impeachment in the fourteenth century, until the present time, and from the beginning of our independence from Great Britain from whence our impeachment provisions came and which are practically identical with those of Great Britain in both the Federal and States' jurisdictions, it has been the established holding that civil officers removable by impeachment may also be removed by judicial procedure.

In order to hold that impeachment is the only method by which Federal judges may be removed from office, it would be necessary not only to hold against the uniform constructions of centuries that civil officers removable by impeachment also may be removed by judicial procedure, but it would be necessary also, with regard to Federal judges, to hold that the condition in the Constitution that Federal judges shall hold their offices during "good behavior," is dead language in the Constitution. As is universally held, there is no dead language in the Constitution. Most of it, however, requires legislative action to release its vitality. Not only does the same right and power obtain to remove Federal judges by judicial procedure, which obtains with reference to all other civil officers which the courts hold thus removable, but with reference to Federal judges there is also this additional specific condition upon which their right to hold office depends; namely, "good behavior," written into the Constitution, which can be enforceable only by judicial procedure. Senators sitting as a court of impeachment cannot do it. Their entire jurisdiction and power as a court of impeachment is derived from and is held within the boundaries fixed by article II, section 4, of the Constitution, the provision last quoted.

Impeachment originated in England during the fourteenth century. It was not an ordinary procedure of government even then, though the House of Lords, in which the impeachments were filed, was a real court, the highest court of the realm, and impeachment was a real criminal indictment, with the possibility, in the event of conviction, of a judgment of confiscation of property and of death. The most pronounced of its unusual characteristics was the fact that the House of Commons, representing all the people of the Kingdom, was the prosecutor. The reason stated at the time for that procedure was that there were great offenders who, it was claimed, were too powerful to be reached and punished by any other procedure. It also was stated that it was beneath the dignity of the House of Commons to appear in a lesser court than the highest court of the realm.

As the democratic characteristics of the Government of England developed, the powers of government separated themselves into legislative, executive, and judicial branches, functioning each through its own personnel; the House of Lords losing its former judicial characteristics which shifted to the developing judicial branch of the Government, the personnel of which were correspondingly increasing their judicial powers and responsibilities and establishing uniformity and stability in procedure which came to be recognized as being as important to the ends of justice as is substantive law.

By the time of our separation from Great Britain, impeachment had become practically obsolete. During the century before our separation and in the more than century and one-half since our separation, there has not been a dozen impeachment cases in England; probably not more than half a dozen. Impeachment is retained in the law of that country, however, for such occasions and situations as were responsible for its origin; namely, the necessity to proceed against a great offender, beyond the reach of the ordinary processes of government—just as it should be retained in our governmental machinery for use in a similar emergency which would result if it should be deemed necessary in the public interest to attempt, for instance, to remove a President from office for bad conduct, or a Justice of the Supreme Court. It would be very difficult to provide a court as a part of our judicial machinery in which to try an ouster suit against a President. In that situation it would be necessary to proceed in the Senate under the impeachment powers. In such a grave proceeding, Senators would suspend their ordinary duties and given concentrated continuity of attention, practically speaking, not possible in an ordinary impeachment. To attempt to have all the Senators suspend their regular duties as Senators and try to sit as judges in the determination as to whether or not one district judge should be removed from office, has no justification in necessity or common sense, and has no place in the scheme of democratic government. In practice, if this bill is enacted into law and is held constitutional, and it is constitutional, the justiciable issues which arise when a district or circuit court judge is charged with bad conduct probably always would be adjudicated in a court where that adjudication, under the nature of our system of government belongs, leaving the Senators to attend to their senatorial duties and assigning these judicial duties to the judges of the courts.

If enacted, this bill would remove the requirement that the entire personnel of one of the Houses of the legislative branch of the Government suspend its legislative duties,

and assume the duties of the judicial branch of the Government. It would send a citizen charged with grave offenses to the sort of tribunal in which his right to be tried is fixed by the most basic philosophy of our system of government, and approved by experience and would give to the people the same sort of tribunal in which to have adjudicated matters arising out of their complaint of bad behavior on the part of Federal judges exercising jurisdiction over them. Article I, section 8, of the Constitution provides:

"The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof."

Congress owes the duty speedily to enact legislation to relieve the personnel of the Senate, busy as they are with great national and international problems of the country, called upon to give advice to the President with reference to many matters, under necessity to act as intermediary between the people of their States and the various administrative agencies of the Government, burdened with a deluge of correspondence, challenged to exercise the highest type of statesmanship ever required by the circumstances of any people. Enactment of this bill would relieve the Senate of the necessity of having its entire personnel under duty to sit as a court of impeachment, putting aside all their ordinary duties and sit for days and weeks perhaps, listening to testimony with reference to receiverships, private bank accounts, conspiracies, and things of that sort, attempting to determine whether a civil officer who happens to be a Federal judge should be removed from office. These Senators will not and cannot do justice to themselves, to the Nation at large, to the individual being tried, or to the people whose public interest is involved. While the trial is going on the Senators are called here and there by duties they must attend to, going in and out of the trial chamber, mostly out, while testimony is being given upon the weight of which depends issues for the individual as vital as his life, and the right of the people to have the proper sort of Federal judge. If managers on the part of the House should be able to prove against the judge being tried that he had tried cases in his court in the same manner as he is then being tried, there would be no need for additional testimony.

Under conditions which obtain at present, public pressure and public demand are moving the Department of Justice toward the institution of a suit on its own motion filed in a trial court, to oust a Federal judge guilty of flagrant violation of the condition of "good behavior." If and when the Department of Justice feels itself compelled to bring such a suit, the probability is that the court will hold the suit properly brought. When that is done a great, new executive power will have been extended over the Federal judiciary. If that occurs, the responsibility for its happening will belong to the Congress. If the Congress will enact proper legislation now, it can fasten in the law for the protection, security, and independence of the judiciary, the provision requiring a preliminary examination and certification by the House of Representatives before an ouster suit can be instituted, and public opinion will hold it there.

As to the suggestion that a committee of the Senate could take the testimony in the impeachment of a Federal judge, that would not remove the malallocation of governmental power or harmonize its exercise with democratic processes. It would be too much like a jury, after having been sworn to try a case, deputizing a couple of its members to hear the testimony while the rest of the jury went about their ordinary duties.

Three Proposed Amendments to the Case Bill

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. HOFFMAN. Mr. Speaker, under permission granted, there are printed herewith three proposed amendments to the Case bill:

Amendment offered by Mr. HOFFMAN: Page 6, line 18, add a new subsection to read as follows:

"(g) Section 7 of the National Labor Relations Act as amended to read as follows:

" 'Employees shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities, for the purpose of collective bargaining or other mutual aid or protection, free from coercion from any source.'

"(h) Section 8 of the National Labor Relations Act is amended by adding two new subsections numbered (6) and (7) to read as follows:

" '(6) It shall be unlawful for any labor organization, officer or representative or member of a labor organization to violate the provisions of, or interfere with the rights granted under section 7, of this act and any such violation shall be deemed to be an unfair labor practice.

" '(7) Any labor organization, any officer, representative of labor, of any labor organization, guilty of an unfair labor practice under subsection (6) of section 8, or of a violation of section 7 of this act, shall, in addition to all other penalties, be deprived of all benefits, privileges, and exemptions under this act.' "

On page 6 of H. R. 5262, after line 18, add new subsection (g), as follows:

"Amend section 8 of the National Labor Relations Act which, in part, reads as follows:

" 'SEC. 8. It shall be an unfair labor practice for an employer', by striking out the words 'SEC. 8. It shall be an unfair labor practice for an employer' and inserting in lieu thereof the following:

" 'SEC. 8. (a) It shall be an unfair labor practice for—

" '(1) Any person to threaten, restrain, or coerce employees in the exercise of the rights guaranteed in section 7: *Provided*, That nothing in this section shall abridge the freedom of speech or of the press' and also by inserting after subsection 5 of section 8 of the National Labor Relations Act the following subsections:

" '(6) It shall be an unfair labor practice for a labor organization, any member of a labor organization, or any officer or officers of a labor organization, or any agent or agents of a labor organization, or anyone acting in the interest of a labor organization, or for an employee, or for employees acting in concert—

" ' (a) To interfere with, restrain, or coerce employees in the exercise of the rights guaranteed in section 7.

" '(b) To resort to or engage in, during the course of any labor dispute and in connection with such dispute, any act or practice which is a violation of any criminal law effective in the jurisdiction in which such act or practice occurs.

" '(c) To interfere by threat, intimidation, or force or threat of force, with the exercise of the right by any employee to continue at his work or to go to or from his place of employment.

" '(d) To strike in violation of a valid contract or agreement.

" '(e) It shall not be considered an unfair labor practice for an employer to discharge or to refuse to reemploy any person who, under the terms of this act, is guilty of an unfair labor practice; nor shall it be considered an unfair labor practice for an employer to refuse to bargain with any organization which or employee who fails to recognize or be bound by the official certificate of collective bargaining representatives issued under section 9 hereof or willfully violates the terms of a collective bargaining contract.

" '(f) It shall not be considered an unfair labor practice for an employer to fail to reach an agreement after it has bargained collectively.' "

Amendment to the Case bill, offered by Mr. HOFFMAN: On page 12, strike out all of section 11 and insert in lieu thereof the following:

"SEC. 11. Violence and intimidation: (a) Whenever any act mentioned in this or any subsequent section shall obstruct or interfere with interstate or foreign commerce—

"(b) It shall be unlawful for any person, alone or acting with another or others, directly or indirectly, by force, coercion, intimidation, or by show or threat of force, or attempt to use force, to force or attempt to force any person to become, be, or remain a member of any labor organization; or, by force coercion, intimidation, or threat of force, or attempt to use force, to force or attempt to force, any person to refrain from engaging in or remaining in employment, or, by force, coercion, intimidation, or by show or threat of force, or attempt to use force, to interfere or attempt to interfere with any employee or other person on his or her way to or from employment, or while seeking employment, which in any way contributes to the production of anything which may become an article of interstate or foreign commerce

"(c) It shall be unlawful for any labor organization or the officers thereof, or for any other organization or the officers thereof, to commit any of the acts herein made unlawful when committed by a person or a group of persons.

"(d) Any individual who violates any of the provisions of this section shall on and after such violation cease to have, and cease to be entitled to, the status of any employee for the purposes of sections 7, 8, and 9 of the National Labor Relations Act, or the status of a representative for the purposes of such act for a period of 6 months.

"(e) Any labor organization or the officer thereof violating or participating in the violation of any of the provisions of subsection (a) of section 11, shall on and after such violation cease to have, and cease to be entitled to, the status of a labor organization for the purposes of the National Labor Relations Act for a period of 1 year."

Amend section 11 by striking out all of section 11 after the word "provisions" in line 2, on page 13, and then insert:

"(b) Any individual who violates any of the provisions of this section shall on and after such violation cease to have, and cease to be entitled to, the status of an employee for the purposes of sections 7, 8, and 9 of the National Labor Relations Act, or the status of a representative for the purposes of such act for not more than 6 months

"(c) Any labor organization or the officer thereof violating or participating in the violation of any of the provisions of subsection (a) of section 11, shall on and after such violation cease to have, and cease to be entitled to, the status of a labor organization for the purposes of the National Labor Relations Act for a period of 1 year."

Amendment offered by Mr. HOFFMAN: Page 12, beginning with line 14, strike out all of

section 11, down to and including the word "act", in line 17, on page 13, and insert in lieu thereof the following:

"That it shall be unlawful for employees of any person who is engaged in business as a carrier of property for hire, to attempt, by means of a concerted refusal to transport the property of, or to transport property to, another person—

"(1) to induce or require such other person to recognize, deal with, comply with the demands of, or employ members of, any labor organization; or

"(2) to induce or require employees of such other person to become or remain members of any labor organization;

in any case in which the property to be transported is to be transported in interstate or foreign commerce, or in which such concerted refusal directly affects interstate or foreign commerce.

"SEC. 2. It shall be unlawful, by means of a strike against any person, or by means of a concerted refusal to work on, handle, or otherwise deal with articles or materials belonging to any person, to induce or require, or to attempt to induce or require, another person to recognize, deal with, comply with the demands of, or employ members of, any labor organization, in any case in which such strike or concerted refusal directly affects interstate or foreign commerce.

"SEC. 3. It shall be unlawful for any labor organization, or for any officer of any labor organization, to induce or require, or to attempt to induce or require, any of the members of such organization to perform any act which constitutes a violation of section 1 or 2.

"SEC. 4. Whoever violates any of the provisions of sections 1, 2, or 3—

"(1) shall on and after such violation cease to have, and cease to be entitled to, the status of an employee for the purposes of sections 7, 8, and 9 of the National Labor Relations Act, or the status of a representative for the purposes of such act for not more than 6 months;

"(2) in case such violation is by a labor organization, shall upon conviction thereof cease to have and cease to be entitled to a status of a representative or labor organization under the National Labor Relations Act for a period of not less than 90 days, nor more than 6 months."

Kunkel Bill for Men in the Armed Forces

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. PITTENGER. Mr. Speaker, from time to time we take note of criticisms either over the radio or in the newspapers of alleged discriminations against men in our armed forces, where officers are favored. Congress ought to do everything it can to remove any cause for that kind of criticism. One source of irritation is the fact that under the law an enlisted man does not get accumulated leave on the same basis as do commissioned officers. In other words, claims have been made from time to time that there is favoritism and that the advantage lies with the officers and against the enlisted men.

To remedy that condition, our distinguished colleague the gentleman from Pennsylvania, the Honorable JOHN C. KUNKEL, has introduced a bill, H. R. 4422, granting to enlisted personnel of the armed forces certain benefits in lieu of their present rights under existing law. The purpose of this legislation is to grant to these soldiers pay for accumulated leave at the rate of their regular pay and allowance, as is now done in the case of officers. There is basis under existing law for the claim that we have a caste system in the Army and such a condition should not exist. The enlisted men are entitled to fair treatment and I earnestly hope that the Military Affairs Committee of the House of Representatives will take favorable action either on the bill introduced by Congressman KUNKEL or on some similar legislation, which will accomplish the same result. This will rectify a mistake that has been permitted to exist entirely too long.

From time to time members of the American Legion call attention to this proposed legislation or other legislation of a similar character, and I am glad to see their activity in behalf of such a change in the law.

Suspension of Argentina From United Nations

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mrs. DOUGLAS of California. Mr. Speaker, I hold in my hand a document which every Member of Congress should read and support, for it offers incontrovertible evidence that the Peron regime is following the pattern created by the Nazis and that its purpose is crime against humanity and crime against peace.

It is a memorandum submitted by the Nation Associates to the General Assembly of the United Nations requesting the suspension of Argentina from the Organization "as an enemy of peace and security on the score that it has violated the United Nations Charter and the Chapultepec agreement, is a totalitarian regime patterned after the Nazi model, and is organizing the country for a war of aggression." The authenticity of the charges are vouched for by the characters of the signatories—Freda Kirchwey, president of the Nation Associates and editor of the Nation; and Dr. Frank P. Graham, president of the University of North Carolina, who is the chairman of the advisory council of the organization.

When, on April 4, the Farrell-Peron regime signed the Chapultepec agreement, it was hoped that at long last hemispheric solidarity might be achieved. On the basis of this hope and the belief that in exchange for membership in the victorious United Nations, the Argentine Government would adhere to its pledges, the United States delegation at San Francisco took the initiative in urging and obtaining the admission of Argentina to the United Nations on April 30, 1945.

Nine months have now passed since the San Francisco Conference. During this period Germany has been defeated in Europe, and Japan in the Far East. During this period, too, the Farrell-Peron regime has become an outright totalitarian government, fashioned in the image of Nazi Germany, with Peron the undisputed dictator. Deliberately and brazenly it has violated the agreements of Chapultepec and the United Nations Charter.

The entire country is being mobilized for war; more than 50 percent of the national budget has been allocated to military purposes. Children of both sexes, from the age of 12 on, are subject to military training. Civil liberties have been suppressed. Education has been regimented. The democratic press has been intimidated or destroyed. Freedom of labor has been vanquished, and important labor unions converted into puppet organizations. More recently, the Peron regime, adopting the scapegoat strategy of the Nazis, has made anti-Semitism an integral part of its program. A police gestapo, under the direction of Peron and his satellites, now supplements the army. The concentration camp and the torture chamber have become every-day instruments of internal control.

Following the pattern of his Nazi masters, Peron is now planning to obtain so-called legal sanction for his totalitarian rule by a presidential election scheduled to be held on February 24, 1946. The outcome of this election can be forecast today. The democratic parties are making a courageous and united stand against Peron's candidacy; but the Government controls the police, the military, and the electoral machinery.

At Nuremberg an Allied military tribunal is conducting the trial as war criminals of leaders of the Nazi Party and their military satellites. Read the indictment of Judge Robert H. Jackson and you will see how, step by step, Peron is following the pattern of crimes which led to World War II.

There is no reason whatsoever to believe that any possible change will occur in the character of the regime. The man who seeks the office of President has openly proclaimed his belief in war "as an inevitable social phenomenon to which all other activities must be subordinated, not simply by the armed forces of the nation but through the subordination of all governments, private institutions and the entire people."

Peron is the man who announced boldly, 4 months after his admission to the United Nations: "I have no fear of civil war. On the contrary, I am prepared for it. I have at my disposal 300,000 soldiers and 4,000,000 workers armed with clubs."

Peron is the man who is responsible for the fact that while thousands of Argentinians are in prison for the sole crime of favoring freedom, Axis agents, schools, and businesses fluorish unchallenged. Fifty percent of German firms in Argentina are still doing business as usual at the same stands. Ricardo Staudt, Ludwig Freude, Fritz Mandl, all Nazi agents, enjoy the personal protection of Peron who has bestowed upon them some of the richest Government

contracts since his admission to the UNO.

Peron is the man who is permitting 191 of the 200 German schools in the country, and 15 of the 16 Japanese schools in the country, to continue. Peron is the man who operates with a Himmler-trained gestapo, 30,000 of whom are to be found in the city of Buenos Aires alone.

What is the United States waiting for? Mr. Braden, the Assistant Secretary of State, whom we called to office as an expert on Latin-American affairs, warns us that this is a Nazi regime. Dean Acheson, the Acting Secretary of State, tells us that the United States will not conclude a military treaty with that regime. Secretary of State Byrnes assures us that the United States approves the Uruguayan proposal for multilateral action against a country which has violated its agreements and destroyed basic human rights.

When will we give reality to our lip service to principles? What is proposed here is an act of self-protection. In this atomic age, a new war would mean the destruction of civilization. There is every reason, therefore, for the American delegation to support, if it does not initiate, a proposal to banish the representatives of Peron from the UNO as an enemy regime.

Once this action is taken it will be possible to isolate Peron and pave the way for a return of democracy in Argentina, as we have in other satellites of the Axis. If we do this, we will not have the travesty of our State Department denouncing the Peron regime as Nazi, the President of the United States urging Peron to send more wheat to the victims of nazism. We will not have the bitter jest of Peron's representatives offering to join the UNRRA and to pay their share of maintaining Hitler's victims. It is time that our foreign policy assumed reality. There is still time to stop a new appeasement. If we want to protect ourselves and the world, we must move immediately against Peron.

A REQUEST FOR THE SUSPENSION OF ARGENTINA FROM THE UNITED NATIONS—MEMORANDUM SUBMITTED TO THE GENERAL ASSEMBLY OF THE UNITED NATIONS BY THE NATION ASSOCIATES, JANUARY 1946

INTRODUCTION

On March 27, 1945, the Farrell-Peron regime of Argentina declared war on Japan and Germany.

On April 4, 1945, it signed the Act of Chapultepec incorporating the agreements of the Inter-American Conference on Problems of War and Peace.

Thus it fulfilled two conditions precedent to its admission to the United Nations Conference at San Francisco.

The first condition was laid down by the inviting powers; the second by the Inter-American Conference on the Problems of War and Peace which met early in March in Mexico.

On April 30, 1945, acting on the initiative of the American delegation and backed unanimously by the Latin-American Republics, the San Francisco Conference voted to seat Argentina.

On September 8, 1945, the Farrell-Peron regime formally ratified the United Nations Charter.

On October 24, 1945, the United Nations Organization came into formal existence after all 51 member nations had signed and filed their ratifications.

THE UNITED NATIONS CHARTER

The preamble of the Charter sets forth the principles which are to guide the United Nations Organization in its functioning, as follows:

"We, the peoples of the United Nations,

"Determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind; and

"To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small; and

"To establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained; and

"To promote social progress and better standards of life in larger freedom; and for these ends

"To practice tolerance and live together in peace with one another as good neighbors; and

"To unite our strength to maintain international peace and security; and

"To insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest; and

"To employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

"Accordingly, our respective governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations."

Chapter I, article 1 of the Charter establishes the fundamental purposes of the United Nations as follows:

(1) To maintain international peace and security.

(2) To develop free relations among nations based on respect for the principle of equal rights and self-determination of peoples.

(3) To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion.

THE ACT OF CHAPULTEPEC

Implicit recognition of the agreements of Chapultepec is given in article 52 of the United Nations Charter sanctioning:

"The existence of regional arrangements or agencies dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action provided that such arrangements and agencies and their activities are consistent with the purpose and principles of the United Nations."

A. In the agreements reached at Chapultepec, the American states—

(1) Reiterate and fervently adhere to the democratic principles which they consider essential for the peace of America.

(2) Declare that "the purpose of the state is the happiness of man in society; the interests of the community should be harmonized with the rights of the individual; the American man cannot conceive of living without justice just as he cannot conceive of living without liberty."

(3) Proclaim "the adherence of the American Republics to the principles established by international law for safeguarding the essential rights of man and declare their support of a system of international protection of these rights."

B. The American Republics further declared their firm purpose to collaborate for the attainment of:

"A constructive basis for the sound economic development of the Americas through the development of natural resources, industrialization, improvement of transportation, and the improvement of labor standards and working conditions, including collective bargaining, all leading to a rising level of living and increased consumption."

Further, they resolved "to consider of international public interest the enacting by all the American Republics of social legislation that will protect the working class and that will embody guaranties as well as rights on a scale not inferior to the one recommended by the International Labor Office."

C. The Chapultepec agreement further undertook:

(1) To recommend to the governments of the American Republics the most careful delegation from the official textbooks used in their schools of everything which might tend to jeopardize the inter-American system.

(2) To recommend to the Governments of the American Republics that they exercise the greatest vigilance to see that the teachings in their schools are based on the principles of freedom, peace, justice and equality that are found in the bases of the inter-American system.

(3) To recommend to the governments of the American Republics the deletion from official textbooks used in their schools of everything which sustains directly or indirectly racial or totalitarian theories or which might therefore be susceptible of compromising the friendly relations between the states of the continent.

D. The Charter of Chapultepec recommended:

(1) That the American Republics recognize their essential obligation to guarantee to their people free and impartial access to sources of information.

(2) That having this guaranty in view, they undertake upon the conclusion of the war the earliest possible abandonment of those measures of censorship * * * which have been necessary in wartime. * * *

(3) That the governments of the American Republics take measures, individually and in cooperation with one another, to promote a free exchange of information among their peoples.

(4) That the American Republics * * * make every effort to the end that when a juridical order in the world is assured, there may be established the principle of free transmission and reception of information, oral or written, published in books or by the press, broadcast by radio or disseminated by any other means, under proper responsibility and without need of previous censorship, as is the case with private correspondence * * * in time of peace.

E. At Chapultepec it was also resolved:

(1) To reaffirm the principle, recognized by all the American states, of equality of rights and opportunities for all men, regardless of race or religion.

(2) To recommend that the governments of the American Republics, without jeopardizing freedom of expression, either oral or written, make every effort to prevent in their respective countries all acts which may provoke discrimination among individuals because of race or religion.

F. The parties to the Act of Chapultepec further agreed:

(1) To recommend that the governments of the American Republics do not give refuge to individuals guilty of or responsible for or accomplices in the commission of such (war) crimes.

(2) To recommend that the governments shall upon the demand of any of the United Nations * * * surrender individuals charged with the commission of such crimes

to the United Nations making the request. * * *

(3) To reaffirm the determination * * * to prevent individuals or groups within their respective jurisdictions from engaging in any activities fomented by the Axis Powers or their satellites for the purpose of prejudicing the individual or collective security and welfare of the American Republics:

(a) To intensify efforts to eradicate the remaining centers of Axis subversive influence in the hemisphere. * * *

(b) To take effective measures to prevent Axis-inspired elements from regaining or securing any vantage points within the territory subject to their respective jurisdictions from which such elements might disturb or threaten the security or welfare of any republic.

(4) They resolved that measures be undertaken "to uncover, disclose, immobilize, and to prevent the concealment or transfer of property and rights located within the American Republics * * * which * * * whether or not in name belong to or are controlled by or for the benefit of Germany or Japan or individuals or entities within those countries."

These agreements, only 10 months old, have been and are being violated in principle and practice by the Peron regime.

As a result, international peace and security are in gravest jeopardy.

A PROPOSAL FOR ACTION BY THE UNITED NATIONS

The first session of the General Assembly of the United Nations is now in progress in London. Its purpose is to establish the machinery and initiate the acts through which the principles of the United Nations Charter may be implemented.

Article I of the Charter provides that the initial function of the United Nations "is to maintain international peace and security."

In the interests of international peace and security, we propose that the General Assembly initiate action to suspend Argentina from membership in the United Nations Organization.

This action is proposed on the score that:

(1) The present regime in the Argentine is a totalitarian government which has persistently and deliberately violated all obligations assumed under the United Nations Charter and the Chapultepec Agreement.

(2) That its purpose is aggression.

When the representatives of the Peron-Farrell regime were admitted to the United Nations Conference at San Francisco in April 1945 no one was under any illusion about the character of the regime. It was known to be a military dictatorship, totalitarian in form and method. It was known that many Axis agents and much Axis wealth were finding a haven in Argentina.

The military dictatorship which Colonel Peron controls made its first bid for power when the government of President Castillo was overthrown by a military coup in June 1943.

In February 1944, 1 month after the government of General Ramirez had announced a break of relations with Germany and Japan in accordance with the Rio de Janeiro Agreement of 1942, power was seized by Gen. Edelmiro J. Farrell and Col. Juan D. Peron. According to a Bulletin of the United States State Department issued on July 26, 1944, extremist pro-Axis elements forced the change in government. The Farrell-Peron regime refused to implement the break with the Axis. Instead, Axis agents and spies arrested by the Ramirez regime were released and affirmative assistance was given to Axis business concerns both through large Government contracts and through the requisitioning of critical materials from firms friendly to the democratic cause.

Pro-Axis newspapers enjoyed official support and assistance in obtaining newsprint, and carried on a bitter propaganda campaign against the United Nations and in behalf of the Axis.

These charges are made officially by the State Department of the United States. As a result of Argentina's acts the United States and all the Latin-American Republics withdrew diplomatic recognition from the Farrell-Peron regime in 1944.

On January 11, 1945, another State Department Bulletin declared:

"Argentina is being used as a base for intensive Axis subversive activities directed against the American continent and the United Nations. * * * Axis diplomatic officials were flagrantly abusing the principles between civilized nations. * * * These diplomats had organized and were directing, financing, and coordinating the activities of different groups or cells of agents, and it was also shown that diplomatic channels were being used for the transmission of information to the high command in Berlin."

Although Argentina was not present at the Chapultepec Conference, every effort was made to secure its subsequent agreement to the proposals accepted there. When on March 27, Argentina finally grudgingly declared war, it was notable that the declaration was made first against Japan, and second against Nazi Germany, on the score that Germany was an ally of Japan.

When, on April 4, the Farrell-Peron regime signed the Chapultepec Agreement, it was hoped that at long last hemispheric solidarity might be achieved. On the basis of this hope and in the belief that in exchange for membership in the victorious United Nations, the Argentine Government would adhere to its pledges, the United States delegation at San Francisco took the initiative in urging and obtaining the admission of Argentina to the United Nations on April 30, 1945.

Nine months have now passed since the San Francisco Conference. During this period Germany has been defeated in Europe, and Japan in the Far East. During this period, too, the Farrell-Peron regime has become an outright totalitarian government, fashioned in the image of Nazi Germany, with Peron the undisputed dictator. Deliberately and brazenly it has violated the agreements of Chapultepec and the United Nations Charter.

The entire country is being mobilized for war; more than 50 percent of the national budget has been allocated to military purposes.

Children of both sexes, from the age of 12 on, are subject to military training.

Civil liberties have been suppressed.

Education has been regimented.

The democratic press has been intimidated or destroyed.

Freedom of labor has been vanquished and important labor unions converted into puppet organizations.

More recently, the Peron regime, adopting the scapegoat strategy of the Nazis, has made anti-Semitism an integral part of its program.

A police gestapo, under the direction of Peron and his satellites, now supplements the army. The concentration camp and the torture chamber have become everyday instruments of internal control.

While the population of the Argentine is suffering cruel oppression and the denial of fundamental freedoms, important Nazi agents continue to find protection and Axis business and Axis schools flourish.

Following the pattern of his Nazi masters, Peron is now planning to obtain so-called legal sanction for his totalitarian rule by a presidential election scheduled to be held on February 24, 1946. The outcome of this election can be forecast today. The democratic parties are making a courageous and united stand against Peron's candidacy; but the Government controls the police, the military, and the electoral machinery.

PERON FOLLOWS THE NAZI PATTERN

At Nuremberg an Allied military tribunal is conducting the trial as war criminals of leaders of the Nazi Party and their military satellites. The principal charges against them are crimes against humanity and crimes against the peace. The indictment presented by Presiding Judge Robert H. Jackson emphasizes that the first act of the Nazi Party was to acquire totalitarian control of Germany in order to carry out its objectives.

The indictment charges that—

"(1) The Nazis set out to undermine and capture the German Government by legal forms supported by terrorism. Their terroristic arm was the storm-troop organization.

"(2) In order to make their rule secure from attack and to instill fear in the hearts of the German people, the Nazi conspirators established an extended system of terror against opponents and supposed or suspected opponents of the regime. They imprisoned such persons without judicial process, holding them in protective custody in concentration camps and subjected them to persecution, degradation, despoilment, imprisonment, torture, and murder.

"(3) The destroyed the free trade-unions in Germany by confiscating their funds and properties, persecuting their leaders, prohibiting their activities, and supplanting them by an affiliated party organization.

"(4) Annihilation of the Jews became an official state policy carried out by official action and by incitement to mob and individual violence.

"(5) In order to make the German people amenable to their will, and to prepare them psychologically for war, the Nazi conspirators reshaped the educational system and particularly the education and training of the German youth * * * imposed a supervision of all cultural activities, controlled the dissemination of information and the expression of opinion within Germany.

"(6) They directed Germany's economy toward preparation and equipment of the military machine * * * embarked upon a huge rearmament program and set out to produce and develop huge quantities of materials of war and to create a powerful military potential."

In the following pages we present evidence of the extent to which the Peron regime, following the Nazi model cited above, has already succeeded in its totalitarian aims and in its preparations for war.

PREPARATIONS FOR WAR

The philosophical basis for the war policy of the Peron government was set forth in June 1944, by Colonel Peron himself, in a speech at La Plata University in which he stated that "war is an inevitable social phenomenon," and that "all other activities must be subordinated to the purpose of national defense. Not simply by the armed forces of the nation, but through the subordination of all Government departments, private institutions, and the entire people." He continued:

"Throughout the ages there have lived philosophers (and I will not hesitate to call them Utopians), who have stated that it is possible to avoid war. Always within a short space of time some new conflagration has broken out to disprove this theory. * * *

"The concept of 'the nation in arms' or 'total war' which was expounded by Marshal Von der Goltz in 1883, is in a certain sense the most modern theory of national defense by which nations direct in time of peace as in time of war every living force within the state in order to attain a political objective. * * *

"It is essential that all the intellectuals of our nation, whatever may be their particular field, should study and understand war, realizing it to be the only means of solving a situation we may be called upon

to face, should God one day decide that war must reach our borders. * * *

"If diplomacy is unable to procure the desired political objectives then it is imperative to be prepared to do so by force, whenever the situation compels the use of such extreme methods. * * *

"Domestic policy is of the greatest importance in the preparation of a country for war. Its role is simple and obvious but difficult to achieve. The maximum number possible of healthy young men of high moral standing and imbued with great love of the fatherland must be incorporated into the armed forces. This will act as a focal point from which all the armed forces will become infected with the same high standards and will readily develop a true spirit of war and sacrifice. * * *

"The following is a summary of the points I have made in my speech:

"1. War is an inevitable social phenomenon.

"2. All so-called peaceful nations (and among them our own), if they desire peace must prepare themselves for war.

"3. The problem of national defense of the fatherland is one to which all activities must be subordinated. National defense cannot be improvised at the moment that war is at our door, but requires many years of constant and conscientious preparation. It cannot be regarded as a problem for the armed forces only, but must be established through the harmonious integrated work of the different Government agencies, private institutions, and all the people of Argentina, whatever may be their particular sphere of work. National defense gives rise to such enormous problems requiring profound professional knowledge that no single person can be absolved from taking part. Finally, whatever demands it may make on us represent contributions to the glory of our Nation and the happiness of our people."

In line with this position, on November 7, 1944, a new organic law of the army was announced compelling all Argentine citizens to prepare for the defense of their country. While conscription for active military duty applies only to males, girls and women are to be prepared for service to the army in various women's auxiliary corps. Military training for men falls into three periods—preconscription, conscription, and postconscription. Preconscription begins at the age of 12 and continues until the age of 20 when conscription starts for a maximum of 2 years. Upon their discharge, all males are subject to postconscription until the age of 50.

During the year 1945, the military budget of the Argentine Government was five times as great as that of 1942, the year before the Peron-Farrell revolution. Since the declaration of war against the Axis, in April 1945, a month before the cessation of hostilities in Europe, was purely symbolical, no legitimate justification for this huge increase in military expenditures can be offered. For the year 1946, presumably a year of peace, the Peron regime has passed appropriations for military expenditures approximating 50 percent of its entire budget. This at a time when the national deficit is mounting and many other department budgets have been cut, notably the National Board of Education.

As a supplementary arm, a nation-wide secret service and police force of over 30,000 has been established in the past year, parallel in its functions with the gestapo and the storm troops in Nazi Germany.

The neighboring Republics of Chile and Uruguay live in constant fear of acts of aggression. Paraguay and Bolivia are already under the domination of Argentina.

"The size of the standing army has been increased, and military construction along Argentina's frontiers with Chile, Brazil, Bolivia, Paraguay, and Uruguay is greater than ever before. New barracks have been built in frontier areas, most of them by German companies which were on the Allied blacklist because of Nazi connections," according to Joseph Newman in the New York Herald Tribune on January 10, 1946.

On January 29, 1945, Mr. Gabriel Gonzalos, Chilian Ambassador to Brazil, charged the Peron regime with having as its principal objective a war on the continent and warned that Chile would be its first victim.

In October of 1945, Dr. Juan Antonia Rios, President of Chile, during a visit to New York, corroborated the fears of the threat against Chile.

The Government of the United States is presumed to have in its possession information concerning shipments of arms by the Peron regime into neighboring Republics to provoke revolutions for the establishment of regimes favorable to the present Argentine Government.

Indicating knowledge of the aggressive intentions of the Peron regime, Dean Acheson, as Acting Secretary of State of the United States, on October 4, 1945, announced: "In view of recent developments in Argentina, the United States Government does not feel that it can properly negotiate or sign with the present Argentine regime a treaty of military assistance."

That this is still the attitude of the United States Government was confirmed by Acting Secretary of State Acheson in a public statement on January 11, 1946.

THE TOTALITARIAN CHARACTER OF THE REGIME AND ITS METHODS OF TERROR

As far back as July 26, 1944, the State Department of the United States publicly characterized the Farrell-Peron regime as totalitarian. In a Bulletin issued that day, the State Department declared, "The dominant power in Argentina was and continues to be in the hands of pro-Axis elements determined to impose their desires. Furthermore, it is signicant that these same elements control the most important ministries and agencies of the National Government, as well as the governments of the Provinces, and have rapidly and energetically implanted a dominant totalitarian system that fully complements and supports their pro-Axis foreign policy through control of the press, the courts, and other key institutions. The basic civil rights have been either nullified or so modified as to have no real meaning. Every effort was made to stamp out democratic opposition to the Government's totalitarian program."

The seizure of power by Peron on October 18, 1945, served only to advance the development of the totalitarian system in the Argentine. How a program of repression and intimidation has been carried out in torture chambers by methods borrowed from the Nazis and applied by a gestapo trained by leading operatives of Himmler, was described by John White, one of the most informed writers on Latin America, in an article appearing in the Nation of March 3, 1945.

Declaring that the gestapo's barbaric use of torture had been transplanted to the Western Hemisphere, Mr. White charged that soon after the Farrell-Peron regime came into power, gestapo agents from Germany expanded a city detective bureau in Buenos Aires into a great national organization specializing in persecution and torture. "This organization," he said, "has set up concentration camps for political prisoners similar to those in Nazi Germany, tortured thousands of victims guilty of nothing more serious than belonging to labor unions or democratic political parties, killed or caused the death of hundreds of people bearing Jewish, Polish, or Russian names, and caused the disappearance of other hundreds."

In describing the techniques used, he said that diplomatic agents of United Nations governments had sent information corroborating the use of these techniques to their home governments:

"The electric spur is the favorite instrument of the new school of native sadists who have been trained by gestapo experts. It is a simple electric cable with several fine steel needles at the end. These electric needles are applied to the most sensitive parts of the naked body, such as the eyelids, the sexual organs, and the rectum. The torture usually is applied at two or more parts of the body simultaneously and has such terrific effect on the entire nervous system that it frequently produces insanity. In less extreme cases it paralyzes the muscles and causes great painful swellings and deep sores. It is persistently reported that at least 5,000 people in Argentina have been tortured with the electric spur.

"A simpler but equally effective method is to jab long hatpins through the testicles. Another frequent treatment subjects political prisoners, women as well as men, to a third degree in which their naked bodies are burned with lighted cigarettes in an effort to force them to answer questions the way the political police want them answered.

"The cup is a device in the form of a funnel which is pressed against the body and from which the air is then pumped out. The resulting vacuum causes a huge swelling inside the cup and draws the blood to the surface, leaving a large black-and-blue sore. This device is used on prisoners known to be suffering from heart ailments. When applied in the region of the heart it aggravates the affection and often causes death from heart failure.

"The bucket is a huge vat filled with urine and excremen The prisoner who is given this treatment is hung by his feet from the ceiling and then lowered until his head is submerged in the contents of the vat. This particular technique has the attraction of producing two forms of torture at the same time—semidrowning in filth, and congestion of the brain from the downward flow of the blood.

"One form of torture makes use of a familiar office appliance. In many European and South American countries letters, contracts, and other business documents are written in copying ink and preserved in duplicate by being put between the pages of a copybook which is then squeezed between iron plates. The Argentine political police have found this office press a convenient method of smashing the fingers of prisoners who refuse to sign certain declarations.

"The slab is a torture machine made of two huge sheets of steel. The victim is placed between the sheets, which are pressed together gradually until he suffers internal hemorrhages and vomits blood.

"The whip and the rod have been seen in the movies. The long leather whip is usually dipped in water before the lashes are applied; the rod is made of fine steel bars that cut into the flesh like knives.

"Professional boxers are employed to beat up certain prisoners since they know how to produce the desired effect without leaving telltale wounds.

"One highly refined form of mental torture drives the prisoner almost to the point of insanity without actually causing any physical hurt. The victim usually is awakened at 2 or 3 o'clock in the morning and told that he is to be executed by a firing squad. He is then taken for a ride in an automobile, accompanied by two or three guards armed with rifles and obviously members of the firing squad. Finally he is stood against a wall and the firing squad is lined up, but at the last minute he is reprieved and taken back to his cell. (This is one of several techniques which are reported to have been used on the Bolivian tin-mine owner, Maurice Hochschild, after he was kidnaped by members of the young army officers' lodge in La Paz last year.)

"Sometimes as a variation a prisoner who is to be released is taken for a ride in an automobile, accompanied by armed guards.

When the automobile gets to a deserted region outside the city, the prisoner is told that he is at liberty. Being familiar with the famous ley de fuga by which prisoners are shot while supposedly trying to escape, he stands there afraid to move and under mental torture that may induce insanity.

"La razzia is an importation from the Sicilian Black Hand societies and is used for intimidating the opposition, especially the working classes. Gangs of armed thugs terrorize entire neighborhoods by breaking into and wrecking houses and by storming meetings of associations and trade-unions, beating up those present and destroying the furniture and fixtures on the pretext that the meeting is plotting against the Government. Schools, libraries, and newspaper offices have been raided frequently, and on two occasions movie theaters in Buenos Aires were stormed while crowded with people.

"Even when they are not tortured, political prisoners are demoralized and intimidated by being subjected to what is popularly known as el mal trato. Women of the working classes, especially wives and daughters who have refused to testify against their husbands and fathers, are put into cells with prostitutes and women criminals. They are not permitted visits from their families or from a lawyer; nor can they receive decent food from outside the jail.

"The mal trato is applied to men prisoners in even worse form. If they are ill they usually are sent to regions where it is certain that their illness will get worse. They are given very poor food or deprived for entire days of anything to eat or drink. They receive no medical attention and may be put into cells with criminals of the lowest order.

"So many lawyers have been punished for defending political prisoners in Argentina that it is practically impossible now for prisoners to find lawyers, except the ones who occasionally are assigned as 'defense lawyers' by the Government."

There is every reason to believe that the system of torture and intimidation has been extended by Peron himself.

SUPPRESSION OF CIVIL LIBERTIES

In the agreements reached at Chapultepec the American states—

1. Reiterate and fervently adhere to the democratic principles which they consider essential for the peace of America.

2. Declare that "the purpose of the state is the happinesse of man in society; the interests of the community should be harmonized with the rights of the individual; the American man cannot conceive of living without justice just as he cannot conceive of living without liberty."

3. Proclaim "the adherence of the American republics to the principles established by international law for safeguarding the essential rights of man and declare their support of a system of international protection of these rights."

In possession of the military, backed by a police gestapo and a civilian army of bureaucrats, the Peron regime, since its admission to the United Nations Conference, has proceeded systematically to destroy the rights of its own citizens, in defiance of elementary principles of human decency and in violation of its commitments under the Chapultepec agreement and in the United Nations Charter.

On May 3, 1945, police deliberately charged and opened fire on unarmed citizens celebrating the fall of Berlin.

On August 15, 1945, similar assaults were committed by the police on persons celebrating the Japanese surrender.

On August 16, crowds of soldiers, commanded by noncommissioned officers, terrorized the center of the city, killed two citizens and wounded many others. They laid siege to the building of the prodemocratic paper, Critica, which they attempted to set on fire. Cheering Hitler, Mussolini, and Peron, and shouting "death to the Jews," soldiers were permitted to commit their outrages without any interference from the police. According to Dr. Alberto M. Candioti, former Argentine Ambassador to Mexico, the rioting soldiers told him that they were obeying superior orders.

On August 18, Colonel Peron announced that civil war was the only solution to the situation existing in the Argentine. In an interview with Dr. Pedro Cue, director of the Cuban Daily El Mundo, Peron declared: "I do not fear civil war because I am prepared for it. I have at my disposal 300,000 soldiers and 4,000,000 workers armed with clubs."

On September 27, 1945, wholesale arrests of prominent citizens guilty only of signing declarations in favor of freedom, took place. Among them were editors of liberal papers, political leaders opposed to the Peron regime, and ordinary citizens who had expressed a belief in democracy. Peron himself went to the Buenos Aires jail to look over the prisoners. Included among those arrested were three of the six rectors of Argentina's national universities.

On October 7, the police charged a crowd near a cemetery paying homage to a 19-year-old student killed in a clash between university students and supporters of Peron. In a wholesale lockup 1,594 students were arrested, including 149 girls. The University of Buenos Aires was closed, its president and executive officers dismissed. Six professors were also taken into custody.

On October 21, 1945, Arnaldo Cortesi, writing in the New York Times, declared:

"Argentina again is witnessing the shameful spectacle of citizens being obliged to find protection against their own Government in foreign embassies. The Peruvian Embassy, for instance, has taken in several persons, including former Federal Judge Ramon S. Vasquez who filed a complaint in court against the police for having tortured political prisoners. In the Uruguayan Embassy, along with others, are former Foreign Minister Jose Maria Cantilo and the family of Rear Adm. Leonardo MacLean. * * * Several newspapers were attacked in various parts of Argentina, as were also some private homes, such as that of Dr. Alfredo Calcagno, rector of La Plata University. In some industrial districts of Avellaneda anyone who appeared in the streets wearing a tie was subject to assault. In Cordoba the offices of the Argentine North American Cultural Institute were stoned while police looked on without interfering. * * *"

On December 9, a mass meeting of the Democratic Union (a coalition of four political parties including the Radicals, Socialists, and Communists, opposing Peron in the coming elections), comprising between 150,000 and 200,000 persons, assembled to hear speakers urge the defeat of Peron in the presidential election, was fired upon. Two persons were killed and 60 seriously injured. The shooting, according to the New York Herald Tribune of that date, was supposedly intended to stampede the throng and break up the meeting.

On December 19, Norah Pines reported in the New York Post:

"Supporters of Colonel Peron were urged to release a wave of terrorism to insure his election, and if he lost to put the country on fire, in a speech by Dr. Federico Cantoni, political boss of San Juan Province and one of Peron's top advisers. Dr. Cantoni threatened that should Peron lose the election, 'we will paralyze the country with one strike after another as long as it is necessary to impose our will.'"

The extent to which the elementary rights of man have been subverted in the Argentine was described by Spruille Braden on August 29 in his farewell speech in Buenos Aires prior to his return to the United States. He declared:

"One by one there appear all the elements used by fascism in its stupid stratagems since the day of the so-called march on Rome. Subversion and disorder, organized by the Government itself and using paid assassins under an honorable disguise; utilization of coercion by the state, not to suppress but to protect subversion; bragging by the coward who attacks those he believed fallen, but humbles himself before the powerful; calculated and underhanded use of violent methods; cunning maneuvering showing false respect for established norms and launching its attack while hiding its origin; violation of the law of hospitality which forbids any treacherous attack on him who is sheltered under the same roof; practice of the so-called 'tactics of confusion' * * * use of intimidation and threats against the precise persons whom that Government was under obligation to protect and respect."

On October 27, after his appointment as Assistant Secretary of State in charge of Latin-American affairs, Mr. Braden said: "The Argentine regime is just as Fascist as any which existed in Germany and Japan." And the following day, he amplified that statement by declaring:

"The state of siege recently imposed on Argentina by Peron is the negation of that very bill of rights for the preservation of which we have fought this and other wars. In more concrete terms, a state of siege permits swaggering officers to beat any peaceful citizen because he refuses to hail the leader. It permits a hoodlum with brass knuckles to strike the face of a young girl because she cries 'long live democracy.' It permits arrests without charge; it permits torture, saber-wielding, mounted police to ride down men, women, and children."

In the city of Buenos Aires, with a normal police force of 8,000 to 9,000, the police force is now composed of more than 30,000 officers, who, according to Police Commissioner Velazco, "would rather charge a crowd than eat." Campo de Mayo, once Argentina's most powerful garrison, with a peak force of 27,000 men, has been reduced to a complement of 6,000 or less, while the security authority has been turned over to Velazco. This, according to a report in the Inter-American Monthly of January 1946.

Another army of supporters of the Peron regime is the civil-service bureaucracy, which in the 3 years since the dictatorship was established, has been increased 50 percent from 172,000 to 250,000, with the number of employees rising sharply. This means that more and more employees are dependent for their livelihood or those who control the state. The increase in civilian employees has been matched by wholesale dismissals of Government employees who do not sympathize with Peron's regime, according to a report in the New York Herald Tribune on December 29, 1945.

REGIMENTATION OF EDUCATION

The signatories to the Chapultepec Act agreed:

1. To recommend to the governments of the American Republics the most careful deletion from the official textbooks used in their schools of everything which might tend to jeopardize the inter-American system.

2. To recommend to the governments of the American Republics that they exercise the greatest vigilance to see that the teachings in their schools are based on the principles of freedom, peace, justice, and equality that are found in the bases of the inter-American system.

3. To recommend to the governments of the American Republics the deletion from official textbooks used in their schools of everything which sustains directly or indirectly racial or totalitarian theories or which might therefore be susceptible of compromising the friendly relations between the states of the continent.

The regimentation of the education of the Argentinian population is part of the program of the Peron regime.

In the primary schools of the country children are taught to copy and discuss the following phrases in accordance with a ruling of the Ministry of Justice and Public Instruction, from the text of which we quote in part:

"Women to procreate heroes—not mothers of renegades.

"Argentine woman must fulfill faithfully her natural obligations.

"New Argentine needs women strong, healthy, and clear.

"The fatherland is always right.

"To be worthy of our traditions, we must live arrogantly.

"We are a liberating nation and therefore have the right to carry out corrections in Latin America.

"To be an Argentine does not mean pacifism, speculation, or anything literary; it means one must be dynamic."

The extent to which the Peron regime has attempted to regiment the higher institutions of education can be judged by the fact that on September 29, 1945, all six national universities decided to suspend their activities as a protest against the unprecedented wave of oppression.

On October 5, this act of defiance was countered by the police who stormed and took by force the University of La Plata, imprisoning 315 unarmed students. Following this act, the Government prepared a decree dismissing all university presidents and replacing them by so-called Government intervenors.

On October 8, according to the New York Times, the police themselves reported that some 2,100 students were being held in jail. According to this report five or six rectors of the universities, many deans of faculties, and dozens of university professors had passed some time in jail during the previous two weeks.

On December 5, the New York Herald Tribune reported that students of the University of Buenos Aires refused to take their annual examinations as a protest against the Peron regime. The only students reporting for the examinations were a handful belonging to the antidemocratic nationalist faction.

While regimenting its own educational system, the Argentine regime has permitted to continue unmolested a system of Japanese and German schools. All but 9 of the 200 German schools and all but 1 of the 16 Japanese schools continue to function. As a token of its adherence to the Act of Chapultepec, the Government has dismissed 27 foreign teachers.

SUPPRESSION OF FREEDOM OF THE PRESS

The Charter of Chapultepec recommended:

1. That the American Republics recognize their essential obligation to guarantee to their people free and impartial access to sources of information.

2. That having this guaranty in view they undertake upon the conclusion of the war the earliest possible abandonment of those measures of censorship * * * which have been necessary in wartime.

3. That the governments of the American Republics take measures, individually and in cooperation with one another, to promote a free exchange of information among their peoples.

4. That the American Republics * * * make every effort to the end that when a juridical order in the world is assured, there may be established the principle of free transmission and reception of information, oral or written, published in books, or by the press, broadcast by radio or disseminated by any other means, under proper responsibility and without need of previous censorship, as is the case with private correspondence * * * in time of peace.

* * * * *

The Peron regime has imposed direct and indirect censorship upon the democratic press of the country. It has arrested editors and arbitrarily suspended the publication of opposition papers. It has harried foreign correspondents.

Police maintain a strict supervision to make certain that nothing in opposition to the Peron regime is published.

For their refusal to obey orders, hundreds of provincial papers throughout the country have been suspended and their editors jailed.

In addition to silencing published opposition the Peron representatives function actively to insure that every statement by the Government is published.

Typical of the brutality and intentions of the Peron regime is the fashion by which it acquired the support of Critica, prodemocratic evening newspaper with a circulation of between 200,000 and 250,000. On October 18, 1945, 5,000 armed supporters of Peron, accompanied by 100 policemen and supported by four armored cars, attacked the paper. The assailants poured lead into the Critica, according to the New York Herald Tribune, for 2 hours. The police then took over, arrested 66 employees, and closed the paper. A week later Critica was permitted to resume publication, but was told "either cooperate or be destroyed."

Raul Damonte Taborda, publisher of Critica, was dismissed through a legal action and the operation of the newspaper turned over to an official interventor after Mrs. Salvadora Medena On Rubia de Botana, who inherited the enterprise from her husband, had decided to make peace with Peron. The interventor took over in an official ceremony after midnight attended by Mrs. Botana and representatives of Peron.

Foreign correspondents have been subjected to intimidation. On July 2 Joseph Newman, correspondent of the New York Herald Tribune, took refuge in the American Embassy because of threats made by telephone by a man claiming to be Captain Moretti, of the Ministry of War.

The United States had to intervene officially with the Argentine foreign office because of the coercion exercised upon John Nash of Newsweek. Before permitting him to leave the country, the Peron government tried to force Mr. Nash to sign a statement saying that his cabled material had been incorrect.

The Associated Press, the United Press, and the International News Service, on various occasions, were informed that all their dispatches would be censored. Early in October, the censorship was lifted, but only after a strong official protest to the Argentine Foreign Ministry by the United States Government.

In contrast is the permission granted for the publication of a new German language newspaper, Freie Press, on December 1. The editor of the new publication is M. Mueller, an Austrian, for many years on the editorial staff of the Deutsche La Plata Zeitung, a Nazi-controlled paper.

As late as September 1945, moreover, pro-Nazi publications such as Junges Volk, organ of the Hitler youth, Teutonia, and the Herald were still operating.

On January 17, 1946, the American Embassy in Buenos Aires released a number of documents showing Nazi connections with the Argentine Government officials and its partial control of the Nazi press.

The story, recounted in the New York Herald Tribune, shows how the Nazi-subsidized press serves now to push Peron's candidacy for president.

The Herald Tribune dispatch, dated Buenos Aires, says:

"BUENOS AIRES, January 17.—The American Embassy in Buenos Aires released to the press today part of a quantity of documents discovered by American authorities in Berlin, proving Nazi connections with Argentine Government officials and Nazi control over part of the Argentine press which at present supports Col. Juan Peron for president.

"On authorization from the State Department, John Moors Cabot, American Chargé d'Affaires, made public 13 of 400 German documents which were sent here from Washington. They consist of 'top secret' telegrams sent between March 9, 1942, and July 6, 1943, to the foreign office in Berlin by Otto Meynen, then Chargé d'Affaires in the German Embassy in Buenos Aires.

"REVEAL CLANDESTINE LINKS

"The telegrams reveal the clandestine links between the Germany Embassy and a number of Argentine newspapers, including 'El Pampero,' 'Cabildo,' 'El Pueblo,' 'Ahora,' and the 'Deutsch La Plata Zeitung.' They explain how these Nazi propaganda organs got newsprint despite the efforts of the United Nations, in accordance with the Rio de Janeiro resolutions, to prevent their getting it. They also disclose how the German Embassy used these organs to influence Argentine internal political affairs.

"The first telegram asked the German Government for authorization to spend 73,450 reichmarks monthly to subsidize these papers (the mark was worth about 40 American cents at the time). The greatest amount, 42,000 marks, went to 'Pampero.' Directors and members of the staff of 'Pampero' now publish 'La Epoca,' Colonel Peron's principal political organ.

"Three thousand marks were allocated to El Pueblo. Asked by reporters why El Pueblo was never placed on the Allied blacklist with other Nazi organs, Mr. Cabot explained that it was also the principal organ of the Roman Catholic Church in Argentina, and was kept off the blacklist out of deference to the church.

"PAYMENTS TO PRESS AGENCY

"The second telegram shows payments and relations established by the German Embassy with Andi, an Argentine news agency which the Argentine military Government selected last year as its official Government news agency but later abandoned as a result of public opposition. The telegram says, 'Andi was induced by the Embassy to place press agents in the Ibero-American countries who are obligated to send the regular press survey down here. In this way, the Embassy could thus receive material and political information which goes beyond the North American agency reports.'

"A third telegram disclosed plans to continue distribution of Nazi material to Argentine newspapers in the event of a rupture of diplomatic relations between Argentina and Germany. It suggested the Embassy 'leave certain sums of money behind in loyal hands.' This correspondent was informed that Ludwig Freude, one of the principal Nazi agents in Argentina and now one of Peron's close collaborators, was one of the men in whose 'loyal hands' the German Embassy left money.

"Antonio Delfino, who resigned only 2 months ago as director of the Argentine National Bank, a Government-controlled institution, was named as the man with whom arrangements were to be made for the transfer of funds to Argentina from neutral countries. He was president of the Hamburg-American Shipping Line and is a known Nazi agent.

"Fulvio N. Cravacuore was named as the agent to whom religious material was to be sent for El Pueblo. Cravacuore is now one of the principal writers for Democracia, one of Peron's new newspapers.

"BIRTH OF A NAZI PAPER

"Another document revealed the German Embassy's relations with Manuel Fresco, former Governor of Buenos Aires Province. It said, 'Fresco has just come directly to the Embassy with a concrete proposal for the creation of a new popular morning newspaper, La Tribuna, and asked for a financial contribution for the purchase of newsprint that allegedly will be furnished to him by President Castillo.'

"This Nazi organ actually appeared under the name of Cabildo and assumed the name of La Tribuna only recently, after Cabildo was suppressed by the present regime in its attempt to show its support for the United Nations. Cabildo was described as a paper 'oriented to the support of the governmental policy of Castillo and the maintenance of Argentine neutrality,'"

SUPPRESSION OF LABOR UNIONS

The American Republics agreed at Chapultepec to collaborate for the attainment of:

"A constructive basis for the sound economic development of the Americas through the development of natural resources, industrialization, improvement of transportation, and the improvement of labor standards and working conditions, including collective bargaining, all leading to a rising level of living and increased consumption."

Further, they resolved "to consider of international public interest the enacting by all the American Republics of social legislation that will protect the working class and that will embody guaranties as well as rights on a scale not inferior to the one recommended by the International Labor Office."

On October 31, 1945, the International Labor Office, then meeting in conference, refused to admit the Argentine workers' delegate and his adviser, Juan Rodriguez and Manuel E. Pichel. The reason given was that the Argentine Government was a de facto war government that had established a state of siege in the country, suppressed essential human liberties and rights that are incorporated in the ILO's constitution, and deprived trade unions of freedom of action and even of their leaders. Under present conditions, workers' organizations in the Argentine Republic do not enjoy freedom of association, freedom of action, or freedom of speech.

Rodriguez, it was subsequently disclosed, is a paid employee of the Secretariat of Labor, a branch of the government established by Colonel Peron.

The attempt to take over the labor unions was begun by Colonel Peron in 1943 when he served as Labor Undersecretary. At that time he began a general reorganization which, following Nazi lines, has had as its objective to win the political support of the working masses, especially the unorganized and unskilled.

The fashion in which this was done is described in the New York Herald Tribune of December 26, 1945, by Joseph Newman, Buenos Aires correspondent of that paper:

"It was not an accident that the first office which Peron himself created and directed after reaching the Government was the secretariat of labor and social welfare. This was actually a new ministry, but was not so described because the constitution limits the number of ministries to eight and the Government was not yet ready to flout the constitution openly.

"From the secretariat of labor Peron began to convert the purely military revolution into a national Socialist revolution. He was aware of the great poverty which prevailed among the masses, despite the agricultural wealth of Argentina. The great landowners who ruled Argentina through their conservative party up to 1943 did less than they might have done to raise the economic and educational level of the Argentine population. * * *

"Like Hitler and Mussolini, Peron began to agitate the working masses, making them conscious of their poverty and of the disproportionate wealth of their employers. He did this through branches of the labor secretariats which were established in cities, towns, and villages throughout the country. His propaganda agents turned out literature by the tons and Peron himself made hundreds of speeches in person and over the state radio urging industrial and farm workers to unite behind him for a better deal. To factory workers he promised more pay, better working conditions, and paid vacations. To peons and exploited agricultural workers he promised some of the rich lands of their wealthy landowners. * * *

"As part of the secretariat of labor he established a national agrarian council which is preparing to divide up big estates and turn them over to the workers. As in the Axis countries, his labor secretariat organized Government-controlled unions, which all workers were urged to join. Independent unions which refused to submit to Government control were suppressed and their leaders were jailed.

"As a result of internal and external pressure, independent unions were permitted recently to resume restricted activities. Though these unions may have succeeded in regaining control of most of the 500,000 organized workers, no one knows the extent of the influence and control which Peron has secured over the 2,500,000 unorganized workers."

On September 13, 1945, police closed the headquarters of the local labor union, comprising some 200,000 members, and arrested 6 of its leaders. The union included such independent labor groups as construction, meat, textile, metallurgical, printing, shoemaking, restaurant, and associated industries.

Seven days later Colonel Peron issued a decree by which a general increase in wages was granted to workers and employees throughout the country.

Joseph Newman, writing in the New York Herald Tribune of December 21, characterized the measure as follows:

"It was clearly designed by its author to win the labor vote. From the point of view of the democratic opposition, it constitutes a form of veiled fraud by attempting to buy the labor vote almost on the eve of the election through the official device of ordering all-around increases of 30 percent in the annual income of the working class. This involves many millions of pesos, which, in political terms, amounts to forced contributions by employers to Peron's campaign."

Such independent union groups as are still able to function are supporting the Democratic Union opposition to Peron.

Peron's tactics in destroying the freedom of the labor unions is described by Peter Edson, feature writer of the Scripps-Howard press, in an article appearing on January 12, 1946, in the New York World-Telegram:

"The story how Peron has bid for labor support in the Argentine is worth going into because it points some morals for the United States.

"Peron himself is of lower middle-class origin, but until his rise to the dictatorship he was unknown to the working classes or their leaders. Who his father was has never been proved, and the record of his birth has never been found. A poor boy with ambition and no little ability, Peron stayed in the army after conscription and got his education in the Argentine school for officers.

"On military duty, Peron went to Italy. In Milan he attended a Fascist leaders' school. He got most of his ideas there. When he returned to the Argentine he was assigned to the office of the Minister of War, Gen. Pedro Ramirez. In time Ramirez double-crossed President Ramon Castillo and Peron double-crossed Ramirez to become the strong man. This was June 1943.

"At this point there enters the picture one Jose Figuerola. He had been a labor adviser to Dictator Primo Rivera of Spain and was plenty smart. Driven out of Spain and becoming an Argentine citizen, he also became labor adviser to Peron. His advice was that he could not consolidate his position in power unless he had the support of labor. Figuerola wrote the necessary laws and decrees.

"First step was to destroy existing labor organizations. They were simply declared illegal. In their place a Government-controlled general federation of workers was formed. Peron or Figuerola got three strong Socialist labor leaders to run it, but it isn't polite to ask how they were persuaded to switch ideals.

"They were smart in their strategy. Instead of trying to control all labor, they concentrated on the key men in transportation, public utilities, and meat-packing industries. Controlling these, Peron could tie up the whole country, though membership of the Peron unions may be only from 15 to 25 percent of the workers. But this minority carries blackjacks and probably pistols and has the support of the police, while all other workmen are unarmed.

"But to conciliate and get at least the passive support of all other labor, Peron put through laws to freeze rents, put ceilings on prices, and raise all wages.

"Peron then called a conference of leaders in industry, management, estate owners, bankers, and businessmen. The idea was to sell them on his plan.

"Management, however, wasn't having any. They broke with Peron and joined forces with what was left of the old organized labor movement and political parties which saw that the Peron program was leading only to ruinous inflation.

"Peron then had to prove he was labor's real champion. He has put through one law after another, ending up with general grants of from 10 to 30 percent wage increases plus bonuses.

"Naturally the low-paid working people are all for it. Naturally they threaten a general strike because employers refuse to pay. Naturally they'll vote for Peron for President if his law is upheld."

ANTISEMITIC PROGRAM

At Chapultepec it was also resolved:

"(1) To reaffirm the principle, recognized by all the American states, of equality of rights and opportunities for all men, regardless of race or religion.

"(2) To recommend that the governments of the American Republics, without jeopardizing freedom of expression, either oral or written, make every effort to prevent in their respective countries all acts which may provoke discrimination among individuals because of race or religion."

The Peron regime has recently instituted, in its emulation of the Nazi pattern, a program of terror against the Jews. On October 20, 1945, the return of Colonel Peron to power was signalized by anti-Semitic riots which were described by Joseph Newman in the New York Herald Tribune:

"Bands of Peronistas, celebrating the victory of their leader, entered the extensive Jewish quarter of Buenos Aires and stoned individuals, homes, and buildings. With the tacit approval of police, they engaged Jewish youths in fist fights and shouted offensive slogans. Carrying Argentine flags and posters bearing portraits of Peron, the Peronistas cried: 'Death to the Jews. Viva Peron.' Police stood by, permitting the bands to go about their work in freedom. Some were

seen giving the Peronistas a lift in police cars from one block to another.

"As the streets were deserted, the Peronistas shouted: 'Jews, come out and fight.' They approached the synagogue on Paso Street with rocks in their hands and were intercepted by a group of Jewish boys who engaged the band in a fist fight and dispersed it. Another group of boys entered the basement of the synagogue and arrested 20 of the defenders. These were later released, but this is believed to be the first time police have violated the immunity of a religious edifice in Argentina.

"Peronistas attempted to stone El Diario Israelita, a Yiddish newspaper which was closed by the military regime when President Pedro Ramirez was in power and permitted to reopen after a vigorous denunciation by President Roosevelt.

"Another clash occurred in front of the Jewish bank, called Banco Industrial, the walls of which were painted with slogans such as 'Death to the Jews. Viva Peron.' On Avenida de Mayo, the principal avenue, the following inscription can still be seen painted on the sidewalk: 'Kill a Jew and be a patriot.' In Plaza de Mayo, where Peronistas had staged a mass demonstration and had been addressed by their leaders the previous night, impromptu speakers harangued small groups with speeches blaming Jews for all the ills of the country and of the world."

On November 25, a new attack on the Jewish quarter was made by 30,000 of Colonel Peron's supporters. Reporting the episode, Arnaldo Cortesi declared in the New York Times:

"Anti-Jewish disturbances of considerable gravity took place in Buenos Aires during the night after a meeting of 30,000 or so of Col. Juan Peron's supporters invaded the Jewish quarter of the city, where they broke the signs of several Jewish-owned shops and insulted everyone in sight, attacking and brutally beating anyone who attempted to protest or defend himself. * * *

"The police, who were present in great force, stood by passively while the Jews who had been knocked to the ground were savagely kicked. Finally, the police intervened, but only to arrest the victims instead of the perpetrators of these aggressions. Later, the police raided a peaceful Jewish social club, pointing their revolvers at about 100 persons inside. Then they arrested several of the club's officials and members for no apparent reason. * * *

"The disturbances * * * have occurred with such regularity whenever large numbers of Peronistas have gathered that it is hardly possible to doubt any longer that anti-Semitism forms a part of Colonel Peron's political stock in trade. This circumstance is perhaps owing in part to the fact that he now has the support of a considerable section of the Nationalists who adopted anti-Semitism along with many other ideals of clearly Nazi character."

Three days later Cortesi reported again:

"Several episodes of anti-Jewish hooliganism occurred last night after a relatively small crowd of former Vice President Juan Peron's supporters had held demonstrations in the center of the city. * * * This time the attacks on Jews were carried out by small bands of about 50 young ruffians who entered the Jewish district shouting 'Long live Peron' and 'Death to the Jews' and proceeded to damage property and to assault passersby. More than 30 pistol shots were fired and some noise bombs were thrown. * * * No casualties were reported.

"The police took no effective measures against the assailants and eventually arrested one man who, judging by his name, is a Jew. * * * When it became known yesterday that a sudden meeting of Peronistas had been called, many Jews sought refuge away from their homes. Others barricaded themselves in their houses. The pro-Peron paper, Epoca, said today that the anti-Jewish demonstrations were staged by Colonel Peron's enemies, who thus planned to bring him into disrepute. * * * This suggestion is sufficiently disproved by the attitude of the police, which never showed mercy for Colonel Peron's opponents, but stood passively by while Jews were being attacked."

On December 19, Dr. Federico Contini, one of Peron's top advisers, discussing the anti-Jewish demonstrations, declared in a speech: "It is a pity that a substantial number of Jews were not killed. It would have served to frighten the others."

On December 30, 1945, Joseph Newman, in the New York Herald Tribune, disclosed that the committee against racialism discovered a plot which originated in police headquarters to stage a pogrom after planting bombs and leaflets in Peron's political party offices and in Catholic churches, attributing them to the Jews. The plot was publicly denounced during the first week in December and therefore failed to materialize.

PERON HARBORS ENEMY AGENTS AND AXIS BUSINESSES

The parties to the act of Chapultepec further agreed:

1. To recommend that the governments of the American Republics do not give refuge to individuals guilty of or responsible for or accomplices in the commission of such (war) crimes.

2. To recommend that the governments shall, upon the demand of any of the United Nations * * * surrender individuals charged with the commission of such crimes to the United Nations making the request * * *.

3. To reaffirm the determination * * * to prevent individuals or groups within their respective jurisdictions from engaging in any activities fomented by the Axis Powers or their satellites for the purpose of prejudicing the individual or collective security and welfare of the American Republics:

(a) To intensify efforts to eradicate the remaining centers of Axis subversive influence in the hemisphere. * * *

(b) To take effective measures to prevent Axis-inspired elements from regaining or securing any vantage points within the territory subject to their respective jurisdictions from which such elements might disturb or threaten the security or welfare of any republic.

(4) They resolved that measures be undertaken "to uncover, disclose, immobilize, and to prevent the concealment or transfer of property and rights located within the American Republics * * * which * * * whether or not in name belong to or are controlled by or for the benefit of Germany or Japan or individuals or entities within those countries."

Committed by the Act of Chapultepec and the UNO Charter to turn over enemy agents and to expose enemy holdings, the Peron government has done neither.

On November 30, 1945, Dr. Carlos Adrogue, secretary of the Committee for Vigilance and Liquidation of Enemy Property, resigned, accusing the Foreign Minister of unwarranted interference with the committee's work. The committee itself declared that the Foreign Minister had introduced a number of legal technicalities to prevent the liquidation of the Ricardo Staudt Co., chief Argentine operator in wool, with a capital of between forty and seventy million pesos. Its head, Ricardo Staudt, a German by birth, came to the Argentine in 1924, to avoid punishment for his criminal activities in Belgium during World War I, and obtained Argentine citizenship. In 1941, Adolf Hitler conferred the Order of the Grand Eagle on him for his "outstanding services to the Nazi cause in the Argentine." Counsel for Herr Staudt is the law firm of Cooke Bros., of which Juan I. Cooke, Foreign Minister of Argentina, is a member. The fact that on January 8, 1946, Dr. Adrogue was kidnaped and beaten up by thugs seems more than a coincidence.

Colonel Peron, himself, has on various occasions intervened in behalf of top German industrialists, among them Ricardo Staudt, Ludwig Freude, and Fritz Mandl. Ludwig Freude is allegedly one of the key leaders in Nazi underground activities on the South American continent. Although on the United States and British blacklist, Freude's firm, Compania General de Construcciones, early in 1945, had a contract with the Argentine Government for 22,000,000 pesos. In February 1945, an investigation commission made an attempt to examine the books of Freude's company. Before this action could be completed Argentina declared war on Germany. Again an investigation of Freude's activities was ordered. This time, Colonel Peron appealed personally to President Farrell, vouching unconditionally for Freude, with the result that the investigation was suspended. Moreover, the report of the interrupted investigation of Freude was torn out of the minutes of the commission and destroyed on an order from Colonel Peron.

On October 26, the Commission for the Liquidation of Enemy Property determined to seize all the property of Ricardo Staudt on the grounds that investigations show that large funds had been transferred from his company to Germany during the war, and that he, himself, regarded Berlin as his headquarters. Staudt, warned in advance of the impending action, secured an injunction. The Commission appealed to a higher court and resolved to proceed with its seizure. But this action was vetoed by Foreign Minister Cooke, with the result that Staudt is still in possession of his property. Staudt is alleged to be the principal financier, together with Fritz Mandl, of Peron's campaign for the presidency.

The charge that the seizure of Axis property would impair Argentine economy was strongly denied by Assistant Secretary of State Spruille Braden, then Ambassador, on June 19, in a speech before the British Chamber of Commerce in Buenos Aires, where he declared: "The Nazi and Japanese firms here clearly are of no importance whatever to Argentine national economy. They often were established for other than commercial reasons—reasons so obvious as to call for no comment. There are, however, many enemy firms with established industries that must be continued as units of Argentine production. They are in treacherous hands so long as they are in enemy hands. Luckily the solution is simple. The Axis firms in question can be easily converted into Argentine enterprises."

On June 25, Assistant Secretary of State William L. Clayton, testifying before a subcommittee of the Senate Military Affairs Committee, declared that the Nazis' grandiose scheme for finding safe haven in neutral and other countries for a German stake for another World War was a matter of grave concern to the Allies. He said that in Argentina where 108 major Axis economic enterprises are known to be operating, not one of these Nazi spearheads had been wholly eliminated.

On November 5, 1945, Virginia Prewett, writing in PM, reported:

"Despite official assertions to the contrary, many known members of the Nazi economic spearheads are still operating in Argentina with perfect freedom and bright prospects for the future. * * * On September 11, the Government officially reported that it was meeting its pledge (made at Chapultepec) to extirpate Nazi influence. However, only a little more than 50 percent of the long list of German firms have been placed under Government control. * * *

"The Compania General de Construcciones has continued operations with immunization from governmental interference. It is now

working on fat Government contracts and is bidding on others. * * * Its head is Ludwig Freude, who received the Cross of Merit from Adolf Hitler. * * * Among the contracts that the untouchable Freude has received from the Argentine Government are: Construction of a new military air base at Reconquista, 6,500,000 pesos. Contracts for building military barracks in towns of Ezequiel, Junin de los Andes, and San Martin de los Andes, 17,000,000 pesos. Freude is also constructing a Government shipyard at Rio Santingo and a torpedo depot at Puerto Belgrano. * * * His company built the new big state hotel at Llao-Llao * * * where the German agent Hans Nobel—who also circulates freely—teaches Argentine high society how to ski. * * * With the exception of two German banks and six insurance companies, all the important German spearhead firms in Argentina still retain the titles to their businesses which are now more flourishing than ever.

"Since the Government's statement last September that it was 'eliminating' Nazi-controlled business, the following German-owned firms have obtained Government contracts: Wayass & Freytag, associated with a firm of the same name in Germany, signed a contract to do the concrete work on bridges 3, 4, 7, 8, and 11 at the new national airport * * * outside of Buenos Aires. Compania General de Obras Publicas, which is a branch of the Philip Holtzman firm of Berlin, has signed for the concrete work on bridges 5, 6, and 16 at the same airport. Since the Government statement, the Government has also received bids now under consideration for construction of state roads, etc., from the following: Compania General de Construcciones, Wayass & Freytag, Compania General de Obras Publicas, Siemens-Schukert, Thyssen-Lamental, Gruen & Bilfinger, and Calera Avellaneda."

As recently as December 6, 1945, Assistant Secretary of State Braden made new representations to Argentina because of its alleged failure to deport 71 Nazi agents.

On August 24, 1945, Nelson Rockefeller, former Assistant Secretary of State, and largely responsible for the admission of Argentina to the United Nations Organization, announced 5 months after Argentina's declaration of war against the Axis: "Of the 15 Japanese and 223 other persons investigated for Axis espionage, only 70 German agents are under arrest. There is very little, if any, control over the directors and officers of Axis firms and associations, and practically no progress in seeking out Axis individuals and assets which may be seeking refuge in Argentina and whose existence is therefore concealed."

On September 15, 1945, the New York Times declared that among the men released, 33 have definitely been identified as enemy agents. No enemy agent has been interned or deported. On that same day Spruille Braden, on the eve of his departure from Argentina for the United States, said, as reported in the New York Times: "The Nazi element is still extremely dangerous. Unless it can be extirpated, it will remain a serious threat for the future. I am not competent to state whether there will be an aggressive Germany again, but if there is to be one, then, in my opinion, the Nazis here in Argentina would be a spearhead against this hemisphere and the United States."

On October 20, 1945, Damonte Taborda, former chairman of the Argentine Committee on Subversive Activities, charged that the political upheaval in the Argentine was the result of a Nazi plot to regain military supremacy and world power. He suggested even the possibility that Nazi research on atomic power was continuing in Argentina.

Even arrested Axis espionage agents receive special treatment. Augustine Rodriguez Aray, former radical party deputy, held as a political prisoner by Peron for many months, in a formal charge to the Federal court, accused the police of aiding and abetting Axis espionage agents. He said that during his 5 months' stay in the Villa a de Vota Prison in Buenos Aires, Colonel Velazco's treatment of convicted Axis spies was so friendly, partial, and benevolent that they were allowed to continue their operations both outside and inside the prison. In their cells were short- and long-wave radio sets, photographs of Hitler, typewriters, and all the material they needed for their work, as well as ample stores of food. What is more, they were allowed to leave the prison without guard day and night, some remaining absent for as long as 2 days.

A further instance of how the Argentine Government is protecting Nazi agents was reported in the New York Times of December 5, 1945: "Seven notorious Nazi agents were ordered deported over the weekend. One escaped, another obtained a medical certificate saying he was too ill to be moved, and the third, a very rich man, had a charge of burglary of $22.50 trumped up against him and claimed he must remain in Argentina to stand trial. Of the remaining four, three applied to the courts for writs of habeas corpus. The Ministry of Interior thereupon forbade the departure of all of them."

CONCLUSION

We submit that the actions of the Peron regime, as cited, are identical in practice and purpose with the actions of the Nazi regime when Hitler came to power. The Nazi Party also began its war program by acquiring totalitarian control of the Government and by instituting a terror against the opposition within Germany. From this point it proceeded systematically to apply the same methods against other countries; conquering half of Europe bloodlessly, and finally precipitating the war which has only just been concluded. The Peron regime, if left in power, will certainly launch a war in the Western Hemisphere.

On September 29, 1944, President Roosevelt discussed the extraordinary paradox of the growth of the Nazi-Fascist influence and the increasing application of Nazi-Fascist methods in the Argentine. "The Argentine Government," he said, "has repudiated solemn inter-American obligations on the basis of which the nations of this hemisphere developed a system of defense to meet the challenge of Axis aggression." He insisted that "unless we now demonstrate a capacity to develop a tradition of respect for such obligations among civilized nations there can be little hope for a system of international security, theoretically created to maintain principles for which our peoples today are sacrificing to the limit of their resources."

On January 5, 1946, Assistant Secretary of State Spruille Braden, speaking on an official State Department broadcast, again branded the present regime in the Argentine as Nazi, and explained its ability to stay in power in the following terms: "They have the police, an important section of the army, armed action groups, and a typically National Socialist program, not excluding the old formula of bread and circuses for the millions. Following recognized Nazi tactics, they secure control of certain strategic labor unions, take over the transportation facilities and a few important unions. With the help of the police you can control a nation."

We submit that the United Nations in proof of its intention to protect world peace, should act at the earliest possible moment to brand the Peron regime as an enemy of peace and security, and as such, to suspend it from the United Nations. Such an undertaking by the UNO is clearly an act of self-protection which will be supported by freedom-loving peoples everywhere.

The millions of casualties of World War II should guard the conscience of the world against a new appeasement. The time to act is now.

Governor Tobin's Address on Kosciusko Bicentennial

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Governor of Massachusetts:

As Governor of the Commonwealth of Massachusetts I am grateful for the opportunity to address our tens of thousands of citizens of Polish birth or ancestry who are observing the two hundredth anniversary of the birth of Thaddeus Kosciusko.

May I add that not only our people of Polish blood but all other true Americans revere the memory of the great apostle of freedom who was born on February 12, 1746. We revere his memory not only because of his heroic service to the Colonies in their struggle for independence, but also because he symbolizes mankind's incessent aspirations for liberty the world over. As Kosciusko himself remarks on one occasion: "I have never fought except in the cause of human freedom, and I can never serve in any other cause."

The early life of the great hero was spent in the happy surroundings of a typical Polish home—a home that was relatively poor in this world's goods, but rich in spiritual resources. His father was a notary and was highly respected in his community for his excellent character. The family was noted for its domestic virtues, and the children were encouraged to improve their minds through study.

Thaddeus was an apt pupil, especially in military engineering, and was graduated with honors from the Royal Military Academy at Warsaw, the Polish West Point, in 1768.

A few years later, when Kosciusko learned that the American colonists had taken up arms in the defense of their God-given rights, his innate enthusiasm for the cause of human freedom impelled him to cross the ocean at his own expense, and to volunteer his services to the Congress of the young Nation.

Kosciusko's career in the American Army gave ample evidence of his superior abilities. To him were entrusted many of the most responsible tasks, and his special talents in the building of fortifications proved invaluable. He was engaged in the building of defenses at Philadelphia, at Ticonderoga, at Saratoga, and finally at West Point.

In every instance the superlative skill of the Polish officer won the immediate and complete confidence of his fellow officers and the men in the ranks. Moreover, historians are unanimous in the opinion that the tactics and the fortifications planned by Kosciusko were one of the major factors in the success of General Washington's armies.

In particular, the work done by Colonel Kosciusko at West Point was of vital importance. Washington himself emphasized the strategic value of this position and urged that the best available intelligence and ingenuity be employed to erect the necessary redoubts.

The best available intelligence and ingenuity proved to be Kosciusko's, so to him was assigned this critical task. His accomplishments won high praise from Washington and the members of the staff. General Armstrong declared: "Kosciusko gave the fortifications such strength that they frightened the enemy from all temptation of even trying to take the highlands." To appreciate

the full meaning of that statement one must realize that if the enemy had succeeded in capturing West Point, the situation of our American forces would have been extremely desperate. Indeed, it has been stated that Kosciusko's outstanding work at West Point was one of the really decisive elements in the eventual triumph of Washington over the British.

No wonder that the commander in chief and other American generals, as well as the Congress and many leading citizens of the new Nation, vied with one another in paying sincere tribute to Thaddeus Kosciusko. George Washington never lost his admiration for the valiant Polish hero. Thus, when Kosciusko returned to the United States for a visit in 1797, his former commander wrote: "I welcome you to the land whose liberties you were so instrumental in establishing. No one has a higher respect and veneration for your character than I have."

And with similar appreciation Thomas Jefferson said of Kosciusko: "He is as pure a son of liberty as I have ever known, and of that liberty which is to go to all, and not to the few or the rich alone. The mass of our countrymen have the highest attachment to his character."

Rightly, therefore, we celebrate the two hundredth anniversary of the birth of this extraordinary man, this noble-hearted son of Poland whose devotion to the ideals of human liberty has been an inspiration to every genuine American since the dawn of our country's independence.

But even as we eulogize the character and the achievements of the great Kosciusko, and as we call to mind the splendid accomplishments of Polish Americans through all the years of our Nation's history, our thoughts turn naturally to the distressful situation in which Poland finds iself today.

A recent copy of the bulletin issued by the Polish American Congress describes the plight of Poland so graphically that no right-thinking person could fail to be dismayed at the manner in which Poland's rights have been ignored.

It is a tragic commentary on international diplomacy that the world conflict which brought victory to Poland's allies brought defeat and loss of her independence to Poland—Poland, which was the first nation to fight against Hitler, and which contributed so much to the common victory.

As the former Polish Ambassador to the United States remarked on July 6, 1945:

"The fate of Poland will be better understood when it is realized that even defeated Nazi Germany loses less through this war than Allied Poland has been forced to give up. Moreover, Poland has been left under the uncontrolled occupation of a foreign power which is imposing upon her a government and a political, social, and economic system that are alien to her.

"Poland's record as a fighting member of the United Nations during this war is unassailable. Her armed resistance to German aggression in September 1939 gave to France and Great Britain the time necessary to prepare their defenses. Later her army, navy, and air force fought in Norway, France, in the Battle of Britain, in Africa, Italy, Normandy, Belgium, Holland, and Germany, while her underground home army performed miracles of sabotage."

We all know that while the war lasted Poland's resolute efforts were frequently lauded by her allies. She was called the inspiration of nations and was given numerous promises of independence after the cessation of hostilities. Now that victory has been won, who can explain to the courageous Poles that the principles for which they and the other peoples of the United Nations fought are not to be applied to Poland herself? Who can convince the Poles that their nation should be carved up or realined to suit the purposes of mightier neighbors, in defiance of the principle of self-determination for small nations?

Justice demands that Poland be accorded her rights, chief among which is the right to a free and unfettered election by the Polish people themselves, to establish their own government on their own terms.

As Governor of Massachusetts it is my earnest hope that this situation will be settled, not upon the basis of political expediency, but upon the basis of liberty and justice. America was founded upon that basis; America has gone to war in defense of those ideals; America wants to see those ideals applied in the case of gallant Poland. Only then can we hope for the establishment of permanent peace; only then will the principles for which we have waged and won a global conflict be vindicated before the nations of the world.

That is my message to all of our splendid citizens of Polish birth or ancestry as I join with them in honoring the memory of Thaddeus Kosciusko. Let us earnestly hope—yes, let us fervently pray—that liberty and justice may not be denied to the Polish people, the pages of whose history have been crimsoned with the blood of countless martyrs to the freedom of their fatherland.

God grant that the indomitable spirit of Kosciusko may hearten his compatriots in this, the most recent of their tragic travails. May the memory of this valiant son of Poland be a source of strength to those who share his nationality and who likewise share his zeal for his country's independence.

May I conclude my tribute to this gallant soldier, whose bicentennial we are now celebrating, by quoting from a beautiful tribute composed by the masterful poet, Keats, in December 1816:

"Good Kosciusko, thy great name alone
Is a full harvest whence to reap high feeling;
It comes upon us like the glorious pealing
Of the wide spheres—an everlasting tone.
It tells me that on a happy day,
When some good spirit walks upon the earth,
Thy name, with the great of yore
Gently commingling, gives tremendous birth
To a loud hymn, that sounds far, far away
To where the great God lives forevermore."

Our Martyred President Lincoln

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. BLACKNEY. Mr. Speaker, America is especially rich in her heritage of great men, and for that reason the month of February has always been to me a sacred month, because it is the birth month of Washington, the Father of his Country and the founder of its Constitution, and of Lincoln, the savior of his country and of its Constitution.

Emerson in his very delightful essay on self-reliance, says:

Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time to accomplish his destiny, and mankind seems to follow in his footsteps as a train of clients. A man, Caesar, is born, and for ages after we have the Roman Empire. Christ is born and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man.

If Emerson's statement is true, and it is, then America is the lengthened shadow of Washington and Lincoln and those other distinguished men that have helped to found and perpetuate this great Republic of ours.

Just 9 years after the death of Washington a babe was born in a log cabin in the lowly hills of Kentucky; a babe that was destined to continue the work that Washington had started.

Born in the lowliest of circumstances, under the most abject poverty, the boy Lincoln grew to greatness, attending school less than one calendar year, and yet acquiring an education in the broader and better sense that has awakened the admiration of the world.

The question is often asked: Where did Lincoln get the beauty and the glory of his English? The answer is, From the beauty and simplicity of the Bible, from the grandeur and the glory of Shakespeare.

From his earliest boyhood he was a constant reader, walking many miles to secure books, studying them carefully, and making the thoughts of the author and the language of the author ofttimes his own thought and his own language. Lincoln's Gettysburg Address will always stand as a specimen of pure English, and the occasion upon which this address was delivered has long been impressed upon my mind.

You will recall that after the Battle of Gettysburg, the State of Pennsylvania and the National Government created a national cemetery which was to be dedicated on November 19, 1863. The Honorable Edward Everett, then probably one of the greatest orators in America, was to deliver the principal address, and President Lincoln was invited to be present.

A large platform had been erected at the cemetery, and 20,000 people gathered there to hear Edward Everett, the great orator of the day. For nearly 2 hours Mr. Everett held the audience spellbound by the power of his eloquence and the beauty of his English, during which time, it is said, Lincoln sat upon the platform, part of the time with his head bowed in his hands, apparently saying to himself, "What can I say to this splendid audience after this great orator is through?" At the conclusion of Mr. Everett's address round after round of applause was given him.

Then President Lincoln was introduced; he walked to the front of the platform, stood there for a moment with his head bowed and his eyes dull, and even Lincoln's friends wondered just what the President could do under the circumstances. Then President Lincoln's form was drawn to its full height. Into his dark eyes came the light of liberty, and for 4 minutes, and 4 minutes only, the President delivered an address the like of which is probably unknown in the English language.

At the conclusion of that address no applause was given, but the reason was apparent. You do not cheer a prayer, you do not applaud a benediction, and

Lincoln's Gettysburg address was both a prayer and a benediction.

The language of Lincoln's Gettysburg address is known practically to every adult schoolboy in America, and the beauty of the English therein has awakened the admiration of the world; let us quote the following from this wonderful address to get the spirit thereof:

It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth.

As I study the life of Lincoln, two great thoughts become apparent. First, Lincoln taught the doctrine of opportunity, and his whole life illustrates the thought that one can accomplish great things if he is willing to work, regardless of the circumstances under which he works. Hundreds of thousands of young men each year since the death of Lincoln have received an inspiration from his life, and by that inspiration have surged ahead regardless, in many instances, of the lack of their own education.

A love of books permeated Lincoln's life and a love of books and literature implanted in the minds of the youth of our land cannot help but develop them to better and greater things.

Second, he loved the American Constitution, and his whole life was devoted to a reverence of that great document.

Lincoln's whole concept of the Constitution, the great love he had for it, and the place he thought it should occupy in the minds of Americans is well illustrated in Lincoln's own language, where he says:

As the patriots of seventy-six died to support the Declaration of Independence, so to the support of the Constitution and laws let every American pledge his life, his property, and his sacred honor.

In these days when old landmarks are being removed and when we are inclined to look slightingly upon many of the great principles of this Government of ours, which have become our heritage, should we not pause and give heed to these words of Lincoln and renew our faith to our Government and to our Constitution? This House of Representatives and the millions of people representing this Nation all owe to that Constitution their complete allegiance and support.

In conclusion, I wish to give two of my favorite quotations with reference to Lincoln, one by Joseph Fort Newton, in which he says:

Tall, angular, homely, eloquent; a child of the South, a leader of the North, who grew up in the back yard of the Nation; the son of a pioneer untrained in schools; a village fabulist, postmaster, and country lawyer; hater of slavery and lover of men; a humorist with a heart full of tears; a logician with a soul of pity and pathos; a high priest at the altar of blood and fire and terror, unbendingly firm, incredibly merciful, infinitely patient; a martyr in the hour of victory; the tallest soul of his time—Lincoln, the savior of his country.

But my favorite quotation, the one that I think presents the finest summary of Lincoln's life, was given by the great Spanish statesman and orator, Emelio Castallar, who, in reviewing the life of the immortal Lincoln and the great things accomplished by him, said:

And when the slave evil became more virulent, when the slave holders uttered their war cries, and the slaves their groans of despair, the woodcutter, the boatman, the tall son of the great West, the descendant of Quakers, the humblest of the humble in his own conscience, the greatest of the great in history, ascends the Capitol, calm and serene in his conscience and his thought. Before him, a veteran army; behind him, hostile Europe; England favoring the South, France encouraging reaction in New Mexico, in his hands a riven country.

He arms 2,000,000 men, gathers a half million horses, sends his artillery 1,100 miles in 1 week from the banks of the Potomac to the shores of the Tennessee, fights over 600 engagements, reenacts before Richmond the deeds of Alexander and of Caesar, and after emancipating 3,000,000 slaves, that nothing might be wanting, he falls at the moment of victory, like Christ, like Socrates, like all redeemers, at the foot of his work. His work, sublime achievement, over which humanity shall eternally shed her tears and God pronounce His benediction.

Wheat Problems

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I am including a wire received from Mr. M. W. Thatcher, president of the National Federation of Grain Cooperatives, of St. Paul, Minn.

The National Federation of Grain Cooperatives represents over 500,000 cooperative grain farmers in the central section of the United States. They are thoroughly familiar with the wheat problems of the Grain Belt and I urge that these suggestions be given consideration by the administration:

ST. PAUL, MINN., *February 11, 1946.*

Hon. FRANK CARLSON,

Member of Congress, Washington, D. C.:

After discussing the President's wheat program for 2 days, and after hearing it explained by a representative of the United States Department of Agriculture, the annual convention of the National Federation of Grain Cooperatives, meeting at Chicago, February 8–9, wired the President the following message: The federation represents over 500,000 cooperative grain farmers from the Canadian border to the Gulf, and from Ohio to the Pacific. "To effectively handle the wheat emergency and make available the maximum amounts of food possible for other nations' needs, the National Federation of Grain Cooperatives believes there are some realistic requirements which must be immediately understood and met: (1) The railroad-transportation system is broken down so far as the immediate requirements are concerned; we as practical operators can demonstrate that fact; (2) transportation equipment exclusively directed to wheat to the exclusion of feed grains will defeat the wheat program because of spoilage from wet corn and other grains needed for the total feed program; (3) more than half the wheat is on the farms, not enough wheat will move off the farms unless the future of ceiling prices and OPA is determined now. Too many farmers will not market both their inventory and the coming crop because of the income-tax burden which would fall upon them in 1 year. Farmers would loan wheat and feed grains to the Government if protected by a program to assure 90 percent of parity price and to permit the farmers to elect the year for price determination and sale."

Respectfully yours,

M. W. THATCHER,

President, National Federation of Grain Cooperatives.

Palmer Hoyt

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian, Portland, Oreg., of February 6, 1946:

A PUBLISHER FOR THE POST

In becoming editor and publisher of the Denver Post, Palmer Hoyt accepts a highly challenging opportunity.

It is not merely that the Post is one of the country's most valuable properties, with a remarkable circulation. There is also the unique fact that it is the dominant publication over a wider area than can be claimed by any other paper. From the Missouri Valley to the Cascade-Sierra Nevada barrier, and from Canada to Mexico, Denver is the only class A city (over 300,000) and the Post is the only class A newspaper. Thus the Post is the logical claimant to spokesmanship for the entire intermountain region. (The strategic position of Denver may be judged from the fact that it has more Federal offices than any city except Washington, D. C.)

It is complimentary to the Oregonian, of course, that the owners of the Post, surveying the Nation's newspaper operations for a successor to W. C. Shepherd, retiring because of his years, should have come to this paper and to Mr. Hoyt. But it is not surprising—certainly not to our readers, to the Northwest as a whole or to the Nation's press. During the period when Mr. Hoyt served as managing editor, from 1934 to 1938, and since he has been editor and publisher, from 1938 until the present, the Oregonian has more than kept abreast of the times and has progressed dramatically in public acceptance and approval.

Modern typography and format have been adopted but without sacrifice of a traditional dislike for sensationalism. Editorial comment has been strictly separated from news coverage but without modification of the editorial forth-rightness which our readers have learned to expect and respect through nearly a century. There has been a liberal outlook but with a strong love for that individual enterprise which built America and in particular built the West. As a consequence there have been many honors. Most important has been the confidence of the people. But the honors also have ranged from a Pulitzer prize to the University of Missouri award for distinguished service.

Meanwhile Mr. Hoyt has found time for varied public activities. Notably, as the original war-bond administrator for Oregon he set up the organization which ultimately, through Ted R. Gamble, became the model for the Nation, and which kept this State at the head of the bond list throughout the war. Then he himself went to Washington for 6 months as Director of the Domestic Division of the Office of War Information—a most successful 6 months. And there have been many other activities, local and national.

But when all this is said, it is still only the cold, black-and-white record. So far as the Oregonian's hundreds of employees are concerned, and Mr. Hoyt's thousands of acquaintances on the outside—all of whom call him "Ep"—he will be remembered longest for his unmatched capacity for friendship. For this he becomes a permanent tradition among the newspaper fraternity of Oregon.

There will be no misgivings here as to his personal and professional success in Denver, or as to his ability to make the Post increasingly accepted as the voice of the intermountain States. We wish him the best. And all who know him will envy Denver his company.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. SAVAGE. Mr. Speaker, I wish to express my great admiration for Abraham Lincoln on this anniversary of his birthday by including with my remarks an editorial from my home-town paper, the Shelton-Mason County Journal, Shelton, Wash., of Thursday, February 7, 1946:

ABRAHAM LINCOLN

Although more than four score years have passed since that fateful night in April 1865 when an assassin's bullet cut short the earthly career of Abraham Lincoln, his place in the hearts and minds of his countrymen as one of the Nation's great heroes was never more secure

This tall, gaunt man with the deep-set, brooding eyes, who was born in a humble log cabin and rose to the highest office in the land, was no ordinary individual. Yet few persons in American history have so embodied the noble qualities of the common man as did he.

His genial wit and wisdom, his simplicity and earthiness, his patience and humility—his love of country and humanity—these were the things that have so deeply endeared him to the people of America.

A cold appraisal of the historical records reveals that Lincoln possessed no magic powers, and that at times he was bewildered, indecisive, and blundering. Sometimes his moods probed the depths of depression; at others, they scaled the heights of inspiration.

But through it all—through the ebb and flow of his spirits, his political and family fortunes—his true greatness gradually emerged until it reached full expression and marked him as an outstanding figure of the ages.

In observing his one hundred and thirty-seventh birthday anniversary on February 12, the American people honor him as the preserver of the Union, as the friend of all humanity.

Statement of Hon. John W. McCormack, of Massachusetts

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. BARRY. I concur, and I am sure all good Americans do, in the following statement of my distinguished colleague the gentleman from Massachusetts [Mr. McCORMACK]:

The baseless charges in the Soviet-controlled newspaper Izvestia that the 32 new cardinal-designates, and particularly the attack on Cardinal-Designate Spellman, of New York, were selected to spread reactionary policies throughout the world could be ignored if it were not for the vicious spirit behind such attacks.

Everyone knows when Izvestia writes it is the Soviet Union speaking. This unnecessary, false, and malicious attack follows a number of others made against the Catholic Church. It appears to be part of a deliberate plan of misrepresentation aimed to divide the people of countries where western civilization exists. These attacks and other actions of the Soviet Union are causing many who believe in world peace to wonder if the Soviet Union is sincere.

To defend the Catholic Church is unnecessary. To expose the reason for the false attack is necessary.

It seems to me the Soviet Union is trying to prevent world peace through international action. This and past attacks, contrary to the truth, are the wrong journey to take to contribute to future world peace. Not only are they false, but they are provocative; they show a dictatorial attitude and an attempt to impose the will of the Soviet Union on the rest of the world. Stalin and those associated with him ought to learn the lessons of history.

Americans of all creeds respect Cardinal-designate Spellman. He occupies a position of respect and affection in our minds. Reactionary? Cardinal Spellman is the opposite. He has always been a leader, as a priest, as an archbishop, and he will be a leader as a cardinal in progressive and humane activities.

The result, if not the purpose of such attacks, is destructive—in that they try to divide the forces of decency throughout the world, and such attacks impair the chances of future world peace.

It is not within my province to give advice to Stalin, but if he used common sense and if he wanted to make a real contribution toward permanent peace and progress he would cause such attacks to cease and instead of attacking he would try to reconcile.

Army Demobilization

EXTENSION OF REMARKS
OF
HON. JOHN W. FLANNAGAN, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. FLANNAGAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein an excerpt from a letter written by one of our soldier boys. This boy is a well balanced young American and has a splendid American background. The statements he makes and the questions he asks cannot be lightly dismissed. I hope Secretary of War and other policy-making officials in the War Department will give serious thought to the statements made in the letter and the questions asked.

The excerpt from the letter is as follows:

Today's Stars and Stripes is full of unhappiness, and has prompted me to write and ask you to send me such things as will make the next 10 or 12 months more bearable. We had begun to delude ourselves into believing that we'd soon be home, but that was foolish. Last fall, when General Marshall announced that beginning in March men with 2 years' service would be eligible for discharge, it was something to look forward to. * * * Now the Secretary of War is quoted in Stars and Stripes in reference to 2-year discharges in March: "I didn't know that was the case." Someone should have introduced the Secretary of War to his former Chief of Staff. * * * We are trying to avoid the Battery Club with its cognac and women, both of the worst imaginable quality. Of the six men in our house, three of us have managed to avoid the place most of the time. * * *

In my letters home I've tried to avoid complaint, or even mention of how all of us feel, and how I in particular feel, about the Army. My reasons for doing this have been several: I didn't want to cause you to worry too much about me, I didn't think it would do much good to be complaining constantly, and I hoped that when I did blow up that you would realize that it was something more than self-pity. Here goes. Several days ago the Secretary of War made a public statement to the effect that (1) he didn't know (10 months after its inception), how the point system works; (2) that his Chief of Staff was an irresponsible man whose public promises were of no interest to the Secretary; and (3) that regardless of the fact that the Navy had announced it was retiring several troop transports as surplus, that the only reason for failure to ship men from the Pacific was the lack of ships. Each of these statements was made before a different group (at different stops on his world tour) but the next day's paper printed his claim to have been misinterpreted or misquoted (he apparently didn't know which).

The same paper carried other statements of others present at one of the press conferences (about points) confirming the Stars and Stripes quotation and interpretation.

Then everyone began talking about how we still have a big job to do, how we must not withdraw from Asia and Europe without fulfilling our world obligations. What soldier has ever denied that? I know we can't pull our forces out of here for years. So do almost all of the men over here. What we have asked is: Why must we who have already suffered years of humiliation and torment do the job? Why cannot we now be replaced, and why conditions cannot be made steadily better, instead of steadily worse? First-class mail which used to take 6 to 10 days takes 20 to 40 days now. During the war we had—here in Europe last spring and summer—plenty of good fresh food. Now we have a menu of dehydrated eggs, boiled macaroni, Spam, either no butter or canned butter which tastes like face cream and bologna. The wonderful education program has died quietly—except for a few schools with a total enrollment equal to about 2 or 3 percent of the troop strength—and has been replaced by spasmodic, disorganized attempts to begin basic training again.

Our officers treat us with less consideration than ever, which is pretty bad. * * *

To such complaints Truman replied today that the emergency is more critical than at any time during the war. He should tell that to the draft boards, especially those boards like No. 2 of Rushville, Ind., which resigned last summer and those which are supplying hardly half of their quota.

If the War Department is doing such a wonderful job, why, even if the Secretary doesn't quite know what it's all about, can't they come out and tell us what they are doing and what they will do? If they have no replacements, why are men with 20 points or less being discharged as surplus?

Lincoln, Friend of Labor

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. PRICE of Illinois. Mr. Speaker, today we observe the anniversary of the birth of one of America's greatest men, Abraham Lincoln.

In looking into history, studying the life of Lincoln, and reading with great interest his many words of wisdom, I came upon these words of the Great Emancipator which would certainly be timely today:

I am glad to see that a system of labor prevails under which laborers can strike when they want to, where they are not obliged to work under all circumstances, and are not tied down and obliged to labor whether you pay them or not. I like a system which lets a man quit when he wants to, and wish it might prevail elsewhere.

I am certain that if Lincoln were serving in this body today he would be aligned on the side of the progressive, liberal men who believe in the supremacy of human rights. I am sure that under the leadership of a Lincoln the men who like to claim him as the symbol of their party would have been persuaded to vote against the vicious, antilabor legislation known as the Case bill, which was passed in this House just a few days ago.

Throughout the Nation today, party orators will be singing the virtues of Lincoln—and they have a fertile subject. But the sad thing is that most of them will ignore, both in their speeches today and in their votes in Congress hereafter, Lincoln's liberal and progressive ideas.

Eighty-fifth Anniversary of the Oregonian

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian, Portland, Oreg., of February 4, 1946:

AT THE AGE OF 85

It is with no disposition to complacency that the Oregonian today completes its eighty-fifth year of daily publication. There is little time for relaxation and self-congratulation for an institution which deals so intimately in the lives and fortunes of the community and the region, and in which its own success is interwoven. These are times as challenging as those tense days before the Civil War when the late Henry L. Pittock put the first edition of the Daily Oregonian to bed.

No oldster in carpet slippers, the Oregonian keenly anticipates the economic and social changes which lie ahead. It is better prepared than ever before to keep the people informed, swiftly, reliably, and without bias, of the newsworthy happenings of the Pacific Northwest and of the world. It will continue to express its opinions, boldly and independently, in the tradition of the late great editor, Harvey W. Scott, on the editorial page.

The Oregonian soon will be a centenarian. Most of the 600 residents of Portland gathered around a big bonfire at Front and Morrison Streets the night of December 4, 1850, when Thomas J. Dryer printed the first edition of the Weekly Oregonian on a Ramage press in a frame shack. The weekly was not suspended until March 30, 1922, though for many years it was overshadowed by the daily, and by the Sunday Oregonian which came into being on December 4, 1881.

Mr. Pittock went to work as an apprentice printer in 1853, became the owner in 1860 and on February 4, 1861, started the daily. At that time, Portland's population was about 3,000, and the Oregonian was the fourth daily. The Commercial Advertiser and the News were well established, and the Times, learning that Mr. Pittock was in San Francisco to order a new press, launched its daily during this absence. Obviously, the field was too crowded.

The enterprise, imagination, fair, and thorough presentation of news, and sound business policies which permitted the Oregonian to outlive scores of competitors through the years were demonstrated from the beginning by Mr. Pittock.

The Civil War was shaping and Mr. Pittock took immediate steps for the best possible coverage of military and national news. While the other newspapers were content to get their dispatches from San Francisco by monthly steamer, the Oregonian arranged for news by telegraph from San Francisco to Yreka, pony express to Jacksonville, and stage to Portland. The Oregonian stood stanchly for the Union, while the Commercial Advertiser became a semidemocratic secession paper and lost most of its following in loyal Oregon. The other papers were indecisive, editorially.

But aside from policy, Mr. Pittock was a businessman, enterprising, fair, and honest in all his dealings. At the close of many a week he went home without a dollar in his pocket, but his employees had been paid in cash. Fifty years after the daily was started, Mr. Pittock recalled: "The Times people didn't attend closely to business. One of them played the violin and the other the bass viol at social functions; I played neither the violin nor bass viol; but I kept at work." The rivals soon folded.

Perhaps the hardiest opposition of the early days of struggle came from Railroad Builder Ben Holladay's Oregon Bulletin, which lasted from 1870 to 1875, when Holladay's foreign capital was exhausted. The Oregonian was caught, too, in the senatorial struggle between H. W. Corbett and John H. Mitchell, the latter backed by Holladay. Mr. Pittock temporarily lost majority ownership of the Oregonian, but regained it later, when Mr. Scott became a partner.

The Oregonian's liberalism in the early eighties, when it vigorously opposed driving out the Chinese, resulted in threats to burn the printing plant and the formation of a mob which stormed around the building but dispersed without causing damage. "The election that year hinged on whether or not Governor Pennoyer should have a Chinaman wash his shirts," Mr. Pittock recalled dryly.

The strong, clear editorials of Editor Scott, one of America's foremost scholars, established the Oregonian as the great newspaper of the West. The newspaper was in the forefront of every effort to develop the region. Mr. Scott's penetrating editorials against free silver, in opposition to the community sentiment for cheap money, helped keep Oregon in the Republican column when neighboring States sailed for William Jennings Bryan for President in 1896.

The Oregonian today, as in the beginning, continues to stand up and be counted on any issue which affects the welfare of the thousands of persons it serves. It is proud of its position in the community, and it will continue to put forth every effort to merit the confidence of its subscribers.

Strike Settlements

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Council of the City of Mansfield, Ohio:

Resolution recommending settlement of strike at an early date

Whereas wages during the war emergency were stabilized to prevent inflationary trends; and

Whereas since said emergency has passed wage earners have suffered a cut in take-home pay through shorter workweek, downgrading from higher to lower grade, skilled jobs, and decrease in incentive earnings; and

Whereas there has been a steady rise in the cost of living since January 1, 1941; and

Whereas this combination of circumstances has caused wage earners an insufferable loss in real wages and lower standard of living: Now, therefore, be it

Resolved by the Council of the City of Mansfield, State of Ohio, That in the greater interest and welfare of the community at large, council recommends that industry and labor engage in collective bargaining in good faith to the end that accord and a satisfactory agreement be reached at an early date by granting a fair and substantial increase in pay.

Passed February 5, 1946.

W. E. BRADFORD,
President of Council,
Mansfield, Ohio.

Approved:

ROY W. VAUGHN,
Mayor, Mansfield, Ohio.

Attest:

CHARLES J. STECKER,
Clerk of Council,
Mansfield, Ohio.

The FBI

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. BARRY. Mr. Speaker, I seriously recommend the reading of the following article on the FBI, written by Mr. George E. Sokolsky and which appeared in the New York Sun on February 8, 1946. I doubt that even the fanatical Russia-first group in America can stomach J. Edgar Hoover being referred to as Himmler's understudy:

THE FBI

(By George E. Sokolsky)

The Daily Worker, organ of an alien international conspiracy for the destruction of American democracy and the substitution for it of a world revolution, recently produced an editorial entitled "Himmler's Understudy."

And by Himmler's Understudy, the Daily Worker means J. Edgar Hoover, an American if ever there was one, whose services to his country equal those of our best generals and admirals. Utilizing the technique of the smear amalgam, by which it is possible to denounce a man by association with unrelated symbols, the Communist organ says:

"Hoover slanders the American Communists as 'foreign agents.' This is the old gag. In England, the Tories used to say that 'communism' came from 'radical America.' In Czarist Russia the police used to say that 'communism' came from Germany, while in Germany the police used to cry it came from Russia."

It does not matter to Americans where England or Czarist Russia or Germany said communism came from. What does matter is that a systematic, insidious, undercover campaign is being waged against J. Edgar Hoover, against the FBI, against all the effective agencies in this country for national defense and security against an alien conspiracy designed to destroy our way of life, our political, social, and economic institutions.

Mark what this same editorial says:

"Communist parties, organizing the people for the establishment of a higher social system, socialism, defend every democratic liberty and every economic measure beneficial to the people. They arise wherever there is poverty and exploitation."

This is said of the United States of America, the country which, after two wars in a quarter of a century, still has the highest standard of living on earth, whose people live in freedom under the law, protected by a free press, and possessing savings of $163,000,000,000 which is their own, to do with as they choose, without Government interference. This is the country that gave to Europe and Asia as a gift $40,000,000,000 in lend-lease, including $10,800,000,000 to Soviet Russia, a poverty-stricken country, so backward that it still employs slave labor.

The Daily Worker, existing in the freedom of America, publishes this denunciation, using the words "poverty and exploitation" as a vile comparison in a fight against J. Edgar Hoover and the FBI. They hate the FBI because it alone of intelligence agencies rejected Communists during the war. They got into the State Department and the Army, and while some were shielded by the secrecy of actual membership, others disclosed their affiliations and were even defended by their superiors in such an agency as the OSS. The FBI kept them out because it is a permanent bulwark of national security.

We are all accustomed to the kind of war that is associated with armies and navies, with airplanes, submarines, and bombs. But most of us do not recognize the insidious and prolonged warfare that undermines a country as termites eat away the sills of a farmhouse. It is warfare that goes into the schools and colleges, that makes labor unproductive, that dissipates national energy in internecine strife, that cultivates bitterness between majority and minority groups, that breaks down national unity by making the entire nation class and group conscious. It is a warfare that goes on day and night, enlisting sentimental people as aids over particular issues but soon engulfing them in its destructive program. It is a warfare that corrupted France before the Nazis conquered her, that has resulted in puppetizing a large number of nations in Europe.

A nation should protect itself from this warfare as from foreign armies and navies. It should fight it by every means at its disposal. Only a cowardly people avoids this fight. Only a cowardly people refuses to see it when it is so apparent and obvious.

Is the FBI essential? It seems to me that the FBI should receive from Congress the largest appropriation in its history—so large that it can really serve America competently in this fight.

Make Democracy Live

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, for many years now, this distinguished House has been plagued by a dangerous growth, which has now become almost cancerous in character. It used to be called the Dies committee. Through some very clever parliamentary manipulating, the committee has been made a permanent body of the House. I'm sure that all of us were shocked recently when we heard Drew Pearson's report on the air that the counsel for this committee, Mr. Ernie Adamson, had written a letter condemning the use of the word democracy at the end of each one of Drew Pearson's broadcasts, when the distinguished commentator says, "Work, fight, give. Make democracy live."

Mr. Speaker, this is as un-American an activity as I have ever heard. I say that Mr. Adamson is unpatriotic and un-American-minded when he uses his position in this manner. Let us leave it to the Hitlers, Tojos, and Mussolinis to sneer at democracy. It was tactics like these which brought Europe to its knees.

I was gratified to see that a gentleman on the other side of the House, Mr. MUNDT, of South Dakota, has now seen fit to repudiate Mr. Adamson's stupid and vicious activities. I hope that the other members of the committee will once and for all clean their own house before they further besmirch the good names and high ideals of millions of Americans who believe in democracy. Mr. Pearson is to be congratulated for his exposure of such un-Americanism in our midst.

GI Writes His Congressman of Ambitions To Help Humanity

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. DOYLE. Mr. Speaker, when I was home in the Eighteenth Congressional District of my native State of California for a few days this Christmas recess, I met with and spoke to a considerable number of men and women who are members of the American Veterans' Committee at Long Beach, Calif. It was an evening affair and they not only listened to me, but they asked questions. It was a group I had never met with before, nor had I met any of the group leaders. The following letter from John Baker, president of the Veterans' Committee, seems to be so inspiring and indicative that it is well worth the reading by anyone. Here it is:

AMERICAN VETERANS' COMMITTEE,
LONG BEACH CHAPTER,
January 10, 1946.

DEAR CONGRESSMAN DOYLE: This will be both a bread-and-butter note and a personal letter.

First of all, on behalf of the membership of our chapter and myself, many, many thanks for your taking time off from your duties and well-deserved rest to speak to us last week. We all appreciated the fact that you have been so swamped that your time can be measured in value. But, more important, we appreciate the fact that your measure of our worth (in the future) warranted your criticism, comments and suggestions, and your obvious sincerity. Again, we thank you.

I go next month to the University of California to begin a course in social and political philosophy which will last 7 years. I am now 25 years old, which means I shall be more than 30 when I begin my active career.

At 21 I entered the Army with no idea of the future, knowing only that the world was certainly a queer mess. Now, I have, at least, a vague goal and an overwhelming desire to get there. That goal is to help humanity attain a spiritual equality with its technological advance.

I don't know yet how to do this but I do know that until the desire for money, material comforts, and social position, is subordinated to the quest for moral values such spiritual quality will not be attained. If that means a different economic system, so be it. The only factor to consider is any change or continuation is the individual, or collectively, the people.

The people are everything: nothing is without the people. That is why I have faith in AVC and why I work for it as an organization that must be successful. It is an organization of, by, and for, its members (potentially 12,000,000 people) as members of humanity.

It is hard for a young person to realize that an older person can or does have any awareness of change and youth's values of life. When we find such an older person we look to him for guidance and leadership. I know that you will not fail the people.

Be assured that your son and our comrades did not die in vain. Good luck.

Sincerely,

JOHN BAKER.

Can We Have a Democratic Army?

EXTENSION OF REMARKS
OF
HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I desire to call attention of the Members to a provocative article, Can We have a Democratic Army? by Benjamin J. Atlas, able veteran Washington correspondent, which appears in the March issue of Everybody's Digest.

Mr. Atlas' article raises sharply the criticism of our armed services which we have heard from so many of our returning servicemen. Believers in democracy, having been reared in a great democratic tradition, these men were taken from their normal lives and made a part of our wartime Army. They reject the term "people's" army, since while it was an army of the people, it lacked the concept of democracy so dear to our people.

Just at the time when we are desirous of increasing our enlistments, Mr. Atlas' excellent article urges upon us full consideration of possible reforms within the ranks of our armed services. For that reason I call it to the attention of Congress. The article follows:

CAN WE HAVE A DEMOCRATIC ARMY?

(By Benjamin J. Atlas)

Maybe it's still a military secret. We've searched the public papers prepared by the brass hats. We've read their requests for a standing Army and Navy four times bigger than any in the Nation's peacetime history. We've examined their blueprints for training a million citizens yearly in addition to the Regular Army. We've combed their diverse other demands which have been driving Congressmen to the dispensary. But the brass hats still haven't shown that the peacetime Military Establishment will be shaped into a democratic one.

That's a mighty important detail. Practically all Americans who have been vocal on the subject agree that we ought to have an effective peacetime military body. At the same time, there is more than passing concern over whether or not that peacetime Army and Navy will practice democracy.

Many of our present and former GI's, for example, have been coming up with provocative questions. They want to know if the permanent military machine is going to be just a more lavish version of the archaic model that preceded Pearl Harbor. They want to know if it's merely going to mean an expansion of officers' country clubs and military caste. They want to know if it's going to be just a luxury Army of goldbrickers and bickering bureaucrats.

They want to know—because if these things are so, we are letting ourselves in for the fattest, most politically powerful, and most incompetent Army of professionals that every saddled a peacetime Nation.

The GI letters and cartoons in the late Yank, the popular Army weekly, were never more waspish than when dealing with the democratic shortcomings of our present Military Establishment. Without the slightest diminution in esteem and gratitude for the brilliant leadership that pressed the war to victory, the healthy GI gripes are a stern rebuke against the antidemocratic ways of the old Army mule and its Navy counterpart.

The GI quarrel is with the failure of the military professionals to broaden the chances for men to rise to leadership. The quarrel is with military caste. The quarrel is with the waste involved for the masses of men in a peacetime Army whose training objectives haven't caught up with the atomic age. The quarrel is with a static peacetime leadership that taboos instructing its men in the ways of people, government, and the world.

It might help if the brass hats—as well as Congress—studied for themselves a random few o. the GI thoughts from Yank and its fellow publications:

"We might as well face the fact that the Army, as we know it, is about the last place we should put our youth for character building."

"Few of us could deny that the bully and the toady get ahead in the Army. * * *"

"If the Army runs true to form, trainees (under universal conscription) will be so disgusted with Army stupidity and bungling, its politics, its crass caste system, and its undemocratic processes, that they will go out determined that they never will have to be in service again."

"What we need is to keep abreast of the mechanical and scientific aspects * * * and not to have a large Army that only knows how to make a bed for Saturday inspection."

"I was tol' that as a private I was not supposed to think, just do as ordered. Over here (Germany), a GI that didn't think wasn't worth a damn."

If the brass hats are familiar with complaints like those, their plans for the peacetime establishment don't show it. There's not a trace anywhere to indicate that the brass hats are willing to part with caste, politics, and all the other evils revealed in a rising mass of evidence from the military ranks. The democratic demands of the recent wartime mass Army apparently have failed to budge the professionals from their traditional leanings.

The Army and Navy Bulletin, an unofficial publication prepared by citizen reserve officers, has reported, for example, that selection of officers of the Regular Navy for flag rank (rear admiral or higher) "has taken on some of the aspects of a popularity contest." The procedure "has stimulated the well-known art of 'polishing the apple,'" wrote the critics, and "it has put a premium * * * on the social side of Navy life, on how many people you know—or don't know."

Wholesale discrimination by the professionals in the awarding of honors has been exposed by the same publication. Although the ratio of Reserves to Regulars in the Navy was nearly 10 to 1 up to last August, the Regulars received 3½ times more medals.

Despite the fact that the Reserves "played a major role in fighting the war and suffered a proportionate number of casualties," wrote the Army and Navy Bulletin, the pros received 27 times more Medals of Honor, highest decoration the Nation can give for heroism in combat. Not a single reservist had been awarded the Distinguished Service Medal, although 139 had been given to Regulars. And here is the pay-off: Officers received 13 times more medals than enlisted men, in proportion to their numerical strength.

The effectiveness of the peacetime Military Establishment is already jeopardized as a result of this kind of favoritism. A carefully conducted poll of Navy personnel, according to columnist Drew Pearson, has revealed that most of the enlisted men, including 90 percent of the Regulars themselves, are fed up with the system.

Only 5 percent of the gobs expressed willingness to stay in the service, according to the poll Pearson said was taken in consultation with experts from such well-established survey organizations as Gallup's and Elmo Roper's. Two-thirds of the men who wanted to get out and stay out gave such reasons as "caste system," "dislike of officers," "officers are heels," "enlisted man is always wrong," and "it's an officer's Navy." Sixteen percent cited regimentation and lack of freedom.

Not a single sailor complained of food, sea duty, danger, crowded bunkrooms or similar personal discomforts as a reason for wanting to cut loose from the Navy. Nor did the majority hope to make more money by returning to civilian life.

As though to set at rest the public's fears, brass hats have been talking vaguely about a peacetime citizens army. By all intelligent standards, their definitions of a citizens' army are hopelessly hollow. The War Department's idea of a citizens' army, for instance, is a comparatively small professional force backed by a big citizens' reserve, fed yearly from men in compulsory training. According to current plans, that comparatively small professional force is estimated conservatively at 1,500,000 men. Estimates run as high as 2,300,000.

Who will be the leaders of this record-size military outfit? The peacetime bigwigs will originate, as they always have, from such hallowed sources as West Point and Annapolis. There is nothing in the blueprints to indicate otherwise. Commissioning and advancement will continue to be influenced by social graces, seniority, family background, race, and religion.

The professional clique system stands as the most stubborn of all barriers to Army progress. In the interest of getting rid of the deadwood, the Army could take a leaf from the original prospectus of its wartime college specialized-training program. The prospectus called for selection of soldiers strictly on their merits for college work in specialized fields. Don't get the idea that the program was a thumping success. It definitely was not, in the opinion of reliable educators as well as military men. The aversion of old-line regulars to products of "book-larnin'" just about wrecked the show.

Furthermore, according to the records, there was plenty of bungling in the selection of the trainees. In addition, the colleges were kept largely in the dark, month after month, on what the program was all about and on how many soldiers were going to be trained.

In fact the Army's possible use of the traineess remained in the realm of inscrutable military mysteries to the high command itself. Relatively few of the graduates went on to commissioned grades. And tens of thousands of them wound up in assignments for which their college specialized training wasn't needed.

All in all, though, honest evaluation by the educators shows that the men picked for the training were generally superior. Anyway, there was something sound and, so far as the Army was concerned, completely novel in the original idea of picking a soldier-trainee on his own abilities without inquiring into his father's social achievements.

With characteristic inflexibility, the Army is refusing to reexamine not only its leadership processes but also its training standards for a peacetime organization.

The Army's training manuals are offering little to stir the democratic incentives of a soldier, whether he is to become a part of an international police force or whether he'll take a post at one of our domestic defenses. Peacetime GI Joe is learning how to repel or attack an imaginary enemy. He is learning about antiaircraft firing, handling a rifle, map-reading, chemical warfare, and use of grenades. He is being toughened by drill, marches, and bivouac. He is getting technical training, too, in a particular branch or service. He is learning how to be a cook,

a baker, a telephone lineman, or any one of the hundreds of other occupational specialties needed in a modern army.

All of this, as far as it goes, apparently is useful to a soldier. Beyond this, however, the soldier's training is at a standstill. Correspondence courses which are available to him are strictly in the category of sops to leisure time. Overseas university classes which the qualified soldier may attend are in the nature of temporary expedients for restless GI's waiting to be demobilized. These are not part of the Army's serious permanent training program.

As a step for preparedness and cooperation in a world whose dimensions have been reduced by jet propulsion and cosmic energy, the Army's training formula is far from adequate. It discounts the value of man's greatest weapon—the human mind. General Marshall himself has cautioned the Nation that "the German soldier-philosopher Clausewitz described war as a violent form of political action."

Anne O'Hare McCormick, New York Times correspondent, reporting from Germany recently on discontent and disinterest among GI's, observed: "This is the proof that they really did not know what they were fighting for and this in turn means failure somewhere to make the issue so clear that they could no question the cardinal importance of the watch on the Rhine."

Brig. Gen. William C. Menninger, director of the Neuropsychiatry Consultants Division in the Surgeon General's Office of the War Department, reported recently:

"The average inductee regarded his induction with a certain degree of fatalism—certainly with no enthusiasm. It was largely left to the Army to provide him with the conviction that the war was important. The absence of motivation contributed significantly to the high incidence of psychiatric casualties."

What is the incidence of psychiatric casualties from "lack of an ideal" in the peacetime Army? How grave will the consequences be in an armed force whose global responsibilities already surpass those entrusted to any previous peacetime armed body in all the world's history?

No army today can boast democratic aims without developing in its enlisted men something more than the skills required for firing a gun, saluting an officer, typing supply forms, or, for that matter, operating radar. The peacetime training objectives are in urgent need of revitalization.

The task is far too big for the brass hats. It requires borrowing—as the military pros finally did in World War II—the talents and resources of the civilian educators. To do otherwise would be to turn over to the brass hats a political instrument which, falling into evil or incompetent hands, could wreck democracy at home.

Congress, in planning a democratic Army, must decide now on just what the balance will be between the brass hats and the civilian institutions. Beyond the basic and technical training which the soldier gets at military camps, the fundamental background of knowledge applicable to his military life can only come from the civilian schools and industries.

In tackling the military plans, it would be worth Congress' efforts to explore the way the Army and Navy handled their vast wartime powers and funds in contracting for aid from civilian industry and education. Severe complaints of military officiousness, bad planning, and red tape have appeared in many of the published evaluations. The military begged off its errors during the war as unavoidable in an emergency whose demands could not be foreseen. Such an excuse is no longer tenable. There is nothing in the brass-hat plans to provide the faintest hope that the military would not repeat those costly mistakes.

Congress, in legislating for a democratic armed force, has no choice but to limit the military professionals to a technical role. Any other course could only invite a military oligarchy or a recurrence of the post-World War I popular reaction against military preparedness.

The task of planning a peacetime Army and Navy is already badly engulfed in politics, greed, and confusion. Congressmen have been forced to retreat to their domed citadel under a bombardment of piecemeal military demands for presumably wholly unrelated decisions on universal military training, Army-Navy strength, Army-Navy unification, and atomic bomb control.

The battle between Army and Navy brass hats on the issue of a unified command has enlivened but not improved the scene. The pulling and hauling among the goldbraiders has been an unsavory reminder of the sort of professional rivalries uncovered in the Pearl Harbor inquiries.

In the present tumult, it is high time that the brass hats recalled the warning of their former Chief of Staff, General Marshall, against a large standing army subject to the behest of a group of schemers. The natural antipathy of GI's to the undemocratic ways of the brass hats melted in the heat of a war that had to be won. Today in the cold uncertain light of peace the urgency for democratization is real and solid.

The problem cannot be decided judiciously under pressure from the military. Congress and the President can hardly expect to get an honest answer to one of the biggest questions of our time without counsel from impartial, civilian-directed investigators.

Getting the answer to that question will require resolving a lot of issues which so far we've been shrinking from. We'll have to decide where we're heading internationally before we can mold a permanent military machine. We'll have to face the reality that there's no future in continuing to plant buffer states against former Allies. We'll have to make up our minds to work cooperatively with our global friends in preventing new Hitlers from rising in Germany, Japan, Italy, or anywhere else. We'll have to stop playing favorites on the atomic secret. We'll have to figure out how the newest scientific discoveries will affect the pattern of our peacetime armed force.

We'll have to consider ways to help the schools and colleges gird for a big share of the responsibility we once left—in sheer ignorance—to the brass hats. We'll have to clean out the deadwood in our military house and open the doors to advancement along democratic lines. We'll have to wipe out the holdovers of military caste for which any sensible veteran has only contempt. We'll have to liberate our soldiers from their present political imprisonment. We'll have to call a halt to framing our military plans in the narrow concept of an army and navy dominated by a professional clique.

Only a democratic Army, whose leaders spring from the heart of the people, will effectively guard the Nation, police the vanquished, and help commit us eventually to economic and political participation with the world.

One World Language

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call attention to the very fine work being done to promote one world language.

On January 29, 1946, Hon. JERRY VOORHIS of California, called attention to the great importance of one world language as a means of promoting international understanding and effective cooperation.

This demand is now being considered in London by the representatives of the United States, and has the general approval of the Ministers of Education of the European nations, who passed resolutions in London over a year ago urging one world language.

The maximum gross products of the United States alone in 1944 reached one hundred and ninety-eight billions—see the record of the Federal Reserve Bulletin for September 1945, page 873.

There is little doubt that this rate of production of goods and services can be achieved throughout the world by the use of the global alphabet devised by former Senator Owen from Oklahoma, as explained in the hearings of November 7 last before the Committee on Foreign Relations of the United States Senate.

The explanation therein set forth is complete. The proof of the adequacy of this alphabet, to make visible the audible sounds of all words in the English language and in other languages, cannot be successfully denied. This alphabet was approved by the Representatives of Oklahoma in the Congress of the United States a year ago, and by the Legislature of Oklahoma on the 26th of April 1945, the same day that the United Nations Charter was approved in San Francisco.

The production of the United States increased nearly 300 percent in 1944, from that of 1933.

Two-thirds of the people of the world are said to be unable to read and write their own language, and their exportable products have been negligible because of their being uninformed as to the modern methods of production, transportation, and distribution. If they could produce to the average of the citizens of the United States for 1944, the products and services of the nations of the people now illiterate would approximate two thousand billions, and create a new world of overflowing abundance, giving employment to the merchant marine of the United States, as well as to the full employment of the people of the United States. It would also enable the people of the world to liquidate the war debts and restore the destruction of war and firm establishment of durable peace and mutual understanding.

It should be obvious that no investment could surpass the investment put into the prompt establishment of one effective world language.

The director of the Committee on World Literacy, Mr. Frank Laubach, has stated in his book, The Silent Billion Speak, that $5,000,000 would suffice to abolish illiteracy. His experience is of importance, for he has directed the teaching of over 80 different nationalities how to read and write their native dialects in phonetic alphabets which can be learned in 1 day.

The expansion of the production of the world through knowledge of modern processes, and the use of one world language going into the billions makes an investment in education the most valuable investment ever conceived in the history of man.

The Congress of the United States is fully committed to the policy of world education in the United Nations Charter. Its representatives, through the delegation sent to the General Assembly of the United Nations in London, realize the importance of establishing one world language.

I wish to commend the remarks of the gentleman from California [Mr. VOORHIS], to which I have referred, and to the record made on the 7th of November 1945, before the Committee on Foreign Relations of the United States Senate.

The radio has announced that Hon. Eleanor Roosevelt proposes to sponsor a resolution before the General Assembly of the United Nations favoring one world language. Such a resolution would meet with unanimous favor in the United States.

Lincoln and the South

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. BRYSON. Mr. Speaker, in commemorating the birthday of President Abraham Lincoln, Mr. Horace C. Carlisle, a native of Alabama, has written a very beautiful and appropriate poem which I gladly insert as a part of my remarks in the RECORD:

LINCOLN AND THE SOUTH

Abraham Lincoln, true history's theme,
Sculpture's idol, and poetry's dream,
Lives in America's worshipful heart,
Greater and grander, as decades depart—
Loved by the North in whose int'rest he wrought,
Praised by the South whom he fearlessly fought.

Long as the Union continues to stand,
Lincoln's great life will enlighten the land—
Though the South thought him her fearfulest foe,
Lincoln's sad death was her heaviest blow—
For, when death closed the great patriot's mouth,
Hope winged its flight from the heart of the South.

In the dark days, when the South in her grief
Needed a Lincoln to lend her relief
From carpetbaggers' and free negroes' scorns,
Scalawags scourged her and crowned her with thorns,
Under whose rule Reconstruction, by far,
Hurt the South worse than the horrors of war.

If the great Lincoln, humanity's friend—
On whom the helpless could always depend—
By his assassin's gun had not been slain,
He might have fought the war over again—
Lincoln's great heart through his pen or his mouth
Never decreed such a curse on the South.

Appraisement of Abraham Lincoln Makes Him a Man Who Shaped Destiny—Citizens of Other Nations Also Appraise Him Superlatively

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. DOYLE. Mr. Speaker, because this great legislative body is this day simply but very sincerely observing the birthday of a former Member of this House, Abraham Lincoln, and because we, as proud Americans might rightly be pardoned for expression of just pride and commemoration, I thought that it would be instructive and inspiring for Members to have before them the appraisal of Abraham Lincoln as made by some of the outstanding leaders of thought and statesmanship in other parts of the world, as well as some of our own. So out of the vast number of appraisals which have been made and which I have been pleased to get together from time to time, I submit the following as merely samples of hundreds and hundreds of others similar in import and finality:

I have heretofore spoken on the floor of this House of the great inspiration the life of Abraham Lincoln as a boy, as a young lawyer, as a legislator, and as President has been to me. I am so glad that historians and scholars are more and more placing full emphasis and effort in ferreting out the truth about Lincoln. Neither mythology nor gossip nor rumor—none of these things should have any place in the known facts about a great American so recently deceased. And because it does seem to me that our Government has not emphasized the ascertaining of the truth and the preservation of facts about him, I respectfully urge that our Government spend whatever time, effort, and money which is necessary to ascertain and preserve as quickly as follows the facts and the truth about him. This, of course, will cover his ancestry as well as his parents, himself, and his entire life and place in history. I do not relate this incident with a thought of criticism of any person or governmental department, but as illustrative of how the things can be taken at face value—which have no factual basis for their truth or veracity in connection with Lincoln lore. I will say that shortly after coming to Washington, on my first visit to the Ford Theater, I saw in the showcase an ordinary-sized business card, and outside the case there was affixed another card saying that it was Lincoln's business card. The card in the case contained the following text in print:

A. Lincoln
Attorney and Counsellor at Law
Springfield, Illinois

To whom it may concern:

My old customers and others are no doubt aware of the terrible time I have had in "crossing the stream", and will be glad to know that I will be back on the same side from which I started on or before the 4th of March next, when I will be ready to [Note: In italics] Swap Horses, Dispense Law, Make Jokes, Split Rails, [end of italics] and perform other matters in a SMALL WAY.

The more I studied it the more it worried me and upon prompt inquiry from the director as to whether or not the Government had verification of this card as bona fide and genuine, I was informed it did not. It was then sincerely explained to me that it had been owned for several years in the Oyrode collection. But the director agreed with me that until or unless it could be actually authenticated, it was hardly appropriate to display it as genuine and to keep it on display in a museum where 10 cents admission was charged, and in a museum where everyone had a right to expect everything to be genuine unless otherwise indicated. So the card came out. This incident will illustrate something of what I urge upon my Government in relation to Lincoln lore and Lincoln history. Increasingly I feel that if Abraham Lincoln were alive today again in the Halls of this Congress, he would take his seat and logically and emphatically take his stand along with those who freely admit that they conscientiously believe that there will be no freedom in our Nation until there is economic freedom for all, regardless of race, creed, or color. I believe his actions prove that he would so conduct himself if he were now alive. In a like manner, if he had been alive last week when we were discussing the Case bill and strikes and the matter of the relationship of labor and management, profits and losses, I believe Abraham Lincoln would have been found on the side of those who promptly recognized that there was no substantial progress on the part of the working people of America until there was organized action on the part of the working people of America. Along this line of thought and action about Abraham Lincoln, it will no doubt be significant and informative to many to read that in Hartford, Conn., on March 5, 1860, Abraham Lincoln said "Thank God we have a system of labor where there can be a strike."

Now I list the appraisements that I previously mentioned:

SAVIOR OF THE REPUBLIC

The memory of Lincoln will live and endure among you, gathering reverence from age to age, the memory of one who saved the Republic by his wisdom. (James Bryce.)

DIVINE HUMAN

A more divine human never has lived. (S. Parks Cadman.)

UNDERRATED

He was misunderstood and underrated in his lifetime, and even yet has hardly come to his own. For his place is among the great men of the world. (Lord Charnwood.)

INSPIRATION OF LIBERTY

The man whom the world honored and loved and who has inspired all the world to love liberty. (Georges Clemenceau.)

BASIC ELEMENTS

He surpassed all others in those attributes which men feel are common to them all. In him they find the pure and unmixed elements. (Calvin Coolidge.)

REINCARNATION

Lincoln does not die. He moves on. He reincarnates. He is the advancing common sense of us all. (Frank Crane.)

ETERNAL NAME

The name of Lincoln will be one of the greatest that history has to inscribe on its annals. (D'Aubigue.)

ABSENCE OF CEREMONIES

In the very accessories of his almost latest moments there is something so homely and so innocent that it takes the subject, as it were, out of the pomp of history and out of the ceremonials of diplomacy. (Benjamin Disraeli)

GREATEST OF RECENT CENTURIES

Not only the greatest American, but greater than any men France, England, or any other country has produced in the last few centuries. (John Drinkwater.)

CONTINENT'S REPRESENTATIVE

The true representative of this continent, an entirely public man, father of his country, the pulse of twenty millions throbbing in his heart. (Ralph Waldo Emerson.)

TRIUMPHANT BUT GENTLE

He was one of the few great rulers whose wisdom increased with his power and whose spirit grew gentler and tenderer as his triumphs were multiplied. (James A. Garfield.)

TRANSFORMING POWER

I may feel free to speak of him as I might speak of Plato or St. Paul or any other of that little group of men but for whose lives and thoughts we should all be different from what we are. (Lord Halifax.)

TITLES TO REGARD

His life and achievements give him titles to regard second to those of no other man in ancient or modern times. (Rutherford B. Hayes.)

BELOVED OF GOD

Abraham Lincoln was the glory of his time, dear unto men and beloved of God. (Newell Dwight Hilles.)

SERVANT

The great-souled servant of the people. (Charles Evans Hughes.)

GENTLEST MEMORY

He is the gentlest memory of our world. (Robert G. Ingersoll.)

GREATEST AMERICAN

He is the greatest man grown on the American continent. (Lloyd George.)

REPRESENTATIVE MAN

He is so eminently our representative man that when he speaks it seems as if the people were listening to their own thinking aloud. (James Russell Lowell.)

AN ENDURING THEME

A thousand years hence, no story, no tragedy, no epic poem will be filled with greater words than that which tells of his life and death. (William McKinley.)

GOD-SUSTAINED

God-given and God-led and sustained we must ever believe him. (Wendell Phillips.)

RACIAL EXPRESSION

He expressed the deepest and holiest feelings of his race for all time. (Elihu Root.)

JUDICIAL TEMPERAMENT

Lincoln had the most judicial temperament of any man in history. (William Howard Taft.)

SAINT OF HUMANITY

He was a Christ in miniature, a saint of humanity. (Leo Tolstoi.)

GOD'S ELECT

Surely he was one of God's elect. Recurring to the doctrine of inspiration, I say again and again, he was inspired by God. (Henry Watterson.)

GREATEST ANGLO-SAXON

Perhaps of all the men born to the Anglo-Saxon race in the nineteenth century, Mr. Lincoln deserves the highest place in history. (Sir Spencer Walpole.)

PERMANENCY

I think we are safe in including Abraham Lincoln in our list of six permanently great figures. (H. G. Wells.)

GRANDEST FIGURE

The grandest figure yet on all the crowded canvas of the nineteenth century. (Walt Whitman.)

INSTRUMENT OF HUMANITY

He was like some great instrument of humanity, wherever life touched him he spoke back its meaning, gave forth fire to kindle its life. (Woodrow Wilson.)

A MAN FOR THE AGES

He belongs not to our age but to the ages, and yet, though he belongs to all time and to all peoples he is ours, for he is an American. (Stephen S. Wise.)

A Tribute to the State Department and Administration Leaders in Reverse

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. PITTENGER. Mr. Speaker, we cannot add to or detract from the atomic bomb power of an editorial which appeared in the Daily News of Washington, D. C., for today, February 12. This editorial is a challenge to the administration, and its foreign policy, and I hope that every person who loves America will read this carefully. I do not have to tell you that time after time we were told there were no secret agreements. I do not have to tell you that we know now that these statements were bare-faced falsehoods. This editorial reads as follows:

SECRET, SORDID, AND STUPID

If there was ever a more sordid deal by the United States than the needless bribery of Russia to enter the Jap war, we can't recall it. Now that the text of the agreement by Roosevelt, Churchill and Stalin at Yalta has been made public, it turns out to be even worse than feared.

It violated assurances by the President and State Department that no secret political agreements had been or would be made.

In giving the Kuriles and South Saghalien to Russia, it violated the first and second pledges of the Atlantic Charter against territorial aggrandizement, and the United Nations declaration. It violated the Cairo agreement which said Japan would be expelled from territories taken by violence and greed—which does not cover the Kuriles.

In agreeing to "hand over" to Russia the Jap territories, it usurped power of the Allied peace conference. This peace conference authority was underlined by President Truman in his statement on Potsdam. It was reasserted by Secretary Byrnes last week in his comment that the secret Yalta pact—which had been hidden even from him for 7 months—would be subject to peace-conference decision. But the secret text provides that these Soviet claims "shall be unquestionably fulfilled"—regardless.

This was also a denial of the United States Constitution and the Senate's treaty powers.

Besides giving Russia the Jap territory, the pact invaded the sovereign rights of our Chinese ally. It gave Russia special privileges at Port Arthur and Dairen and in control of Manchurian railroads, and it separated Outer Mongolia from China. Since none of this could be delivered without the consent of Chiang Kai-shek, the President agreed to "take measures in order to obtain this concurrence on advice from Marshal Stalin." So the later Chinese-Russian treaty, making good on the Big Three deal, was under this duress.

The deal was stupid, because no bribe was needed. It was more to Russia's interest than to ours that she fight Japan; because Japan was a nearer threat to her than to us, and because only by fighting could Russia get a stake in the postwar far eastern settlement. We would lick Japan without her help—and virtually did anyway.

The deal was stupid not only for us, who had a reputation of international integrity to maintain, but also for Russia. She easily could have obtained from the legal peace conference legitimate trusteeship and bases in south Saghalien and the Kuriles.

We believe the Big Three outsmarted themselves. Roosevelt and Churchill unwittingly undermined an orderly and just peace structure. And Stalin has tipped his hand to America, that he is playing a game in the Pacific of grab and ruthless power.

Do you not think it about time, Mr. Speaker, in view of the serious charges made in this editorial, that the American people should be advised now if there were other secret agreements? Perhaps some were made with other countries besides Russia. We ought to have the facts. So far as Russia is concerned the American people were sold down the river. It was American troops and American valor that conquered Japan. There is no reason why Russia should have been promised or should now be given the Kuriles. If there are other secret agreements, now is the time to repudiate them. Surely the political leaders of this country should concede some rights to America and its citizens.

The Closed Door to Opportunity

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 7, 1946

Mr. WHITE. Mr. Speaker, recognizing the importance of opening the Great Lakes to ocean transportation for the progressive development of commerce and industry in the heart of the United States, there is inserted herewith a letter and resolution received from one of the railroad brotherhoods, and my reply thereto:

BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN,

Washington, D. C., February 11, 1946.

To the Members of the House of Representatives:

MY DEAR CONGRESSMAN: The national legislative board of the Brotherhood of Locomotive Firemen and Enginemen just completed its sessions here in Washington. This board is made up of chairmen from every State in the Union.

They directed me to send you the enclosed resolutions passed by them regarding legislation now before Congress.

Sincerely yours,

J. A. McBRIDE.

Resolution opposing the St. Lawrence seaway

Whereas there is before the United States Senate Senate Joint Resolution 104 for development of the St. Lawrence seaway and power project; and

Whereas it was first promoted as a waterway; then as a power project; then as a joint waterway and power project; then in 1940 it blazoned forth as a great national defense aid; and

Whereas the necessity of this seaway and power development as a national or international defense is now a thing of the past; and

Whereas the completion of the St. Lawrance deep waterway is intended to decrease the movement of traffic via United States rail lines, and if successful, will be detrimental to the best interests of our national system of transportation and to the public in general; and

Whereas the railroads of our Nation employ a large number of workers, it is a matter of deep concern to the railroad centers of the country as to the proposals to alter commercial routes and transfer of freight through Canadian outlets subject to laws now in effect or proposed in Canada, whereby freight must be routed through that country; and

Whereas the immense investments in railroads constitute an important part of our tax-paying properties, so consideration should be given to the economic questions involved and to the unemployment resulting if the changes occur; and

Whereas there is a surplus of rail transportation, including terminal facilities in the United States, the very existence of which is dependent not only upon traffic now being handled which waterway proponents contend would be diverted, but is also dependent on increases from every available source; and

Whereas it has been clearly shown that the preponderance of benefit derived from completion of this waterway will inure to Canadian traffic and that the traffic change contemplated, if successful, will divert from New Orleans and North Atlantic seaports the larger proportion of export grain products: Therefore be it

Resolved, That the national legislative board of the Brotherhood of Locomotive Firemen and Enginemen, representing 48 States in the United States, is opposed to any agreement designed to bring about development of the St. Lawrence waterway and power project.

DEAR MR. McBRIDE: What is the matter with the St. Lawrence seaway? Why oppose a plan to make our Great Lakes coast line accessible to ocean transportation to all the world?

Must we keep closed the door of opportunity to the States of this great central region?

Must we bar vast potential development to these United States lake-shore communities? Must our most productive States be deprived of enlarged markets at our very door?

Could not you and our railroads with equal propriety oppose navigation on the Ohio River through the industrial Pittsburgh district where auxiliary transportation has increased railway tonnage in such a marked degree?

Sincerely,

COMPTON I. WHITE,
Member of Congress.

Housing

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. DAVIS. Mr. Speaker, under leave to extend my remarks, I am including several important resolutions for the benefit of the membership which were passed at the last meeting of the United States Conference of Mayors:

GENERAL HOUSING BILL OF 1945

Whereas the general housing bill of 1945 (S. 1592) sponsored by Senators WAGNER, ELLENDER, and TAFT, and now pending before the Senate Committee on Banking and Currency, constituted one of the most important subjects of discussion by officials of more than 300 American cities gathered in conference at the Hotel Astor in New York City, December 10, 11, and 12, 1945, and which conference developed the following facts:

1. Returning veterans and war workers are being confronted with the most critical housing shortage in the history of this country and this shortage is becoming more acute daily;

2. Serious blight and slum conditions already have overtaken approximately one-fifth of the areas of cities, creating tremendous social and health problems affecting the well-being of more than 25,000,000 people living in these blight and slum areas;

3. The entire local real-estate tax base in cities is being undermined by billions of dollars of assessable property already scrapped by adverse blight and slum conditions and the rapid expansion of blight is destroying annually additional billions in property value: Now, therefore, be it

Resolved, That the United States Conference of Mayors herewith endorses the general objectives of said general housing bill of 1945 (S. 1592).

HOUSING

Be it resolved by the United States Conference of Mayors, That where a landlord arranges for a room or rooms in the landlord's own living quarters and sharing the home with his own family, to a veteran of World War II for housekeeping, including cooking on the premises, the OPA rent regulations as to landlord-tenant relationship governing tenure shall not apply; and be it further

Resolved, That this resolution be submitted immediately to the Director of Reconversion and the Administrator of the Office of Price Administration.

RESOLUTION ON HOUSING

Whereas legislation is now pending in the Congress of the United States providing for a housing appropriation of $190,000,000 for the purpose of making available 100,000 temporary family units; and

Whereas in many cities of the country the housing situation is so critical as to require the immediate use of such temporary units even though it is recognized that such temporary units provide no final answer to the housing shortage and that their need and use is due entirely to an emergency condition; and

Whereas it is urgent that no delay occur in making emergency family housing units available: Now, therefore, be it

Resolved, That the United States Conference of Mayors petition the Congress to enact the pending legislation at the earliest possible moment; and be it further

Resolved, That such temporary housing units as may be turned over to the cities be operated and administered by the city housing authorities or other appropriate agency of the municipal government to the end that the municipal authorities, which are closest to the problem, may insure that the people most desperately in need of housing are provided for.

CONTINUATION OF RENT CONTROL

Whereas throughout most of the cities of the United States there exists a drastic housing shortage; and

Whereas it is the consensus of opinion of the mayors of the cities of the United States that if rent control is discontinued, a serious inflation in housing rentals would result; and

Whereas such an inflation would work a hardship, particularly upon veterans and their families along with displaced war workers in every section of the Nation: Now, therefore, be it

Resolved, That the United States Conference of Mayors here assembled in annual conference urgently petition the Congress of the United States to extend the expiration date of the Emergency Rent Control Act until the present housing shortage conditions are eliminated.

HOSPITAL AID LEGISLATION

Whereas there is great need for the expansion, construction, and modernization of municipal health and hospital facilities; and

Whereas the Education and Labor Committee of the United States Senate has given approval to a program of Federal aid to municipalities for hospital construction, expansion, and modernization: Now, therefore, be it

Resolved, That the United States Conference of Mayors in annual conference assembled urges the adoption of pending legislation as recommended by the Senate Education and Labor Committee.

Legislation Like Railway Labor Act Can Inspire Permanent Industrial Peace

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks, I wish to state that the Republican leadership in achieving harmony and unity in the field of labor-management relations has been clearly defined during our national history. One of the pioneers in carving out legislation and bringing light and objectivity to our national policies in this respect was none other than a native Hoosier, the former Senator Jim Watson.

The predictions which former Senator Watson made more than 20 years ago, and the legislation which he sponsored, have come into their true significance during the current industrial strife. He farsightedly faced our social, economic, and political problems with an understanding of the human elements involved and of the responsibility our industrial and labor leaders owe to the public. This was clearly shown in the legislation he introduced as chairman of the Senate Committee on Interstate Commerce—

legislation which was to become the Railway Labor Act.

If only the party in power today had this kind of leadership and vision, we could safely predict the rapid reconversion of our domestic economy to a sound, productive basis. It would eliminate the serious and irresponsible acts of selfish leaders which rock our national security. It would inaugurate an orderly solution of our labor-management relations without disrupting our entire economy.

In the current issue of the National Republic is an article showing how well-conceived legislation like the Railway Labor Act can inspire permanent industrial peace and eliminate the menace of strikes.

The article follows:

"Sunny Jim Watson—his friends formerly called him. Prophet Jim Watson is what they now name him."

With the above words Mark Thistlethwaite—nationally known newswriter—recently broadcast from an Indiana radio station some new laurels which have been bestowed upon the former Indiana Senator. The laurels are based upon two predictions which he made in the Senate 20 years ago.

One of the predictions has been fulfilled. The other has promise of being fulfilled when Congress enacts into law President Truman's proposed antistrike legislation, which is based upon so-called cooling-off periods, in threatened strikes, and the establishment of fact-finding boards.

As chairman of the Senate Committee on Interstate Commerce, Watson in 1926 sponsored legislation that became the Railway Labor Act. It is after this law that the President has fashioned his proposal for permanent industrial peace and a plan to terminate the menace of strikes. In behalf of the bill which he was sponsoring, Watson said in the Senate on May 6, 1926:

"I am bold enough to prophesy that if this plan shall be adopted, no railroad strike will again occur in the United States."

Nearly 20 years have passed, and, as yet, no strike on railroads has occurred under the law. Thus Prophet Watson's first prediction still stands.

In the same speech the Hoosier Senator went further and said:

"I am bold enough to say that if this legislation succeeds, it will become the standard by which similar machinery will be set up in the whole industrial world of America. Who does not wish for that glad day in the settlement of these disputes?"

The Watson legislation of 1926 did succeed. Congress is now at work on the proposed Truman legislation to apply the principles of that Railway Labor Act to all major industries. Congress has been asked to do exactly that when the President, in his message of December 3, 1945, said:

"I recommend that for the settlement of industrial disputes in important Nation-wide industries there be adopted the principles underlying the Railway Labor Act."

In respectful and good-humored fashion, friends of Watson are saying that the President, in that message, was doing all in his power to make "Prophet Jim's" second prediction come true.

Those efforts of President Truman to pass this legislation were renewed on January 3, 1946. On that evening the President broadcast an appeal to rank and file Americans—"the most powerful pressure group in the world"—to prod Congress into taking action on his domestic legislation, including strike legislation. On strike legislation he said:

"I recommended certain fact-finding procedures which I believe can go a long way toward meeting these problems. I had hoped Congress would follow my recommendations or would at least propose a solution of its own. It has done neither.

"Experience has shown that once the public knows the facts it can make its opinion known in a practical way. In order to give a fact-finding board a reasonable chance to function before a strike is actually called, I suggested that there be a 30-day cooling-off period."

Watson, in that speech of May 6, 1826, made statements of similar tenor. He then originated the term "cooling-off" time, when he said:

"This period of repose * * * this cooling-off time will give the public full knowledge of the situation."

When President Truman, in his broadcast, said that "experience has shown that once the public knows the facts it can make its opinion known in a practical way" he re-echoed again wholesome utterances of Senator Watson of 20 years ago.

In that same speech of May 6, 1926, Watson quoted certain language from a decision by the Supreme Court of the United States in the case of *Pennsylvania Railroad Co.* v. *United States* (261 U. S. 72, 80), as follows:

"The decisions of the Labor Board are not to be enforced by process. The only sanction of its decision is to be the force of public opinion, invoked by the fairness of a full hearing, the intrinsic justice of the conclusion * * * and the full publication of the violation of such decision by any party to the proceedings. * * * The function of the Labor Board is to direct public criticism against the party who, it thinks, justly deserved it."

President Truman, in his radio address of January 3, 1946, said:

"Experience has shown that once the public knows the facts, it can make its opinion known in a practical way."

Former Senator Watson, in the Senate, May 6, 1926, said:

"The only sanction of the Labor Board's decision is to be the force of public opinion. The functions of the Board is to direct public criticism against the party who, it thinks, justly deserves it."

The sentiments of Watson in 1926 are repeated in thought—almost in the same words—by President Truman on January 3, 1946.

The Railway Labor Act applies to railroads and to air lines. The original proposal for the law came from several brotherhoods and also the railroads. The legislation was enacted without opposition. It was enacted with the leadership of railroad labor. Railroad labor has through the years commended it to workers in other industries.

The act does not forbid strikes, but it does provide a cooling-off period in which adjustments result and disputes are ended without even threat of strikes. Railroad workers have always represented a high degree of intelligence; they have successfully used the machinery of the Mediation Board in settling differences without the country in peacetime or wartime being menaced by a cessation of transportation.

Most differences between railroad employees and management are adjusted without reference to the Mediation Board. An Adjustment Board, composed of employees and management, takes care of most disputes amicably. But should adjustment fail, a Board of Mediation may be named.

As a final resort, the President may name an Investigating Board that would report to the public. But under the act no strike or lock-out shall result within a 30-day period—a cooling-off period. The result is amicable relations between railroad workers and management.

Actually thousands of differences between labor and management have been peacefully settled since the enactment of this legislation. During the fiscal year 1944 the Railroad Adjustment Board disposed of 3,280 disputes involving interpretation or application of rules and employee grievances. "The entire record," reads one of the Annual Reports of the Board, "warrants full confidence that the railroads and air lines, in making their contributions to the national defense, will not be hampered by labor controversies."

During the 20 years' life of this law, comment has frequently been made that, since the law has operated so successfully, the principles represented by it should be extended to workers in all other branches of industry. It was this sentiment which President Truman recognized when he made his proposal to Congress. The point was well brought out in the annual report of the Board for 1944, which states:

"The Railway Labor Act often has been cited as the model law governing the handling of labor difficulties. It is the fruit of over 50 years' experience in Federal legislation in this field. The law was, with amendments, a good one, and has functioned well since 1926."

The National Mediation Board is little known to the country and seldom appears in the newspaper headlines. This situation is due to the fact that it operates with satisfaction to railroad labor, railroad management, and to the public. It causes no public attention or alarm. It does not get in the headlines. Its members are Harry H. Schwartz, Chairman; George A. Cook; and Frank P. Douglass.

The operations of the National Mediation Board are in sharp contrast with the National Labor Relations Board. The latter has been known to the country as being constantly associated with labor strife and turmoil. The latter has been under attack from the American Federation of Labor because of the belief that membership of the Board was prejudiced and had alliances with a rival union. Management and industry have through the years persistently attacked its rulings as being biased and prejudiced.

Calvin Coolidge was President when the Railway Labor Act was passed. He issued a public statement when he signed the bill which is replete with wisdom and based on the genuine interests of labor, industry, and welfare of the public. A monument made from President Coolidge's Vermont granite, might well be erected in Washington in his honor. On it should be written his words on the evils of strikes uttered when he signed this bill. Those words are:

"A strike in modern industry has many of the aspects of war in the modern world. It injures labor and it injures capital.

"It injures the economic welfare and general comfort of the whole people. It tends to embitter and divide the community into warring classes and thus weakens the unity and power of our national life.

"Labor can make no permanent gains at the cost of the general welfare."

Should the OPA Be Extended?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. BUFFETT. Mr. Speaker, a barrage of pressure-group propaganda designed to force Congress to extend the OPA has begun.

Inasmuch as the OPA still has war-granted unlimited powers over the American system of individual freedom, Con-

gress is entitled to demand a liquidation pattern for OPA—if this war agency is not being slyly used to bring about a totalitarian state in America.

My efforts to secure enlightenment on this all-important question from Mr. Bowles have not succeeded. Is OPA unwilling to promote the restoration of normal economic processes? The following correspondence with Mr. Bowles leaves that question in doubt:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., November 27, 1945.

Mr. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

DEAR MR. BOWLES: Your letter of October 30 submitting your Senate report, together with an inquiry for suggestions, has been received.

I have read your report.

I do not find any plan for the orderly elimination of this war agency. Will you please send me one?

Sincerely yours,

HOWARD BUFFETT,
Member of Congress.

OFFICE OF PRICE ADMINISTRATION,
Washington, D. C., December 12, 1945.

The Honorable HOWARD BUFFETT,
House of Representatives, Washington, D. C.

DEAR MR. BUFFETT: You have asked for a plan for the orderly elimination of the Office of Price Administration.

It seems to me that, in the first place, the elimination of price control must be determined not by a set time but by a condition. I am as anxious as anyone else to reach the end of the necessity for such control, but if we go into a postwar inflation, as we did after World War I, millions of Americans will face economic tragedy. If we hold things steady until production permits lifting of controls without inflation we should be able to go forward into an era of long-lasting prosperity.

In a chart presentation made before the Senate Small Business Committee on December 4 I tried to give a factual statement of the inflationary forces now at work in the country. I am enclosing a copy of these charts for your information.

Last July it was believed that cut-backs would, in general, free both manpower and materials in substantial quantities with, however, considerable variation in both geographical and commodity areas. As the transition from a wartime to a peacetime economy was then forecast, it was thought advisable to suspend controls of significant items only when the Price Administrator could form a judgment that an increase in the general level of prices for the commodity would not result. This was set forth in directive No. 68, dealing with exemptions and suspensions and issued by the Economic Stabilization Director on July 25, 1945.

The importance of this restriction was stressed by the requirement that the Administrator terminate any suspension and reinstate the prior ceilings if prices for the commodity should rise or threaten to rise above the level of the ceilings in existence at the time of suspension.

Under section 1 of the directive, the agency has moved to suspend ceilings on a few commodities, such as ingot and pig aluminum and magnesium, where production facilities during wartime were increased many times to the point where they were completely adequate to supply any considerable demand. It should be noted that most suspension actions under section 1 were based upon the assumption that labor would become available in increasing quantity.

Under section 2 of the directive, the agency removed controls over a large number of minor items, control of which presented administrative difficulties out of proportion to the net benefit to price control. In each of these actions under section 2 the Administrator found that there was no substantial threat of diversion of materials, facilities, or manpower. In most actions of this type no possible threat of diversion existed because of a limited possible demand for the commodity involved. In other of these actions, however, it was felt that no threat of diversion existed because of the anticipated increasing availability of manpower and materials.

Shortly after the Japanese surrender it was generally believed that almost immediately manpower and materials would soon become available in abundance. From this assumption there followed quite logically the conclusion that OPA would be able to act swiftly in removing controls even at some possible risk of temporary slight price increases. On the basis of this assumption, it was also felt that it might well be safe to eliminate the diversion criterion from section 2 of the directive.

Accordingly there have been many discussions within the agency and with members of industry looking toward the advisability and mechanics of adopting a more aggressive and liberal decontrol policy than that embodied in directive 68. Also there have been public statements indicating the possibility of such a policy. As a result, there is a growing feeling in OPA, and on the part of industry and the public, that rapid selective decontrol is in immediate prospect. The effect has been an increase in the pressure for decontrol applied by some and against it by others. Hundreds of businessmen have urged OPA not to move hastily in removing controls.

Events subsequent to VJ-day have not affected the general principles governing decontrol but they have demonstrated the error of the assumption that manpower and materials would promptly become available to industry in abundance. We have had to reexamine the advisability of requesting the amendment of directive 68 in such a way as to permit a more rapid decontrol policy.

Under prevailing conditions manpower and materials are not generally available to industry in anything like the required quantities. This is particularly true of manpower. It seems that this situation may continue for some time. It has, therefore, been concluded that, for the time being and until the materials and manpower situations have been corrected, no request will be made by OPA for the amendment of directive 68.

The conclusion from the foregoing is that directive 68 is, and until further notice will remain, the price department's guide in considering the suspension and removal of controls and in discussing these subjects with members of industry. In recent weeks much time has been spent in discussing the advisability of taking decontrol action in specific instances upon principles going beyond the provisions of directive 68. As a result a heavy workload has developed in a number of the branches and this workload threatens to continue and even increase to the point where it may interfere seriously with day-to-day work to the detriment of over-all price control and to the disadvantage of industry in general. For this reason, members of the price department are instructed to base discussions of proposed decontrol measures on the directive.

In connection with the directive some further clarification seems appropriate at this time. Mr. Brownlee's memorandum of July 25 did not discuss the weight to be given the possibility that wage increases might follow decontrol action. The recent Executive orders removed the prohibitions against wage increases and returned the determination of wage rates to collective bargaining. This fact has added to the difficulties in making findings under section 1 that prices will not rise over preexisting ceilings. Moreover, actions may not be taken under section 2 unless the Administrator forms a judgment that exemption will not have the result of wage increases which would produce a substantial diversion of manpower from production that is essential to the transition to a peacetime economy. Furthermore, shortages of materials in many areas persist, and this fact must be given consideration in applying the diversion criterion in section 2.

In summary it may be said that for the time being we must move more slowly in the removal of controls than we anticipated at the time of the Japanese surrender.

It is for the foregoing reasons that I reiterate again my statement earlier in this letter that the end of price control must be based not on a time but on a condition. Just as soon as supply and demand come into balance on each commodity so that controls can be removed without a rise in prices, we will move to decontrol.

Sincerely,

CHESTER BOWLES,
Administrator.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 7, 1946.

Mr. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

MY DEAR MR. BOWLES: This is in answer to your letter of December 12, following my request of November 27 for your plan for the orderly elimination of the Office of Price Administration.

In your letter you reported that no plan had been prepared yet and you also indicated that you currently saw no prospect of formulating such a plan. Instead, you expected certain conditions to be reached eventually which would facilitate the elimination of price control.

Since that time several facts have become clearly apparent. One is that the operation of the Office of Price Administration has decisively restricted and discouraged production and/or distribution in various lines of business. Notably among these are butter, building materials, and various textile items. Considering these examples, it would seem that to wait until full production had been achieved before eliminating price control would mean perpetual price control. If removal of price control is to be contingent upon attaining full production, it is your No. 1 responsibility to secure full production. What constructive steps are you taking to get full production?

As price control is a dangerous economic narcotic, it must be rapidly removed from our economic diet if the habit is not to become disastrously permanent. Consequently, it appears that a precise plan to taper off and eliminate this economic narcotic should be a peacetime responsibility of the OPA of equal importance to that of preserving an orderly price structure.

If that length of time is required, it seems possible that the Office of Price Administration should be given 12 months from July 1, 1946, in which to complete the transition to a free price economy. Such extension would mean that the OPA had been continued for a period of 22½ months after the end of the war and almost 26 months after the defeat of Germany. Considering American's productive capacity, this length of time should be more than sufficient to restore a free economy, if there is the willingness and competency within the OPA to carry out this task.

Accordingly I am hopeful that in your appearance before the House Banking and

Currency Committee shortly you will present to us a plan for the orderly elimination of price control by a definite date.

Referring to the closing paragraph of your letter, I wish to add one comment. You state "that the end of price control must be based not on a time but on a condition. Just as soon as supply and demand come into balance on each commodity so that controls can be reversed without a rise in prices, we will move to decontrol."

My answer to this proposition is that if the Office of Price Administration cannot achieve this happy condition in 22 months with the absolute powers it now holds, it can never achieve the condition which you designate as necessary. Consequently, unless the OPA is able to prepare such an orderly program for restoring free economy by a definite date, it must of necessity become apparent that it is either not trying to restore a free economy or is incompetent to do so.

Sincerely yours,

HOWARD BUFFETT,
Member of Congress.

Radio Address of Hon. Fred Bradley of Michigan

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my broadcast of this week put on the air over Stations WSOO, Sault Ste. Marie; WMAM, Marinette, Wis.; and WDBC, Escanaba, Mich.:

In my first radio broadcast to you this year—just about a month ago—I referred to the so-called British loan. I said in part this: "This $3,750,000,000 of British credit (to which our State Department has apparently committed us) is to be loaned them at 1.62 percent without any guaranty whatsoever to insure its eventual repayment and that 1.62 percent of interest which they presumably will pay us comes out of your pockets in the form of taxes which cost you about 17 percent on every dollar you earn. And how are you going to float it? There is only one way, and that is to take it out of your own pocket in the form of a new loan, 'Dollars for Britain,' and that is not all. Soon it will be dollars for Russia, France, China, and dollars for every other Nation on the earth if this loan goes through and Congress rubber stamps it."

I had previously explained to you that the so-called British loan provides first of all that we should liquidate for a mere $650,000,000 approximately $25,000,000,000 worth of lend-lease material and equipment that we sent over to Britain to prosecute the late war, and I pointed out that that $650,000,000 was to be spent solely within the realm of the United Kingdom, namely, for the purchase of property and for the construction of superduper American embassies in the various parts of the British Empire or for educational purposes, namely, to educate American youth into the glories of the British Empire so that we could have in effect more Rhodes scholars operating within our Government to make sure that the sun would never set on the British Empire.

I pointed out to you then that I do not blame the British statesmen for coming over here and striking a sharp bargain with our State Department. I admire them. They are doing a good job for Britain. They believe in Britain first, last, and always, and more power to them. I was, however, extremely critical of our own State Department, who are pulling the wool over the eyes of the American people and seeking to give our sum and substance away to the world. In other words, they are leading Uncle Sam on a world-wide "good-time Charley" jag, hoping thereby to get the "good-time Charley" more friends. But, friends, no "good-time Charley" ever made lasting friends that way. As soon as his money runs out—and heavens knows ours must be running out pretty soon—then, unless he continues dealing out the dollars to the hungry, he is the worst accursed individual on the face of the earth—and we are not far away from that day of reckoning. Incidentally, I'm heartened to believe from the comments I have heard on the floor that the British loan, when it comes on the floor of the House, at least, is going to have pretty tough sledding, and I would not be surprised to see it defeated by a good margin. In other words, I would not be surprised if the House of Representatives served notice on the world that Uncle Sam has a new modern pocketbook on which he has pulled the zipper at this time.

But, as I predicted to you then, if we grant this loan to Britain, we would be obliged to grant a larger loan to Russia and heaven knows how many other countries might come to us as they did under the lend-lease program and ask for similar loans, and, once having set the pattern, I fail to see how our State Department would hesitate in committing us to loan any amount of the Treasury they deemed advisable at the time. And remember, as I pointed out to you in my broadcast of 2 weeks ago, having to do with the attempt of the Communists to oust Mr. J. Edgar Hoover, head of the FBI, that this political prodigy whom they have dug up to replace him, one Mr. George F. Schwarzwalder, who is now engaged in streamlining the State, War, and Navy Intelligence Services, has, perhaps, had his finger in the pie when it came to upping the personnel and the appropriations for the State Department from a personnel of 3,600 in 1939, with an appropriation of $18,000,000, to a present personnel this year of about 10,000, with an appropriation of $75,000,000, and a request next year for a personnel of 25,000 and a budget of something like $150,000,000. If that is streamlining in efficiency of personnel and expenditures, then that is one for you to answer. I also pointed out in that broadcast that Mr. Schwarzwalder had brought some new blood into the State Department and had infused it with men who, "while not conversant with actual diplomatic work, are fully familiar with and sympathetic to the new trends in the world."

Now this past week it has come out in the open that our State Department is now negotiating a loan of $6,000,000,000 for a deserving war victim—Russia. We find on inquiry that Russia possesses gold reserves of some two to ten billions and is producing gold at a rate exceeding $168,000,000 a year. And you will recall that before the war, we were purchasing gold from Russia at $35 an ounce that could be produced in this country as low as $20 an ounce. In other words we were then subsidizing Russia. The fact of the matter is that we cannot tell anything definite about Russia now nor have we been able to in the past. She is so reluctant to let the United States, her benefactor in this last war, know just what is going on in Russia that she refuses to permit us to know just exactly what her actual gold balance is just the same as she has steadfastly refused to let us known just how much of the lend-lease billions that we sent her has actually been dissipated in the war or just as she refuses to permit us to know just how much of those lend-lease billions in actual fighting equipment are now being employed to implement the Russian expansionist program in eastern Europe, in Iran and wherever else Russia seeks to expand her influence. And then, too, you will recall that Russia went along at the start with the so-called Bretton Woods pact and then backed out at the last minute. Why? Because Russia would have to tip her hand under the Bretton Woods pact and tell us just how much gold she had laid away for a rainy day. It's just another example of how our amateurs in the State Department are taken for a merry-go-round ride at the international world political circus. Let me revert back to Britain for a moment. According to columnist Arthur Sears Henning, Britain today has unmined gold reserves of twenty-four and one-half billions and unmined diamond reserves of eight billion eight hundred millions. Then she has a little matter of some foreign investments amounting to some $14,000,000,000 including three and one-half billions that she has invested in the United States alone and in other American countries. But she still does not hesitate to accept from us a goodly loan which you and I know full well will always be a gift, if granted by the Congress, in order, that the sun shall never set on the British Empire. The British we know refused to pay the First World War debt—amounting to some six and one-half billions—when good old Uncle Sam was called Uncle Shylock—and you know full well that they have no desire nor intention whatsoever of repaying this present proposed $4,000,000,000 loan.

Now I want to say this, that the Soviet Union has been very scrupulous in repaying her debts to us, with the exception of the money which the former Czarist Government borrowed from us in World War I, and which they said at one time they hoped to repay, but which they have not done so far. To quote Mr. Henning: "Russian secrecy concerning Soviet gold resources and credit facilities also operated to reduce by two-thirds the amount of relief funds allocated to the Soviets by the United Nations Relief and Rehabilitation Administration. The Russian Soviet Republic made an application for 700,000,000. Because, under the UNRRA rule, funds could not be allocated to a country possessing ample resources to finance its own relief, Assistant Secretary Clayton opposed any allotment to Russia contending that the Soviet Union had 'not only gold but a certain amount of credit facilities.'

"The Russians pleaded poverty but, when pressed to reveal their gold resources, withdrew their application for the Russian Soviet Republic and substituted applications for the Ukraine and Byelorussian Republics. They thus avoided any revelation of the amount of their gold hoard and gold-production rate. Finally UNRRA allotted 189,000,000 to the Ukraine and 61,000,000 to Byelorussia."

And now get this—and I quote again from Mr. Henning's article: "Although the extent of the Russian gold reserve has been known to the Truman Administration for several months, State Secretary Byrnes recently said that a loan of $1,000,000,000 to Moscow had been earmarked by the Export-Import Bank."

Well, I repeat what I told you a month ago. If we are going to open the bomb-bay doors of our Treasury to Britain and then to Russia, we've got to open them to the entire world.

We did under lend-lease and under that act we granted the President power to extend the facilities of lend-lease to any nation which he felt could contribute to the defense of the United States. You have heard of the so-called Atlantic Charter—simply an idealistic memorandum drawn between Mr. Churchill and Mr. Roosevelt to provide for the famous "four freedoms"—freedom from fear, freedom from want, freedom of speech, and freedom of religion. Where do you find it in the world today under the present British imperialistic expansion

program and under the Russian expansionist program? I'll tell you where. If you look about the world today, you will find that $5,000,000,000 worth of lend-lease arms and equipment is engaged in local and international war in every quarter of the globe. And each tank—every gun and every aircraft; yes, and every shell has stamped on it "Made in the U. S. A." How do you like that bill? And, do you like the returns you are getting? And about how long do you think that Uncle Sam will be looked upon in India and the Malay States and in Central and Latin America as the great lover of freedom and the deliverer? Think it over, folks.

Early in this broadcast I said I admired the British statesmen for looking after British interests first, last, and always. I was critical of our own amateur statesmen in the State Department. Maybe they are not so much to blame after all. Maybe they are acting under orders from the White House in making good on commitments made by the late President Roosevelt. I hate to rattle the bones of a skeleton in the closet but here are the facts. When he was campaigning for a fourth term, Mr. Roosevelt told the American people: "After my return from Tehran, I stated officially that no secret commitments had been made. The issue then, is between my veracity and the continuing assertions of those who have no responsibility in the foreign field." Now the facts are that in the 10 months since Mr. Roosevelt passed away, at least a half dozen of his secret commitments have come to light. For instance, he agreed with Stalin at Yalta that the Communists should have extra votes in the United Nations Organization. Then we learned that at Yalta also, he had agreed that Germany should give up $20,000,000,000 in reparations, of which Russia would get half—and now she is asking us for an additional six billions of American dollars. And, we find also that former Premier of France Daladier revealed that as far back as 1938, he offered to start repaying France's World War I debt to the United States, but Mr. Roosevelt refused the offer and told neither the Congress nor the American people about it.

Then we remember, also, that during his fourth-term campaign, Mr. Roosevelt told the Jews in America that he favored the establishment of a Jewish commonwealth in Palestine, but we find that he also had a joker up his sleeve in that one by having a secret agreement with King Ibn Saud, of Saudi Arabia, in direct opposition to his promise to the American Jews. But, perhaps, the worst deceit that he practiced on the American Congress and on the American people was in his last personal appearance before the Congress of the United States when he told us he had made no secret agreements at either Tehran or Yalta. Later a committee of Congress, among other things, designated the Kurile Islands—laying between Japan and Alaska—were basic to the defense of the United States. We now learn officially from Secretary Byrnes, of the State Department, that at Yalta Mr. Roosevelt agreed with Uncle Joe Stalin to give these islands to Russia after we had conquered Japan. And so, in conclusion, I wonder just how much may later come to light as to Mr. Roosevelt's commitments for the United States to provide substantial financial gifts under the guise of so-called loans not only to Britain and Russia but to any other nation on the face of the globe. This, of course, Mr. Roosevelt did entirely without any authorization from the Congress, which is supposed to control the purse strings of this Nation; and I assure you that as your Representative I will not vote to loan or give one red cent of the American taxpayers' money to any nation on the face of this earth. We had over a million casualties in this last war. Over one-quarter million boys will never come back home. Those who did come back home are going to come to the Congress eventually for a bonus and if I am still here I shall vote for a bonus to our American boys but I will not vote one cent to be sent outside of the United States to nations who should be loaning money to us but who are coming to us with their hands outstretched.

Address of Hon. Overton Brooks, of Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. BROOKS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the four-State Red River Valley Improvement Association meeting at Shreveport, La., on valley development, January 28, 1946:

Mr. President and representatives from Oklahoma, Texas, Arkansas, and Louisiana, it is certainly a real pleasure to come back home and meet with such a splendid gathering as we have here today. The pleasure is intestified by the realization that all of us come together for one single purpose—namely, the development of the Red River Valley for flood control and navigation.

I left Washington yesterday morning and I expected to be back in Washington tomorrow. It is therefore fitting, I think, that I give you the Washington viewpoint in reference to the flood-control program. As others have indicated, the interim flood-control program totaling $7,500,000 was built up and approved by the Vicksburg office of the Army engineers, working in collaboration with State department of public works and the Red River Valley Improvement Association and other organizations. Late last fall the report of the district engineers arrived in Washington; and recently it was approved by the Board of Engineers there.

Last week, it received the approval of the Chief of Engineers, General Wheeler, and has been sent to the several States and to the Flood Control Committee of the House of Representatives, under whose resolution the report was made and presented. It gives me much pleasure to realize that I introduced a resolution in Congress which was approved by the House Committee on Flood Control and which formed the basis for going to work on this masterly report.

At the present time, we in Washington are awaiting a report from the States affected; and I was pleased to read in the press just before leaving Washington that our own Governor had already approved this comprehensive report. As soon as other States have approved it, the matter will be returned to Washington for action. I have already talked to Chairman WHITTINGTON, of the House Flood Control Committee, and other members of the committee asking for speedy consideration there. In the Senate our own senior Senator, Senator JOHN H. OVERTON, chairman of the Commerce Committee, will be waiting the opportunity, I am sure, to push most diligently and expeditiously every phase of this important matter.

Even before the report is approved we have work to do. As you know, funds were appropriated in December, after a hard fight in the House, to complete Wallace Lake at a cost of $194,000; to begin the construction of the Bodcau Bayou Dam and Reservoir, costing almost $3,000,000; to clear Loggy Bayou, for which $67,000 has been appropriated; and to begin the stabilization work and bank protection on Red River, of which $500,000 have already been appropriated to begin a program costing $3,000,000.

This statement does not include the preliminary work contemplated in Arkansas, Texas, or in Oklahoma along the Red River. We have local representatives here from those areas and they, no doubt, will cover the projects which we have in mind and are interested in promoting. This, however, represents money—large sums of money. It represents tremendous work projects but, after all, the problem of making the Red River Valley safe from floods and crevasses is a mammoth project. The Red River originates in New Mexico and flows eastward and southward some 1,300 miles in Texas, along the Oklahoma-Texas boundary line, in Arkansas, and in Louisiana. At last it forms a confluence with the Mississippi and the Atchafalaya at Barrie Landing. The Red River Basin consist of 91,000 square miles and is 75 percent rural at the present time. The census figures show the 1940 population to be something less than 3,000,000 people and our principal occupations agriculturally are the growing of cotton, corn, hay, oats, potatoes, and sugarcane. Industrially, we are large producers of petroleum, salt, cement, sulfur, iron, aluminum, and fertilizer.

From time immemorial, Red River has risen above its banks and flooded the surrounding territory. Between the years 1843 and 1900, six great floods occurred, causing loss of lives and an immense amount of property loss. The 1843 flood equaled and perhaps was greater than all others to date. Other great floods since, of course, are the floods of 1908, 1938, and the flood last year, 1945. At Shreveport, during the course of the flood, the waters descending Red River measured 303,000 cubic feet, although the capacity of the stream measured from 100,000 to 130,000 cubic feet per second.

This very fact showed that 3 cubic feet of water had to be carried down Red River when only 1 cubic foot of water could be transported in the restricted channel available at the flood stage. This could only result, as it did result, in a flood of appalling destruction.

The plan of the Army engineers, briefly, provides for eight reservoirs, which will cost $360,000 annually for maintenance and operation. Local interest will be required (1) to furnish lands needed without Federal costs; (2) to take care of construction damages; and (3) to maintain and operate all works following construction.

I have here some brief figures in reference to the destruction caused by floods in the Red River Valley. I want especially to give you the figures available from the flood of 1945, which is last year's flood. When these waters receded from our landscape they left a tremendous toll of property damage. In fact, congressional reports show that damage for the entire country from floods last year totaled $103,800,000, and that this damage was divided between agriculture and industry as follows: Namely, $45,000,000 was agricultural damages and $58,000,000 was other damages. Of this amount of $103,000,000 for the whole Nation, the damage in Red River Valley from last year's flood totaled $12,600,000.

An interesting sidelight of this occurred during the course of the vigorous debate over including flood-control items in a certain appropriation bill last fall. The amount which was being asked for by proponents of flood control to be appropriated was something like $120,000,000, as I recall. I showed at that time that the amount of loss was over $100,000,000 and that had floods been prevented in 1945, due to our flood-control program, this great amount of money would have been saved to our people.

It is interesting to note that Red River did not play a favorite among States in spilling waters over the countryside. Louisiana had 2,624,000 acres inundated; Arkansas, 1,211,000 acres inundated; Oklahoma, 249,000; nd Texas, 395,000, making a total flooded acreage in Red River Valley last year of 4,510,000 acres. In Louisiana, the lands flooded were divided by parishes as follows, to wit:

Parish:	*Acres*
Rapides	83,000
Grant	79,000
Natchitoches	280,000
Winn	10,000
Red River	75,000
De Soto	33,000
Bienville	20,000
Caddo	140,000
Bossier	86,000
Webster	9,000
Avoyelles	208,000
Caldwell	132,000
Ouachita	147,000
Richland	83,000
Franklin	71,000
Union	62,000
Morehouse	169,000
West Carroll	6,000
Catahoula	295,000
Pointe Coupee	3,000
Concordia	390,000
La Salle	125,000
Tensas	110,000
West Feliciana	8,000
Total	2,624,000

CONCLUSION

Perhaps the greatest individual phase of the Red River improvement program, as we presently have it, is the navigation project. This contemplates the construction of a navigation channel west of the river parallel more or less to its banks from Shreveport down almost to the Atchafalaya River. I have traveled through northwest Louisiana during the course of many years; and I have found all groups of people interested in this navigation project. Every group realizes water transportation will help this entire Arkansas-Louisiana-Texas area. I have talked to many farmers and they realize the construction of the navigation channel will mean lower freight rates for their produce and another means of getting cotton and other agricultural products to the market. The businessman realizes water transportation will mean an over-all saving to every business which requires either the bringing in or shipping out of any large amount of material. The industrialist knows that it is vital to this general area of the Southwest. Even the housewife who, during these inflationary times, is doing her best to keep her budget balanced, realizes that lower transportation rates will mean an actual saving to her in the purchase of food and other household needs.

For this reason, there has been a general clamor throughout this territory for the navigation channel. Only last week a large group of outstanding businessmen appeared from this area and made a strong presentation of the navigation project to the Board of Army Engineers in Washington. I think they did a splendid job; and I believe the Board of Engineers will approve it and send it to Congress at an early date. Of course, this means more work on your Congressman and your Senators. This means that the time for preliminary work will be at its end and the time of genuine hard shovel work will be at hand. I believe, however, that both projects have an excellent chance of being approved by Congress in the year 1946; and I am working to this end.

Mr. President, the present population of this valley, one of the largest valleys of the world and as rich as the Biblical Garden of Eden, is less than 3,000,000 people. It has 91,000 square miles of territory in its basin; and there is an average of only 33 people per square mile in this valley. This means cities, towns, hamlets, and farms all included; more than 20 acres of this rich valley are available to every man, woman, and child, were it equally distributed.

Why is this? A land as luscious and as desirable as any on earth with only 33 people per square mile shows lack of development. This is because of lack of protection from floods which perennially sweep the valley, bringing death and devastation. It is because of lack of cheap water transportation which is sorely needed by all of our people. Our national population is increasing almost 1,500,000 people per annum; and it behooves our National Government to reclaim the fertile land such as lies in this valley to make it inhabitable for the teeming millions of persons who, as the years go by, are going to demand a place to make a living.

Wherever water transportation has gone in the past there has been development. There is development along the Mississippi River and great industrial development along the Ohio River because of navigation. The Erie Canal has had a tremendous economic importance to a large part of the eastern area of the country, and away down here in the deep South the intercoastal canal is performing a major function in developing a great sweep of territory from Corpus Christi to Florida. The same result will be evidenced when our canal project becomes a completed one. The population of the valley will jump, I predict, from 3,000,000 to 10,000,000, and we will find here, after our labors are done, a happy, prosperous valley people, thankful that minds conceived and hearts promoted the work of building this barge channel.

Mr. President, in the Civil War days use was made of the Red River for navigation. History shows that Shreveport was an active inland port during the days of the Civil War. Our old-timers can remember that large river boats were built right here where the city of Shreveport stands and were piloted down the river to be used in a large trans-Mississippi commerce which was built up as a supply line for the Confederacy from the far West. As Grant besieged Vicksburg these boats navigated the Red, the Atchafalaya, and the Mississippi, bringing farm produce and other merchandise to points along the Mississippi for transportation overland to the Confederacy in Virginia. One of these well-known boats was named *The Star of the West*. Another was used in an attempt to run the blockade from Red River down the Mississippi by New Orleans.

After Vicksburg fell, the Red River Valley campaign was supported by a flotilla of gunboats under General Banks. We can remember the waters of Red River became shallow and the gunboats were in distress. Then occurred the building of a dam across the Red River to float the gunboats downstream, which, by the way, was done by the Army engineers and constituted the first navigation project on Red River, as far as I can find out. The heyday of river transportation was reached around 1870, when packet boats ascended the Red to Shreveport and Jefferson, Tex., bringing large quantities of needed materials and supplies and taking other huge quantities with them upon the return trip.

My friends, we meet here today to express our desire to see a return of those days along the Red River. We want, and we are ready to fight for, a further development of this great valley which will surely follow the building of this lateral canal. We who meet today visualize a completion of this project and we hope to hear again the shrill whistle of the river boat as it echoes across the fertile plantations and wooded hills of the Red River Valley. We hope to hear again the noise of the gangplank touching bank, the process of one loading the river barges all in our minds, denoting the opening of a new era for Ark-La-Tex and for the people of Red River Valley.

America's Dead and Dying Rivers

EXTENSION OF REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. MANSFIELD of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reader's Digest for October 1945.

AMERICA'S DEAD AND DYING RIVERS

(Condensed from the American City by Holman Harvey, with additions by the author)

When America can get back to her own housekeeping she has a pressing chore to tackle, the job of liberating our waterways from pollution.

The other day I rode the ferryboat across the Delaware River from Philadelphia to Camden. Some 360,000,000 gallons of raw sewage from the two cities was churning down the stream. The paint on ships and on buildings along the banks was blackened by sulfurous gases rising from the contaminated water.

Next day I went downstream to Chester, Pa. The city's drinking water for its 60,000 people comes from this river and is so heavily weighted with purifying chemicals that many buy bottled water. Bathing in the river is unsafe, and fish life has all but vanished.

Chester's plight is by no means unique. More than 3,400 American cities and towns, inhabited by 29,000,000 people, discharge a daily volume of 2,500,000,000 gallons of raw sewage into our waterways. Another 2,900 communities, with 22,000,000 inhabitants, dump their sewage after a lick-and-a-promise treatment that leaves it still 65 percent disease laden. In addition to sewage, vast tonnages of factory wastes are drained into our streams. Such pollution of our water sources, with its continual threat of epidemic disease, is wiping out waterfront property values, corroding dams and bridges, obliterating bathing and other water sports over large areas, and progressively destroying our once-abundant fish life.

Three-fourths of the Nation's waterway pollution centers in the densely populated industrial belt stretching from the Atlantic coast to St. Louis and Chicago. In the Ohio River Basin the drinking water of hundreds of communities is endangered, despite Herculean efforts to stave off infection by filtration and heavy doctoring of the water with purifying chemicals. In 144 communities in the basin, annual death rates from diarrhea and enteritis have risen during the past 12 years to as high as 91 per 100,000 persons.

Absolutely "pure" water does not exist even in streams untouched by man. Therefore all American communities, other than the tiniest, filter their drinking water and treat it with chlorine and other chemical purifiers, the degree of treatment depending on the amount of impurities in the water. The extent of pollution is determined by what public-health bacteriologists call a "coli count"—the number of harmless coliform bacteria, normally present in all human sewage, which are found in a measured sample of water. The coli are readily detected, whereas disease organisms often are difficult

or impossible to identify. It is assumed that disease germs may be present in water containing more than six coli to the pint; therefore, this maximum count is the official purity standard of the United States Public Health Service for safe untreated drinking water—or for safe public bathing. And the Public Health Service considers that the most modern and effective purifying treatment now known cannot safely be depended upon to remove all the disease organisms from water which contains more than 100,000 coli to the pint.

The most comprehensive colicounting ever undertaken was completed 2 years ago in the Ohio River basin by the Public Health Service and the Army Engineer Corps, aided by a consulting civilian scientist. At 1,160 out of 2,000 locations tested, the water was unfit for bathing and of questionable quality as a source of drinking water supply.

Pollution is severe in the Pittsburgh, Cincinnati, and Louisville areas. Along the 90-mile stretch between Pittsburgh and Wheeling, W. Va., the average coli count was 125,000 to the pint, and at one place it was 405,000. The safety limit, remember, is 100,000. Below Louisville the coli count ranged from an average of 320,000 to a maximum of 1,200,000.

While water-borne typhoid fever has been virtually eliminated in most communities by purification of the drinking water, death rates indicate that the organisms causing diarrhea and enteritis often survive treatment. And periodic outbreaks of so-called intestinal flu have been traced to polluted water. This disease has swept over hundreds of cities in recent years. Moreover, the mysterious origin of infantile paralysis may at last be found in waterway pollution. The Journal of the American Medical Association has reported that the poliomyelitis virus has been isolated from water containing raw sewage.

In its natural state, a healthy stream can cleanse itself of waste matter—animal, bird, and fish excretions and carcasses, decaying plant life, and a very considerable volume of sewage—within a few miles. But its capacity to purify itself breaks down when the load of waste becomes too heavy. The self-functioning stream "dies," and becomes merely a lifeless conduit.

A stream purifies itself chiefly by means of its own bacteria—the aerobic bacteria which can't live without oxygen, and the anaerobic bacteria which can't live in the presence of oxygen. The anaerobes devour the solid materials which settle to the river's bed, while the aerobes attack the dissolved and suspended solids which remain in the water above. As the waste passes through their microscopic bodies it is converted from complex, organic material into inorganic, or mineral, material which no longer can putrefy.

Neither the aerobes nor the anaerobes attack the human disease organisms present in sewage, but these are devoured by microscopic animal organisms, the aquatic protozoa.

As the aerobes feed they multiply; and as they multiply they use up more and more of the available oxygen in the stream. However, a healthy stream passing over rocks and rapids and falls aerates itself, drawing oxygen from the atmosphere. Also the tiny plant organisms, the algae, return oxygen to the stream as sunlight strikes their green chlorophyll and brings about the miracle of photosynthesis. And while the algae thus are providing the aerobes with oxygen they feed upon the mineral matter which the aerobes are manufacturing from the waste. As the algae consume this inorganic matter it is changed back into living organic matter; and so is completed one of the mysterious, complex, and never-ending cycles of organic life.

Finally, as the wastes are consumed and converted, the aerobes, with a dwindling food supply, themselves subside in number and make less and less demand upon the stream's oxygen. The elaborate process draws to a close; the natural balance of the stream is restored. Cleansed, vigorous again with oxygen, it is ready for the next assault upon its purity.

Thus, left to their own devices, many rivers carry vast burdens of sewage to the sea without serious injury. But when the load becomes too heavy and too continuous, this is what happens:

The aerobes, attacking the fluid wastes, reproduce in such numbers that they use up more of the stream's vital oxygen than the stream can replace. For lack of oxygen the aerobes and disease-destroying protozoa die. Up then from the stream's bottom, into the the oxygenless upper waters, move invading multitudes of anaerobes. With an abundant food supply, safe now from the hated oxygen, they soon take over the entire stream. And as they avidly feed they extract hydrogen from the water and sulphur from the waste and combine them into the evil-smelling hydrogen-sulfide gas which you have noticed rising from the surface of a sluggish stream.

The algae die away as the beclouded water blocks off their life-giving sunlight. Deprived of sufficient food and oxygen, fish life languishes. The stream is dead.

In treating sewage, before it is discharged into our waterways, sanitary experts follow the stream's own purifying methods, but speel them up. The solid material, or sludge, is allowed is settle in vats. Then it is placed in airtight tanks for from 30 to 60 days. Here the anaerobic bacteria "digest" it, as on the river bottom. The gas produced by the anaerobes often is used to heat and light the treatment plant. Any surplus is sold or given away.

Settling out the solids achieves only about 35 percent purification of the total sewage. To accomplish 85-percent purification the "effluent" (dissolved and suspended matter) is placed in tanks exposed to oxygen, where it is attacked by aerobic bacteria and protozoa.

For a theoretical 100-percent disinfection the treated effluent also is chlorinated. Where public bathing beaches are located near the point of discharge, this final treatment is considered advisable.

Some communities package and sell their treated sludge as a fertilizer. Notable are Milwaukee's "Milorganite," Toledo's "Tolegro," and Grand Rapids' "Rapidgro" and "Grandgro," the latter fortified with additional chemicals. The financial return to these cities is of considerable help in defraying the cost of treating the sewage.

Numerous cities, among them some of the long-time offenders, have become aroused to the need of freeing our streams from the dead weight of pollution. Pittsburgh is considering a $50,000,000 plant. Philadelphia, under a No. 1 priority over all other postwar projects, plans to spend $45,000,000. Camden, Cincinnati, Louisville and others are expected to install treatment plants.

But an Aegean job remains. According to an official United States Public Health Service report issued last year, only 1,300 of the 16,750 incorporated communities in the United States have adequate systems for collecting and treating their sewage. Local inertia, politics, and the apathy of industry have obstructed progress. It is for this reason that the Public Health Service believes the only practicable way to solve the problem is to deal with each river basin as an entity and recommends that Congress authorize all States contiguous to interstate waterway basins to enter into cooperative compacts to set up and carry out coordinated regional abatement programs.

Six bills providing for waterway-pollution abatement now are pending before Congress. They would encourage cities to build modern sewage-treatment plants, and industries to solve the knotty problem of waste-disposal. Legislation favored by the conference of State health officers, and approved by the Public Health Service, would authorize the Federal Government to extend grants-in-aid to communities, and loans to stream-polluting industries, to a total of $1,000,000,000 over a period of 10 years, provided that equal amounts are expended by the communities, and that all loans are to be repaid in full.

The annual cost to the Nation of operating and maintaining a complete system of sewage and waste treatment for the liberation of our waterways would total about $100,000,000—almost exactly the estimated annual economic loss now caused by pollution. The gain in the resulting safeguarding of the public health, and the imponderable recreational and esthetic values, cannot be evaluated.

The British Loan

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House I present for printing in the CONGRESSIONAL RECORD an editorial on the British loan that appeared in the Indianapolis News, one of the country's foremost newspapers, on January 17, 1946, as follows:

THE BRITISH LOAN

With the return of Congress, it is apparent that a very determined effort will be made to block or defeat approval of the $3,750,000,000 line of credit to Great Britain. The opponents already are attacking the agreement. If one can believe these gentlemen, the loan is an unparalleled example of international philanthropy.

Few people understand the mechanics of world trade, and fewer still can comprehend international finance, so it is not surprising that these Congressmen have found considerable support at home. To most men $3,750,000,000 sounds like, and is, a lot of money. The interest rate is less than on GI loans, on government bonds, or the note that the citizen must pay at the bank. So it is easy to oversimplify the issue and ask why we should be more generous to a foreign government than to our own citizens.

Nor has the attitude of the British conservatives, the London papers and a considerable portion of the English public helped the chances of the loan. If this, as is asserted abroad, is a sell-out of British commercial interests for a pittance, how can it be, from the American standpoint, such a bad bargain as the isolationists would have us believe?

The fact is that the loan should be good business for the United States, and for the world. In return for the credit of $3,750,000—to be spent for goods produced by American factories—the United States is given access to one of the richest markets in the world, hitherto rigidly controlled by the sterling bloc.

That is a selfish reason. From the standpoint of statesmanship this loan is the entering wedge against economic nationalism that sows the seeds of war and spawns depressions. On this basis $3,750,000,000 does not loom so large. Two weeks of war would cost as much, a year of depression would cost more.

American-Born Wives Denied Commissary Rights in Canada

REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 8, 1946

Mr. WEICHEL. Mr. Speaker, enlisted men have bitterly complained of unjust treatment and also of discrimination against their dependents. They complain that the Army discriminates against their American-born wives in Canada. They claim their American-born wives are denied the right to purchase food and necessaries in the American Army commissary in Canada. But Canadian-born wives can purchase at will. I believe a thorough investigation should be made and the people given the facts.

I am including a statement of more than 17,000 words from these men in Canada covering this denial of food and necessaries to their American-born wives, and I ask unanimous consent to include this in the RECORD, showing discrimination by the Army against American-born wives of enlisted men in Canada.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MEMORANDUM: ARMY ABUSE AND CONTEMPT FOR ENLISTED MEN BELOW THE GRADE OF STAFF SERGEANT WHO HAVE AMERICAN WIVES IN NEWFOUNDLAND

Recently a brilliant piece of policy was established by the commanding officer in charge of Fort Pepperrell, Newfoundland, as evidenced by exhibit D, an exact copy of the Daily Bulletin, of Headquarters, Newfoundland, dated November 16, 1945. In it will appear that men below the first three enlisted grades (below the grade of staff sergeant, that is) who have married Newfoundland girls (foreigners) will be furnished family quarters at Fort Pepperrell, Newfoundland, while enlisted men of the same ranks (sergeants, corporals, privates first class, and privates) whose American wives have come to Newfoundland with the United States State Department permission and permission of the Newfoundland immigration authorities but without a permit from the War Department or local Army commander are denied the right, even though request has been submitted to local Army headquarters, to have family quarters on the military reservation of Fort Pepperrell. (See pars. 1 and 2, exhibit D.)

Although to some extent enlisted men whose American wives are here without Army permits receive commissary privileges (right to buy groceries, etc., at the Army store) temporarily, and, as the staff of the commanding officer makes plain, only at the whim or discretion of the commander, it would appear that unless the commander and his staff of officers receive instructions from Washington to correct their stupidity, they will, after January 1, 1946, deny commissary privileges to these enlisted men with American wives. (See par. 6 as related to par. 4, exhibit D, the Daily Bulletin.) In addition it is plain in paragraph 6 of exhibit D that authority to ration separately (a money allowance) will be denied these men (sergeants, corporals, privates first class, and privates) with American wives after January 1, 1946, and in fact although several men with American wives have applied in the past months for separate ration allowance, their request has been denied. At the same time, enlisted men of the same grades (sergeants, corporals, privates first class, and privates) who married Newfoundland girls (foreigners) receive without hesitation or question, commissary privileges and authority to ration separately (a money allowance). (See exhibit D.)

In addition, while these enlisted men with American wives (sergeants, corporals, privates first class, and privates) are prohibited from getting family quarters and living on the post (military reservation) at Fort Pepperrell by authority of the above-cited daily bulletin (see exhibit D), they are prohibited by the same daily bulletin, paragraph 6 thereof, from living in town off the post (St. John's is one-half mile away). And, further, the daily bulletin indicates that these men not living on the post at Fort Pepperrell will not get commissary privileges for their families. Is not the Federal law on Government housing (see exhibit D, p. 6) authorizing tenancy for all ranks a higher authority than Army restrictive measures?

This obvious arbitrary, unreasonable discrimination in favor of enlisted men with foreign wives (Newfoundlanders) and against men of the same grades who have married loyal American citizens is really unbelievable, except that it is so typical of the stupidity in high ranks in the War Department and in local Army commands. Or is this policy part of the inducement to have men who have married loyal American girls to reenlist in the Army? Perhaps to save the country and its material bounty for the comfort of foreigners while denying the same comforts to Americans?

This policy shows even more contempt for these enlisted men (sergeants, corporals, privates first class, and privates) with American wives when it is set beside the lavish quarters furnished at and on Fort Pepperrell for families of officers and the first three grades of enlisted men (staff sergeants, technical sergeants, and master sergeants) as authorized by congressional law and Army regulations (see AR 35–4520, exhibit I; AR 35–4220, exhibit I; AR 210–10, change 13, exhibit K), and this is true for this privileged class (officers and the first three enlisted grades) regardless of how good, bad, or indifferent a foreigner the wife might be or if she is American or not. In addition to family quarters, these wives, foreigners or Americans, of officers and the first three grades of enlisted men get other luxuries such as deliveries of food from the Army commissary store by means of Army transportation (see exhibit C), rental allowances for officers of sums greater than the actual rent (see AR 35–4220, par. 5, exhibit I), subsistence allowances for officers (AR 35–4220, par. 1, exhibit I), and for enlisted men of the first three grades (see AR 35–4520, par. 1 and par 13, exhibit I) and family quarters for enlisted men of the first three grades (exhibit I). The list of other special privileges for this class could perhaps be lengthened ad infinitum.

Now of course the ridiculous reason the local staff of officers give for refusing to enlisted men below the first three grades—below staff sergeant—who have American wives the privileges of buying food at the Army commissary store; and of living in apartments at Fort Pepperrell; and of receiving ration allowance is that the War Department—and consequently its counterpart, the Army locally—has forbidden wives of enlisted men below the grade of staff sergeant to leave continental United States by virtue of War Department Circular 125 dated April 25, 1945, section II, paragraph 1d, as amended by War Department Circular 252 dated August 20, 1945, section V (see exhibit A), wherein the following undemocratic class distinction verbiage is used: "Travel to Newfoundland by dependents of United States Army and Navy personnel whose grade, rank, or rating entitles them to transportation of their dependents at Government expense * * * is authorized."

These men of genius reason that because of AR 55–120, paragraph 8 (see exhibit G) and AR 35–4880, paragraph 1 (see exhibit H) only dependents of enlisted men above the fourth grade—fourth grade meaning the equivalent of the grade of sergeant—and dependents of commissioned officers are entitled to transportation at Government expense by reason of the language "when any officer, warrant officer, or enlisted man above the fourth grade * * * the United States will furnish transportation in kind from funds appropriated for his dependents." And so the similar language used in circular 252 (exhibit A) is such that only dependents of staff sergeants or higher or of commissioned officers are permitted to leave continental United States. Wives of enlisted men of the grade of sergeant or less are by these regulations prohibited from coming to Newfoundland at their own expense or even of leaving continental United States for any place outside thereof where any other American citizen is entitled to go. (For equal stupidity refer to exhibit M which quotes General Eichelberger as desiring the same discrimination for the occupation troops in Japan.)

Since when does the War Department or the Army in peacetime have jurisdiction to prohibit an American citizen, who is not in the armed forces, from traveling outside the United States? Is not such travel by such citizens the sole province of the State Department? Especially when the State Department has passed rules or orders allowing any American to travel to Newfoundland without even a passport?

Not only are wives of officers and of the first three enlisted grades permitted to come to Newfoundland but by AR 35–4880 paragraph 1a (see exhibit H) they are authorized to reimbursement from the Government for their expenses of travel, and are entitled to the expense of transportation back to the United States by reason of War Department Circular 287, section X (see exhibit I), which removed the previous restriction of one movement of dependents at Government expense for those dependents of officers and the first three enlisted grades (staff sergeant or higher) which restriction of one movement was originally imposed by AR 35–4880 paragraph 9 (see exhibit H). In fact the above-cited Circular 287 (exhibit I, p. 1) has made it permissible for wives of all men above the grade of sergeant to be transported at Government expense any number of times indefinitely, whereas wives of men below the grade of staff sergeant are not permitted by the War Department or Army to even come to Newfoundland or anywhere else outside the United States (however they do come anyway because the State Department in fact permits them). Perhaps this principle of discrimination and inverted, perverted democracy practiced by the War Department and Army is what we enlisted men below the grade of staff sergeant with American wives have been sacrificing time, money, separation, and effort to preserve? Or would not Hitler's democracy be just about as good as this type set up by the Army?

In short, because of all these conflicting and confused Army regulations and orders devoted to help the privileged few and to destroy the family life of men below the grade of staff sergeants married before the war to good American girls, the local commander and his mistakes find their justification to enact equally ridiculous Army orders here in Newfoundland, supplementing the perverted restrictions of Circular 125 as amended by Circular 252, thus permitting only wives of men above the grade of sergeant and of officers to come to Newfoundland (see Newfoundland Base Command Memorandum No. 63, par. 2, dated August 27, 1945, and par. 4 of Adjutant General's letter attached thereto; exhibit B).

It is no secret that the War Department made the order contained in circular 252 (see exhibit A), allowing wives of the higher ranks to travel to Newfoundland because of specific request to that effect by the local Army commander suggesting the language: "by dependents of United States Army * * * personnel whose grade, rank, or rating entitle them to the transportation of their dependents at Government expense." Why was no request made for the same privileges for men of all grades and ranks, in view of the fact that many apartments at Fort Pepperrell still remain vacant? And when ample accommodations can be obtained in the town of St. John's (and have been obtained—at high rents, of course—by many privates whose wives came without Army permission but with State Department permission and permission of Newfoundland immigration authorities)? The answer is plain: Arrogance, conceit, stupidity, and selfishness of those Army officers in Newfoundland who control this policy prevented it. The size of these attributes rivals those in the Adjutant General's Office in Washington, where these insipid policies are finally determined.

So the local United States Army officers go from this War Department-Army policy of prohibition of travel to Newfoundland for wives of men less than staff sergeant in grade to their asinine conclusion that no other privileges normally given other men of the same grade can be granted these dastardly men who brought their loyal and true American wives from the United States, while the same privileges would be granted to any soldier who picked up with any sort of foreign woman, good or bad, as a wife.

Furthermore, is not the denial of commissary privileges to any enlisted men of any grade a violation of the will of the people of the United States as expressed in Federal law, Title 10, United States Code, Section 1237, enacted by our United States Congress and which is just as binding upon our Secretary of War or local Army commanders as upon any other citizen? (See sec. 1237, exhibit BB.) This law definitely specifies "the officers of the Quartermaster Corps shall procure and keep for sale to officers and enlisted men at cost price * * * for cash or on credit, such articles." Is it not plain that the Federal law uses the word "shall" which is a command or mandate to do a thing, and that it specifies sale to "officers and enlisted men" without making any distinction as to rank or grade? When the Federal law gives no authority to create a class distinction as to rank and grade, how can the War Department staff or local commanders and staff be arrogant enough to create classes in open defiance of Federal law, an authority greater than theirs? Also, does not the War Department's pronouncement on this subject of enlisted men buying food at the Army store as contained in AR 30-2290, dated August 10, 1938, paragraphs 1 and 2 (see exhibit BB), also clearly state that sales shall be made (par. 2a (1) (a)) to "officers, warrant officers, and enlisted men of the Army" without specifying any right of local commanders to withhold privileges from men of any grade or rank? Just where do despotic, dictator-minded commanding officers get their authority to withhold privileges from enlisted men of lower grades who have good American wives in direct violation of both Federal law and War Department order? Does any officer's twisted mind sincerely believe the restriction on travel of dependents to Newfoundland as contained in Circular 125 as amended by Circular 252 (exhibit A) is sound basis for such stupid refusal of commissary privileges to men with American wives?

With reference to the Newfoundland commanding officer's refusal of family quarters to enlisted men below the third enlisted grade with American wives (see Daily Bulletin, November 16, 1945, pars. 1 and 2; exhibit D), is it plain, grade-school common sense to use the travel restriction of wives of enlisted men as contained in Circular 125 as amended by Circular 252 (exhibit A) as justification for this refusal of family quarters? Especially is it sensible when Army regulations impose no such restriction upon the commander on the subject of assignment of family quarters, and instead expressly exhort the commander to make assignments for the best interests of the service? (See AR 210-10 and change 13 thereof; exhibit K.) Is it for the best interests of the service for any Army commander to assign all enlisted men with foreign wives to quarters while enlisted men of the same grades with American wives are denied family apartments or quarters; and, furthermore, when the quarters available are numerous enough to house all married men and families no matter how foreign or American the wives are? A commander who knows as little as some in the field would perhaps answer "Yes" to this question. In fact, the local commander is giving corporals (and in some cases privates) with Newfoundland (foreign) wives reenlisting in the Regular Army permanent quarters, which quarters are in as excellent condition as officers' quarters (see exhibit D) and designed for use by officers and the first three grades of enlisted men. And is all this sensible when a Federal law authorizes renting Government housing to all ranks? (See exhibit D.)

As for the separate rations allowance, the travel restrictions of Circulars 125 and 252 (exhibit A) are again used by the local commander for justification in denying separate rations allowance to enlisted men below the grade of staff sergeant with American wives in Newfoundland, while granting them to enlisted men of the same grade who have married Newfoundlanders (foreigners) (see exhibit D). Is this good judgment or observance of the express direction of the War Department as contained in Circular 134 dated April 8, 1944, paragraph 1 thereof (see exhibit J) where it is stated: "The post commander * * * may in his discretion and with due regard for the best interests of the service * * * authorize individual men to mess separately"? This item thus falls in the same category of customary military stupidity as the denial of family quarters to men with American wives residing with them in Newfoundland.

Even foreign domestic servants and maids of officers get better consideration than the American wives of enlisted men below the grade of staff sergeant with regard to receiving family quarters at Fort Pepperrell by virtue of the authority of AR 210-10, Change 13 dated January 8, 1944, paragraph 13e. (See exhibit K.)

The last straw to all this discrimination against enlisted men below staff sergeant with American wives is that the local commander has urged the equally perverted Adjutant General's Office and the War Department to back up his decision in denying transportation at Government expense back to the United States from Newfoundland for those American wives of such enlisted men below staff sergeant, which wives have come to Newfoundland with State Department permission but without Army permits. Several such enlisted men have made requests and have been refused orders allowing transportation of their dependents back to the United States by Government conveyance or at Government expense. This the local commander is doing although the War Department over General Marshall's signature has stated, contrary to that decision, in circular 245 dated August 11, 1945, paragraph 3 and 3a that transportation at Government expense will be furnished to dependents of all military personnel (regardless of rank or grade) on duty at stations outside continental United States (see exhibit F). How can any intelligent person read an exception into this so as to exclude American wives who came to Newfoundland with permission of our United States Government through the State Department but contrary to the Army's ridiculous verbiage in circulars 125 and 252 (see exhibit A), the Army having no jurisdiction in peace at least to restrict travel of civilians?

Furthermore, is not the War Department, General Marshall, and the Army required—like any other citizen—to obey Federal laws enacted by our United States Congress, and specifically the Federal law known as the Military Appropriations Act, 1946 (see exhibit E), and are they not required, if they issue Army regulations on a subject covered in this law such as transportation of dependents, to follow the Federal law? Is not the Federal law a higher authority than the War Department, General Marshall, and Army? It will be noted that the Federal law expressly says that dependents of such military personnel without regard to rank or grade may be moved, and shows no intention that foreign wives shall alone be a privileged class to the exclusion of good, loyal American wives. And if the law is interpreted to permit such exclusion of American wives, what principle of American democracy justifies the transport at Government expense of millions of dollars 100,000 or more British, German, French, and a varied assortment of all colors and nationalities of foreign wives back to the United States while at the same time denying the small expense of transporting the relatively few American wives back to the United States? In addition, other American wives and foreign wives of enlisted men, staff sergeant or higher, and of commissioned officers get free rides at Government-taxpayers' expense back to the United States; and as mentioned before, no longer are they restricted to one move at Government expense because of circular 287, section X, September 20, 1945 (see exhibit I, p. 1). In fact, one staff sergeant, a bigamist, in Newfoundland took his second illegal foreign wife which he married in Newfoundland back to the United States at Government expense; and had such authority by the above Army regulations regardless of how many times his lawful American wife might have traveled at Government expense.

The apex of the ridiculous was reached lately when a staff sergeant recently so promoted here in Newfoundland was threatened with denial of benefits, such as family quarters on the post, etc., to which other staff sergeants married are entitled, because his wife was brought here without an Army permit at a time when he was only a corporal in grade. His wife came from the United States. Yes, circular 125, as amended, was given as the reason for this foolish attitude.

By way of contrast, the Canadian Army in Newfoundland all during the war by its quota system permitted in practical effect all its personnel of any rank or grade to bring their wives from Canada to live with them. And that was true also of the Canadian Navy stationed in Newfoundland. The Canadian Army and Navy treated none of its personnels' wives, no matter what grade the serviceman held, as an outlaw. Certainly, the Canadians would not have been so stupid as to give privileges to Newfoundland wives marrying Canadians which they would deny their own Canadian wives married to Canadians. So one can see that Canada follows a Christian policy of fostering family life where it does not interfere with military activity, in complete contrast to what we in America consider as sensible, but which is really a pagan, immoral policy. However, one must admit the greater democracy in Canada, and must also admit that Canada probably has a greater proportion of people with sound religious principles controlling their Government and the armed services than the proportion of the same controlling the United States Government and Army. Even the people living in Newfoundland think the American policy is stupid and antireligious. (See exhibit L.)

Are these the intelligent principles, Government and country for which all enlisted men fought? It might be if the War Department and Army were cleaned of its stupid characters and parasites whose unearned portions of their pay coming from the United States Treasury far exceeds the Government cost of transporting a few American wives to the United States and the cost of other benefits (commissary benefits, rations allowance, and family quarters) unjustly denied them in violation of Federal law or Army regulations, or common sense.

Do these local drains on the Federal Treasury wearing uniforms have the same intense desire to stop Government costs or fill the Federal Treasury when they take, as they have, ten 1942 Army staff cars in excellent condition, declare them surplus property, have the Army recondition and paint them, put on new tires, and sell them to the officers only of highest rank (themselves) at less than one-third or one-half their market value (about $450 in United States money)?

All these matters might be good advertisement for the current Army enlistment drive, especially the prospective soldiers who have American wives.

LIST OF EXHIBITS

EXHIBIT A

Circular 125: Travel of dependents.
Circulars 197 and 203: Travel.
Circular 252: Travel to Newfoundland.

EXHIBIT B

Memo 63 (Newfoundland headquarters): Travel to Newfoundland.

EXHIBIT BB

AR 30-2290 and U. S. C. 1237: Commissary.

EXHIBIT C

Price list of commissary store, Fort Pepperrell.

EXHIBIT D

Daily Bulletin (Newfoundland headquarters), November 16, 1945.

Special Order 172: Public quarters for private with Newfoundland wife.

Special Order 168: Family quarters for corporal and sergeant married to foreigners.

Special Order 170: Separate rations to private married to Newfoundlander.

Authority to ration separately for private married in Newfoundland to foreigner.

EXHIBIT A

CIRCULAR 125

WAR DEPARTMENT,
Washington, D. C., April 25, 1945.

(Effective until October 25, 1946, unless sooner rescinded or superseded)

I. Enlisted men: Every enlisted man 42 years of age or over, whose service is honorable and who voluntarily applies in writing to his immediate commanding officer for a discharge, will be sent to a separation center, as provided in current instructions, for discharge under the provisions of AR 615-365 (Convenience of the Government) and this circular. Such applicants overseas will be returned to the appropriate separation center in the United States in excess of rotation quotas. Military necessity or other requirements or limitations will not be a bar to discharge; however, this authority will not be used in lieu of disciplinary action, nor when discharge under other Army regulations is appropriate, nor when the individual concerned is under medical or surgical treatment. The provisions of this circular do not apply to enlisted women of the Women's Army Corps.

[AG 220.8 (17 April 45)]

II. Travel: 1. Civilian dependents of military personnel and of War Department civilian employees may enjoy the same travel privileges accorded to other civilians but they may not proceed to a theater, base, or command outside the continental United States in which military or civilian personnel upon whom they are dependent are stationed except—

a. When they are bona fide members of—
(1) Army Nurse Corps.
(2) Women's Army Corps.
(3) American Red Cross.
(4) United Service Organizations.

b. When they are dependents of bona fide members of military attaché staffs or offices and military commissions or missions in Latin America, provided such travel is appropriately authorized in War Department orders.

c. Upon specific request of a theater or base commander for their employment in a capacity necessary to the war effort.

d. With respect to the Bahamas, the Caribbean Defense Command, and Brazil, in accordance with joint Army and Navy policy, travel by dependents of United States Army and Navy personnel, whose grade, rank, or rating entitles them to the transportation of their dependents at Government expense, and by dependents of War and Navy Department civilian employees on permanent duty in these areas, is authorized subject to the following conditions:

(1) That the travel is for the purpose of establishing residence with (not visiting) the personnel concerned;

(2) That in each area the appropriate Army and Navy commanders will coordinate local implementation which will be governed by availability and suitability of housing, the availability of medical supplies, and other pertinent local conditions;

(3) That in each area the appropriate Army and Navy commanders, respectively, will determine the order in which applications for authorization for dependent's travel will be granted;

(4) That no Government transportation will be furnished except as may become available as surplus;

(5) That reimbursement for transportation of dependents will be effected in accordance with existing law;

(6) That no household goods or private automobiles will be transported via Government transportation or at Government expense;

(7) That no increase in Army or Navy personnel assigned to the above areas will result.

2. The fact that a member of the Army Nurse Corps, Women's Army Corps, American Red Cross, United Service Organizations, or a civilian is a blood relative of, or marries, a member of the armed forces or a War Department civilian employee in an oversea theater, base, or command, will not be allowed to effect an advantage or disadvantage in the assignment or duty of either person, nor will it be allowed to preclude the privileges normally allowed to such persons. Assignments of personnel under military control to duty overseas and authorization for others to proceed will be made solely on the basis of military necessity and without regard to the personal relationships involved.

3. Section IV, Circular No. 228, War Department, 1944, pertaining to the foregoing subject, is rescinded.

[AG 510 (17 April 45)]

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

CIRCULAR 197

WAR DEPARTMENT,
Washington, D. C., June 30, 1945.

IV. Travel: The last sentence of paragraph 2, section II, WD, Circular 125, 1945, is changed as follows:

Assignments of personnel under military control to duty overseas and authorization for others to proceed will be made solely on the basis of military necessity and without regard to the personal relationships involved, except as provided in section V, WD, Circular 47, 1945.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

CIRCULAR 203

WAR DEPARTMENT,
Washington, D. C., July 6, 1945.

VI. Travel: Paragraph 1e, section II, WD, Circular 125, 1945, is added as follows:

e. Travel to Bermuda by dependents of United States Army and Navy personnel whose grade, rank, or rating entitles them to the transportation of their dependents at Government expense, and by dependents of War and Navy Department civilian employees on permanent duty in Bermuda, is authorized subject to the conditions enumerated under d above.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

CIRCULAR 252

WAR DEPARTMENT,
Washington, D. C., August 20, 1945.

V. Travel: Section II, WD, Circular 125, 1945, as amended by section IV, WD, Circular 197, and section VI, WD, Circular 203, 1945, is further amended by adding paragraph 1f, as follows:

f. Travel to Newfoundland by dependents of United States Army and Navy personnel whose grade, rank, or rating entitles them to the transportation of their dependents at Government expense, and by dependents of War and Navy Department civilian employees on permanent duty in Newfoundland, is authorized subject to the conditions enumerated under d above.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

EDWARD F. WITSELL,
Major General,
Acting The Adjutant General.

EXHIBIT B

MEMORANDUM NO. 63, TRAVEL OF DEPENDENTS TO NEWFOUNDLAND

HEADQUARTERS,
NEWFOUNDLAND BASE COMMAND,
UNITED STATES ARMY,
APO 862, CARE OF POSTMASTER,
New York, N. Y., August 27, 1945.

1. Attention of all concerned (only officers and first three grades) is directed to con-

fidential letter AGO, subject, Travel of Dependents of Military Personnel to Newfoundland, dated August 17, 1945 (classification reduced to "Restricted"), copy of which is appended hereto as enclosure No. 1.

2. All United States military personnel or War Department civilian employees coming within the purview of paragraph 2, enclosure No. 1 (see AG letter, next sheet), who desire to have their dependents establish residence with them in Newfoundland will make application, through post commanders, for permission therefor to the commanding general, Newfoundland Base Command. Application forms for this purpose may be procured from the Adjutant General, Newfoundland Base Command, or from post adjutants.

3. Before request is approved, applicants will be required to show that suitable housing is available for their dependents, either on or off the post. Post commanders in their forwarding endorsements will indicate either (1) that suitable quarters are available on the post or (2) that the individual has procured suitable housing in the neighboring community.

4. If no Government transportation is requested: When application is approved, the commanding general, Newfoundland Base Command, will issue to the applicant a letter of authorization for the travel of dependents. This letter must be sent to the dependents concerned, and will be used in lieu of a passport. It must be in the possession of dependents at all times while travel to Newfoundland is being performed.

5. If Government transportation is requested. Lists of dependents approved by the commanding general, Newfoundland Base Command, for travel to Newfoundland will be forwarded in accordance with paragraphs 6 and 7, enclosure No. 1, to The Adjutant General, and the commanding general, Army Service Forces. Persons requesting Government transportation for their dependents will instruct such dependents to take no action in connection with Government-provided transportation prior to receipt of instructions and invitational travel orders issued by The Adjutant General.

6. Medical care for dependents. Due to the limited Medical Department personnel to be stationed in Newfoundland, it will be necessary, initially, to restrict medical care for dependents as follows:

(a) Only out-patient treatment and emergency care, which in civilian practice is equivalent to office calls and residence calls, will be provided for dependents of United States Army personnel at post hospitals in Newfoundland.

(b) A baby clinic will be operated one afternoon each week for the purpose of routine physical examinations and immunizations for children of preschool age.

(c) Hospitalization of cases of any type, dental treatment, and maternity service (including prenatal care) will not be provided.

7. Immunization: The following immunizations are required prior to departure from the United States.

(a) Smallpox vaccination unless immunized within the past year. Waiver of smallpox vaccination in the case of infants under 3 months is authorized.

(b) Typhoid and paratyphoid (triple typhoid vaccine) unless immunized within the past year. This immunization consists of three inoculations administered at weekly intervals which will require a total of 2 weeks. Waiver of the requirements for triple typhoid vaccine for infants under 1 year of age is authorized.

(NOTE.—In this connection, it is suggested that dependents contact the commanding officer of a general hospital, general dispensary, Army airfield, or Army camp, post, or station nearest their homes who will be in a position to administer the necessary immunizations. A private physician may administer immunization inoculations, but if so, a certificate for same must be obtained for presentation to military authorities when required (AG–10).)

By command of Brigadier General Connell:

A. H. WARREN,
Colonel, G. S. C., Chief of Staff.

Official:

[SEAL] F. J. MATTHEWS,
Captain, A. G. D., Adjutant General.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, D. C., August 17, 1945.

Subject: Travel of dependents of military personnel to Newfoundland.

To: Commanding Generals, Eastern Defense Command, Governors Island, N. Y.; Newfoundland Base Command, APO 862, care of Postmaster, New York, N. Y.

1. War and Navy Departments have agreed to the following provisions governing travel to Newfoundland by dependents of United States Army and Navy personnel and dependents of War and Navy Departments civilian employees stationed in Newfoundland:

2. Travel to Newfoundland by the dependents of United States Army and Navy personnel, whose grade, rank (nobody below staff sergeant), or rating entitle them to the transportation of their dependents at Government expense, and by dependents of War and Navy Departments civilian employees on permanent duty in Newfoundland is authorized subject to the following conditions:

(a) That the travel is for the purpose of establishing residence with (not visiting) the personnel concerned.

(b) That the commanding general, Newfoundland base command, will coordinate with the commandant, United States naval operating base, Newfoundland, upon local implementation, which will be governed by availability and suitability of housing, the availability of medical supplies, and other pertinent local conditions.

(c) That in each area the appropriate Army and Navy commanders, respectively, will determine the order in which application for authorization for dependents' travel will be granted.

(d) That no Government transportation will be furnished except as may become available as surplus.

(e) That reimbursement for transportation of dependents will be effected in accordance with existing law.

(f) That no household goods or private automobile will be transported via Government transportation or at Government expenses.

(g) That no increase in Army or Navy personnel assigned to the above areas will result.

3. Action is being taken by the War Department to amend section II of Circular 125 so as to include Newfoundland among the excepted stations mentioned in subparagraph d. Attention is invited to the fact that Circular 125 is not applicable to the transportation of dependents from overseas stations to the United States.

4. There is at the present time no surplus space on Government transportation to Newfoundland. However, in the event that surplus space should become available in the future, instructions relating to the application for and the use of such space is included herein.

5. Dependents will be required to complete the inoculations prescribed for Army personnel assigned from the United States to Newfoundland. Dependents will be required to make their own arrangements for transportation to the port of embarkation when notified by The Adjutant General that they are to travel via Government transportation to overseas station. When dependents elect to travel via commercial transportation (rail, water, or air) at their own expense, they will be required to make their own arrangements for transportation to final destination.

6. Lists of requests for surplus Government transportation approved by the commanding general, Newfoundland Base Command for the travel of dependents will be forwarded in triplicate by air pouch to The Adjutant General (attention: Operations Branch, AGO), War Department, Washington 25, D. C., and in quadruplicate to the commanding general, Army Service Forces (attention chief of transportation), Washington 25, D. C. Lists should contain the following information:

(a) Christian name, sex, ages, addresses of dependents, and names, ranks, and Army serial numbers of individuals upon whom they are dependent.

(b) Method (air or water) and approximate date of travel desired.

(c) Order of precedence of movement within both the air and water categories.

(d) A class IV air priority designator for those personnel for whom air transportation is desired.

The applications that will be considered by the commanding general, Newfoundland Base Command, will include requests of all military personnel wherever stationed within the territorial limits of Newfoundland.

7. Dependents of Government civilian employees, traveling under provisions of War Department Circular 125, may travel by surplus air transport but at their own expense, unless such dependents are traveling to accept Government employment in Newfoundland Base Command, in which case they may travel at Government expense.

Dependents of military personnel may travel by surplus transportation available to the War Department, either air or water, at Government expense. The authority for travel will be contained in War Department invitational travel orders issued at the request of the commanding general, Newfoundland Base Command.

8. Personnel under Newfoundland Base Command will be instructed to inform their dependents to take no action in connection with travel on Government-provided transportation prior to receipt of instructions and invitational travel orders issued by The Adjutant General.

9. For your information, copies of instructions for procedure involving either air or water transportation as issued by The Adjutant General to the dependents for whom transportation is requested by overseas commands are attached hereto as enclosures 1 and 2.

10. Copies of local implementation plans based on the policy set forth above will be furnished to the War Department at the earliest practicable date.

11. The commanding general, Newfoundland Base Command, is authorized to reduce the classification of this communication when deemed advisable and is directed to advise the War Department when reduction has been accomplished.

By order of the Secretary of War:

EDWARD F. WITSELL,
Brigadier General,
The Adjutant General.

Certified a true copy:

F. J. MATHEWS,
Captain AGD, Adjutant General.

EXHIBIT BB

COMMISSARY SALES (FOOD AND PROVISIONS)

The people of the United States have expressed their will, through their duly elected Representatives in Congress, on the subject of commissary provisions for members of the Army by means of the Federal law embodied in title 10, United States Code, section 1237, as follows:

"1237. Sale at cost prices of articles designated by officers of Inspector General's Department; accounting:

"The officers of the Quartermaster Corps shall procure and keep for sale to officers and enlisted men at cost price (except that overhead costs shall be charged, as prescribed in sec. 1231 of this title, in the case of articles of clothing and equipage) for cash or on

credit, such articles as may, from time to time, be designated by the officers of the Inspector General's Department of the Army. An account of sales on credit shall be kept, and the amount due for same shall be reported to the Chief of Finance. (R. S. par. 1144; Aug. 24, 1912, ch. 391, par. 3, 37 Stat. 591, June 3, 1916, ch. 134, par. 7, 39 Stat. 169; June 3, 1916, ch. 134, par. 9a, as added June 4, 1920, ch. 227, par. 9, 41 Stat. 766.)"

Necessarily subordinate to the will of the people of the United States as expressed in the above Federal law are the Army regulations propounded by order of the Secretary of War, as follows:

"ARMY REGULATIONS No. 30-2290

"WAR DEPARTMENT,
"Washington, August 10, 1938.

"QUARTERMASTER CORPS: SALE OF SUPPLIES AND SERVICE

"SECTION 1. Sale of subsistence articles:

"1. General: a. Such authorized articles of subsistence supplies as it may be practicable to keep and as are required from time to time will be kept by sales commissaries in reasonable quantities for sale to those entitled to purchase the articles.

"b, c, d, e. * * *

"2. Kinds of sales and to whom made: a. Cash sales.

"(1) Definition: Cash sales are those paid for at the time of purchase, and will be recorded on W. D., Q. M. C. Form No. 386 (cash sales slip), or as provided in paragraph 10a (5), AR 35-6660.

"(2) To whom made: Cash sales are authorized to be made to the following for their own use or for the use of dependent members of their families:

"(a) Officers, warrant officers, and enlisted men of the Army, Navy, Marine Corps, and Coast Guard on the active or retired list.

* * * * * *

"(j) Civilians employed with the Army, including duly accredited representatives of nationally recognized welfare organizations, at stations so located as to make the purchases from civilian agencies impracticable, upon written authority of the post commander."

PRICE LIST, COMMISSARY SALES STORE, NOVEMBER 1945, FORT PEPPERRELL, NEWFOUNDLAND

1. Deliveries will be made to family quarters at Fort Pepperrell.

* * * * * *

Sales are made to the following:

(a) All members of the United States armed forces.

Enlisted men living (enlisted men below staff sergeant with American wives, because by local Army order they are not permitted to live outside their barracks (see Daily Bulletin, November 16, 1945; exhibit D, par. 6)) in barracks will not be sold fresh meat or dry and canned goods, except personnel on authorized reconnaissance and recreation.

EXHIBIT D

DAILY BULLETIN

HEADQUARTERS, NEWFOUNDLAND BASE COMMAND AND FORT PEPPERRELL, NEWFOUNDLAND,
New York, N. Y., November 16, 1945.

Paragraph 1. All concerned: Enlisted men below the first three grades who have married in Newfoundland (married foreigners), will be furnished family quarters for their dependents at Fort Pepperrell, provided they submit an application therefor through their organization commanders to this headquarters. Personnel of the Regular Army who held the grade of T5g (corporal) or higher can be provided permanent quarters normally assigned to men of the first three grades. Upon occupying these quarters men having class F allotments will have 90 cents per day deducted from their pay for family quarters furnished them as outlined by change 5, paragraph 29-c, AR 35-4520, dated January 21, 1944.

PAR. 2. Married privates, first-class, and other enlisted men below the first three grades who have married in Newfoundland, who do not elect to reenlist in the Regular Army, will be assigned family quarters at Fort Pepperrell for their dependents. These quarters are located in buildings T-265 to T-273, above and slightly west of the West Side Gas Station. Deduction for quarters will be made wherever class F allotments exist.

PAR. 3. It is planned to have an apartment in building T-269, west side, and an apartment in the east side NCO quarters 709 available for inspection of prospective occupants Sunday afternoon, November 18, 1945, from 1300 NT to 1700 NT, at which time there will be displayed in each quarters the furniture and equipment now available for issue to married enlisted men on memorandum receipt.

PAR. 4. Enlisted men taking advantage of this opportunity can be provided telephone service at the rate of 75 cents per month and will not be required to sleep and live in barracks. Commissary privileges will be extended to these enlisted men on the same basis and conditions provided for other military personnel living at Fort Pepperrell with their families.

PAR. 5. Enlisted men who have married without permission will not be permitted to occupy family quarters at Fort Pepperrell until disciplinary action imposed by a court-martial or otherwise has been adjudged and after termination of punishment.

PAR. 6. Garage space is available for married military personnel living at Fort Pepperrell. In this connection, attention is called to Circular 50, Newfoundland Base Command, dated September 25, 1945. Effective January 1, 1946, married enlisted men who do not live on the Fort Pepperrell reservation will not be granted authority to ration separately or to be quartered outside the reservation when not on duty.

By order of Colonel Warren:

F. J. MATHEWS,
Major, AGD, Adjutant General.

SPECIAL ORDER No. 172

HEADQUARTERS,
NEWFOUNDLAND BASE COMMAND AND FORT PEPPERRELL, NEWFOUNDLAND,
UNITED STATES ARMY,
APO 862, CARE OF POSTMASTER,
New York, N. Y., December 7, 1945.

4. Under the provisions of AR 210-10, Pvt. Daniel B. Turner (married to Newfoundlander; reenlisted in Regular Army), 34427450 (605), 3294, Quartermaster Carrier Detachment, Fort Pepperrell, Newfoundland, APO 862, is assigned public quarters, apartment 410-C (permanent quarters built for officers and first three enlisted grades; quarters built with funds appropriated by Congress solely for such ranks), effective December 10, 1945.

By command of Brigadier General Connell:

A. H. WARREN,
Colonel, GSC, C. of S.

"During the fiscal year 1946 the dependents and household effects of such military and civilian personnel (without regard to rank or grade) in and under the Military Establishment on duty at stations outside the continental limits of the United States, or in Alaska, as may be determined upon by the Secretary of War, may prior or subsequent to the issuance of orders for the relief of such personnel from their stations, or subsequent to the discharge or release of such military personnel from active military service, be moved (including packing and unpacking of household effects) from such stations outside the continental limits of the United States, or in Alaska, to such locations as may be designated by such personnel, by the use of either Government or commercial means of transportation, and later from such locations to the duty stations to which such personnel may be ordered, and current appropriations of the Military Establishment available for travel and transportation may be used for this purpose, the decision of the Secretary of War to be final as to the dependency of any individual sought to be affected by this provision except as to travel performed subsequent to arrival in the United States: * * *."

EXHIBIT F

CIRCULAR 245

WAR DEPARTMENT,
Washington, D. C., August 11, 1945.

(Effective until February 11, 1947, unless sooner rescinded or superseded)

TRANSPORTATION OF DEPENDENTS FROM OVERSEAS

1. Purpose: The purpose of these instructions is to clarify War Department policy concerning the movement of dependents at Government expense from overseas to the United States and to its territories or possessions, for the guidance of oversea and United States port commanders.

2. Definitions: (a) The word "dependents" as used herein refers only to wives, (all wives) husbands, and children of military personnel and of that civilian personnel defined in paragraph 3a(2).

(b) The term "Government expense" shall include transportation of dependents in kind, or reimbursement of expenditures actually incurred not to exceed the cost of transportation if same had been provided in kind by the Government.

3. Policy: The Secretary of War has determined that, effective July 1, 1945, the transportation at Government expense of the personnel enumerated below is warranted and directs that transportation be furnished, when available, in accordance with the policies outlined herein:

(a) Personnel to be affected:

(1) Dependents of all military personnel, regardless of rank or grade, (including those who have been separated from the service under honorable conditions) who are, or have been, on duty at stations outside the continental limits of the United States, or in Alaska, at any time since September 8, 1939.

(2) Dependents of employees of the American Red Cross (for whom water transportation only is authorized under these instructions) and of full-time civilian employees directly employed by the War Department or the Army.

(3) Dependents of military and civilian personnel who are not themselves entitled to transportation to the United States or its Territories or possessions by reason of the circumstances of their separation from the service or termination of employment overseas are specifically excluded from the provisions of this circular.

(4) Fiancees of military personnel are specifically excluded from the provisions of these instructions. They must provide for their own transportation and travel as commercial passengers at their own expense. Theater commanders may, however, render such assistance as may be practicable to fiancees in arranging for transportation, upon the request of the service personnel concerned.

(5) Dependents of deceased personnel are also excluded from the provisions of these instructions. Transportation of these individuals is governed by the provisions of section XIV, WD, Circular 140, 1945.

(b) Transportation to be provided:

(1) In all cases the transportation of dependents will depend upon the military situation, the amount of surface shipping available, and current instructions of the War Department. Transportation of dependents by air at Government expense or by military aircraft is not authorized without the expressed approval of the War Department.

(2) Vessels available will be used in the following order of precedence:

(a) Army transports (i. e. vessels owned by or bare-boated to the Army and manned and operated by the Army) or Navy transports.

(b) Other vessels of American registry.

(3) Dependents, if embarked by the Army on a War Shipping Administration vessel will be given a copy of the letter of authority covering their transportation as required by paragraph 13, WD Memorandum 55–44, September 29, 1944, subject, Transactions Between War Department and War Shipping Administration.

(4) Transportation to be provided under the provisions of these instructions will be effected from an oversea port to a location in the United States or its Territories or possessions. Port transportation officers will furnish transportation only from ports of debarkation to inland points in the United States designated in the travel orders of the individuals, or to an appropriate United States port of embarkation in connection with further ocean travel which may be necessary under such orders, except that the port transportation officer may amend orders of dependents to authorize travel to another point in the United States, upon request of the military or civilian personnel upon whom they are dependent, when in his opinion such action appears justifiable.

(c) Charges for subsistence: Charges for subsistence will be made in accordance with the following:

(1) On Army transports, in accordance with paragraph 20b, WD Memorandum 55–44, December 22, 1944, subject, Transactions Between War Department and War Shipping Administration.

(2) On Navy transports—as prescribed by the Navy Department.

(3) On War Shipping Administration vessels—as prescribed by paragraph 17, WD Memorandum 55–44, September 29, 1944, cited above.

(d) Authority and priority:

(1) The movement of dependents will be strictly controlled by the theater commander or his duly authorized representative, who shall furnish the dependent with appropriate travel orders, citing this circular, and stating the inland destination in the United States,

its Territory, or possession, of the individual concerned. Such orders will be issued only upon written request to the oversea theater or base commander by the military or civilian personnel for whose dependents transportation is authorized. This request will include the location to which transportation of dependents is desired.

(2) Space priorities for dependents referred to herein will be as determined by the theater commander under the provisions of WD letter (AG 510 (19 Apr. 45) OB-S-E-SPTOM-M), May 8, 1945, subject, Priorities for Personnel Returning to the United States by Other Than Air.

4. Relation to other regulations: These instructions are not intended to, and do not in any way, affect regulations or requirements of the Immigration and Naturalization Service of the Department of Justice, and of the Department of State, nor do they in any way affect such restrictive measures as may be taken by competent authority relative to travel to or through restricted areas. Furthermore, these instructions in no way affect transportation of dependents of military personnel from the United States to oversea commands.

5. Restriction: These instructions are not intended to limit or restrict the rights of personnel who may be otherwise entitled by law or regulations to transportation of dependents. Where dependents are transported to inland destinations in the United States under the provisions of this circular, the transportation authorized will constitute the "one such movement" contemplated under existing instructions.

6. Shipment of household effects: Transportation of household effects under the provisions of this circular will be limited to those of military or civilian personnel who were living with their dependents overseas at the time of their induction or employment by the Government, and by the amount of surface shipping available. The provisions of paragraphs 12 and 34, AR 55–160, will be waived in the case of household effects transported under the provisions of this circular.

7. Rescission: WD letter (AG 510 (23 Oct. 44) OB–S–E–M), November 23, 1944, subject, Return of Dependents from Overseas, is rescinded.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

EDWARD F. WITSELL,
Major General, Acting The Adjutant General.

WAR DEPARTMENT,
Washington, April 26, 1943.

TRANSPORTATION CORPS—TRANSPORTATION OF INDIVIDUALS

* * * * *

8. Dependents:

(a) To whom transportation furnished:

(1) Military personnel, permanent change of station:

(a) When authorized: Subject to (b) below, and also (4) below, effective June 1, 1942, when any officer, warrant officer, or enlisted man above the fourth grade (above sergeant) is ordered to make a permanent change of station, the United States will furnish transportation in kind from funds appropriated for his dependents, provided that if the costs of such transportation exceed that for transportation from the old to the new station, the excess costs will be paid to the United States by the officer, warrant officer, or enlisted man concerned. See section 12, act June 16, 1942 (sec. I, Bull. 28, WD, 1942).

(b) Restriction changed by Circular 287 (see Exhibit I): For military reasons, for the duration of the present war, only one such movement of dependents is authorized on and after September 1, 1942. Present regulations governing the movement of dependents of military personnel returned to civil life through retirement, discharge, or relief from active duty remain in effect and are not modified by the foregoing limitations.

(c) Permanent change of station defined: The words "permanent change of station" as used in (a) and (b) above include the change from home to first station when an officer, warrant officer, or enlisted man, including retired personnel and members of the Reserve components of the Army, is ordered to active duty other than training duty and the change from the last station to home in connection with retirement, relief from active duty, or transfer to a Reserve component. See section 12, act June 16, 1942 (sec. I, Bull. 28, WD, 1942). An enlisted man discharged in order to enable him to accept an appointment as an officer and ordered as such to proceed to another station for duty is an officer ordered to make a permanent change of station within the meaning of this paragraph.

(2) Army of the United States personnel: On and after September 8, 1939, and until 6 months after termination of the war or such earlier time as the Congress by concurrent resolution or the President by proclamation may designate, dependents of personnel of the Army of the United States will be furnished transportation in kind, under the same rules and regulations that govern the issuance of transportation in kind for dependents of Regular Army personnel. (See sec. 4 (a), act June 5, 1942 (Bull. 27, WD, 1942).)

EXHIBIT H

ARMY REGULATIONS No. 35–4880

WAR DEPARTMENT,
Washington, D. C., April 19, 1945.

FINANCE DEPARTMENT—REIMBURSEMENT FOR TRANSPORTATION OF DEPENDENTS

1. Authorization of reimbursement for transportation of dependents: (a) Reimbursement equal to commercial cost authorized: When any officer, warrant officer, or enlisted man above the fourth grade (above sergeant), having dependents as defined in paragraph 2, is ordered to make a permanent change of station, the United States shall furnish transportation in kind from funds appropriated for the transportation of the Army to his new station for such dependents: *Provided further*, That if the cost of such transportation exceeds that for transportation from the old to the new station, the excess costs shall be paid to the United States by the officer, warrant officer, or enlisted man concerned: *Provided further*, That transportation supplied the dependents of such officer, warrant officer, or enlisted man, to or from stations beyond the continental limits of the United States, shall not be other than by Government transport, if such transportation is available as may be determined by the Secretary of War: *And provided further*, That in lieu of transportation in kind authorized by this section for dependents, the President may authorize the payment in money of amounts equal to such commercial transportation costs for the whole or such part of the travel for which transportation in kind is not furnished when such travel shall have been completed. (See sec. 12, act June 16, 1942 (56 Stat. 364; 37 U. S. C. 112, M. L. 1939, Supp. II, sec. 1371c–12 (6); sec. 1, Bull. 28 WD, 1942).)

(b) Delegation of authority to Secretary of War to make payments: The Secretary of War is authorized, in lieu of transportation in kind for travel of dependents of officers, warrant officers, and enlisted men above the fourth grade authorized by (a) above upon permanent change of station, to make payment in money of amounts equal to commercial transportation costs for the whole or such part of the travel of such dependents for which transportation in kind is not furnished when such travel shall have been completed. (See Executive Order 9222, August 15, 1942 (sec. IV, Bull. 45, WD, 1942).)

2. Dependent defined: (a) General: The term "dependent" as used in these regulations, except in section IV, shall include a lawful wife and unmarried children under 21 years of age. It shall also include the father or mother of the person concerned provided he or she is in fact dependent on such person for his or her chief support: *Provided*, That the term "children" shall be held to include stepchildren and adopted children when such stepchildren or adopted children are in fact dependent upon the person claiming dependency allowance. (See sec. 4, act June 16, 1942 (56 Stat. 361, 37 U. S. C. 104; M. L. 1939, Supp. II, sec. 1371c–4; sec. I, Bull. 28, WD, 1942).)

* * * * *

9. (Rescinded by circular 287.) (See exhibit I.) Reimbursement for only one movement: (a) General: For military reasons, for the duration of the present war, only one movement of dependents, as distinguished from a movement in connection with evacuation or relief from active duty, is authorized on and after September 1, 1942. (See AR 55–120.) Where claim for transportation of dependents has been filed by the individual concerned and payment has been made thereof by the issuance of a check covering cost of travel in question, said claim may not be withdrawn and check canceled in order that transportation for a subsequent move may be claimed.

EXHIBIT I

CIRCULAR No. 287

WAR DEPARTMENT,
Washington, D. C., September 20, 1945.

X. Transportation.—1. Dependents: The one-move restriction on the transportation of dependents of military personnel (dependents of soldiers above staff sergeant can now ride at Government expense any number of times), which has been in effect since September 1942, is removed. The lifting of this restriction is applicable, under the provisions of AR 55–120 as modified below, to—

(a) Dependents of personnel on orders directing permanent change of station issued on or after November 1, 1945.

(b) Dependents of personnel on orders directing permanent change of station subsequent to September 1, 1942, from the last permanent duty station to present permanent duty station only. This travel is authorized only in cases wherein dependents have not previously joined personnel upon whom they are dependent at their present permanent station and where travel is commenced on or after November 1, 1945.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

EDWARD F. WITSELL,
Major General, Acting the Adjutant General.

ARMY REGULATIONS No. 35–4520

WAR DEPARTMENT,
Washington, D. C., April 19, 1945.

FINANCE DEPARTMENT—MONETARY ALLOWANCES FOR QUARTERS AND SUBSISTENCE FOR ENLISTED PERSONNEL IN A NONTRAVEL STATUS AND FOR QUARTERS FOR DEPENDENTS OF ENLISTED PERSONNEL OF FIRST, SECOND, OR THIRD GRADE

1. Authorization of allowances.—a. To each enlisted man not furnished quarters or rations in kind there shall be granted, under such regulations as the President may prescribe, an allowance for quarters and subsistence, the value of which shall depend on the conditions under which the duty of the man is being performed, and shall not exceed $5 per day. See section 10, act of June 16, 1942

(56 Stat. 363; 37 U. S. C. 110; M. L. 1939, Sup. II, sec. 1371c-10 (1); sec. 1, Bul. 28, W. D., 1942).

* * * * *

13. Personnel entitled to allowance: Each enlisted man of the first, second, or third grade, in the active military service of the United States having a dependent as defined in paragraph 14 shall, under such regulations as the President may prescribe, be entitled to receive, for any period during which public quarters are not provided and available for his dependent, the monthly allowance for quarters authorized by law to be granted to each enlisted man not furnished quarters in kind: *Provided*, That such enlisted man shall continue to be entitled to this allowance although receiving the allowance provided in paragraph 1 if by reason of orders of competent authority his dependent is prevented from dwelling with him. See section 10, act June 16, 1942 (56 Stat. 363); 37 U. S. C. 110; M. L. 1939. supp. II, sec. 1371c-10 (2); sec. I, Bull. 28, W. D. 1942).

14. Dependent defined: The term "dependent" as used in these regulations shall include at all times and in all places a lawful wife and unmarried children under 21 years of age. It shall also include the father or mother of the person concerned provided he or she is in fact dependent on such person for his or her chief support: *Provided*, That the term "children" shall be held to include stepchildren and adopted children when such stepchildren or adopted children are in fact dependent upon the person claiming dependency allowance. Section 4, act June 16, 1942 (56 Stat. 361; 37 U. S. C. 104; M. L. 1939, supp. II, sec. 1371c-4; sec. I, Bull. 28, WD, 1942).

ARMY REGULATIONS No. 35-4220

WAR DEPARTMENT,
Washington, D. C., November 17, 1945.

FINANCE DEPARTMENT—SUBSISTENCE AND RENTAL ALLOWANCES FOR COMMISSIONED OFFICERS AND OTHERS ENTITLED TO SIMILAR ALLOWANCES

1. Statutory provisions: (a) Commissioned officers below grade of brigadier general.—Each commissioned officer on the active list, or on active duty, below the grade of brigadier general or its equivalent * * * shall be entitled at all times, in addition to his pay, to a money allowance for subsistence. The value of one subsistence allowance is hereby fixed at 70 cents per day. To each officer * * * receiving the base pay of the first, second, third, or sixth period the amount of this allowance shall be equal to two subsistence allowances, and to each officer receiving the base pay of the fourth or fifth period the amount of this allowance shall be equal to three subsistence allowances: * * * Section 5, act June 16, 1942 (56 State. 361; 37 U. S. C., Supp. III, 105; M. L. 1939, sup. II, sec. 1371c-5).

* * * * *

5. Statutory provisions: (a) Commissioned officers below the grade of brigadier general.—Except as otherwise provided in this section, each commissioned officer below the grade of brigadier general or its equivalent * * * while either on active duty or entitled to active-duty pay shall be entitled at all times to a money allowance for rental of quarters.

To an officer having a dependent, receiving the base pay of the first period the amount of said allowance shall be $60 per month, to such an officer receiving the base pay of the second period the amount of this allowance shall be $75 per month, to such an officer receiving the base pay of the third period the amount of this allowance shall be $90 per month, to such an officer receiving the base pay of the fourth period the amount of this allowance shall be $105 per month, and to such an officer receiving the base pay of the fifth or sixth period the amount of this allowance shall be $120 per month. (Same statutes as quoted in paragraph 1 above.)

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

CIRCULAR No. 134

WAR DEPARTMENT,
Washington, D. C., April 8, 1944.

III. Enlisted men: Pending revision of AR 210-10, December 20, 1940, and the printing of changes in AR 30—2210, March 15, 1940, the following changes in those regulations are published:

1. AR 210.10: Paragraph 11b is rescinded and the following substituted therefor:

11b. The post commander, or in the case of class II installations, the commander submitting consolidated ration requests, may in his discretion and with due regard for the best interests of the service, authorize individual men to mess separately. See paragraph 13b (6), AR 30-2210, and sections IV and V, AR 345-400.

2. AR 30-2210: Paragraph 13a (6) is rescinded and the following substituted therefor:

13a(6) Rations due for individual enlisted persons authorized to mess separately will not be included in the ration return.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

ROBERT H. DUNLOP,
Brigadier General, Acting the Adjutant General.

ARMY REGULATIONS No. 35-4520

MONEY ALLOWANCE

WAR DEPARTMENT,
Washington, D. C., April 19, 1945.

9. Separate rations: Enlisted men who are authorized by competent authority to mess separately are entitled to the commutation value of the ration, as announced in current War Department circulars, which will be paid on regular monthly pay rolls or supplemental pay rolls. The period for which due will be shown in the remarks under the name of the individual concerned. See TM 14-502.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

EXHIBIT K

ARMY REGULATIONS No. 210-10

WAR DEPARTMENT,
Washington, December 20, 1940.

POSTS, CAMPS, AND STATIONS ADMINISTRATION

13. Quarters: (a) General.—The post commander will make all assignments of quarters, except that if the quarters for assignment to him personally are considered by him to be inadequate, the facts will be reported to the next superior commander for final determination and assignment.

(b) For officers.

(1) Assignment.

* * * * *

(d) For noncommissioned officers (corporals or higher).

(1) Noncommissioned officers entitled to quarters are not entitled to make selection thereof in accordance with their grade. Subject to the restriction contained in (2) below, the post commander should make such assignment of available quarters as he deems for the best interests of the service.

(2) Due consideration should be given to the fact that certain quarters have been constructed from funds appropriated by Congress for quarters for a specified class of noncommissioned officers, such as those of the Medical Department.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

E. S. ADAMS,
Major General, The Adjutant General.

AR 210-10—CHANGES No. 13

POSTS, CAMPS, AND STATIONS ADMINISTRATION

WAR DEPARTMENT,
Washington, D. C., January 8, 1944.

AR 210-10, December 20, 1940, is changed as follows:

13. Quarters: (a) General: The post commander will make all assignments of quarters, except that if the quarters for assignment to him personally are considered by him to be inadequate the facts will be reported to the next superior commander for final determination and assignment. At posts, camps, and stations where no quarters for officers are maintained, the commanding officer thereof will so advise the Office of the Fiscal Director, Army Service Forces, attention: Receipts and Disbursements Division, the Pentagon, Washington 25, D. C. (see AR 35-4220). Amendatory report will be immediately furnished in cases where changing conditions render original report inaccurate.

(b) For officers:

* * * * *

(d) For noncommissioned officers:

(1) Noncommissioned officers entitled to quarters are not entitled to make selection thereof in accordance with their grade. Subject to the restriction contained in (2) below, the post commander should make such assignment of available quarters as he deems for the best interests of the service. When noncommissioned officers are assigned to occupy any public quarters with their dependent, the monetary allowance in lieu of quarters (AR 35-4520) on account of such dependent will cease on the day of such assignment.

(e) For civilians (more than American wives of enlisted men below staff sergeant get): The post commander may grant permission to servants and civilian employees to occupy such quarters as are available. The post commander will be responsible that payment for or reduction from salary of the value of such quarters is effected as prescribed in AR 35-3840.

By order of the Secretary of War:

G. C. MARSHALL,
Chief of Staff.

Official:

J. A. ULIO,
Major General, The Adjutant General.

EXHIBIT L

By way of further contrast between the Canadian armed services and the American armed services, Canada again shows more equitable and Christian concern for the family unit, fostering and encouraging it, in contrast with the American policy which shows no interest in the sacred relationship except for an overexaggerated, sentimental concern for those men who have two or three children and are in service, by way of the demobilization regulations. It is true that in America each child counts 12 points up to 3 children; but the married man who through no fault of his own has no children, regardless of how long married, receives no points toward the total required for discharge, and so is in no different position than a single man no matter how long the married man has been married.

However, in Canada, every married man as of March 31, 1945, regardless of children or no children, receives a grant of 20 percent of his total discharge points to add onto his total points and so arriving at a grand total in determining his eligibility for discharge.

But in America a married man married on March 31, 1945, would get no extra points to add to his score for discharge purposes, unless he were blessed with children.

By way of further contrast, the American Army gives an unmarried man who has an illegitimate child which he has by approved agreement, for as low a sum of $500 for a period of several years, agreed to support, a grant of 12 points toward discharge. Yes, this is understandable, for it fits into the rest of the pattern of discouraging normal family life and rewarding immoral conduct, which seems to be the policy of the American Army and Government.

Question: Does America still think it is the moral leader of the world? The people of Newfoundland, who know of the reward for illegitimate children and no reward for marriage even of long standing, hardly admit it. They put America just one small step ahead of atheistic Russia.

EXHIBIT M

TODAY'S WAR NEWS

1. PACIFIC THEATER

NEW YORK.—Optimistic over the current state of the Jap occupation, Lt. Gen. Robert L. Eichelberger (what a super an American general can be), commander of the Eighth Army, reiterated yesterday his proposal that the wives of officers and first three graders (staff sergeant or above) be permitted to join their husbands in Nippon.

In explanation of his arbitrary limitations, he said that most enlisted men in the lower grades were too young to have wives (married men up to 38 years old were drafted without any hesitation. Is that too young to be married? And are all married officers older than that?)

2. ASIATIC THEATER

Shanghai: General Marshall, new American envoy to China, stepped briskly from his silver C–54 transport plane at Shanghai's airfield yesterday afternoon ready to begin his admittedly difficult assignment—bringing peace and unity to China.

Washington: With General Marshall about to try his hand at settling the problem of Chinese unity, the State Department aired America's views on two other Asiatic trouble spots.

Statements issued by the Department expressed concern over Indonesia and hope that Dutch and Indonesian leaders soon could make peace and disclosed that the United States has several times asked Britain not to sign a peace treaty with Siam until British-American discussions on Siam are concluded.

Tientsin: Six heavily bearded marines, who said they had been guests—under armed guard—of Chinese Communists for 38 days and once clashed with rifle-firing soldiers in a frustrated escape, returned Wednesday to this marine headquarters. They were given food parachuted by their buddies and were reported in good condition when they returned.

3. OTHER NEWS

WASHINGTON.—Congress passed a broad revision of the GI bill of rights on Wednesday, liberalizing the rules on loans and education for veterans.

The most important changes made in the original law were removal of the requirement that tuition fees, unemployment compensation, and defaults on loans be deducted from a future Federal bonus; increase in the subsistence allowance for GI students from $50 to $65 monthly to individuals without dependents, and from $75 to $90 monthly to individuals having one or more dependents; removal of the age requirement on the education section of the law; increase in the Government loan guaranty from $2,000 to $4,000.

WASHINGTON.—President Truman yesterday nominated five delegates and five alternates to the United Nations first General Assembly in London next month.

Heading the list is Edward Stettinius, who was named chief United States delegate and America's representative on the powerful World Security Council. Other delegates are Secretary of State James Byrnes, Senator TOM CONNALLY, Texas Democrat, Senator ARTHUR H. VANDENBERG, Michigan Republican, and Mrs. Eleanor Roosevelt.

Plans call for the President to exercise power to direct the votes of the United States delegates, invoke economic sanctions against aggressors, and use American troops within quota limits to back up the decisions of the Security Council.

WASHINGTON.—The Senate unanimously approved a measure yesterday to cut red tape for the entry into the United States of wives whom servicemen married abroad.

Washington: Eligible Army officers who have watched promotion pass them by now can make the grade before leaving the service.

The War Department announced yesterday that officers up through lieutenant colonel who have served long periods in grade and meet the requirements will be promoted on the first day of their terminal leave.

The provision applies to lieutenants who have been in grade 18 months, captains and majors for 24 months, and lieutenant colonels for 30 months. Fifty percent additional credit is given for time overseas. To receive this promotion officers must have an efficiency index of not less than 40.

Washington: Government fact-finding to settle labor disputes met crucial tests yesterday in three far-reaching wage controversies—tests that may have an important bearing on legislation now before the Congress.

Fact-finding boards in the General Motors and oil industry controversies face decisions which are fundamental, whether to consider a company's profits in recommending possible wage increases.

One of the chief provisions of the proposal submitted to the Congress by President Truman is to empower Government fact-finding boards to subpena company's books in labor disputes.

Detroit: As the Ford Motor Co. again sat down at the bargaining table to discuss wage demands of more than 100,000 Ford workers in the United States with the United Auto Workers Union, the strike across the river at the Ford plant in Windsor, Ont., ended after 99 days—the longest walkout in Canadian labor history. The union members voted to return to work under the Government proposal to negotiate and if necessary arbitrate the dispute.

Miami Beach: The International Ladies Garment Workers Union executive board approved a resolution instructing all locals to extend their aid to war veterans in entering the trade whether prewar union members or not and to accept them as members without the payment of fees any time within 6 months of discharge.

Washington: Selective service halted the drafting of fathers Wednesday night. It also instructed local boards not to accept as volunteers fathers with three or more children.

Washington: The Navy joined the Army in liberalizing its discharge procedure with cuts in point requirements for discharges for all personnel ranging from one to eight points effective January 1, January 15, and February 2.

New York: The buying public, apparently convinced that the best is none too good for the first peacetime Christmas in 5 years, is boosting gift buying to the highest levels in history. Sales records are being set all over the country and Macy's in New York reported its highest single day's sales in history as well as the $3,000,000 sales day this season—only once before has the store ever sold over $1,000,000 worth of goods in 1 day. An exclusive fur shop reported a great demand for mink coats from $6,000 up. Evening gowns costing $150 and more are so popular that some stores cannot supply enough of them.

Rio de Janeiro: American sailors on a good-will tour of South America were ordered to remain aboard the United States cruiser *Little Rock* at Santos as police investigated clashes between some 350 seamen and angry Brazilians Wednesday night at Sao Paulo.

Police said rioting began when some sailor who had been drinking began lifting the skirt of a young woman standing in a bus line. Six Brazilians and several sailors were injured in the fighting in which firemen brought hoses into play to hold back the crowds.

New York: More than 50,000 troops at three East coast ports during November in the world's greatest transoceanic movement in history, the American Merchant Marine Institute reported yesterday. Twelve GI's a minute went down the gangplanks at New York, Boston, and Hampton Roads during the month.

Editorial by Hon. Kenneth Romney

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks, I include an editorial written 20 years ago by Hon. Kenneth Romney, Sergeant at Arms of the House of Representatives for the Seventy-second, Seventy-third, Seventy-fourth, Seventy-fifth, Seventy-sixth, Seventy-seventh, Seventy-eighth, and Seventy-ninth Congresses. It is as applicable today as when published two decades ago.

The editorial is as follows:

THE SHRINE OF A NATION

The log-cabin birthplace of Abraham Lincoln, a shrine at which democracy will ever kneel and weep, is now the property of the United States Government. President Wilson, speaking for the Government, accepted the magnificent memorial housing it in a speech of fine felicity and noble sentiment.

There is nothing in America so filled with inspiration as the Lincoln cabin. It is tenanted with associations that overwhelm the senses, with thoughts that buoy the spirit, with sentiment that soothes the soul. It is a place of brooding reverence.

Abraham Lincoln is the ripest fruit that the American democracy has borne. The genius of free government flowered fullest in him. He was the disciplined, tempered product of a people that is striving painfully to achieve the ideals of democracy, ideals that have their abode among the stars. Probably he was the best that human government can develop.

A keen current philosopher, Winston Churchill, in his recent book, A Far Country, declared that democracy is the great adventure of mankind. The truth of this is written across the history of the world. Democracy is indeed adventure, attended by all its trials, all its high fervors, all its anguish. And Abraham Lincoln was the great adventurer, who knew the pain, the

joy, the triumph of it; he led his people nearer their ideal than they had ever been before.

We are glad that Lincoln came out of a cabin and that his birthplace was all but as lowly as that of Christ. It adds incalculably to our faith in America. It adds beauty and sublimity to the life picture he left us, the great picture that throws its tremendous shadow across the short history of our national life. It encourages aspiring youth and gives dignity to honest poverty. It is the touch the master artist would have added to his career.

Lincoln was disciplined for his tasks as few have been. Adversity pinched him. Sharp misery wore him to the bone. Sorrow cut his face. Humility made a brother of him. But Nature stored his mind with uncanny wisdom, filled him with quaint conceits, mellow humor and wonderful sympathy and led him on to his high mission in the world.

President Wilson in his Hodgensville speech touched on Lincoln's loneliness in these impressive words:

"This strange child of the cabin kept company with invisible things, was born into no intimacy but that of its own silently assembling and deploying thoughts."

A great unearthly figure, hearing voices none other heard, seeing visions no other eye beheld, having faith that would have broken in a heart less strong and bold.

America will not last forever, unless history reverse itself. It will, unless the warning of history be heeded, follow the democracies of Greece, the Republic of Rome, the monarchies of modern times into that vast gulf we call the past, that vague, intangible realm where fact fades into fable, truth into legend. But when that distant age shall come, the student of history, looking back, will see the mighty figure of Lincoln standing serene and secure in a Nation founded on principles of democratic government which with unerring vision he labored to establish and preserve

Republican Form of Government Versus Democracy

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 12, 1946

Mr. COFFEE. Mr. Speaker, in recent weeks, Ernie Adamson, chief counsel of the House Committee on Un-American Activities, has seen fit to write to various progressive-minded individuals and officials of liberal organizations arguments that there is no such thing as democracy acceptable in the United States. Mr. Adamson postulates that under the Constitution only a republican form of government is to be tolerated, that our country was not organized as a democracy, and that there is something dubious and questionable about the very word itself. I suggest that Mr. Adamson do a little further research in history and political philosophy. I suggest that a counsellor for a committee of Congress has gone far afield from his authority and rights in broadcasting letters throughout the United States, arguing against democracy. Think of it, Mr. Speaker. A committee formed for the purpose of combatting un-American activities and ipso facto, an exponent of American institutions, is permitting its chief counsel to excoriate citizens of the United States for following in the footsteps of Thomas Jefferson, Andrew Jackson, Woodrow Wilson, Franklin Roosevelt, because of their proclaimed devotion to democracy. What is there inherent in the word democracy which should frighten us? Are we afraid of democracy?

Recently the Veterans Against Discrimination, of New York City, an organization comprised of thousands of war veterans and their families, received a letter from this same Adamson, in which said Adamson implied that the recipient organization was about to conduct a propaganda campaign against provisions in the Constitution, which, in itself, is an idiotic statement. By inference, that statement would indicate there was something reprehensible or criminal in an organization asking to change the Constitution or amend it by lawful means. Because the letter from Mr. Adamson is an amazing document, which should startle all students of American history, and because the reply of the Veterans Against Discrimination is devastating and pointed, I am including the letters herein below. They are as follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON UN-AMERICAN ACTIVITIES,
Washington, January 29, 1946.
VETERANS AGAINST DISCRIMINATION,
New York, N. Y.

GENTLEMEN: Would you please be good enough to send me a list of your officers and your managing committee?

Several of your circulars have been sent to us by citizens of your city, and I note that you refer to democracy several times. I wonder if you are sufficiently familiar with the history of the United States to be aware that this country was not organized as a democracy, and that section 4 of article IV of the Constitution reads, in part, as follows: "The United States shall guarantee to every State in this Union a republican form of government."

Is it your purpose to ask for an amendment of the Constitution, or do you propose to conduct a propaganda campaign against the administration of the provisions of the Constitution?

Yours very truly,
ERNIE ADAMSON,
Chief Counsel.

VETERANS AGAINST DISCRIMINATION,
New York, N. Y., February 1, 1946.
Mr. ERNIE ADAMSON,
Chief Counsel, House of Representatives, Committee on Un-American Activities, Washington, D. C.

DEAR SIR: Your letter of January 29 on behalf of the House Committee on Un-American Activities in which you take issue with Veterans Against Discrimination for the use of the word "democracy" is particularly shocking and outrageous in that it is directed to an organization composed of men and women who have just served this country through a bloody struggle for the preservation and extension of democracy.

The only interpretation which can be put on your letter is that the House Committee on Un-American Activities is now publicly on record as opposing the democracy for which Americans have always fought and in which millions of American men and women believe as the fundamental principle of our Government.

Veterans Against Discrimination would like to ask you, Mr. Adamson, whether the Committee on Un-American Activities intends to investigate every organization which believes in America as a democracy. Is it the purpose of the Committee on Un-American Activities to propagandize against democracy? Does the committee propose to change our democratic form of government?

These are the words of our late Commander in Chief, Franklin D. Roosevelt: "Always the heart and soul of our country will be the heart and the soul of the common man—the men and women who never have ceased to believe in democracy * * *."

Men discharged from the United States Army were told by Gen. George C. Marshall: "Start being a leader as soon as you put on civilian clothes. If you see intolerance and hate, speak out against them. Make your individual voices heard, not for selfish things but for honor and decency among men, for the rights of all people."

This statement by General Marshall has become the preamble of the constitution of Veterans Against Discrimination. Our active campaigns against the Fascist policies of the New York Daily News is one phase of our continuing fight for democracy. We will continue to press for the establishment of a permanent Federal Fair Employment Practice Commission and for other legislation which will, through the elimination of discrimination, "promote the general welfare and secure the blessings of liberty."

On behalf of the Veterans Against Discrimination, we emphatically refute the Committee on Un-American Activities' interpretation of democracy and its claim that the United States is not a democracy. Inasmuch as the Committee on Un-American Activities was empowered by Congress only to investigate subversive and un-American activities, it has no right to question the activities of the Veterans Against Discrimination.

Your letter and the insinuations contained in it constitute a flagrant and unforgivable insult to all the millions of American men and women who served to protect our democracy.

Sincerely,
LAWRENCE RIVKIN,
Chairman.
BERNARD MOSS,
Executive Secretary.

A letter discussing this same subject matter issued by the American Civil Liberties Union reveals the attitude of this great organization, which is the chief protagonist in America of the Bill of Rights, with reference to the amazing attitude shown by this man, Adamson. The ACLU letter is as follows:

AMERICAN CIVIL LIBERTIES UNION,
New York City, February 8, 1946.
To the Members of the House of Representatives:

Ladies and gentlemen, the following letter addressed to the Speaker of the House should be of interest to you:

FEBRUARY 8, 1946.
Hon. SAM RAYBURN,
Speaker of the House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: The standing Committee of the House on Un-American Activities has employed a chief counsel, Ernie Adamson, who in the committee's name is engaging in what seems to us both improper and absurd activities.

The latest exhibit to be called to our attention is a letter under date of January 29, addressed to the Veterans Against Discrimination, New York City, which reads as follows:

"GENTLEMEN: Would you please be good enough to send me a list of your officers and your managing committee?

"Several of your circulars have been sent to us by citizens of your city and I note that you refer to democracy several times. I wonder if you are sufficiently familiar

with the history of the United States to be aware that this country was not organized as a democracy, and that section 4 of article IV of the Constitution reads in part as follows: 'The United States shall guarantee to every State in this Union a republican form of government.'

"Is it your purpose to ask for an amendment of the Constitution or do you propose to conduct a propaganda campaign against the administration of the provisions of the Constitution?

"Yours very truly,

"ERNIE ADAMSON,
"Chief Counsel."

The clear implication of this amazing letter is that the advocacy of democracy is un-American and that any organization committed to it is properly subject to House investigation. It would also logically follow that undemocratic movements are American. This sort of nonsense would justify investigating even the Democratic Party. One wonders whether the chief counsel is prepared to revile the works of Thomas Jefferson, Andrew Jackson, Woodrow Wilson, and Franklin D. Roosevelt among the other illustrious leaders of American democracy, who constantly use that word to describe the United States.

We are not concerned with silly semantics but with the gross impropriety of such inquiries, which reflect upon the good sense and good faith of a House committee and thus upon the House itself. Taken together with other recent activities by the committee, or officially on its behalf, the conclusion is inescapable that the conception of un-Americanism which dominates the committee is contrary to our principles and traditions. While we are wholly in favor of the utmost use of the congressional power of inquiry, this committee has so abused it that its abolition is plainly justified on its record. Apparently no curb short of abolition can be put on it by the House. We earnestly urge your support of that course.

We are,

Very sincerely yours,

JOHN HAYNES HOLMES,
Chairman, Board of Directors.
ARTHUR GARFIELD HAYS,
General Counsel.

Abraham Lincoln—Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. FEIGHAN. Mr. Speaker, today we celebrate the birthday of a great American who fought without ceasing to preserve the Union, and to foster the true spirit of America—the spirit of freedom and liberty and justice for all. Our Nation's debt to Lincoln, the great humanitarian, is indelibly written in the history of our country and in the hearts of our countrymen.

Today also marks the two hundredth anniversary of the birth of a man whose native land holds him in no less esteem than that which we Americans have for our great emancipator. I speak of another fighter for freedom and liberty, Thaddeus Kosciusko, who fought not only for the freedom and independence of his native Poland, but also for the freedom and independence of our own America. No greater contribution was made to the cause of American independence by any of those who came to our aid from foreign lands, than that of Kosciusko. I need only recall his part in the defeat of Burgoyne at Saratoga, and in the South Carolina campaign. The measure of his assistance may be gained from the fact that on October 13, 1783, our Congress made him a brigadier general in the American Army.

On this two hundredth birthday of Thaddeus Kosciusko we Americans are enjoying the independence for which he so fiercely fought. One may question whether his own native land is enjoying the independence which he vainly fought to gain for it during his eventful life. True, Poland is now free and independent, but disquieting stories of political murders and Communist terrorism continue to leak out of that devastated land. Such is our American debt to Poland, the land of our benefactor's birth, that I strongly urge that we, as a Nation, continue to exhibit the livelist concern in the welfare of Poland. Under various international agreements, we are committed to guarantee free and unfettered elections in the liberated lands. I strongly urge that our State Department follow up Secretary Zyrnes' remonstrances on the terrorism existing in Poland, and throw the great weight of America behind the fight of all true Poles for a truly free Poland.

Lincoln's Last Message to the Thirty-eighth Congress, December 6, 1864

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. DOYLE. Mr. Speaker, I know that it will be interesting and valuable to the Members of this House and other readers of the CONGRESSIONAL RECORD to have before them a brief outline of the text of President Lincoln's last message to the Congress. Its contents reveal that it lacks the usual gems of literary achievement which most of his state papers contained, but your reading of this outline will indicate the unusual variety and large number of subjects which he communicated to Congress about. Here it is:

Fellow citizens of the Senate and House of Representatives, again the blessings of health and abundant harvests claim our profoundest gratitude to Almighty God.

I. FOREIGN AFFAIRS

The condition of our foreign affairs is reasonably satisfactory.

1. Mexico: Theater of civil war.
2. Costa Rica and Nicaragua: Transit route.
3. Colombia: Intimate relations.
4. Venezuela: New liberal institution.
5. Peru and Spain: Civil war averted.
6. Chile, Argentina, Bolivia, Costa Rica, Paraguay, San Salvador, and Haiti: Most friendly relations.
7. Liberia: African slave trade.
8. Europe: Overland telegraph.
9. Great Britain: Ocean telegraph.
10. Egypt, Barbary powers: Satisfactory relations.
11. China: Rebellion suppressed.
12. Japan: Friendship for United States.
13. Foreign merchants: Contraband trade.
14. Brazilian and British ports: Political difficulty.
15. Great Britain: Treaty adjustments.
16. Canada: Reciprocity treaty.
17. European states: Immigrants.

II. FINANCIAL AFFAIRS

The financial affairs of the Government have been successfully administered during the last year.

1. Increased taxation proposed by Congress.
2. Receipts during war, $1,394,796,007.62.
Disbursements, same basis, $1,298,056,-101.89.
Balance in Treasury, $96,739,905.73.
3. Source of receipts.
4. Disbursements for civil service.
5. The public debt, $1,740,690,489.49.
6. National banking system.

III. REPORTS

1. Secretary of War. A document accompanying message. (See conclusion of address.)
2. Secretary of Navy:
(a) 671 vessels carrying 461 guns.
(b) 51,000 men in naval service.
(c) Total expenditures from March 4, 1861, to November 1, 1864, $238,647,262.35.
(d) Construction of navy yard.
(e) New rank of vice admiral.
3. Postmaster General:
(a) Postal revenues for year, $12,438,253.78.
(b) Expenditures, $12,644,786.20.
(c) Deficit, $206,532.42.
(d) Ocean mail steamships.

IV. SECRETARY OF THE INTERIOR

1. Population scarcely been checked.
2. Admission of Nevada consumated.
3. Territories show rapid growth.
4. Public lands, 4,221,342 acres located.
5. Pacific railroad progress.
6. Minerals mined valued at $100,000,000.
7. Reorganization of Indian system.
8. Pensions for soldiers and sailors.
9. District of Columbia institutions.

V. AGRICULTURE

1. Peculiarly, the people's department.

VI. CONDUCT OF WAR

1. All important lines and positions steadily advanced.
2. General Sherman's operations most remarkable feature.

VII. ORGANIZING LOYAL STATE GOVERNMENTS

1. Arkansas and Louisiana successful.
2. Missouri, Kentucky, and Tennessee at work.
3. Maryland, completely successful. "The genius of rebellion will no more claim Maryland. Like another foul spirit, being driven out, it may seek to tear her, but it will woo her no more."

VIII. SLAVERY

1. Proposed amendment to Constitution:
(a) "I venture to recommend the reconsideration and passage of the measure at the present session."
(b) "The common end is the maintenance of the Union, and among the means to secure that end—constitutional amendment."

IX. POPULAR ELECTIONS

1. Most reliable indication of public purpose.
2. No candidate for any office whatever, high or low, has ventured to seek votes on the avowal that he was for giving up the Union.
3. Election proved we do not approach exhaustion in manpower.

X. NEGOTIATION FOR PEACE WITH INSURGENTS

1. It is an issue which can only be tried by war, and decided by victory.

2. They can at any moment have peace by laying down their arms and submitting to the national authority under the Constitution.

3. The executive power itself would be greatly diminished by the cessation of actual war.

4. The door of pardon and amnesty has been for a full year open to all except such as were not in condition to make free choice.

5. I repeat the declaration made a year ago that while I remain in my present position I shall not attempt to retract or modify the emancipation proclamation nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress.

If the people should, by whatever mode or means, make it an executive duty to reenslave such persons, another, and not I, must be their instrument to perform it.

In stating a single condition of peace, I mean simply to say that the war will cease on the part of the Government whenever it shall have ceased on the part of those who began it.

ABRAHAM LINCOLN.

America's Foreign Policy

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. BUSHFIELD. Mr. President, on January 25 the senior Senator from Indiana [Mr. WILLIS] delivered an address on the subject America's Foreign Policy, at the Mayflower Hotel, in the city of Washington, before the American Coalition.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is apparent that America's foreign policy is the last thing many Americans want to discuss, or think about, today. The average man is occupied with many other problems—inflation, strikes, making enough money to keep body and soul together and to keep the children well fed and adequately clothed. Besides, the war is now over, many say, and there will be no need to worry about foreign policy unless another war threatens.

Nothing is so interesting to a people—just before a war—as foreign relations. But, to our great hurt, the vast majority of the people lose interest in the subject once the war is decided. Yet, the best time for every American to think of foreign policy is right now, right after the most destructive war in world history, for the decisions that are made today will determine the road we shall follow for years to come. If, through lack of public knowledge of the issues, if through decisions made without understanding and endorsement of the people, the foreign policy of our Nation is faulty this year and next year, then the results several years from now will be disastrous. A careless people today may be an angry and disillusioned nation tomorrow.

Every Senator, I am sure, gives a disproportionate share of his time to thinking about America's foreign policy, for it has been apparent for many years that wars are more costly than depressions, natural catastrophes, and carelessness combined. And when I have considered that the stupidity of men—men here and men of all other nations—have made wars possible at all in our lifetime, I have been aghast at the price we have paid for our stupidity.

Therefore, I do not hesitate to say that the subject of foreign policy is America's most pressing problem today, even in view of the admittedly crucial problems on the home front.

In my judgment, America's foreign policy today must be based on four essential points:

First. The creation of an American foreign policy that is so clear and understandable that he who runs may read and understand it, both in America and in nations whose peoples hitherto have had different concepts from ours. It must be America's own foreign policy and not a mere duplication of some other nation's.

Second. That this foreign policy preserve the Monroe Doctrine as our guiding lamp toward freedom from interference in this hemisphere by nations of other parts of the world.

Third. That this foreign policy be clearly based in justice for all peoples and all nations, including those people who are living in restraint under governments of our allies, as well as those people who lived in serfdom under our enemies.

Fourth. The strengthening of our American system of representative government at home and continued emphasis on promoting the health, physical resources, and comfortable living of our own people.

Let me discuss those points in greater detail. First: The creation of an American foreign policy so clear and understandable that all our citizens, as well as peoples of other lands, may understand it.

The more I have studied foreign policy, the more convinced I have become that if the United States is ever going to make progress toward eliminating wars, and the causes of wars, it is going to be done through the prompting of an enlightened populace, an aware people. No real progress is going to be made in carrying out our American ideals abroad until the vast masses of our own people understand clearly the issues at stake in every instance.

The prime requisite to help the people understand, of course, is simplicity and clarity in the words of our diplomats. We must see to it that the words used to tell the people of our foreign adventures are not meaningless, or subject to varying interpretations.

Just take the simple word "democracy," which is used so blithely by our Secretary of State, James F. Byrnes. The same word is used by Stalin and Molotov. But does Byrnes mean the same thing when he says the word "democracy" as Molotov means when he says it? Every thinking person knows that the two men, while using the same word, are thinking of two entirely different concepts.

When, as in the case of Bulgaria, the Russians claim that "democracy" has been inaugurated, they see no reason why they cannot use the word to apply to a system in which only one political party was allowed on the ballot. What a travesty. Yet, our Secretary of State does not tell our people that when he speaks of democracy he means a representative government, a republican form of government as defined by innumerable historians through the decades. He lets Molotov use the word "democracy" again and again unchallenged, when Molotov, of course, is really referring to a new form of tyranny which has been fastened on the people of Russia for more than a quarter of a century and now is being fastened on Estonia, Latvia, Lithuania, Rumania, Bulgaria, Poland, Finland, and many another bit of territory that has fallen within the orbit of Soviet Russia.

The people of America want to cooperate with other nations in building for a just and enduring peace. The people, I know, want to work with the United Nations Organization, and they will do everything within reason to help it succeed where other attempts have failed for centuries past.

The people will not be hoodwinked. They do not want to be included in a system of big-power politics which ignores and scuttles the rights of individual citizens by the millions in nation after nation, and which will bring disaster when the balance of power shifts.

In many cases, of course, we have a firm policy, but in others we have no policy at all. In China, as we know, we are actively on the side of the men who are fighting the growth of communism. Yet in eastern Europe it appears that we are encouraging the Communists. Frankly our policy in the American section of occupied Germany is so obscure today that I do not believe anyone can tell what are our Nation's aims there.

True, we have soldiers there, and certainly we have a great number of representatives of Government agencies and observers there, but whether we want a strong Germany, a weak Germany, whether we want Germany dismembered or unified again, or what our Government wants done with Germany and with Germans we have no way of knowing.

Several days ago two prominent churchmen came to Washington after a journey in Europe and urged the President simply to allow church people in this country to send packages of food to needy persons in Germany. They found the President woefully uninformed or misinformed about the actual distress in Germany and were astounded at his seeming lack of interest in seeing to it that old women and young children in Germany be permitted to receive gift packages donated by Americans, not help from the American Government. After all the old principle, "If thine enemy hunger, feed him," is the best policy in building for peace in a new generation. [Applause.]

The people ought to be told what our Department of State plans for Germany. They ought to be told what this Department plans for the Far East, for the Near East, for all the sections of the earth in which there are trouble spots that may be breeding the germs of another war. Our soldiers will serve in those foreign areas with greater patience if they know something of the call for their sacrifice.

There are those intellectuals who believe that foreign policy, as domestic policy, should be made by a few persons in the Department of State, or in the White House, who are supposed to have some kind of magic power which gives to them the immediate and correct answer to all our varied problems. But I cannot help thinking of that masterful quotation from the Federalist Papers, in which Hamilton wrote:

"The history of human conduct does not warrant that exalted opinion of human virtue which would make it wise in a nation to commit interests of so delicate and momentous a kind, as those which concern its intercourse with the rest of the world, to the sole disposal of a magistrate created and circumstanced as would be a President of the United States."

The second point in my foreign policy for America—preservation of the Monroe Doctrine—may sound ancient in these days of atomic energy, but I would remind you and all Americans that Russia does not find the principle ancient. It was pointed out by a well-known columnist only last week that while Stalin appears to be paying lip service to the United Nations Organization General Assembly in London, Russia continues playing a lone hand where her vital interests seem to be affected. Russia goes right ahead lapping up new territories and proclaiming what amounts to a modern version of the Monroe Doctrine for Europe and Asia.

The United States must make it crystal-clear at all times today and tomorrow and for many a day to come, I think, that the Monroe Doctrine is still the policy of this Nation in regard to this hemisphere. [Applause.] It has been reinforced by the support of many of our southern neighbors.

There are those who say that the United States already is making this clear, and that the Monroe Doctrine works today as ever. Generally, I would agree, but there are increasing signs that Russia would like to increase its influence in Latin America, taking the place of the Nazi influence which we all know was in great evidence there before and in the first phase of the late war.

Not many months ago, I saw a most interesting news dispatch in the New York Times relating how the Soviet Embassy in Cuba and Soviet representation generally in many other Latin-American nations had increased greatly in the past 10 years, in fact, out of all proportion to actual Russian financial interests in those countries. It occurred to me, as I know it will occur to every thoughtful American, that our Department of State can never be too watchful, can never tell us, the people, too quickly of factors, such as this one, pointing toward an unusual interest of any foreign power in an American Republic.

My third point—that our foreign policy be clearly based in justice for all peoples and all nations—must be the keystone of our foreign relations. Unless this Nation, at present the most powerful physically in the history of the world, uses its position of leadership to see that men everywhere are given justice under law, that all nations, large and small, act with mercy and justice toward other nations, we will have wasted the blood of the men who fell so valiantly in the late war.

Justice, as we know, is not just a beautiful concept: it is a code by which men live and move and have their being. Freedom is a quality of an individual, rather than of a nation. No matter how much we might talk of justice in America, we would not have it if one citizen were denied the right of trial by jury, of the writ of habeas corpus, of the right to have his home free from illegal search and seizure.

Likewise, no matter how much we prate of international justice, we know that we do not have it as long as the people of one country unjustly remain under the bondage of another. We know that there can be justice under law for none unless there is justice under law for all. It is to be ardently hoped that when the assembly of UNO gets through the preliminaries and really gets down to business, these problems of the small nations will receive prior consideration. As a man is judged by his smallest habits, so that organization will be judged by its manifestation of interest, or lack of interest, in these so-called small problems, which altogether make up the one big problem facing the world.

We Americans love peace; yes. We seek it desperately and cling to it. But we want peace with justice for all. We know, as no other people know, that if peace is not based on justice it is built on the shifting sands of expediency and that it will not, it cannot, be a lasting peace.

My final point—the strengthening of our American system of representative government and promoting our own continued strength—can hardly be challenged by any of our citizens. We hear it said so often that America has come to leadership in the family of nations and that all nations look to America to lead them out of the confusion which seems to have fastened itself upon present-day international relationships. The greatest nations of the world cried to America to save them when their freedom was at the point of destruction. America responded magnificently. This Nation sent the best of her youth into the war and gave more than 300,000 of her choicest young men, poured out the products of her mines, her oil wells, her factories, and her treasure unstintingly in the warfare against totalitarianism. There is no question in our minds that to America belongs the credit for saving the world, although this credit may be begrudgingly recognized by other nations.

And why was America able to do this? The answer to that question is, because of the peculiar genius of our system of representative government. It was through that system that we have been able to out produce all our enemies as well as all our friends because here in America labor and industry have been free from the heavy hand of bureaucratic control for the most part during all our long, glorious history. Our very freedom has made us strong, developing in our citizens all the latent potentialities in man in the field of science, education, the arts, and industrial "know how." We owe it not only to our own land but to civilization itself to see that America remains strong.

But while we recognize this fact—that America must be strong; and most Americans pay lip service to the ideal, we know that many persons, some in high authority, imagine that we can make America strong by depleting our natural resources and diluting our freedoms with totalitarian concepts taken from nations we saved or destroyed. They tell us that by giving our material resources to other lands, we are making it possible for the other nations to regain strength and to become better customers of ours.

Theoretically, and on paper, this sounds wonderful, but unless there is constant supervision by our Nation over the economy of other nations, and no one urges that, it will not be possible. I doubt that, in the long run we will ever make a penny net profit—in cash or good will—from any such sleight-of-hand international transactions. Export businesses here and there undoubtedly will prosper through our Government waste, but the end result will be a net loss to the citizens of the Nation as a whole.

There can be no real and lasting progress by the various nations we thus attempt to help unless there is a basic change in the character of the inhabitants of the various lands and a change in their government structures. It is useless for us to contribute funds and materials to governments which have nothing in common with ours and whose leaders look with contempt upon our ideals of freedom.

Just as an individual does not gain in moral caliber and intrinsic worth through receiving charity indefinitely, so the other nations of the world will never put forth their best efforts to feed and clothe their own people and then to increase their real wealth as long as they know that Uncle Sam will bail them out of their difficulties from time to time. We should serve notice on the world that we will give aid to the suffering and export food for the needy, that we will export ideas that can be used to make real wealth, that we will be glad to export a résumé of our history and our form of government which made such a glorious history possible, but that beyond these essentials, there isn't much else we can do. Our humanitarianism demands that we help see that no one starves, but it does not obligate us to see to it that people live comfortably for years at the expense of the American taxpayer, without working out their own economic salvation the hard way. [Applause.]

As James Madison wrote in the Federalist Papers, "every man who loves peace, every man who loves his country, every man who loves liberty, ought to have it ever before his eyes, that he may cherish in his heart a due attachment to the Union of America, and be able to set a due value on the means of preserving it."

If we have a due attachment to our Union, and have set a due value on the means of preserving it, we certainly have recognized that not for always can the wealth of America be dissipated without bringing to us increased inflation, fewer goods, and eventual shortages in this land of supposedly perpetual plenty.

Religion, Common Sense, and the Race Question

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, February 9 (legislative day of Friday, January 18), 1946

Mr. CAPPER. Mr. President, Rev. A. Powell Davies, pastor of All Souls Church, Washington, D. C., delivered an able address on January 13, 1946, the title of which was "Religion, Common Sense, and the Race Question." I ask unanimous consent to have the address printed in the RECORD.

I have an estimate from the Public Printer that the address will take two and one-half pages of the RECORD and will cost $130.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Whenever human beings are faced with a persistently difficult problem, they apparently try to do one of three things with it—forget it, misrepresent it, or sentimentalize about it. The thing they are utterly reluctant to do is to understand it.

There may be several reasons for this attitude. One might be that understanding a difficult problem is prone to be laborious, and the human mind is characteristically lazy. Another doubtless is that understanding often brings a change of outlook, and most people prefer their outlook to remain what it is. Then there are the crystallized opinions, emotionally loaded, which in other people we identify as prejudices (in ourselves, we try not to identify them). We do not like to lose the shelter and protection which prejudice so promptly and dependably affords. Moreover, we do not want to think effectively because effective thinking often leads to doing something, and we are more afraid of that than of all the other things combined. For in dealing with difficult problems doing something is very apt to lead to trouble. And trouble is a thing we are eager to avoid.

When someone tells us that unless we brave out the trouble at the beginning, it is certain to grow worse before it catches up with us at the end, we feel resentful. We do not like to hear that trouble will catch up with us, not because we believe otherwise, but because we want to keep the thought of it suppressed. And so, as I say, we try to keep the problem out of sight.

If this is impossible, then we try to make it seem a different problem than it is; we do this in one of two ways, or perhaps in both. We misrepresent it: that is to say, we make it appear that nothing can be done about it, or that nothing ought to be done, or if something can and should, then very little. Or perhaps we make suggestions so extreme and drastic that no one could possibly hope to adopt them. Although this is done from an opposite point of view, the result is the same: and so sometimes, but not always, is the motive. It provides a virtuous feeling inexpensively.

If, however, we are of another temperament, we take the whole problem to our hearts and sentimentalize about it. The outcome of this is vague promises in beautiful language—promises which soon become ironical, while the lovely language festers and becomes a sickening jest.

All this is folly. Mature minds should look upon it as beneath them. Moreover, it is certain that important problems will resist this childish treatment and insist upon responsible solutions. In the end, it is impossible to forget such problems, disastrous to misrepresent them, and recklessly stupid to sentimentalize about them. This is now the case with the race question.

If we are ever to gain control of the problems of race relationship and adjust them in such a way that they do not bring us to calamity, that time is now. Notice that I said gain control of these problems, I did not say solve them. In my opinion, no one is entitled to a hearing on this question who does not understand that full solutions will not come until the races of mankind are indistinguishable. Until, in short, there is no race problem. As long as there are races, there will be race problems. In the same way that as long as there are young and old, there will be problems between the generations, and as long as there are men and women, there will be problems between the sexes. The very fact of difference makes for problems. Therefore, I say, until the racial differences are gone, there will be one degree or another of difficulty. This is a basic fact of human nature—indeed, of the nature of all living things—and it is dishonest not to reckon with it.

History records no instance, so far as I am aware, of two or more races inhabiting the same territory for a considerable length of time without the race problem being ultimately solved either through absorption or extermination. My assumptions, therefore, are the following: First, that this will continue to happen and that absorption will be the final method of solution; second, that it will not happen very promptly, the resistance of all races being generally strong against it; third, that until it does, race problems will not be fully solved but only increasingly reconciled, adapted, and adjusted. In saying this, I am thinking not only of race problems in America but throughout the world, and I recognize that in this larger sense, the white race has been dominant for less than 500 years and is clearly a minority.

I repeat, then, that if ever we are to gain control of race problems, and adjust them in such a way that they do not bring us to disaster, the time is now. And if anyone thinks that adjustment, as against solution, means only something slight and inconsiderable, he has not begun to understand the urgency of present needs. At the moment, we are in the position of the driver of an automobile with faulty brakes, careening along somewhat bumpily and steering rather crazily, but for the time being down a fairly gentle grade. Soon, the grade will be steeper, much steeper, and we shall be helpless unless by then we have gained control.

And this is true, not only here at home, but everyhere throughout the world. Nothing is more short-sighted than to think of the race question as a local problem or a national problem, or as a series of unrelated problems. It is one of the all-inclusive problems of the age, a universal problem, and, as such, entirely inescapable. What was the doctrine that started Hitler on the path to Armageddon? Surely, the doctrine of a master race. Hitler's intention was to bring about a racial hierarchy, Germans on top, other white peoples on a series of descending levels immediately below, and the other races of the world at the bottom. This was Hitler's attempt at adjustment and we know what it cost us to overthrow it.

That was across the Atlantic. Across the Pacific, the Japanese were trying a similar plan. They intended, first, to be the masters of the Orient, then, later, of the world. Their propaganda was not entirely ineffective. There is a population of one and a quarter billions in the Far East, all increasingly racially conscious. We might pass on from there to the Middle East, and then to Arabia and Africa. We might allow our thoughts to linger for a fleeting instant in Central and South America. Wherever we look—no matter where—the question of race relationships is one of the liveliest, most entangling, most tenacious problems of the modern age. And whatever is done about it in one place has instant repercussions in every other place throughout the world. This, as I see it, is a fact to keep in mind—to keep quite zealously in mind. Unless we wish to suffer the consequences, in this as in other things, of a course of action which is summed up in the rather grim and gloomy phrase, "too little, too late."

Let us therefore recognize that the race question is not something conjured up by agitators, or harebrained radicals, or visionary idealists—disagreeable people who are so inconsiderate as to be willing to make us uncomfortable. The race question arises because mankind, to begin with, is of several different races, because these races are in contact with each other, because they are competitive, and finally because they now must live together, dependent upon each other, in a single world community. The race prejudice and injustice of the past, if it continues, will surely prove ruinous in the future. And all this, I say, is not produced by agitation, or made controversial by people who want to do something about it; it is a part of the situation as we find it, and people who want to do something about it—something sufficient to the need—are the only people who are showing any understanding of it, or who take a prudent attitude toward it.

The notion that prudence consists in doing nothing about a problem because it is troublesome and urgent is both shocking and fantastic. Do we do nothing about a general conflagration because our own particular house is not as yet on fire? Do we go on doing nothing when the sparks are falling on our roof? Do we do nothing until it is too late to do anything? My own idea of prudence, I must confess, is to act promptly, adequately, and responsibly, and the more troublesome the problem the more necessary is such a course of action.

Now the title of this sermon promises that the subject will be treated at the level of common sense, and that is what I have been trying to do. It also promises, however, that the treatment will be religious. Let me say at once that I see no opposition between the two. Common sense that ignores the claims of conscience and makes no recognition of religious values is too shallow to be really common sense. The prophets of all ages have given us warnings that in the end were always recognized as common sense. Sometimes the recognition came too late. But still, it was common sense. The Golden Rule is common sense. Justice is common sense. All that a true religion asks is always common sense. On the other hand, when religion—or something that calls itself religion—offers us misty, vague emotions instead of something real, what we are getting is not religion, and neither is it common sense. When we are told to love our black brothers and brown brothers and yellow brothers, just as we love ourselves, without being told to put it into practice, we are being cheated of the meaning of religion, and accepting something trivial and sentimental.

Religion is not a veil between ourselves and facts; religion is the strength to handle facts. Of course, it's dangerous. If Jesus had never cleansed the temple, if he had only talked about it vaguely, probably nothing would have happened to him. The authorities would have left him alone. They might even have encouraged him to talk, for he talked interestingly. But on the other hand, the religion of Jesus would have been dead, too. Killed by Jesus, because when he had the chance to do something, he left it undone. And while it was dangerous for Jesus to cleanse the temple, it was still more dangerous to allow the temple to go on in the same old way. That is what the people did—after Jesus was out of the way. And in a few years, just as Jesus had told them, the temple was destroyed. When it comes to dangers, the weighing of the greater against the less is not only good religion, if people had the intelligence to see it, they would know that it is also common sense.

At the level, then, of candid, genuine religion, which is also the level of common sense, what should our attitude to the race question be? I cannot within the compass of this single sermon take up its international aspects, or even all its national and domestic aspects. I cannot take up, just now, the anti-Semitic question. I must concentrate upon the Negro question. I do so because in the United States this is the most urgent of our racial problems, as it surely is in Washington.

At the present time, taking advantage of the opportunities brought about through the war, our Negro fellow citizens are asking for equality. They mean not only equal treatment as a separate people but equal treatment in common with all people. They ask for equal economic status. They want a chance for better kinds of work, for more important positions. They seek equality in living space, in enfranchisement, in public life, in cultural pursuits, in education. In addition, they resist most kinds of segregation.

Now, what is the justice, the spiritual validity, the common sense of this? Surely, there is no one who would honestly and openly declare himself against it.

I admit that if I were a Negro I would try to understand white people rather circumspectly. I would counsel other Negroes to remember caution and restraint. There is always the risk of losing everything—at least in this particular generation—by trying to get too much at once. If I were a Negro I would say to other Negroes, something like this: "White people, at every step, must be given a little time. Not too much time, of course, or they will take all the time there is. But still, a little time. Because white people do not adjust to uncomfortable changes as easily as colored people do. They do not adjust to them easily, even when no racial question is involved." I might say that, and I might add this: "That many times when white people seem to be discriminating against Negroes, they are really discriminating against poverty. This is far from being a virtue, but still, it changes the picture quite a little. White people forget that the conditions Negroes must endure do not always encourage cleanliness and good civic behavior and social hygiene. And so they sometimes get confused. They are afraid of things that are not particularly racial, and they mix them up with things that are." And I might conclude: "Do not strive for mere rhetorical victories, or put first the most difficult kinds of equality. Negroes, too, insist, among themselves, upon preserving social layers, one above another: and so they must realize how resistant white people also are about such things. Try to make equality substantial. Seek it first in economic justice, in a higher income, in access to better jobs; seek it in equal housing conditions, opportunity of equal health, equal hygiene, equal education. Then, with these things in hand, other adjustments will come more readily." This, I think, would be common sense for me to talk, if I were a Negro—and as it involves forbearance, patience, and restraint, it might be good religion, too.

But then, of course, I am not a Negro. And so I must say to myself and to other white people, "The time has come for justice for the Negro people—for all non-white people, both here and everywhere. It is not common sense to resent it, because resentment will only increase the difficulties. It is common sense to know that the Negro claim is a just

one. It has never been shown scientifically that there is any such thing as a superior race. It has been shown that only tragedy results when people of one inheritance or color try to dominate another. There is nothing but disaster in holding to the notion of a master race. It is good common sense—and good religion—to start all your thinking with just the human race. To acknowledge that the founding principle of the United States is true: that all men are created free and equal. To acknowledge that the religious principle of universal brotherhood is true, and to try to act upon it. It is not reasonable to expect the Negro race to wait forever. It is not just, not rational, and not religious, to try to keep them down. Let us move now, and as rapidly as we can, to equality of opportunity, equality of privilege, not only in words but in deeds."

But suppose this much is granted?—and by an increasing number of people, I think it is. Suppose we are ready to support all useful and practical measures which will lead toward these aims, in the economic life of the Nation; and the political; and in housing and education and the like. I do not know how many people are really willing for these things—as I say, I think it is an increasing number—but certainly I am ready for them myself. And I know perfectly well that some of the adjustments involved will not be easy. No one needs to tell me so—though I can always be grateful to the many charming people who are so intent upon informing me.

Let me be perfectly candid about this matter of uncomfortable changes. Just as much as anyone else, I could find it comfortable to get along with things as they were. Comfortable in everything but conscience. But that is mere temperament, not conviction. I propose so far as in me lies to act upon conviction. Let it be understood that such adjustments as are now in process will not be always easy; let it be acknowledged that there will be many kinds of friction, many possibilities of strife. Still, the claim of justice cannot be denied. Its time has come. The Negro claims for equal treatment must be granted.

But suppose this much is allowed. There still remain two other questions—social equality and nonsegregation—and I shall say what I think about them as plainly as I can. First, social equality. Wherever the occasion is unforced and natural, I am in favor of it. But where there is artificiality and constraint, I would prefer to wait. I believe, for example, that educated Negroes should move freely among other educated people in whatever activities would naturally draw them together, irrespective of the color of their skins. And I could doubtless give other illustrations. But having read such careful treatises as the recent one by St. Clair Drake and Horace R. Cayton—Black Metropolis—both of them Negroes of very fine minds and fair, impartial judgment, I doubt the wisdom of trying to force too many kinds of social mingling too energetically and too soon. As for intermarriage, I think that for some time to come it will happen, by percentage, rather rarely. The case histories studied are not often encouraging. This is not a mere matter of white resistance to such alliances. Negro resistance to intermarriage, especially on the part of the Negro women, is just as strong. In fact, there are deep resentments among the Negro people—and I am bound to say that most of them seem justified—which are a great impediment to social freedom in the mingling of the races. It is important to overcome these resentments. But in doing so, it is necessary to avoid new ones.

It seems to me that this is an area where Negroes and whites should be more candid in conferring together. For it will take the wisdom of both—not of either of them, acting separately—to meet the problems which must be adjusted. If social equality means freedom in social mingling, and that is what it usually means, then I am in favor of it so far as it leads to increasing understanding between the races; but I am cautious about it where mutual constraints or mutual resentments would damage the progress which might otherwise be made. So far as I know, I am without prejudice about it, for on this particular subject I was not brought up with any. But I am inclined to think, subject to whatever might increase my knowledge or improve my confidence, that it is better to work most for economic justice, and for other equalities which may make social mingling less a problem than it is.

As for public segregation, it seems to me to have no basis, except in prejudice. If there is to be segregation at all, I would like to suggest a new and better scheme to equalize it: there should be in every public auditorium where such discrimination is the practice, three sections, one—and no doubt the largest—for white and colored people who are willing to be together; one for white people who refuse to mix with Negroes, and one for Negroes who refuse to mix with whites. If there is to be segregation, I recommend my scheme as eminently fair, and I await the criticism of any who deny its justice. The three sections might be labeled very aptly. The largest one (for both Negroes and whites) might bear upon its sign the simple word "Americans," seeing that the American founding principle is the one they honor and respect. The other two signs might be respectively, "For Americans, Substandard, White," and "For Americans, Substandard, Nonwhite." This would be an honest, and, I hope, a satisfactory arrangement.

When it comes to churches, and particularly Unitarian churches, the question is somewhat different. It was settled long ago. Christianity—even traditional Christianity—is based upon the equality of all its worshipers before the one God and Father of all mankind. Unitarianism is based, in addition, upon freedom. All who accept its basis are equally entitled to its opportunities. There can be no segregation in a Unitarian church without its ceasing to be Unitarian. It does not follow, of course, that every Unitarian will live up to his church's highest standards, but no Unitarian would want to reduce his church's standards to the level of his own or wish to have the flag of freedom down.

Presumably, because it is very difficult for Negroes to join a predominantly white church—difficult because the Negro people would regard it as desertion of their race—it may be a long while before people of all colors worship regularly together. Yet, it seems to me essential that they do so sometimes. If the problems of race are not to be settled at the level of religion, they will have to be settled at a lower level. I find this possibility far from reassuring. An eminent American Negro told a friend of mine that the only place where Negroes can find equality—genuine equality—is the Communist Party. I have thought about this and have come to the reluctant conclusion that in the sense intended, it is probably true. I am not, I hope, unjust to the Communist movement—I do not wish to be—but I do not want the race question adjusted at the Communist level. I want it adjusted at the religious level. And I will take my share in trying to bring it about. I cannot forget that all scholars are agreed that the crucial factor which brought about the triumph of Christianity during the decline of the Roman Empire was its universality. It included all who were willing to be Christians—all. And I notice that the Communists are ready to include all who are willing to be Communists. I recommend this as a parallel well worth studying. One of the best scholars of modern times, Prof. John MacMurray, has written an excellent little treatise on it, a treatise called the Creative Society. These are things worth thinking over.

I say again, I want, and desperately, the race problem met and adjusted, and in the end, solved, at the religious level—the religious level and the level of common sense. I invite you to accept this level, every one of you, as your own. Every lower level is dangerous. It will grow more so, I mention this, and yet my appeal is not to fear. Every lower level is unworthy of us—unworthy. We know—nothing can excuse us—what the requirements of conscience are. We know what is demanded of us. The choice is plain before us, and the future will depend upon the level of our decision.

I have stayed quite closely today to what I thought was obvious and persuasive. It may be less so than I think, but that was my intention. But now a word in closing. There are times when I stand aside and wonder at the strangeness of this world of ours. The years of all of us are short, our lives precarious. Our days and nights go hurrying on and there is scarcely time to do the little that we might. Yet we find time for bitterness, for petty treason and evasion. What can we do to stretch our hearts enough to lose their littleness? Here we are—all of us—all of us upon this planet, bound together in a common destiny, living our lives between the briefness of the daylight and the dark. Brothers in this, each lighted by the same precarious, flickering flame of life, how does it happen that we are not brothers in all things else? How strange and foolish are these walls of separation that divide us. When I think of these things I wonder. I wonder at the patience of God. While the dream still lives in our hearts, God waits. While the vision shines in our eyes, God hopes. How long shall we keep Him waiting?

Prayer: O Thou, who at the beginning didst breathe into us all the one breath of our common life, breathe deeper now, and bring us to our soul's awakening. Amen.

Address by Secretary Wallace Before National Citizens Political Action Committee

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Henry A. Wallace, Secretary of Commerce, before the National Citizens Political Action Committee at New Haven, Conn., on February 8, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Political action against reaction is the challenge of our time to people like you—and me.

Political action to you and me means determined, effective, progressive political action—action against the real and present and deadly danger of political, economic, and social reaction. That is why people like you all over the country are organizing such independent movements as the National Citizens Political Action Committee.

That is why we are here tonight.

Political action means votes. So this, then, is not just a time for ringing speeches. It is a time for ringing doorbells.

This is not just a time for fancy phrases that make the eagle scream. It is a time for action at the ballot box by voters who understand a few simple basic facts.

The foremost of these facts is the fundamental relationship between political and economic power. For our democratic way of

life has been—and must continue to be—based upon maintaining a balance between political action and economic action.

The unceasing force of economic action, if not checked by the proper political action, leads us inevitably to reaction with all its cost in human misery. Then, unless vigorous, enlightened political action provides a remedy through the full use of the ballot box, we shall certainly be faced with ultimate revolution and the destruction of our free institutions.

Some people may say that this is an oversimplification of the economic and political processes, but I do not believe that you here tonight could hold such an impression. We have lived through part of this process. And I believe you will agree with me that, just a few years ago, we were saved from economic and political disaster only by the bold, courageous political action which brought forth Franklin Roosevelt's New Deal.

The ballot box gave us a remedy then—and just in time. And that lesson we must not forget now.

That experience, and the social-economic progress that followed, gives convincing proof that it is only dynamic political action that spells out progress in our democratic system—dynamic because it reflects the needs of our people.

That experience, coupled with lessons of the past, also stands as proof that the Democratic Party has best served the needs of the people of the United States. But the Democratic Party itself has flourished only when it fought the good fight of progressive political action.

We here tonight know that when the Democratic Party ceases to be the people's party, it will die—and it will be well dead.

Some of you here tonight are businessmen, and you are concerned not only with keeping and strengthening the freedom of our free enterprise system; you are also concerned with obtaining the maximum of business opportunities under full and fair employment conditions that will provide a continuous high level of fair profits.

Some of you here are workers equally concerned with maintaining a maximum of opportunities under conditions of full and fair employment—so as to guarantee a decent annual wage and a continuous chance for advancement.

Others of you are housewives who, in the arduous task of running your homes in wartime, learned well the lessons of price controls—and who, today, as a result of your wartime experience, can appreciate the need for holding the line on prices.

And still others of you come from the academic world and can best appreciate the necessities of more and better education—of more and better scientific research and teaching facilities available to all the people—of the need particularly better to equip all of us to meet the new problems of living at peace, one nation with another, in an atomic age, and at the same time, to direct the peaceful functions of atomic power into socially useful channels.

For myself, I am here tonight still fighting for the things Franklin Roosevelt fought for—and supporting President Truman in his fight for the progressive legislation that will continue to make the Democratic Party the party of progress in this country. And I know quite a bit about this kind of a fight—from the inside of my own family. My grandfather and my father, out in Iowa, fought the fight against the forces of privilege in the Republican Party. I joined in the same fight—and I learned, as my grandfather and father before me learned, the utter hopelessness of looking to the Republican Party for national progress. I have the utmost sympathy with those progressive Republicans who still look to the Republican Party for progress on a national scale—I shared their faith once—and was disillusioned.

That is why I am here tonight as a Democrat. I campaigned for Alfred E. Smith in 1928—and I will keep up the fight as long as the Democratic Party remains the people's party.

But political parties are not ends in themselves. They are merely the instruments of the people's power—the political expression of the people's will. There is need—an indispensable need—for political action independent of organized political parties. There is need for organized but independent effort to stimulate thought and action by the individual voter—to awaken political consciousness, to keep political parties aware of popular needs, and to keep political controversy on a national level. There is an urgent need for independent pressure through such organizations as the National Citizens Political Action Committee.

So, again, that's why we are here tonight. And here in Connecticut you have an excellent opportunity to see what the people's power means in action.

You now have in Connecticut four good Representatives in Congress who have a splendid voting record—all Democrats—who are progressive right down the line on both domestic and international issues.

I refer to JOSEPH RYTER, HERMAN KOPPLEMANN, Mrs. CHASE WOODHOUSE, and JAMES GEELAN from here in New Haven.

How do you get good Representatives like these? You get them only by getting out the independent vote—not only in Presidential years but especially in the off years.

To emphasize the importance of the off years, let us take the case of HERMAN KOPPLEMANN, a progressive businessman who understands that the real interests of free enterprise cannot be separated from the interests of the whole of the people. He was first elected to Congress in 1936, a Presidential year. He was defeated in 1938. He was elected again in 1940, another Presidential year. He was defeated again in 1942. He was reelected again in 1944, again a Presidential year. His record in voting in the people's interest is perfect. Why, then, was he not reelected in the off years? Simply because too many voters of his district—as all too often happens in too many districts of the United States—slumbered on election day.

It is the job of the National Citizens Political Action Committee—it is the job of every independent voter—to see that there is no slumbering in the coming off-year election. Stop the slumbering and you need have no fear of losing Representatives like Mrs. WOODHOUSE, HERMAN KOPPLEMANN, JOSEPH RYTER, and JAMES GEELAN.

Stop the slumbering and you will have plenty of opportunities of public service for good progressives like Lieutenant Governor Snow and Margaret Connors.

Stop the slumbering and you can have from Connecticut, even in an off year, a solid progressive Democratic bloc of six Members—just as you had in 1936 and again in 1940.

Too much emphasis cannot be placed upon the necessity for watchfulness in every single congressional district in the country. What does one vote mean? Well, just a short time before Pearl Harbor, one single vote in Congress saved the extension of the draft law. Every Congressman counts. Furthermore, continuity in Congress is a matter of very specific concern to everyone interested in progress.

Again let us take Congressman KOPPLEMANN's case. Had the voters of his district not slumberered in the off-year elections, KOPPLEMANN would have had 8 years' seniority instead of 2. As long as the committee systems in both the Senate and House are organized as they are on the basis of seniority, this would have given the progressive voters of Connecticut a much stronger voice in Congress.

But you in Connecticut stand to lose one or more—perhaps all—of the four excellent representatives if you don't get out the vote. This year is another off-year. You must reverse the usual trend of off-year voting. Is this possible? Is it superhuman? I do not think so. To reverse the trend requires only that you keep after the one voter out of eight who voted in 1944 but who will stay home in 1946 if he follows past habits. Remember—only one out of eight. And if this one citizen who would otherwise remain at home realized how closely the off-year elections are tied to his personal interest—just as closely, in fact, as the Presidential elections—he would be bright and early at the ballot box.

The answer is up to the people like you here tonight. It is up to you to do the job. It is up to you to awaken these part-time citizens to their own interest. It is up to you to reach them wherever you see them—in your churches, at the drug store, at the movies, everywhere. In the end, it means you ring their doorbells and talk to them as neighbors.

But I came here tonight not only to plead for a continued progressive Democratic delegation from your State. I came because other national servants badly needed for our national safety happen to come from your State. And they also need help and need it now.

One of these is your very able Senator BRIEN MCMAHON who is the chairman of the most important congressional committee ever set up in these United States—the Special Committee of the United States Senate on Atomic Energy.

BRIEN MCMAHON is giving this committee, to this overwhelming international problem of atomic power, an intelligent and enlightened leadership. His own bill for controlling atomic power and for the application of atomic power to peacetime life is an excellent bill. I testified in behalf of this bill last week, and I call upon you here tonight to give BRIEN MCMAHON and his bill, S. 1717, your complete and active support.

There are three atomic energy bills under study. The McMahon bill is the only one which maintains the principle of Government responsibility to the people. It is the only one which places control of the atomic energy commission completely in the hands of the electorate and its chosen representatives. The McMahon bill stands for the traditional principle of civilian control over military matters—which has always guarded against military domination or dictatorship. The McMahon bill best provides for the development of the peacetime uses of atomic energy through the channels of free private enterprise under careful Government control and licensing. It best provides for the utilization of atomic energy for the betterment of all of the peoples of the world.

There are powerful forces arrayed against BRIEN MCMAHON and his committee. These forces can be defeated only by mobilizing of the support of the people behind men like BRIEN MCMAHON who are fighting the cause of the people's peace.

I came to Connecticut tonight for a further reason—to strengthen, if I can, the hand of another of your leaders of the people's cause in Washington. That man is Chester Bowles.

I know a little something about being on the receiving end of brickbats, and I am sure that Chester Bowles has received more brickbats in the past 6 months than anyone else in Washington. And why? Because he has so successfully resisted every pressure except the pressure of the general welfare. In any popularity contest among the plain people buying food and clothes—and trying to find a place to live or trying to build a home—I am sure that Chester Bowles would rate just about 100 percent. But Chester Bowles is not asking for the bouquets that are long overdue him. He is asking for support. He needs it now.

There is no need here for a textbook lecture on the dangers of inflation. But there

is need here to point out that the danger of inflation does exist today—more than ever before. You can avert this danger again only by mobilizing public opinion behind Chester Bowles in his fight to hold the line on prices. There is no time to lose.

Now, I want to mention one other item of business—the need for intelligent consideration of international financial action. The immediate occasion is the necessity for congressional approval of the British loan—an arrangement negotiated over many months by men whose integrity and experience commands our respect. Approval of this loan is also a part of the fight for the people's peace. The issues involved are not complex as some financiers and their economists would have you believe. The issues in fact are simple.

The loan amounts to $3,750,000,000, a big sum, but still only the equivalent of what it cost us to fight the war for a period of 15 days. Britain needs this money to get on her feet again. We are the only nation in a position to lend it to her. If she does not get this money from us, she will be forced to embark on a program of restrictive trade. The world, then, will quickly become divided into competitive blocs, the sterling bloc of Britain, the dollar bloc of the United States, and the Russian bloc. The fight for the people's peace can fail on this one issue alone.

Tonight, I have set forth some of the items of the people's business which demand your immediate and constant attention—if we are to obtain and maintain this peace of abundance that we and the peoples of our Allied Nations earned through horrible years of war.

Some people of little faith in the democratic process would seem to believe that we lost this war for peace and security for all. The views of these people have been well expressed by the recent advertisements of the Society of Sentinels, Inc.—a fit successor to the Liberty League. Now the Society of Sentinels, bespeaking the privilege of the few against the general welfare of all of us, advocates the elimination of nearly every progressive constructive measure enacted since 1932.

These agents of reaction, camouflaged beneath high-sounding labels, would lead us back to the days when there was no social security—no protection of legimate investment in the market places—no minimum wage laws and no guaranty of collective bargaining—and no government protection against those monopolistic practices endangering all business activity.

They would lead us back to mass unemployment and plenty of starvation—back to another economic break-down with all of its frightening potentialities.

Did we fight and win our costliest war to be so fearful of democratic progress? Are we so weak as a people that we must cower before the problems of a peace that holds out more hope of opportunity for all—more real and lasting prosperity for all—than we have ever before known?

We take pride in being a Nation of intelligent, enlightened people. And I do not believe that the intelligent people of this country, given the facts, will knuckle down to the forces of defeatism.

Progress is in our blood. Progress has always been the life stream of these United States.

It is the kind of progress that spells out full and fair and continuous employment, and a continuous chance for advancement for the worker—full production and a continuous level of fair profits for the businessman—and a fair break for the consumer who represents all of us.

It is the kind of progress that spells out the uses of atomic energy not for purposes of universal suicide—but for purposes of universal plenty.

This is what I mean by the people's peace. The answer lies with you—the people. You can have it—but the time for your decision is here and now.

Policies Upon Which the President and Congress Do Not Agree

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Policies Upon Which the President and Congress Do Not Agree," written by Fred Brenckman and published in the February issue of the National Grange Monthly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLICIES UPON WHICH THE PRESIDENT AND CONGRESS DO NOT AGREE—MANY LEGISLATORS DOUBT THE SOUNDNESS AND WORKABILITY OF CERTAIN MAJOR FEATURES OF THE PROGRAM MR. TRUMAN ADVOCATES

During the course of his radio address to the Nation on the night of January 3, President Truman gave Congress full credit for its loyal cooperation in the field of foreign affairs, but he remarked on the domestic front the legislative branch of the Government could offer no similar record of achievement. Declaring that the domestic problems with which we are faced during the postwar era are just as serious as those with which we have to grapple on the world stage, the President took Congress to task for not having acted with more alacrity on some of the legislative proposals he has sponsored.

He specifically mentioned the need of legislation authorizing the appointment of fact-finding boards as a help in the settlement of disputes between labor and management; the prompt enactment of the full employment bill; the bill increasing the minimum wages now provided by law for unskilled workers in industry; the measure providing for Federal funds to supplement the unemployment benefits now paid by the several States; together with the bill making permanent the Fair Employment Practice Committee.

In his radio address, the President appealed to the American people, whom he termed "the most powerful pressure group in the world," to bring their influence to bear on Congress in behalf of his legislative program. He indicated that if Congress did not like his program it should adopt one of its own.

It is not that Congress is unwilling to cooperate with the President under proper conditions in dealing with some of the subjects mentioned in his address. This applies with particular force to the prevailing unrest on the industrial front, which is seriously retarding the transition from a wartime economy to one of peace.

The truth is that many Members of Congress, regardless of party, seriously doubt the wisdom and soundness of some of the major legislative proposals advanced by the President. These doubts and misgivings are not confined to the members of the legislative branch of the Government alone; they are shared by large segments of the population.

DEALING WITH INDUSTRIAL UNREST

For example, while the proposed legislation for the establishment of fact-finding boards in the adjustment of labor disputes meets with the approval of Walter Reuther, vice president of the United Automobile Workers, CIO, it is not approved by William Green, president of the American Federation of Labor, and those for whom he speaks. Mr. Green declares that the passage of this legislation would create a worse situation than that which it is intended to cure. Some labor leaders have remained discreetly silent. Of course, Mr. Green and other labor leaders are aware of the fact that if the principle of "showing the books" should be established, it would often mean that labor would have to accept a reduction in wages. On the whole, labor has not been friendly to profit-sharing plans, because the adoption of such plans would also mean the sharing of losses.

When General Motors Corp. was asked to show its books to the fact-finding board which President Truman appointed in advance of any legislation on the subject, in an effort to get an understanding of the issues involved in the strike at the numerous plants of the company, it refused.

"What is the UAW-CIO really after?" asked the company. "Is it seeking facts or new economic power? Does it want to know things or to run things?"

Continuing, the statement of the company declared:

"The obvious fact is that the UAW-CIO has gone beyond its rights under the law and is reaching, not for information, but for new power—not for a look at past figures, but for the power to sit in on forecasting and planning for the future.

"A LOOK AT THE BOOKS

"A 'look at the books' is a clever catch phrase intended as an opening wedge, whereby unions hope to pry their way into the whole field of management. It surely leads to the day when union bosses, under the threat of strike, will demand the right to tell what we can make, when we can make it, where we can make it, and how much we must charge you—all with an eye on what labor can take out of the business, rather than the value that goes into the product. If the union can do this in the case of General Motors, it can do it to every business in this land of ours."

Someone has suggested that what is needed in the present situation, even more than fact-finding boards, is principle-finding boards! In any event, if the books of General Motors Corp. had shown that the company was in a position to pay the full 30-percent increase in wages demanded by the striking workers, such an arrangement would not have been fair to the competitors of the company, nor to the general public.

The people who buy the products of General Motors Corp. or of any other manufacturing concerns are entitled to share in any benefits that may accrue from improved processes or the economies effected through mass production. In the past the people have received their share of such benefits in the form of lower prices. Under the plan put forth by the UAW-CIO, the workers would monopolize all these gains, leaving the public entirely out of consideration.

AMENDING WAGES AND HOURS ACT

Turning to another of Mr. Truman's requests for legislative action, take the bill amending the Wages and Hours Act of 1938. This act at present fixes the minimum wage of unskilled labor in industry at 40 cents per hour. The pending bill in this connection would immediately raise the minimum to 65 cents per hour, with a goal of 75 cents an hour in 2 years.

Every well disposed person naturally wants to see all workers properly compensated. There is truth and justice in the Biblical saying, "The laborer is worthy of his hire." But when the Federal Government or any other unit of government, undertakes to tell an employer in private industry how much he must pay his workers, regardless of economic conditions, and without the Government contributing anything whatsoever to the pay roll, it is violative of all sound principles of government.

It has well been observed that the chief function of the legislator is not to make laws, but to discover them. There is a higher

law than that which is passed by Congress; there is a higher law than the ruling that may be made by some governmental board or bureau, and that is the economic law. When the economic law is violated the penalty is always swift and sure.

While in a narrow sense agriculture is exempted from the workings of the wage-hour law, officially known as the Fair Labor Standards Act, actually the farmer must compete with industry in the labor market. Who would want to work for the farmer at a rate within his reach, based on the returns he receives for his products, if it were made illegal for an employer in industry to pay less than 75 cents an hour, even for the most inefficient and unskilled labor in the country? Aside from the agricultural angle, there are many thousands of marginal industries scattered all over the land that could not afford to pay such a minimum wage, unless the further progress of inflation should greatly reduce the value of the dollar.

It would appear, therefore, that however good the intentions of the proponents of a minimum wage of 75 cents an hour may be, the effects of the enactment of the pending bill would be to throw countless thousands of people out of work, because nobody could afford to hire them. Perhaps this may explain why Congress hesitates to enact such a measure.

THE FULL EMPLOYMENT BILL

The title of the so-called full employment bill, also advocated by the President, has an alluring sound. During the latter part of September the Senate passed this bill after quite a few changes and amendments, intended to protect the public interest. The measure was referred to the House Committee on Expenditures in the Executive Departments, headed by CARTER MANASCO, of Alabama, who commands the respect of all his colleagues. There are quite a number of able and conscientious men on this committee.

Lengthy hearings were conducted on the Senate bill by this committee. A number of House bills bearing on the same subject were also considered. The committee had so little confidence in the Senate-approved measure that it was voted down, 17 to 3. Then the committee proceeded to prepare a substitute bill, which was reported to the House and passed on December 14. The bills are now in conference between the two branches of Congress, and it is difficult to predict what may emerge.

The bill passed by the Senate declares that "All Americans able to work and seeking work are entitled to an opportunity for useful, remunerative, regular, full-time employment, including self-employment in agriculture, commerce, industry, and the professions."

Very briefly, the Senate bill provides that to the extent that full employment cannot be furnished by private enterprise, there shall be "such volume of Federal investment and expenditures as may be needed * * * to achieve the objective of continuing full employment." An amendment was included which provides that this shall be done in a manner "consistent with the needs and obligations of the Federal Government and other essential considerations of national policy."

In its original form, the bill made no provision whatever for raising the money necessary to finance public-works programs undertaken to provide full employment. As passed, the Senate bill provides that at the beginning of each regular session the President shall transmit to Congress a "National Production and Employment Budget" for the ensuing fiscal year and such longer period as he may deem appropriate. This budget is to estimate the number of employment opportunities that will be open in private industry during the ensuing year, and the President is directed to make such recommendations as he may deem necessary to take up any slack in the labor market. This message or report is then to be referred to a joint committee of the Senate and House, which committee, in turn, is to report its findings and recommendations to both branches of Congress not later than April 1 of each year. A Senate amendment provides that any program for Federal investment and expenditures in providing full employment during times of peace shall be accompanied by a program of taxation.

HOUSE COMMITTEE STATES OBJECTIONS

In reporting its substitute bill to the House, Chairman MANASCO's committee said:

"All are agreed that high levels of employment in the United States must be maintained. All are not agreed on how this objective is to be achieved. Both the Senate bill and the two companion House bills adopt the theory that the maintenance, not only of high levels of employment but of continued 'full-time' employment * * * is the responsibility of the Federal Government. * * *

"This committee substitute unqualifiedly rejects this theory, under which employment through private enterprise would be perfunctory, and the guaranty would really rest on Federal investment and expenditure—a gigantic and unworkable proposal contemplating improvised expenditures and unwholesome Federal concentration. The adoption of such a theory not only would inevitably entail continued deficit spending, but would also destroy the system which has made this Nation great and strong—the system of free competitive enterprise, under which the highest standard of living in history has been attained."

Entertaining such convictions, it will readily be understood why the members of the House committee did not feel they would be discharging their responsibility to the American people by perfunctorily putting the stamp of approval on the bill passed by the Senate, or by reporting out either of the two House bills which were considered.

In the meantime, nobody has been injured because the committee took the time that was needed to give proper consideration to the weighty proposal that was placed before it. It is interesting to note in passing that while Government economists estimated there would be 6,000,000 unemployed people during the early part of the reconversion era, the best figures available today indicate that there are only 1,500,000 unemployed; and such is the demand for labor that these unemployed can easily be provided with jobs under our system of private enterprise. This goes to show how far wrong the guesses of Government economists can sometimes be.

The bill passed by the House discards the term "full employment," and substitutes as a title "The Employment Production Act." It places heavy emphasis on preserving, maintaining, and encouraging our traditional system of free enterprise. The bill provides for the appointment of a council of three economic advisers to the President, each of whom shall receive a salary of $15,000 per year. This council is directed to prepare an annual report on economic conditions and place it in the hands of the President not later than the 1st of January each year. The President, in turn, is directed to forward this document to the Joint Committee on the Economic Report, which is to be established by Congress. The several committees to which this report may be referred shall report to Congress as a whole not later than the 1st of May, making such recommendations as they may deem advisable.

That, in simplified form, is the gist of the House bill, which the President declares is not acceptable to him

FAIR EMPLOYMENT PRACTICE BILL

Perhaps the most controversial measure touched upon by Mr. Truman in his radio address is the fair employment practice bill, which is intended to prohibit discrimination in employment because of race, creed, color, national origin, or ancestry.

This bill was favorably reported to the House from the Committee on Labor on February 20, 1945, by Mrs. MARY NORTON, head of the committee. Both the Democratic and the Republican Parties have given pledges to support the principles contained in this measure, which is in danger of becoming a political football during this election year. A majority of the members of the Rules Committee of the House is against the bill, and a petition is being circulated to discharge the committee from further consideration of the measure in order to bring it to a vote in the House. To accomplish this, 218 signatures to the petition are necessary, or a majority of the entire membership of the House.

The bill calls for the appointment of a Commission of five members, each of whom shall receive a salary of $10,000 a year and this Commission is to be given broad and sweeping powers to carry out the purposes of the act. The Commission is to be empowered to make its own rules and regulations, which can only be set aside by the passage of a concurrent resolution by Congress within a period of 60 days after the issuance of such rules or regulations.

Under the provisions of the bill, headquarters of the Commission will be in Washington, but there is no limit fixed as to the number of branch offices that may be established. The rules laid down by the Commission are intended to apply to employers in private industry, together with the Federal Government and its various agencies, as well as the State governments and their minor subdivisions, including counties, cities, townships, and school districts. The term "employer" is defined as a person having in his employ, six or more individuals, or any person acting in the interest of such employer, directly or indirectly.

Any employer against whom a complaint might be filed would not be entitled to a jury trial. The Fair Employment Practice Commission would decide the case. If the defendant should be found guilty by the Commission, he could be forced to desist of the practice complained of, and could be required to hire, rehire, or promote the complainant, as the case might be, with back wages from the time the alleged act of discrimination occurred.

Any person willfully resisting, preventing, or impeding the work of any member of the Commission or its agents shall be subject to a fine of not more than $5,000 or not more than 1 year of imprisonment.

PICTURED AS PANDORA'S BOX

In a minority report on the bill filed by Congressman CLARK FISHER, of Texas, a member of the Committee on Labor, he says:

"This bill is a departure from the traditional American system of free enterprise, with respect to the light that has always been enjoyed by employers to use their own sound judgment and discretion in selecting loyal and capable employees. * * * It therefore follows that the proposal to deprive the businessman and the farmer affected by this bill of the basic privilege of passing judgment on the choice of his employees, and of transferring that final determination to a bureau in Washington, smacks strongly of totalitarianism.

"The bill, if enacted, is extremely unfair to the Negro race in America, for whose alleged benefit it is designed. The measure would be unenforceable. Its attempted enforcement would have the natural effect of resulting in strikes, riots, and violence and in bringing about racial prejudice and discrimination. It is manifestly unfair to the American Negro, because it would retard his progress and would be calculated to foment racial feeling and bitterness against him."

Mr. FISHER is further of the opinion that the enactment of this bill would set the stage

for a new era of racketeering and blackmail in America; that it would result in thousands and thousands of lawsuits being filed by troublemakers and professional agitators. He declares the measure would legalize and dignify the activities of those who would practice shysterism and blackmail in America. The constitutionality of such a measure is, of course, extremely doubtful.

The unemployment compensation bill, to which the President referred in his address, passed the Senate on September 20. It was referred to the House Committee on Ways and Means. The committee considered the measure but came to the conclusion that it would be unwise to enact it, particularly so because of the large number of strikes that were called following the surrender of Japan.

The bill provides that during the reconversion period, ending June 30, 1947, unemployed persons shall be entitled to compensation at the rate of $25 per week, not exceeding 26 weeks in each year. To make this possible, Federal funds would be used to supplement unemployment compensation payable under State laws, and to equalize such payments.

FRED BRENCKMAN.

Collective Bargaining Can Work

REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. MICHENER. Mr. Speaker, whether or not collective bargaining between management and labor is effective necessarily depends on the attitude and the approach of those doing the bargaining. Fairness, understanding, and reasonableness on both sides are essential. Success depends much upon the approach in each case. Rule or ruin, vindictiveness, hatred, and desire to punish, have no place in a collective-bargaining conference. Good faith must be the cornerstone of every conference.

In these troublesome management-labor days, it is gratifying to report that collective bargaining can, will, and does work, if both sides want it to work. Interdependence must be recognized.

Mr. Speaker, I make reference to an industry in my district in which both management and labor have done an outstanding job throughout the war, where labor strife has not interfered with war production and all because there exists the proper spirit on the part of those in the front offices as well as in the production rooms. I make reference to the Monroe Auto Equipment Co. of Monroe, Mich. What I mean is best explained in a front-page news article, appearing in the Monroe Evening News of February 11, which reads as follows:

AUTO EQUIPMENT WAGES UP 18.5 CENTS—NEW WAGE AGREEMENT, RATIFIED BY UNION, PROVIDES SECURITY CLAUSE

A wage increase of 18½ cents an hour, effective March 1, was announced today for all employees of the Monroe Auto Equipment Co. A joint announcement was made today by officers of Local 878, UAW–CIO, and representatives of management who met with the bargaining committee of the union. The increase granted is plant-wide, including office workers who will receive a minimum of 18½ cents an hour increase based on their salary.

Negotiations have been in progress for the past 2 weeks and the agreement was approved at a special meeting of the local held Sunday at the high school.

Both management and the union emphasized that negotiations were completely amicable throughout. The company's contract with the union runs yearly to September 1 and provides for wage negotiations at 6-month intervals instituted by either management or the union.

A security clause for the company is a part of the agreement and is the first to be granted by the union. Under this clause any employee involved or participating in an unauthorized work stoppage or strike will forfeit any part of the company's profit-sharing fund accrued to his benefit from the beginning of the fiscal year up to the time of the disqualification. Any disqualified person, upon reinstatement, shall participate in the fund from the time of reinstatement to the end of the fiscal year. The money involved during disqualification shall be added to the general fund and distributed to all persons not involved in the unauthorized strike or work stoppage.

Negotiation for the wage increase was at the request of the union and the amount of the raise is based on what appears to be the pattern of the big three of the automotive industry—Chrysler, General Motors, and Ford—union members said. The local company has extensive manufacturing contracts with the Chrysler Corp. Chrysler and Ford have already signed similar contracts.

The company's profit-sharing plan has been in effect since 1938. It places 25 percent of the profits after normal taxes in a pool for distribution upon a percentage basis to the employees. Payment is usually made in December for the fiscal year ending June 30.

The wage increase will affect approximately 1,400 employees of Auto Equipment plants in Monroe, Petersburg, Temperance, and Frenchtown. It brings the company's base minimum rate to $1.01 for a 40-hour week.

James Morgan and John Adams, international representatives of UAW-CIO from Pontiac region 1–B, were in Monroe yesterday for the meeting with the union. The bargaining committee of the local unit included Marvin Otterpohl, Robert Redding, Carlos Gastambile, Mike Birch, and Ben Trombley, in addition to Irving Bruhn, union president. Company representatives included B. D. McIntyre, W. D. McIntyre, officers; George M. Streicher, plant superintendent; and Carl Savage, director of personnel.

Mr. Speaker, this employer and these employees have not only helped themselves but they have rendered a service to the public, and are entitled to the thanks of all of us. May I express the hope that others will follow this precedent?

Secret, Sordid, and Stupid

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following editorial from the Washington Daily News of February 12, 1946:

SECRET, SORDID, AND STUPID

If there was ever a more sordid deal by the United States than the needless bribery of Russia to enter the Jap war, we can't recall it. Now that the text of the agreement by Roosevelt, Churchill, and Stalin at Yalta has been made public, it turns out to be even worse than feared.

It violated assurances by the President and State Department that no secret political agreements had been or would be made.

In giving the Kuriles and South Saghalien to Russia, it violated the first and second pledges of the Atlantic Charter against territorial aggrandizement, and the United Nations Declaration. It violated the Cairo agreement which said Japan would be expelled from territories taken by violence and greed—which does not cover the Kuriles.

In agreeing to hand over to Russia the Jap territories, it usurped powers of the Allied peace conference. This peace conference authority was underlined by President Truman in his statement on Potsdam. It was reasserted by Secretary Byrnes last week in his comment that the secret Yalta pact—which had been hidden even from him for 7 months—would be subject to peace-conference decision. But the secret text provides that these Soviet claims "shall be unquestionably fulfilled"—regardless.

This was also a denial of the United States Constitution and the Senate's treaty powers.

Besides giving Russia the Jap territory, the pact invaded the sovereign rights of our Chinese ally. It gave Russia special privileges at Port Arthur and Dairen and in control of Manchurian railroads, and it separated Outer Mongolia from China. Since none of this could be delivered without the consent of Chiang Kai-shek, the President agreed to "take measures in order to obtain this concurrence on advice from Marshal Stalin." So the later Chinese-Russian treaty, making good on the Big Three deal, was under this duress.

The deal was stupid, because no bribe was needed. It was more to Russia's interest than to ours that she fight Japan; because Japan was a nearer threat to her than to us, and because only by fighting could Russia get a stake in the postwar far eastern settlement. We could lick Japan without her help—and virtually did anyway.

The deal was stupid not only for us, who had a reputation of international integrity to maintain, but also for Russia. She easily could have obtained from the legal peace conference legitimate trusteeship and bases in South Saghalien and the Kuriles.

We believe the Big Three outsmarted themselves. Roosevelt and Churchill unwittingly undermined an orderly and just peace structure. And Stalin has tipped his hand to America, that he is playing a game in the Pacific of grab and ruthless power.

Is This What He Fought For?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. HOFFMAN. Mr. Speaker, the union prevents even a veteran doing what he thinks is a day's work. Here is the story from the Grand Rapids Herald:

WORKS TOO HARD, LOSES JOB

A 39-year-old Army veteran, with 2 years' service in the Pacific, charged Thursday he

has been deprived of his job at the Fox De Luxe Brewing Co. plant here because union workers decided the veteran worked too hard.

The veteran, Charles F. Samalot, 310 Lafayette Avenue SE., recently employed by the brewery, told Clarence Case, director of the veterans' counseling center, three union members told him his work permit card had been suspended when he approached the time clock Thursday morning.

The union, United Brewery, Flour, Cereal, and Soft Drink Workers of America, has a closed-shop agreement with the brewery.

L. R. Brand, secretary of the union's local, No. 254, verified the veterans' charges saying Samelot was "doing two men's work." The union has other charges against the veteran, Brand said, but did not offer details.

"We want to keep as many of our members working as possible," Brand explained, adding that "when somebody does two men's work he's keeping somebody else out of a job."

A hearing in the case is scheduled Saturday when E. G. McCann, the union's international representative, is due here from Detroit.

Samalot was described as "very satisfactory" by a spokesman for the brewery who said management "would like him to remain with us."

"However," said the brewery spokesman, "the union has canceled his card."

Samalot, married and the father of an 11-year-old son now ill, said he would make a fight for his job.

Although the union is independent, Local No. 254 is affiliated with the Kent County Industrial Union Council (CIO).

DAR Reply to Mrs. Luce

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a letter from Mrs. Julius Young Talmadge, president general of the Daughters of the American Revolution, replying to the remarks of the lady from Connecticut [Mrs. LUCE].

The matter referred to follows:

NATIONAL SOCIETY, DAUGHTERS
OF THE AMERICAN REVOLUTION,
Washington, D. C., February 12, 1946.

Hon. JOHN E. RANKIN,
House of Representatives,
Washington, D. C.

MY DEAR MR. RANKIN: The Honorable CLARE BOOTHE LUCE, of Connecticut, published an extension of remarks in the CONGRESSIONAL RECORD, of Monday, February 4, concerning the Daughters of the American Revolution, which contained misstatements requiring correction.

It appears that Representative LUCE has attempted to secure the list of chapters and the list of members of the DAR for her personal use. She requested this list through Mr. Ernest S. Griffith, director of the Legislative Reference Service of the Library of Congress.

Mr. Griffith was told by letter from Mrs. Raymon C. Goodfellow, organizing secretary general of the DAR that the organization's mailing list is not available to the public.

Representative LUCE has raised the point that the DAR is required in its corporation to report annually to Congress. This is incorrect. The DAR is required to report annually to the Secretary of the Smithsonian Institution concerning the proceedings of its own continental congress.

Representative LUCE complains that since the mailing list of the DAR is not available to the public it is impossible for any Member of Congress "to seek the opinion of all chapters concerning the 'white artists only' clause in the Constitution Hall contracts."

That also is incorrect. Any Member of Congress can secure from national headquarters the viewpoint of chapters in upholding or opposing the rules governing Constitution Hall in accordance with customs prevailing in the District of Columbia.

If Representative LUCE, however, complains that the mailing list of the DAR is not available to those who want it for political purposes she is 100 percent correct.

Communists, radicals, propagandists, and un-American troublemakers have long sought access to the mailing list of the DAR in order to stir up strife and discord. They would like to destroy the DAR. It is the same technique used against other organizations and societies to break them up. Therefore, the DAR declines to give out its membership list to any person, even to its own members. We are sure Members of Congress recognize the need for this and approve this policy. In fact no Member of Congress with the exception of Representative LUCE has ever made a request for the mailing list of the DAR.

Representative LUCE has attempted to use the power of a Member of the Congress to secure the DAR mailing list for her use as a member of the DAR engaged in a dispute over the use of Constitution Hall. Representative LUCE is aware that no member of the DAR has access to the mailing list.

The Members of Congress know that all information concerning the activities of the DAR is available at any time and that any reasonable request will be granted.

In order to keep the record straight we respectfully ask that this letter be inserted in the RECORD.

Sincerely,

Mrs. JULIUS Y. TALMADGE,
President General.

Assistance for Central Europe

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech recently delivered in the city of Washington by Dom Odo, Duke of Wurttenzberg, OSB, honorary chairman of the Central European Rehabilitation Association, Inc., and chairman of the International Catholic Help for Refugees and War Victims.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In 1928 I founded the Catholic underground because I was convinced at that time that we in Germany would turn either to communism or to nazism. On January 30, 1933, the very day Hitler came into power, the terror against the people who did not agree with him and against the churches started. We had no arms to resist; only a moral, mental or spiritual resistance would be possible. On April 30, 1934, I was forced to leave Germany and go to Luxemburg and from there to Switzerland. Three times I was sentenced to death by the gestapo. Other countries were then contacted for the purpose of organizing resistance; first Austria—but with no great success and later Czechoslovakia and then Poland were also contacted. In late 1939 and early 1940 we brought, through the underground, 28,000 Polish soldiers who were interned in Romania out of that country and into France.

Before the invasion of France, several German officers came to me in Switzerland with the plans for the coming offensive against the French. These plans were given to the Allies but apparently did no good. I told these officers that the offensive would be a great success but that finally the United States would step in and liberate Germany from Hitler after the collapse of France. Admiral Canaris, Chief of the German Intelligence Service (later killed by the gestapo in 1944) who hated Hitler and nazism, came to see me secretly in Switzerland. He was desperate concerning the victories of Hitler. My answer to him was that "Hitler would finally be defeated when the United States of America came into the war."

After the Pearl Harbor disaster, I told the underground "do not despair—many ups and downs will come but finally the United States will bring victory and liberation of Europe."

When the African invasion started, hopes of the underground arose; thousands of secret radio listeners were sentenced to death by the gestapo. How strong the resistance within Germany can best be shown by the following figures:

During the Nazi regime the gestapo killed 300,000 German Jews and 1,200,000 German Christians, both Catholic and Protestant. Soon reports placed the latter figure at 2,000,000 which is probably exaggerated.

Invasions of Italy and France—D-day came.

All antagonists of Hitler and nazism were full of hope—with the coming of the Allies everything would be changed for the better.

Finally came the liberation. In the east the Russians raped, killed, looted, and reports from Silesia tell that conditions are worse than Dachau and Belsen ever were. First the Russians and the Red Poles forced the German population to leave land which they had lived upon for centuries. Now the Russians and the Red Poles have a new plan—by starvation and terror they hope to force the remaining Germans into "voluntarily" leaving the country. There is no official food ration in Eastern Germany but the people manage to scrape together about one meal a day. In the eastern areas all children under 2 years of age are dead. In one Silesian town of 20,000 inhabitants 80 adults die weekly of typhoid and infant mortality has approached 100 percent.

In the city of Hof, in Bavaria, displaced persons from the Baltic States, East and West Prussia, Mecklenburg, Pommern, Poland, Silesia, Czechoslovakia, Hungary, and other Balkan states have been assembled here. The number runs into the millions. Among them are over 3,400,000 children, nearly all orphans since their parents have been killed or deported to Siberia to be slave laborers for the Russians.

In Wurttemberg alone French Morocco troops raped more than 40,000 women and young girls, even down to children 4 years of age. As a result venereal diseases are rampant and looting and killing took place on every hand. Similar situations took place in the French zones at Vorarlberg and Tyrolia in Austria.

Displaced persons mill aimlessly about other parts of Germany. Misery is prevalent in Norway and the Netherlands. Belgium faces many hardships and she must rebuild many of her cities and historic buildings, such as the Louvain, which were destroyed by the Nazis.

In tiny, independent Grand Duchy of Luxemburg 40 percent of the homes were destroyed by the changing tides of war. Of the

14,000 Luxemburg boys who were forcably inducted into the Nazi Army and slave-labor battalions, over 4,000 are dead and 2,000 are still missing. These are prisoners of the Soviet.

France is miserable. The lack of adequate food supplies and the fact that industry has not as yet revived has had a profound effect upon the economic life of this country and as a result, much of the continued difficulties of France are now felt by some to be due especially to the irresponsible radical elements in her Government.

In Italy hunger and starvation are events of the day. And is this the promised liberation from Hitler and nazism?

Now the peoples of Europe are beginning to say, "Under Hitler we had enough to eat, but now we are starving." The situation goes from bad to worse. The Four Horsemen of the Apocalypse ride across the face of Europe.

Only one country can help—the United States, and through the United States Latin America can also participate.

Please do not permit that the peoples of Europe shall be deceived in their faith in the United States. If help to Central Europe, and especially to central Germany, are not permitted, then we have to count upon four great dangers:

1 Epidemics already now in the eastern part of Germany—typhoid and typhus have reached the epidemic proportions. These epidemics can affect United States occupation troops and even come over to these United States.

2. From hunger arises troubles, riots, and revolutions. There is the danger that more American boys might lose their lives.

3 Germans deceived in their faith of the United States will find that nazism and fascism were better. They will then say there was enough to eat under the Nazis. Then the Nazi criminals will become heroes and martyrs For when people starve, unsound philosophies and theories as fantastic as they may be, sound good to a hungry man, and he then becomes excited and returns to these fallacious ideas.

4. And, further, if the Germans are deceived in their faith in the United States they might be driven into the arms of bolshevism. They will feel that it is better to become Bolsheviks than to have their families starve to death and, so, in order to save the lives of their wives and children, they would turn to this dangerous theory. If Germany turns to communism, then also France and all other countries of Europe will so in turn. Russia will have the whole manpower and the brains of Europe for the coming fight with the United States.

All these dangers can be banned by helping the starved people in all countries of Europe without excluding any people or any country. Help is urgently needed, but it must come quickly or otherwise it is too late, and then complete disaster will fall upon the world.

No Gestapo and No Discrimination

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. HOEY. Mr. President, I ask leave to have inserted in the Appendix of the RECORD an editorial from the Raleigh (N. C.) News and Observer of February 11, 1946. This editorial was written by Hon. Josephus Daniels, who was Secretary of the Navy for 8 years during President Woodrow Wilson's administration, and who more recently served as Ambassador to Mexico for more than 10 years under President Roosevelt's administration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO GESTAPO AND NO DISCRIMINATION

Twice in recent years have visionaries, sectionalists, and bitter partisans joined forces to force inept legislation that would dig up more snakes than it would kill.

The first was the attempt to transfer the enforcement of criminal law from the individual States to the Federal Government at Washington. Lynch law shocked and infuriated good people in the North and the South. Naturally, there was demand to end this savagery and punish the perpetrators of the indefensible crime. Some good people, seeing that in some southern States punishment was not meted out to lynchers, hastened to offer a remedy that would not be ineffective. They overlooked the fact that southern governors—Bickett in North Carolina and Vardaman in Mississippi, and others—went into the ranks of would-be lynchers and saved the lives of the men charged with the most repulsive crimes. The sentiment in the South, after the horrors of reconstruction, set itself to end lynchings, which the records show were not confined to the South. White leaders and Negro leaders in the South united to end the worst of crimes, which invoked indignant people to take the law into their own hands. Not only that, but they cooperated to see that those charged with crime should be tried by the courts, and, if guilty, punished in a civilized manner. Because the repulsive crime and repulsive lynchings did not cease at once some people jumped to the conclusion that Uncle Sam should step in and oust State direction of the criminal law and take control. They drew up an antilynch Federal act and brought to bear every influence to put it on the statute books. When the Senate failed to pass that inept act, the prediction by its good and bad supporters was that the failure to put Uncle Sam in charge would be followed by an increase in lynching. But they were false prophets. Without a Federal act, lynchings have decreased to the vanishing point. Birmingham is as much opposed to lynching as Boston, and New Bern as antagonistic to the savagery as New York.

Indeed, jealous of their reputation, the southern people of both races have left no stone unturned to wipe out the crime. Unfortunately, now and then some raucous voice of partial excuse for the lynching of a brute in human form has been falsely paraded as the sentiment of that community. Though there is no difference in the attitude of good people in the North and South as to lynching, good southern people, because most lynchings have occurred in the South, are more hostile to it than those in other sections.

Unmindful of the teaching of history in the matter of lynching—proof that no Federal legislation is needed—because of some discrimination in employment, some theorists joined hands with politicians to put on the Federal statue books what they called a Fair Employment Practice Act that would prevent any discrimination by employers because of race, religion, or place of birth of their employees. Charges of discrimination have been more numerous in the North than in the South, including complaints that Jew employers discriminated against non-Jews; that gentile employers would not employ Jews; that Protestants gave the cold shoulder to Catholics, and vice versa; that white people discriminated against Negroes and that no Negro institution or concern would employ a Jap citizen or any white people if they applied. As to the South, where segregation in schools and churches has always prevailed, some of the advocates of the FEPC bill openly declared the purpose of the bill was an entering wedge to end all segregation in the South, where the Negroes are numerous. The bill also found some support because in some parts of the South, the Negroes are not given good schools, Negro teachers are underpaid, and dirty coaches sometimes are provided for Negroes by transportation companies. All parts of the South were not free from these charges. However, as Senator HOEY, of North Carolina, demonstrated by citing the improvements in this State and other Southern States, there has been steady and fine progress in recognition of the duty of the State to all its citizens, white and colored. And better conditions in health, education, and homes is the watchword and must become universal, law or no law.

The remedy of FEPC was regarded by most southerners and many others as not a remedy for discrimination, but as being as inept and unworkable as the old antilynching measure. Because of this, and because some of the supporters did not hesitate to say the act was a big stick directed at the South, the southern Senators felt justified in resorting to a filibuster to prevent its passage. Under the act, so able Senators asserted, there was opportunity for a gestapo, and the punishment of men charged with violation of its un-American provisions, without the right of trial by jury.

There is deep-seated opposition to the filibuster and the inability of the majority to promptly put their wishes into law. The opponents of the measure were embarrassed by this feeling of majority rule. Their answer was that the Senate is the only forum where the fullest and freest debate is permitted, with no cloture or other rules to prevent the consideration deemed wise when a measure of a new and drastic character is being pressed for action. Long ago, the Senate elected to continue to debate as long as Members desired to be heard. This does not always operate to the public good. It has serious disadvantages and sometimes has resulted in denial of legislation needed for the common good of the whole country, as when a few men in the Senate defeated the much-needed merchant marine bill before World War I, and the willful men prevented the arming of merchant marines to protect American ships on the high seas. On the other hand, the lack of cloture has prevented a bare majority from hastily rushing through legislation which had not the approval of the American people. The good and the bad are both present in the absence of the right of a majority within a few days under rules like the House to cut off debate and pass measures. Even so, the Senate in all its history has denied cutting off debate unless two-thirds of the Members vote for cloture. In the present instance, the advocates of the bill lacked only a few votes to invoke cloture. They would have succeeded if all who professed to favor the FEPC bill were more for it than their opponents to cloture.

It is well known that some who protested loudest for the bill were only giving it lip service and were glad to see the measure sidetracked. The southern Senators have come in for severe criticism, but at least they fought in the open and stood up to be counted and did not look both ways, as a few northern Senators are believed to have done.

The FEPC bill is dead. It died because it ran afoul of the right of the individual and the individual State and had so many openings that would have been contrary to American methods of freedom and hate of Gestapo practices. But the purpose of the sincere advocates of the measure have not been affected by the disposition of the bill. All the southern Senators declared—and most of them with perfect sincerity—that they stood as firmly against injustice and discrimination

on account of religion or race as any of its advocates. All people, North and South, should carry out of their own free-will policies of justice and fairness, without any of the discrimination that shames Americans.

The South put an end to lynching without Federal legislation.

The South must be free from unfair discrimination without Federal legislation.

Fair employment and fair compensation are essential to all people, all creeds, all nationalities, and all races.

Citation and Investiture of Leo T. Crowley as Knight Commander With Star of the Order of Pius IX

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. LA FOLLETTE. Mr. President, on January 28 I had inserted in the Appendix of the RECORD, beginning at page A271, the remarks made by Cardinal Stritch at the impressive ceremony in connection with the investiture of Hon. Leo T. Crowley as knight commander with star of the Order of Pius IX. I now ask unanimous consent to have inserted in the Appendix of the RECORD the remarks made on that occasion by Archbishop Kiley, of Milwaukee.

There being no objection, the remarks of Archbishop Kiley were ordered to be printed in the RECORD, as follows:

In the office which we priests are obliged to recite every day, and which is composed of passages from sacred Scripture—from both the Old and New Testaments—in yesterday's office we read, in the passage taken from St. Paul's letters to the Romans, "Give to all men their due when it is due, custom to custom, honor to whom honor is due." The church, recognizing how proper and equitable this counsel is, has followed it down through the centuries. Churches have honored rulers who, because of their beneficent rule, have manifested earnest and genuine solicitude during their reign for the spiritual and temporal welfare of the people whom they governed, thus proving themselves worthy of some recognition, and on this account the church bestows recognition of some kind on them. The same is true regarding statesmen, heads of families, and individuals who display patriotism and public-spiritedness to distinguish themselves among citizens as people of conspicuous work.

Even in other times the late Holy Father, Pius XI, honored many men who had attained preeminence in their particular field of endeavor by making them members of the Pontifical Academy of Science. Among those were several non-Catholics, one of whom, a university professor, died a few months ago in California, so that it is the policy of the church to recognize merit wherever it is found, to foster and encourage science, and to honor real scientists, but not pseudo scientists. The church, recognizing the fact that the marvels of science and their connection with the material world are something good in themselves, has always endeavored to carry on this work. What science does—and we sometimes lose sight of the fact—is to unlock that vast storehouse of treasures wherein an infinitely wise Creator has stored riches for the welfare of man. Since God is the authority of science and religion, there can be no conflict between religion and genuine science. Science is nothing else than the discovery of hidden secrets of nature's laws and in the course of time the application of those laws heretofore known only to the Creator of man. For this reason the church and God—the authority of religion and science—honor real, genuine science as powerful.

In contrast to what we see in other parts of the world, many persons in our own land, speaking in the language of today, have made good in a big way, even though they perhaps spent their youth in a country or small town and did not have the opportunities of those who were reared in the larger urban sections. Some tell us that this success, beyond their native talent and ability which is essential, is due to the fact that, coming from these sections, they are not overawed by occasion and do not take too seriously the artificial standards which often influence and handicap the city-bred man. To have respect for everyone, not because of the street on which he lives, the club of which he is a member, or the college which he attended, but because of his accomplishments and because, over all else, he is a square fellow, and to show supreme indifference as to whether his associates are in the bluebook or only in the telephone book—this attitude of mind liberates these people, who have made their way up from the bottom, from the infamous chains which often shackle the man who permits the social column of the Sunday paper to play too dominant a part in his life.

We may note in the life of Mr. Crowley, to honor and felicitate whom we are gathered here, that the impelling movement in all his actions has been fidelity to duty. Being unaffected and of straightforward character, he could never countenance or subscribe to anything that was merely for show. Thus, real fundamental things are the only objects worthy of his attention in every office entrusted to him. He gave himself wholeheartedly to each project, and, once in office, his first efforts were to determine exactly what that office required of him and then faithfully and conscientiously he carried it through to the end. For me to enumerate his achievements would be like carrying water to the ocean. His accomplishments, locally here in Madison, throughout Wisconsin and the Nation, as a statesman, giving advice and counsel during the critical period from which the Nation has now partly emerged, are well known to everyone here. In honoring him for his accomplishments and all his efforts in behalf of the enslaved peoples in the lands beyond the seas, the Holy Father was following a custom centuries old and expressed in the beginning by no less a personage than St. Paul, who said, "Render to all men their due, tribute to whom tribute is due, custom to custom, honor to whom honor is due."

My dear Mr. Crowley, may you be blessed with continued success in your undertakings and those you are called upon to assume. May you be blessed with length of days and joy in the high honor which the reigning Pontiff, Pius XII, has conferred upon you.

Inconsistent

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Inconsistent," which appeared in the Charlotte (N. C.) Observer, one of the leading dailies of the South.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INCONSISTENT

In the debate on the bill for a Permanent Fair Employment Practice Commission, Senator HARRY F. BYRD, of Virginia, has touched the Republican supporters of that measure in a vulnerable spot.

The Senator reminded them that they had cried out most sonorously against Government bureaucracy; they had fulminated against the growing army of Federal factotums who send their snoopers into every office and factory until no businessman can any longer call his business his own.

Republicans, Senator BYRD recalled, have clamored for Government economy and have shuddered at the amount of money paid out in salaries to these hosts of meddlesome parasites on the United States pay roll.

Why then, asks the Senator, are these same Republicans so earnest in their support of this bill that would produce the granddaddy of all the bureaucracies and would result in Government snooping into private business on a grand scale that has not yet even been approached?

This bill, Mr. BYRD reminds the Republicans, provides for five commissioners with a salary of $10,000 each.

The army of investigators, inquisitors, detectives, and snoopers required to carry out its provisions can only be estimated by looking at the act itself.

It will control the right of every employer with more than six employees to hire, fire, or promote. There are 1,500,000 such employers in this country. The number of snoopers required to look into the employment practices of that many firms would run into the thousands, not to mention the examiners who would have to hear all complaints that somebody was hired, fired, or promoted because of race, religion, national origin, or ancestry.

These investigators, the Senator reminds businessmen, would have the right to enter any place of business, examine the books and pay rolls without any process of court. The bill would deny the employer his constitutional rights by forcing him in this way to give evidence against himself.

This evidence could then be used by examiners to try the employer without benefit of counsel or jury, and from the examiner's arbitrary decision there would be no appeal.

It assesses fines, imposes jail penalties, hails an employer to Federal court far from his home, and provides heavy punishment for interference with the agents in any way. This last clause is so broad that it could cover almost anything.

This is carpetbaggery with a vengeance.

It is, as Senator BYRD says, inconsistent, to put it very mildly, for the very people who have protested most vociferously against bureaucratic interference in business to promote the most arrant case of such meddling that has yet been devised.

District of Columbia Suffrage

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. CAPPER. Mr. President, the Washington Sunday Star of February 10

printed an able article by Jesse C. Suter in support of the Sumners-Capper bill, now pending in Congress. I ask unanimous consent to have Mr. Suter's article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUSTICE FAVORS AFFIRMATIVE REPORT—DISTRICT NEEDS VOTES, NOT STATEHOOD

(By Jesse C. Suter)

CITIZENS OF UNEQUAL STATUS AT HEART OF NATION

The Declaration of Independence lays down the fundamental truth that all men are created equal and endowed by their Creator with certain unalienable rights, but today at the very heart of the great American Republic 170 years after the signing of that immortal document at Independence Hall, there exist two distinct classes of American citizens, divided by the place of their legal residence.

They all live here and are engaged here in various capacities in both private and public employment. In the aggregate they probably exceed in numbers 900,000 people. In the first class, there are those who possess legal residence in a sovereign State and by reason of that fact possess the right to vote in national elections for Senators and Representatives, as well as for Presidential electors, and thus participate in the Government of their country. Second, there is another class of American citizens here who occupy a peculiarly lower political status, because they lack legal residence in a State and therefore hold allegiance to no individual State.

Because of this accident of residence, they are denied all participation in the Government of their country to which they hold sole allegiance. They are not permitted to elect Members of the two Houses of Congress or to participate in the election of President and Vice President. The only opportunity for the individual citizen to participate in the Government of the United States is through the election of Senators and Representatives who compose the Congress which is the supreme legislative power in the Nation and in its Capital.

These American citizens of this lower political status have been likened by some great statesmen to subjects of the Republic and thus really slaves rather than free men. Diligent study of the Constitution and the debates on that great document furnishes ample evidence that the failure to provide an equal political status for the people of the Nation's Capital was due to omission rather than intent. A tragic feature of this omission is that not only was it a failure to provide a definite political status for these voteless and unrepresented Americans, but it was also a failure to provide the Congress with the power to cure this anomalous situation.

It has been found that the only possible cure is through an enabling amendment to the Constitution of the United States which would give Congress the power to provide that these individual isolated Americans at the Capital be given their inherent right to vote for Members of both Houses of Congress and Presidential electors.

The Sumners-Capper proposed amendment (S. J. Res. 9, H. R. Res. 62, 79th Cong), when added to the Constitution, would simply give Congress the required additional power. It would in no way affect the political status of the District of Columbia as one of the geographical divisions of the Nation, as it would in no way diminish the exclusive supreme legislative power of the Congress over the seat of government

As the Constitution stands now the only representation by the people in the Congress and among the electors of President and Vice President is through the States. A provision for representation of these isolated Americans at the Capital in a distinct manner without recognition as citizens of a State comes as a shock to some people in the Congress who fear that in some unexplained, mysterious manner the District of Columbia through such representation would become a State. This fear has been raised time and again during the long years of consideration of this vital problem.

In his argument before the House Committee on the Judiciary in January, 1921, Theodore W. Noyes, chairman of the Citizens' Joint Committee on National Representation for the District of Columbia, stated: "The effect of this amendment is not to admit the District into the Union as a State, but to give the (then) 437,000 Americans residing in the 10 miles square under the exclusive control of Congress the same representation as citizens of a State in Congress and the electoral college. Not a new State, but a new political status is created or evolved.

"This amendment operates as a supplement of the 10-miles-square provision, defining explicitly in view of the changes of more than a century the political status of the residents of the Federal District. It alters the existing law of congressional and electoral college representation, and creates a new American constituency with representation in Congress and the electoral college; not a new State but a politically uplifted District of Columbia, an enfranchised 10-miles square, already created and made unique by the Constitution.

"This new factor in our scheme of National government representation may be unusual, peculiar, extraordinary, but it is not so unusual, peculiar and extraordinary as the original creation and present-day retention by the great republic of the totally unrepresented 10-miles square, a district physically within the United States, even containing its Capital, but politically outside of the United States."

The remedy proposed by the Sumners-Capper amendment is no more unique than the un-American situation which it would cure.

SUGGESTED REVISION OF THE SUBCOMMITTEE RECOMMENDATION

The subcommittee of the Senate Committee on the Judiciary in its favorable report has proposed to amend the proposed constitutional amendment by adding the following: "The number of such members shall not exceed two in the Senate, a number in the House of Representatives equal to the number of Members of the House of Representatives to which a State having the same population as such district would be entitled, and a number among the electors equal to the sum of the number of Members which the Congress authorizes such district to have in the Senate and in the House of Representatives."

The citizens' joint committee respectfully recommends that the committee amendment be revised and clarified so that the proposed amendment to the Constitution be reported to the Senate reading as follows:

"SECTION 1. The Congress shall have power to provide that there shall be in the Congress and among the electors of President and Vice President Members elected by the people of the distrct constituting the seat of the Government of the United States, with such powers as the Congress shall determine. The number of such Members shall not exceed two in the Senate, a number in the House of Representatives to be determined by apportionment on the same population basis as provided for the States and a number among the electors equal to the whole number of Senators and Representatives to which the said district may be entitled. All legislation hereunder shall be subject to amendment and repeal.

"SEC. 2. This artcle shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within 7 years from the date of the submission hereof to the States by the Congress."

It is understood that Senator O'MAHONEY considers this suggested revison an improvement on the subcommittee version. This suggested revision is much clearer in its statement and is in conformity with the language of the Constitution.

NO VALID OBJECTION HOLDS TO SENATE REPRESENTATION

It is the inherent right of every American to participate in the Government of this Naton. That Government is chiefly exercised by the Congress, which is the supreme legislative authority. The Congress does not consist simply of the House of Representatives, but also of the Senate.

How can Americans in the Congress reconcile the idea of permitting some American people to be represented in the Senate while similar representation is denied to other Americans? Surely my mysterious sanctity surrounds the Senate and its Members to warrant such discrimination. The people of the District of Columbia need to be represented in bouth houses of Congress, as in no other way can they become real participants in the Government of their country. These Senators who are also Americans elected by the American people of their States, should surely be sufficiently sympathetic to see that justice is done.

There are special and general reasons for the people of the District of Columbia being represented in the Senate, aside from the exercise by Congress of the supreme legislative power. The power of the Senate to ratify treaties, to confirm Presidential appointments, etc., vitally affects the people living in the Federal District, and to deny them such representation will be to perpetuate a gross injustice.

WHY TIE THE HANDS OF A FUTURE CONGRESS?

This age-old question should be settled now by the passage of the pending joint resolution. If the power of Congress under the proposed amendment is reduced, it will simply put the burden on these voteless and unrepresented people of continuing to seek an amendment which will grant the necessary power. There seems to be no good reason why the Senate Committee on the Judiciary of the Seventy-ninth Congress should tie this matter up in such a way as to prevent the Eightieth, the Eighty-first or any other Congress from extending to these subject people by simple legislation the powers in the National Government which they need in order that they may be recognized as full-fledged American citizens.

SUGGESTED FEARS ARE GROUNDLESS

In the first place, there can be found no ground whatever for a fear that the granting of representation in the two houses of Congress and among the electors of President and Vice President would make the District of Columbia a State. If anyone will simply contrast the attributes of a State, with its Republican form of Government, its own legislature, its power to make a constitution, etc., with the entire lack of all such powers in the District of Columbia, which is and would continue to be subject to the supreme authority of the Congress, the fears will be found to be groundless.

Another fear which has been suggested sometimes is that should the Sumners-Capper amendment be approved, it would open the way for large cities of the country to demand that they also be admitted to representation. It should be borne in mind in this connection, first, that the people of these large cities are all represented in both House and Senate and in the electoral college, and

in the second place, that without any amendment to the Constitution, but by action of a State legislature and approval by Congress, any of them can be separated from their own States and admitted into the Union as sovereign States. These are points which many of the inventors of pretexts against favorable action appear to overlook.

Letter From a World War II GI

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Corp. Maurice A. Shade, a veteran of World War II:

A JOINT LETTER TO OUR CONGRESSMAN BY A WAR II GI WHO FOUGHT UP FRONT, NOT IN THE REAR ECHELONS, TO THE HONORABLE E. M. MOORE, SENATOR, AND THE HONORABLE PAUL STEWART, REPRESENTATIVE

MCALESTER, OKLA., *February 11, 1946.*

GENTLEMEN: I believe it has come timely for us returned War II veterans to tell Congress where we stand, what we know of Europe, and what we are finding out since our return.

I was over there so know whereof I, and my buddies, speak. Our knowledge was not learned at a pink tea in a hotel or club room, but in the fox holes where bullet and shells had no respect for person.

I've seen buddies die with the last words: God have mercy, Mom (or wife's name)—murmured from their lips.

I've helped my squad pick up buddies with their arms or legs torn off, and we did it in the heat of battle. One of my squads all are dead and I came back crippled for life.

We boys went over and fought for the "four freedoms," country, and home. And no damn politician, be they in the White House, Congress, or bureaus, is going to shear us of our heritage or change our views.

We veterans are watching, like a cat at the rat hole, to peg our candidates from the highest to the lowest office in the land. Good men will be reelected if they choose to run. But those who have and are playing into the hands of Wall Street speculators, strikers who made big money while we were in the fox holes, those who would like to make this Nation totalitarian or communistic, will lose.

By the time of the general election 6,000,000 or more of War II buddies will be back. Multiply that number by six (our mothers, fathers, wives, sisters, and brothers), you will have 36,000,000 that can beat any union, any Communist, any bureaubrats who believe in feathering their own nest and the hell with the rest.

Meat: England, France, Belgium, Holland, according to size of country, have more fat cattle than the United States, so why new meat rationing?

Wheat: Russia now has more than the United States of America. What they didn't raise they took from the countries they now control, so let Russia feed them, in place of asking that "we the people" cull our chickens, kill our cattle, hogs that the people who knifed us in the back may not starve. If that is even common sense then all of us veterans have come home shell-shocked, and we will shock them again this fall by cleaning house from the top down. Good men have nothing to fear.

If I thought that you two men had a hand in this Washington planning, I wouldn't even take the time to write you, but fight you hell-bent at the polls in 1946. So will my buddies, many of whom I have interviewed since I returned from overseas 4 months ago.

We all believe in—feed the people of our Nation first. Feed them well. Then what is left give it to Europe. We say give, because we'll never get a dime back.

We, and our folks, haven't forgotten War I and the years that followed. And how Hoover made a million out of sugar.

We haven't forgotten, will not forget, the scrap iron that the United States of America exported to Japan and the Japs returned to us in bullet-and-shell formation.

We, the veterans of War II, and our folks, will not be fooled this year by political balderdash speeches, propaganda, and radio "bull." We will pick our man, be he a Democrat or a Republican, if his past record is good, and can stand sunlight.

Please do not take personal exception to this letter unless the shoe fits. From what I hear, both of you gentlemen can be reelected unless you turn to the leftest crowd.

Be right, and fight like hell, even if you loose a congressional battle at the Capitol. Christ hated the Pharisees, cowards, "whitewashers," and double-crossers, so do we vets.

Enclosed you will find clipping which you may have already read. There are many other articles that you are making the voters' whiskers grow.

Very respectfully yours,
Corp. MAURICE A. SCHADE.
MCALESTER, OKLA.

Lumber

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. ANDERSON of California. Mr. Speaker, those of us who reside in California and who are familiar with the serious shortage of lumber and other building materials in that State are unable to understand how our Government can continue to export large quantities of lumber abroad. In this connection, I wish to include the following self-explanatory wire just received from Governor Warren, of California, and I commend it to the attention of my colleagues and the cognizant Federal agencies:

SACRAMENTO, CALIF., *February 12, 1946.*
Hon. JACK Z. ANDERSON,
Washington, D. C.:

Since VE-day differentials in favor of export trade in lumber have siphoned off at least hundreds of millions of board feet of lumber urgently needed in this country and particularly in our State for home building. In spite of our protests, I am informed that Federal Government is increasing quota of exportable lumber. I have also been advised that the OPA is considering a differential on water-shipped Douglas fir which will have the result of siphoning off the remainder of our western lumber. This is unfair to the Western States and particularly California, which has absorbed a new population of 2,000,000 people during the war with very little new housing, and which has recently received over 600,000 veterans who are in distress for lack of housing. I am signing a bill submitting $1,000,000 bond issue for veterans' homes and farms, but such legislation is of little value if there is no lumber for home building. This telegram is being sent to California congressional delegation in the hope some action can be taken to make our western lumber available on fair terms to the people of the western States.

EARL WARREN, *Governor.*

"Our Choice—Decentralization of Governmental Responsibility or Government by a Centralized Bureaucracy"

EXTENSION OF REMARKS
OF
HON. HATTON W. SUMNERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. SUMNERS of Texas. Mr. Speaker, leave having been granted, I present herewith for printing in the CONGRESSIONAL RECORD a statement made by me 21 years ago before the Rules Committee and later printed in the CONGRESSIONAL RECORD under the title "Our Choice, Decentralization of Governmental Powers, or Government by a Centralized Bureaucracy."

This statement gives a picture of the conditions then existing, 1925. It should be valuable in a comparative examination of causes, direction, and rapidity of trends, and should help to arouse even so governmentally indifferent a people as we are to a realization of what we are paying in money and in the loss of opportunity to live in a free government—what we are paying for what we have imagined we are getting for nothing.

The statement referred to is as follows:

"OUR CHOICE—DECENTRALIZATION OF GOVERNMENTAL RESPONSIBILITY OR GOVERNMENT BY A CENTRALIZED BUREAUCRACY"

(Extension of remarks of Hon. HATTON W. SUMNERS, of Texas, in the House of Representatives, Thursday, February 26, 1925)

Mr. SUMNERS of Texas. Mr. Speaker, leave having been obtained, there is being printed herewith, in part, copy of a resolution pending before the Rules Committee, together with a statement made before that committee with reference thereto.

I wish it clearly understood that in what is said no reflection upon the personnel of Federal bureaus and departments is intended. Whatever of criticism there may be is directed against the policy of government under which bureaucracy develops and not against those who are carrying out that policy. I hope there will be no confusion on this point.

The resolution is as follows:

"Whereas the vast increase since its organization of the territory in which the Federal Government has jurisdiction, the natural development in such territory, and the shift of new governmental responsibility to the Federal Government have created an aggregate of Federal responsibility which is overloading its machinery and rendering it increasingly difficult to discharge with efficiency and economy through the agencies at its command either its original or its acquired responsibilities, and under which increasing responsibilities it is difficult, if not impossible, to prevent the Federal Government from becoming distinctively bureaucratic in its operation: Therefore be it

"Resolved, etc."

STATEMENT OF HON. HATTON W. SUMNERS, MEMBER OF CONGRESS FROM THE STATE OF TEXAS, BEFORE THE RULES COMMITTEE OF THE HOUSE

Mr. SUMNERS. Mr. Chairman, this resolution proposes the creation of a joint committee to investigate and report back to the next Congress, if it can determine, how the Federal Government may be relieved of its governmental overload in order that it may be able thereby properly to discharge its Federal duties. That is the primary purpose. Conferences with State officials and, as far as practicable, with the people are contemplated.

Let us consider briefly the condition in which the three branches of the Federal Government find themselves at this time. First, the legislative branch.

THE LEGISLATIVE BRANCH

In the legislative branch of the Government gentlemen know from observation and from experience that matters of tremendous importance are acted upon without the membership, generally speaking, having had an opportunity to give the consideration which safety and good legislation require. Congress must have to do with the vast country between the oceans, from Canada to Mexico, with the Territory of Alaska extending up into the Arctic region; to the south in the West Indies are the Virgin Islands and Puerto Rico; farther down is the Panama Canal Zone; out in the middle of the Pacific Ocean are the Hawaiian Islands; and on the other side of the earth are the Philippines. Congress not only has to legislate for this territory in interstate, national, and international matters, but under our present system Congress is more and more being called upon to legislate as a State legislature, going further and further into the domain of State responsibility.

There are thousands of bills coming in each session. If Congress legislates wisely it must not only study the proposed legislation, but it must know conditions in the sections of the country with which it deals. If a personal reference will be excused, during vacations I go into the country and get all the first-hand information I can. But there are several States in which I have never been. I have not been in Alaska, the Virgin Islands, the Hawaiian Islands, or the Philippines, and yet I must help legislate for them. We have our committee work; we are called upon by our constituents to aid them in getting consideration of their matters with these bureaus which we are creating; and thousands of letters must be replied to in the course of a session. It is not a question of the ability of the present membership of Congress, but of human capacity. I do not care whom the people send here, this accumulated governmental responsibility cannot properly be discharged by them. Nobody thus pressed can give the time and thought to the problems of the Federal Government which those problems require. There is not the slightest use for us longer either to deny or to undertake to hide that fact. That condition has to do not merely with efficiency but with the possibility of efficiency.

DELEGATION OF RESPONSIBILITY TO COMMITTEES

In trying to take care of the ever-increasing demands the Congress has already divided itself into what in many respects are little legislative bodies—we call them committees, but they are more than committees as committees were originally intended to function. The Members of Congress, not because they wish to do it, but because they are compelled to do it, follow to a dangerous degree the judgment of these small groups of men as distinguished from their own independent judgments based upon knowledge. It is beyond human capacity.

DEVELOPMENT OF A BUREAUCRACY

Not only that, but even with this dangerous arrangement, which increases capacity to handle volume at the sacrifice of safety, the legislative branch of the Government cannot take care of its overload, so that it makes a further sacrifice by turning over important legislative powers to the various rapidly multiplying bureaus of this Government; that is to say, the Congress will enact a general law and delegate to these bureaus the power to legislate as to details. We call their enactments rules and regulations. But in practical operation, insofar as the average citizen is concerned, they are laws. Not only that, but there is given to these bureaus the power to construe the rules and regulations which they make and the power to enforce them—the three powers of government. Contrary to our traditions, to our philosophy of government, contrary to all the things we profess to believe and against all the warnings of history, we are placing the three powers of government—legislative, executive, and judicial—into the hands of the same personnel, not one of whom is elected by the people.

Not only has that happened and is happening to a greater and greater degree each year, but, as the power delegated to these bureaus accumulates around the heads of the bureaus those nearer to direct responsibility in turn are compelled to pass them on down to subordinates and from these subordinates to other subordinates, until the point is reached where some subordinate many times removed from anybody whom the people have had the opportunity to elect goes to the private citizen carrying with him all the powers of the great Federal Government.

When he goes to that individual he does not go as one whom that individual has had a voice in selecting. He goes not as a responsible agent of popular government, responsible to the public; he goes as an appointed governor of the private citizen. As a practical proposition what can the private citizen 2,000 miles from this Capitol do to resist such an agent of the great Federal Government? That is the test. We have gone so far in increasing numbers and in increasing Federal powers that there is not, in fact, any elected person who in good conscience can be held responsible for the acts of these appointed persons. There are now around 500,000 persons scattered over this vast territory operating the machinery of the Federal Government. Only 533 of them are elected by the people, and all of them are located here in Washington, one little spot on the eastern border. There is no elected person who it can be charged, knows what the individuals of this appointed personnel are doing.

THE JUDICIAL BRANCH

Passing to the judicial branch of the Government, the thing which has happened with regard to the Federal judiciary is very interesting and indicative of what has happened with reference to the increase of governmental responsibility of the other branches of the Government. Until 1891 practically all appellate jurisdiction in the Federal system was vested in the Judges of the Supreme Court of the United States. At that time Congress created circuit courts of appeals to relieve the Supreme Court. We now have nine of such circuit courts exercising appellate jurisdiction, much of which the Supreme Court formerly had.

Notwithstanding that, the Supreme Court, in the judgment of this Congress, is compelled to have further relief and by a unanimous vote of both Houses a bill was passed by this Congress shifting much of the obligatory jurisdiction from the Supreme Court to these circuit courts of appeals. But no such possibilities of relief for the other two branches are to be found in our system. There can be but one President and but one Congress. It is true the State governors and State legislatures afford possibilities of relief, but instead of moving legislative and executive responsibility away from Washington, as we are moving judicial responsibility away from Washington, the current of movement is toward Washington, the point where the overload already is.

THE EXECUTIVE BRANCH

I beg o direct your attention now to the executive branch of the Government. There is but one man belonging to that branch of the Government, the President of the United States, elected by the people, and that only in a qualified sense. Under the President there are more than 500,000 people on the Federal pay roll, operating the machinery of that one branch of the Government. I shall not discuss the element of expense, of unnecessary burden upon the taxpayers, of the system which we have developed of having the Federal officers and State officers working at the same governmental jobs, or of the policy of sending the tax gatherers into the States to collect money from the people, bringing it up to Washington and sending it back to the people from whom it was collected, or rather whatever part of it has not been eaten up by the army of nearly 600,000 Federal employees now on the pay roll, and fooling the people into the belief that they are getting something for nothing from Uncle Sam. I am talking about the result upon general governmental efficiency of this policy of concentration, without regard to cost.

Has anybody little enough sense to imagine—when the duties of the President, dealing with all sorts of international questions and great national questions are considered, with the duty to make recommendations to Congress, the duty to examine and the power to veto every bit of legislation that we pass here, the necessity to make nomination of all the chief officers, and to do hundreds of other things—that Calvin Coolidge or anybody whom God has ever created or ever will create can supervise and direct any considerable part of what is being done by these 500,000 people who are operating the executive machinery of this Government within our own territory out among the States everywhere and into the farthest corners of the earth? Of course, he does not know what they are doing. And yet he is the only elected person of all that half million people, the only one directly responsible to the people.

There is no use complaining of bureaucracy so long as the total of governmental responsibility concentrated in Washington is beyond the capacity of a government of the representative type to discharge.

When the capacity of the ordinary machinery of the Federal Government becomes overloaded, these bureaus are the only agencies to which the overload can be shifted. When these bureaus have transferred to them such powers of government as it is necessary now to place in them, and they exercise those powers without effective supervision by elected agents of the people, as is now the case, we have a great Federal bureaucracy far toward its full development, regardless of what the Constitution provides.

NATURE AND DEVELOPMENT OF OUR SYSTEM OF GOVERNMENT

In this connection I would like to say a few things with reference to our Constitution, which I believe pertinent to this consideration. I will attempt only to touch a few high points. I am convinced that much of our confusion and of our difficulty has come from our acceptance as actual facts of the mythological tales peddled over this country by Fourth of July orators and others of like sort as to the origin and nature of our system of government. These stories are all very fine and thrilling, and during our formative period were helpful, no doubt, to hold us together until we could develop into a Nation, but they are utterly hurtful and confusing since that stage of national development has passed and the serious, prosaic task of operating the governmental machin-

ery which was established has come to challenge the genius of this generation. We must get it out of our heads that the fathers established a self-adjusting, self-operating, bombproof, foolproof government. Our history runs counter to the fairy tales told to us by these Fourth of July orators. The fathers, all honor to their memory, were too wise and too patriotic to attempt so impossible a thing as is ascribed to them. They well understood—those who assembled in the State constitutional conventions and those who assembled in the Federal conventions to complete the work begun in the State conventions—they understood that written constitutions cannot create a popular government, but that popular governments create written constitutions. The fathers in 1787 understood that the constitution of popular government inheres in the nature of things; that it can no more be placed in the pages of a book than can a living human being be written into the pages of a book. What they wrote was descriptive, declaratory, interpretative, facilitatory, in a sense fixative, and was supplemental to the State constitutions which had already been adopted.

Insofar as our Constitution is written, and in the sense that it is written for each citizen, it is to be found in the document called the constitution of his State; there is where most of his constitution is to be found; and in the Federal Constitution. They are parts of the same thing. In theory, no; in fact, yes. We have passed the theorizing stage and are dealing with the facts of government now.

I am taking a little time here, because I am convinced that there are a few basic things which we must get straightened out before we can properly consider what we should do in our present circumstances or how to do it.

Our Constitution within historical times has been in process of development under natural law since the second century. I cannot cover that. It is an important thing, however, to have in mind. As a bearing upon our own task, it is necessary for us to have in mind also that in our own country we have passed through two periods and are now in the third. It would be more exact to say that we have passed through one period and are in the second. The colonial period was in fact a part of the formative period of our separate national development.

During the formative period of our National Government, of any national government, where different territorial units are brought together into one governmental organization, there is tremendous pressure from the inside outward. During that period strength moves—it seems to move naturally—to the point of weakness. That is the period of concentration of governmental power, naturally and properly so.

A constitution, written words, can never hold within itself the element of cohesive strength, especially among a people whose philosophy of government was, as expressed in the words of the Declaration of Independence, which became the battle cry of the colonies, that governments "derive their just powers from the consent of the governed."

During that period the Constitution acted as does the tape of the horticulturist, binding parts of different plants together. But the tape does not unite. It can only hold in proper adjustment and give nature a chance. Our Federal Constitution held exactly that relationship during the formative period of our National Government.

I do not know when we had grown together, but it is clear from the views expressed with reference to the annexation of Texas that by 1843 no minority of States in point of military strength could have left this Union without a civil war. If New England had undertaken to separate, we of the South would have joined with the other sections of the country to coerce those States back into the Union. There was one great weakness. I do not want to inject a matter that may raise controversy, but the tariff and slavery together helped to put an element of weakness between the two great sections, North and South. Those issues were as foreign substances between the sections. There was not the possibility of complete union between those sections until slavery at least was gotten rid of. At every other point there had been complete union. The States of these sections had united, but the sections had not. Suffice it to say that the Union of the States is now a fact. The first period is now history. We have reached the point where no controversy can ever again reach through to test the strength of the Federal compact, whatever it may be. We are a Nation, created not by words nor Federal compact, but by nature. To all practical purposes we have ceased even to have a dual system of government. I know gentlemen will question that. I am just stating my judgment.

We have a system of government, a Nation, a part of the governmental power of which is lodged in the municipality, part in the smaller units of government, part in the county, part in the State, and part here. In its construction it was built from the smallest unit upward. It functions from the bottom upward. That is its nature. We seem to have overlooked that fact. We are trying to operate it from the top downward. It cannot be done.

OUR RESPONSIBILITY

Our duty now and our responsibility is entirely different from that of those who in the constitutional conventions undertook to recognize and to declare the fundamental laws of popular government and to set up the machinery through which such a government may properly function. Our duty and our responsibility is also entirely different from that which obtained during the period when it was a question whether the central government—I do not use that designation in an exact sense—could hold the States together until they could grow together and thus form a nation. That has been an accomplished fact, at least since the Spanish-American War.

We now have no further need for our very interesting mythology. I do not underestimate its former usefulness. Of the composite virtues, magnified, of the great men who wrought in that period, we builded a national shrine around which all the people of all the States could gather. That helped to strengthen at the point of weakness. I would not detract from those men or lessen in the slightest degree popular love and gratitude for them, but I would put them where they belong, upon a sane, humanly possible, historically true basis. That would better enable us truly to honor them by preserving the fruits of their labors and the heritage of centuries of governmental development, which, in a very definite sense, they transmitted to us.

Popular governments grow as a tree grows. Man can help but he can not create, and he can help only when he works in harmony with nature. Not only must those who establish the visible evidences of a popular government and provide its functioning machinery work in harmony with natural law, but those who operate that machinery must do that thing also. We seem to have overlooked that fact. We seem to have overlooked the fact that everywhere there is law which directs and limits human discretion. The physician recognizes it. The farmer recognizes it. The builder recognizes it, and those who operate the machinery of this Government must begin to recognize it. We will have to face about. Nature compels respect for her plan as much by the limitation imposed upon human capacity as by the capacities given to human beings. When the limit of human capacity is reached, that is the end of argument.

Is there anybody in position to know the facts—Democrat, Republican, Socialist, or what not—who does not know that the total of governmental responsibility concentrated at Washington is beyond human capacity to discharge through any agency susceptible of popular control?

REACTIONARY MOVEMENT

Gentlemen, the present direction of movement is not progress. It is reaction; I do not care what sort of brand the individual puts upon himself who advocates it. I lay down this proposition, sound in theory, sound in governmental philosophy, and established by history, that after the completion of the formative period of a popular government, all true governmental progress, by the very nature of that system of government, must be in that direction which moves governmental power away from the central governmental agency where it accumulates during the formative period back toward the people into those governmental agencies more directly and more completely under popular control. The reasons for that are not founded in theory; they are founded in necessity. We face that necessity now. That is why I have introduced this resolution. This is not left to the will of statesmen. It is fixed in the economy of nature. Popular government is not an accident. It is necessary for human development, and nothing necessary for human development is left to chance. Human respect for nature's plan is secured by natural laws which human beings must respect or pay the penalty. We are paying the penalty not only here but in the States.

DESTROYING STATE EFFICIENCY

We are not only destroying the efficiency of our system of government at the Federal end by an overloaded governmental machinery, but we are destroying the efficiency of the States. If we want to destroy the States as virile, efficient agencies of popular government, there could be no more effective method than our present policy of taking from them the necessity to discharge the powers that rest naturally within the scope of their governmental jurisdiction. That is what we are doing and doing largely by State and popular surrender as distinguished from Federal usurpation. That is a most remarkable fact. Can anybody question that the States are losing their dignity, their independence, their importance, and their vigor as sovereign units of government when he sees them bereft of responsibility, begging at the door of the Federal Treasury? That is not a beautiful figure. It is not a beautiful fact, either. There are exceptions as to individual States and as to individual officials of States, but this is true generally, not only as to States but as to the citizenship of the States.

That is not all. We are not only destroying the efficiency of the Federal Government by the overload, and the vigor and governmental capacity of the States by this process, but we are doing a far-greater harm than that. By taking governmental responsibilities from those units of Government that are close to the people we are taking from the private citizens the necessity of a more direct grapple with the problems of their Government, which problems and the necessity to work them out in good providence come to develop them for the bigger responsibilities of tomorrow.

SYSTEM DEPENDENT UPON GOVERNMENTAL CAPACITY OF CITIZENS

If this system of government is to endure, it must depend for its strength in the crises that are to come not so much upon its laws or upon the written provisions of its Constitution, or even upon the capacity of

men in official position, but upon the virtue and the governmental capacity of its private citizenship. The present policy of creating a feeling of dependence upon a great central government is not calculated to develop such a citizenship. It is the sense of responsibility that sobers judgment, that develops civic virtue; it is the strength which comes from the struggle, from the grapple with the difficulties incident to the operation of a system of popular government which gives capacity. Nor can the lesson, taught by the penalty imposed for mistakes made, be dispensed with. How can we hope to develop a citizenshhip capable of dealing with the greater difficulties of tomorrow when we are constantly moving the power and responsibility, the necessity to govern, away from the people, away from those units of Government wherein the private citizen has the more direct control and the larger share of responsbility? We have turned our backs on the lessons of history and are trying to operate our system of Government from the top downward, in violation of the laws of its nature, and in violation of the laws of human nature as well.

I do not care what the form of that government is, I do not care what the political philosophers say; if you injure the governmental capacity of the people, you strike at the foundation of governmental strength and at the ability of the people to protect their right against governmental and private oppression. We have not only to stop concentration, but we have to begin an intelligent decentralization of governmental responsibility.

Whatever may be thought of the other reasons which I have given, there is one reason which no informed person will question either as to the fact or as to its sufficiency. This Federal Government has accumulated a total of governmental responsibility which is beyond human capacity to discharge through any governmental agency susceptible of popular control. I do not know whether or not what I have proposed would do any good. I believe it is the way to begin. I believe that if a joint committee were created to study our problems from the Federal end, to confer as I have indicated with State officials, to go really to the bottom of this situation and let the people of this Nation know the truth, it would help. We have not been telling them the truth about this situation, because men do not like to go home to their respective constituencies and confess their lack of knowledge or the limit of their capacity. We are too much like a certain type of the old-fashioned school teacher who seemed to have the idea that they had to impress their students that all knowledge was an open book to them. I am willing to admit the truth when I say that important items of legislation pass through this Congress, with regard to which I have very imperfect information, because it is the fact.

Mr. BERTRAND. Have you any plan in mind?

Mr. SUMNERS. As indicated in this resolution. I know we cannot drift along this way; I know this Federal Government is today more bureaucratic than it is representative, and is drifting more rapidly each day in that direction. I am not unmindful of the difficulties before us. It is a big job. It is getting bigger all the while. The quicker we move the less will be the task. We can do it because it has to be done. Things which have to be done can be done.

I do have some ideas as to how to start, but I do not believe it would be good strategy for me to indicate now how I think this thing should be done. I mean decentralization brought about. I will say this: It cannot be done—I am speaking now as a practical proposition—unless the people will that it be done. Of that I am certain. That was had in mind when the resolution was framed. I have the most profound confidence in the capacity of the people of the United States to operate a system of self-government if those with official responsibilities will discover the facts and tell them the truth. I do not underestimate the importance and the necessity of wise leadership. If the material for such leadership is not here now, it is in the body of the citizenship and can and will be sent here when the facts are made known to them.

The CHAIRMAN. The general proposition with you is that you want someone to study the situation that has grown up here of concentration of power at Washington. That is the general idea?

Mr. SUMNERS. Yes, sir; and to confer with State officers. This matter has to be handled as much at the State end as here. There is no use of the States deploring the loss of powers to govern unless they exercise the powers they have. They have to stand on their own legs. They can not hold the strength they have, much less grow stronger, by leaning on the Federal Government in matters which lie within their governmental capacity.

The CHAIRMAN. There is no question but that this is a very important proposition and so considered by very many Members of the House. It is an interesting study and will take a lot of time to accomplish definite results.

Mr. NELSON. You would have to delegate a great deal of power to people who are not responsible.

Mr. SUMNERS. Yes. And if we could get rid of non-Federal matters which destroy the possibility of supervision, it would be all right to do that.

There are some things the Federal Government ought to do which it is not doing, but which under its present overload Members of Congress hesitate to commit the Federal Government to do. We hesitate to place more power in these bureaus because not only do we create these bureaus and turn over to them these powers but the little group of elective agents of the people are so busy with responsibilities, which cannot be shifted, that they cannot supervise or control for the people what is being done by the appointed personnel which operates these bureaus. We are not only turning over the governmental powers to an appointed personnel, but to an unsupervised personnel. They are becoming with tremendous rapidity not agencies of popular government effectuating the public will but the unsupervised actual governors of the people, not only expending their money but exercising over them the most absolute and far-reaching governmental powers. Somebody elected by the people may find out about things that are done months and years afterwards, more often never at all. There are things which this Federal Government ought to do and would do if it could get rid of those things which the States can do, which are cluttering up the whole Federal machinery.

Mr. NELSON. What the gentleman said was enormously true during the war. One lieutenant somewhere could bind the Government in a marvelous way.

Mr. SUMNERS of Texas. Gentlemen, the plain facts about the matter are that we have made an awful mess of our job. It was the business of the fathers to establish this system of government and it is ours to operate it. They established the machinery for a system of government with such a distribution of governmental powers as to render it susceptible of popular control, and we, with a rapidity unequaled in the governmental history of the world, by a concentration of those powers, are converting that marvelous system into a great Federal bureaucracy—a type of government in many respects the least efficient, the most expensive, the most susceptible of corruption and of tyranny of any of the known systems of government. Nobody can deny that. Is that not an important fact? Is it not time we were giving that fact earnest patriotic consideration?

Regardless of who is responsible for the condition in which we find ourselves, whether the Congress in not having more vigorously resisted the pressure for centralization or the State governments in not having insisted on the retention of their powers, or the people in having urged their representatives in Congress to function for them in shifting these governmental responsibilities, we face a situation which requires the united, cooperative effort of the people and of their officials—State and Federal.

It is my opinion that in one way or another responsibility is fairly well distributed. I will accept mine and have no time to quarrel with those who say they have none. I am trying to help deal with this situation. I feel confident that if a joint committee should be created and during this coming vacation devote itself to a study of our general governmental problems and of our governmental resources, consult with State officials, and, wherever opportunity presents itself, with citizens of the country, and formulate a clear statement presenting the situation as it is, I believe—I am certain to whatever degree judgment can give me certainty—that great good would result. Gentlemen, the general attitude of the public mind gives promise of helpful cooperation at this time. This is the time to act.

The Merger Issue

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 13, 1946

Mr. IZAC. Mr. Speaker, under leave to extend my remarks, I am including an article appearing in the February issue of Naval Affairs:

THE MERGER ISSUE

No group of people in this great country are more interested in matters affecting the national security than the members of the Fleet Reserve Association. Our interest is attested by the fact that we have dedicated the most vigorous years of our lives to serving our country in peace and in war, and even though we now wear civilian clothing and are engaged in many and diverse business and professional vocations we have a common bond in our loyal and affectionate sentiment for the service whose uniform we wore.

One of the most vital issues before the Nation today is the question of merging the existing Army and Navy into one department under a single Cabinet head. Despite the importance of this proposal public reaction is inclined to be apathetic, probably because other matters such as demobilization, strikes, and economic legislation have more immediate appeal to the civilian mind. However, this attitude of indifference cannot be entertained by citizens with our own background of service to our country.

The proposal to merge the armed forces into one department is not new. It has appeared and reappeared in various forms over the past century, both in this country and in England. Legislation has been introduced in the Congress from time to time to effect such a unification, but the evidence of advantages to be gained has never had sufficient weight to convince the Congress and the people that they should discard a winning combination for an organization which has never proved successful in any country where

it has been used. Now that we have successfully fought the greatest war in the history of mankind by the cooperation and coordination of effort of our magnificent Army and Navy, backed by the organized productive resources of our industry, we find proponents of the merger making extravagant claims that the job could have been done better, more efficiently, and more cheaply as a single department of the Government.

Always bearing in mind that our interest and our intent is to advocate and support any measure which will strengthen the national security, it is pertinent to examine any proposal which claims to achieve that goal. Also we should guard against broad and general statements which claim sweeping advantages without showing how the end is to be attained. When a man claims that he can do any job better than it has been done before and still save 25 cents out of every dollar previously expended, we believe that he should show in detail just how he proposes to effect such saving. We believe that the proposals to merge the Army and Navy should be examined in just that light, a calm, impersonal, and judicial examination to determine where increased efficiency and economy will result from such a measure.

The Honorable James Forrestal, Secretary of the Navy, is a gentleman of unquestioned ability and integrity. He has made an outstanding success in the business world and has rendered distinguished service to the country in his posts as Under Secretary and later as Secretary of the Navy. When Senator DAVID I. WALSH, chairman of the Senate Naval Affairs Committee, requested Mr. Forrestal's views on the proposals to unify the armed services into a single department the Secretary applied an accepted principle of the business world in approaching the question * * * he secured the services of a well-qualified and impartial civilian, Mr. Ferdinand Eberstadt, to study the question to determine the strengths and weaknesses of the existing structure and to make recommendations as to steps to be taken to strengthen the national security. As a result of Mr. Forrestal's action the Eberstadt report stands as the only exhaustive and scientific study which has been made available to the Congress as to the advantages and disadvantages of our existing system.

Without going into the details of Mr. Eberstadt's excellent and exhaustive study his conclusions and recommendations may be stated briefly:

CONCLUSIONS

(a) That unification of the War and Navy Departments under a single head would not improve our national security.

(b) That the weaknesses of the existing structure are defects of coordination; gaps between foreign and military policy—between the State Department and the Military Establishments; gaps between strategic planning and its logistic implementation—between the joint chiefs of staff and the military and civilian agencies responsible for industrial mobilization; gaps within and between the military services—principally in the field of procurement and logistics; gaps in information and intelligence, between the executive and legislative branches of our Government, between the several departments, and between the Government and the people.

RECOMMENDATIONS

(a) That the military forces be organized into three coordinate departments, War, Navy, and Air, each headed by a civilian Secretary of Cabinet rank, supported by a civilian Under Secretary and such Assistant Secretaries as may be necessary, and commanded by a military officer.

(b) That a National Security Council be established to afford a permanent vehicle for maintaining active, close, and continuous contact between the departments and agencies of our Government responsible, respectively, for our foreign and military policies and their implementation.

(c) That legislation provide for the continuation of the Joint Chiefs of Staff which should include among their duties:

(1) Preparation of strategic plans and strategic direction of the military forces of the United States;

(2) Preparation of joint logistic plans and assignment to the services of logistic responsibilities, in accordance with such plans; and

(3) Approval of major requirement programs—material and personnel—of the services in accordance with strategic and logistic plans.

(d) The creation of a National Security Resources Board in order that there may always exist an organization ready and able to implement military plans in the industrial mobilization and civilian fields.

(e) The encouragement of scientific research and development by the appointment of an Assistant Secretary for each branch of the services to head research particular to that service and to cooperate with and link military and civilian research.

(f) The creation and training of the Army, Navy, Air Forces, and Marine Corps to insure their integration into a balanced program designed to instill a mental attitude of cooperation and alert understanding of the many-sided character of modern war, without impairing technical proficiency or the morale which grows out of tradition and service pride.

(g) The creation of a Central Intelligence Agency to collect, analyze, evaluate, and disseminate intelligence information to all agencies of the Government.

In forwarding his study, Mr. Eberstadt stated that prior to undertaking the task he had generally favored a single department, and it is pertinent that his opinion was changed by his careful examination of all phases of the complex structure. It is quite probable that many people of the country who do favor a single department have been swayed in their decisions by the broad and sweeping claims of greater efficiency and economy of one organization and that unification will in some obscure manner cure all the existing deficiencies and defects in the present separate departments.

Current comment in the press indicates that the subcommittee of the Senate Military Affairs Committee, which is drafting legislation to provide for one Department of Common Defense, is disposed to accept some of the important features of the Navy plan for national security, including the National Security Council, the National Security Resources Board, the Central Intelligence Agency, and the Central Research and Development Agency. If this information is correct, little remains to be done toward reconciling the divergent views of the two services as to the details by which full coordination can be effected. However, there remains the basic and vital question of one Department with one Secretary and one Chief of Staff of the Armed Forces as contained in the proposal being considered by the subcommittee as opposed to three Departments with three Secretaries and the Joint Chiefs of Staff composed of the chief military officers of the three services advocated by the Eberstadt recommendation and in only slightly different form by the Navy plan for national security.

Concentration of the responsibility for the operation of all the armed forces of the Nation in one Secretary in the Cabinet is too big a job for one man. During the recent hostilities we had 11,000,000 persons in uniform and were expending 80 percent of the National Budget; under these conditions, the Secretaries of War and Navy were tremendously overburdened men, yet under the present proposal their combined responsibilities would be heaped upon one man. We believe that in 1950 we will be expending 30 percent of our National Budget for the armed forces, and we believe that the job will still be too big for one man. In addition, we question the ability of one man to insure that the interests of three services are treated with equal adequacy and moderation, and believe that any conflict of policies can be resolved more advantageously for the best interests of the Nation by three men than by one.

We view with concern the proposal to establish a chief of staff of the armed forces, for we believe that such a concentration of military authority in one individual will destroy the balance which must exist between all military arms in modern warfare. We have witnessed the defeat of two powerful nations—Germany and Japan—who placed their fate in the hands of imperial general staffs dominated by one service * * * that the domination in both instances was by Army officers is not pertinent to the point at issue, for domination by any one service will surely result in unbalanced decisions in the conduct of modern war. And modern warfare demands, as does no other human problem, the ultimate in coordination, cooperation, and teamwork from all participants.

As members of the Fleet Reserve Association we advocate the best, and only the best, organization of our armed forces which can be conceived by the leaders of our country. We do not want to be sold something of unproven worth on the strength of unsubstantiated claims that it will eliminate all inefficiency and waste. We do want to effect such reorganization of our existing system as is necessary to bring it up to date and remedy recognized weaknesses brought to light during the war, but we prefer to retain a two- or three-department organization until someone can guarantee against the mistakes of armed forces dominated by one service which so surely led to the defeat of France under Napoleon, Germany under Wilhelm II, and again under Hitler, and Japan under Tojo.

Instruction of German Children

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 13, 1946

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I herewith submit the following:

We, the student council of Hamlin Rural High School, Hamlin, Kans., do hereby entreat you, our popular Representative to the Halls of the Federal Government, that you do all in your power without any reservation whatsoever to see that the children of Germany receive instruction in the democratic way of life by teachers who firmly believe this philosophy to be the only one which will give us world peace and freedom from fear for ourselves and our children yet unborn.

We, the members of the student council of Hamlin Rural High School, of Hamlin, Kans., herewith affix our signatures and recommend that the student body also sign.

Gerald Hanson, President, Student Council; Butch Musselman, Senior President and Council Member; Julie Schilling, Junior Council Member; Maxine Arnold, Sophomore Council Member; Jimmy Burgert, Freshman Council Member; Wayne A. Meyer; Newt Barnes;

Cis Barnes; Rachel L. Pyles; Jo Anne Pyle; Stanley Charles; Paul Armstrong; Floyd Titus; Floyel Armstrong; Austin Heise; Jack N. Pyle; Stanley Trull; Bill Arnold; Dewey Pyle; Evelyn Wood; Joan Hanson; Georgia Titus; Eleanor Bates; Helen Shields; Valeta Burgert; Patricia Kay Burgert; Molly Barnard; Bill Schilling; Lavern Whaley; Raymond Rison; Lawrence Puvogel; Jean Devine; Webb Guilliam; Marvin Puvogel; Victor Abby; Robert Meyer; Marjorie Miller; Kenneth Bauman; Virginia Burgert; Raymond Puvogel; Russell Sauver.

FEBRUARY 1, 1946.

Alexandria Labor Controversy

EXTENSION OF REMARKS

OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 13, 1946

Mr. SAVAGE. Mr. Speaker, the following letter from the editorial page of the Washington Post of February 10, 1946, written to the editor, states that only 3,000 out of 65,000 citizens vote. If these figures are correct it means that less than 5 percent of the people vote. The letter implies that the Alexandria courts and judges are controlled by machine politics. The person who wrote the letter seems to know what he is talking about.

Such things as this is the reason workers are opposed to the poll tax. Such things as this is why the workers of America take political action and I venture to say we are going to see more of it in the future.

Mr. Speaker, in addition to the letter, I include a news article from the Washington Daily News of February 12, 1946, about the Alexandria labor case. Besides being interested as an American in the principles involved, I am a Virginia taxpayer. I own a home very close to Alexandria. I often hear my neighbors over there say, "they will not pay a poll tax to vote because they believe it is a travesty on their American rights." The letter and the news article are as follows:

[From the Washington Post of February 10, 1946]

"JUSTICE" IN ALEXANDRIA

Equal justice under law—the noble sentiment carved in stone above the entrance to the Supreme Court of the United States—the ideal for which Americans have fought in every war—becomes a hollow mockery when workingmen are hailed into the courts of Alexandria.

An Alexandria police judge sentenced two labor leaders to 3 months in jail and fines of $550 apiece and 3 years good behavior. Their names are unimportant. What is important is that on the same day the court fined two persons $25 and $50, respectively, plus a suspended 30-day jail sentence, on other charges of disorderly conduct when convicted of beating another with an axe and a beer bottle.

What is also important is that the president of the Central Labor Union has been pointing his finger at the rottenness of machine politics in Virginia. Particularly he objected to the machine putting labor stooges on the State pay roll and then encouraging them to take over central labor unions.

According to eyewitnesses the "machine" stooges advanced from the rear of the hall and jumped on the secretary and beat him. The action was well coached and concerted. This sort of thing is old hat and routine for "machine" politicians and their henchmen. Only this time the cure didn't take. The secretary had boxed in college, had been an amateur champion and had worked his way through Catholic University in Washington by boxing, and so the tables were turned.

Unable physically to whip the secretary, they called on their mentors, the machine politicos. They swore out warrants, charging the secretary, whom they attacked, and the president, who had rapped for order and hadn't left his chair, with assault.

No counterwarrants could be secured by the secretary and president though their attorney went as high as the Commonwealth attorney. No one who knew the courts of Alexandria with its machine-controlled judges had any doubt of the outcome of the trial. They knew the men would be found guilty. But the severity of the sentence is astounding.

Only in a lynch court in a city where 3,000 carefully chosen citizens vote out of 65,000 citizens can such grave miscarriages of justice occur.

This isn't Berlin or Tokyo "justice" which I am writing about, remember, but "justice" in Alexandria, Va.

AMERICAN.

WASHINGTON, *February 7.*

[From the Washington Daily News of February 12, 1946]

FEELING RUNS HIGH IN ALEXANDRIA LABOR BATTLE

Participants in Alexandria's explosive political-labor fight started when two AFL leaders were given heavy sentences for assaulting a Virginia labor inspector at a union meeting last month, today indicated storm warnings will be kept flying for at least another month while a new trial date is being set.

A motion by Defense Attorney Maurice D. Rosenberg of Alexandria, asking for postponement of the hearing until March 11, when a new term opens, was granted by Alexandria Corporation Court yesterday. Mr. Rosenberg plans a vacation of several weeks in Florida because of ill health.

Defendants George D. Hardman, 39, president of Alexandria Central Labor Union, and James C. Turner, 29, delegate to the AFL central body, were sentenced to 3 months in jail and fines of $550 each on three assault charges filed by J. Fred Kirchner, 30, labor inspector of northern Virginia and former president of Alexandria CLU. The fracas occurred at a union meeting January 7.

Public Land Grazing Policies

EXTENSION OF REMARKS

OF

HON. E. P. CARVILLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 13 (legislative day of Friday, January 18), 1946

Mr. CARVILLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me under date of January 17, 1946, by the central committee, Nevada State Grazing Boards, dealing with public land grazing policies, together with a statement on the same subject.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

CENTRAL COMMITTEE,
NEVADA STATE GRAZING BOARDS,
Reno, Nev., January 17, 1946.

Hon. E. P. CARVILLE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: Enclosed is a copy of a statement on public land grazing policies adopted at a meeting of this committee in Reno, January 11, to which rancher organizations of practically every region of Nevada sent representatives.

The following is an attempt to briefly outline the viewpoint of the stockmen as expressed at the meeting:

FOREST SERVICE

Those presently in charge of this Federal agency seem to have decided that it has moved too slowly in the past to adjust grazing use of a number of range allotments in line with their ideas of range capacity. To make up for the past they feel that reductions in numbers of livestock actually grazed in 1945 of as high as around 30 percent are necessary. In addition it is conceling many nonuse permits. Following strong complaints by the range users, they are now showing a disposition to spread these reductions, to some extent, over 2 or 3 years.

The range users feel that:

In too many cases, inexperienced officials are trying to determine grazing capacity without any real knowledge of the regions concerned.

That instead of calling the users and other local interests together to help work out the problem in some organized practical manner, with least possible upset to the users' dependent property investments and the local tax and business structures, the Forest officials are merely using their arbitrary powers to force through these reductions, regardless of their ruinous economic results to the users and the local economies concerned.

That, if such ruinous policies are applied now to the individual users presently concerned, they soon will also be applied to users in general, with no apparent end in sight since no definite assurances so far are forthcoming from the officials that additional reductions will not be applied to place new users on the ranges or that overuse of ranges by big game will be controlled.

That the spreading of these heavy reductions over 2 or 3 years merely means a short postponement of their ultimately ruinous effects.

GRAZING SERVICE

To avoid repetition, am advising that, in general, the same situation as outlined above exists in the efforts of the Grazing Service to adjust livestock grazing use to range capacity on grazing districts through its so-called work-sheet plan and in some cases by officials with little or no experience with actual conditions in the regions affected and with the attitude of forcing through their theories without regard for the collective opinions of the users concerned.

UNITED STATES LAND OFFICE

At the Ely, Nev., grazing-fee hearings the end of May 1945, the Grazing Service Director promised that no further areas would be included in grazing districts without local meetings and majority vote. Then the Land Office representatives stated that if the vote was against grazing districts they would apply the lease plan of section 15 of the Taylor Act.

The stockmen affected feel that this confronts them with the threat of being forced, whenever the Grazing Service chooses to hold the local meetings, to have their ranges go under either one or the other of the two

plans. They fear the grazing-district plan because of the trouble it has brought in the areas where it is being applied. They fear the lease plan because they do not know what it may mean under the broad, autocratic powers available to the Secretary of the Interior under the said section 15. Many of them have had experience under the broad, autocratic-power plan of range regulation by the Forest Service and want no more such plans.

They do not believe that as it originally was and still is written by Congress section 15 was intended to apply to the big range areas such as theirs. This section provides that it shall apply only to areas that are so situated as not to justify their inclusion in grazing districts. The fact that the Grazing Service has been trying to put these areas in grazing districts even against the will of the users, proves to the stockmen that that Government bureau feels they are so situated as to justify inclusion therein and that the only reason they are not in is because the local users have voted against it. They cannot understand how the Land Office, after the Grazing Service has decided the areas are so situated as to justify inclusion in grazing districts and have tried to get the local users to vote them in, can then turn around and put the areas under section 15 because it, as another bureau, chooses to feel they are not so situated as to justify inclusion in grazing districts. Either they are or they are not. If they are, then what is the Land Office's reason for trying to force the section 15 lease plan upon them? If they are not, why is the Grazing Service trying to put them in grazing districts?

IN GENERAL

The stockmen feel that they have but one chance for relief in all these matters affecting Forest Service, Grazing Service, and Land Office policies, this being a congressional investigation of this whole matter of public land and grazing policies; that unless Congress will take steps to hold up the application of these policies and provide for their investigation the officials of the bureaus concerned will force their will upon and ruin their dependent investments beyond hope of recovery.

They also feel, with opportunity to prepare their case and have it heard before an authorized congressional committee, ways can be found to solve the problems concerned in sensible and practical manner with a minimum of injury to the future of their enterprises and the entire economies of their regions.

They also feel, if Congress will not or cannot find a means of speedily holding up application of these arbitrary ruinous policies by the bureaus concerned, that their Nevada congressional delegation should work together to hold or tie up their appropriations so that no part of these could be expended to carry on these harmful policies in those regions of Nevada concerned.

The stockmen also understand that the President of the United States, under a recent grant by Congress, now has the power to put both grazing district and forest grazing administration under either the Forest or Grazing Services and that the Secretary of Agriculture, who now has the Forest Service in his Department, recently has stated that he soon also would have the Grazing Service, which now is in the Interior Department. The stockmen feel that since they are the users and since their lifetime endeavors in the way of developed, dependent land and water holdings are at stake, they should have opportunity to be heard before any such action is taken. They therefore are asking the members of their congressional delegation to place this matter before the President as quickly as practicable.

As will be observed from the signatures to the enclosed statement, original of which is on file here, there have been few, if any, occasions upon which so representative a group of range users of Nevada ever conferred upon and joined in a statement of this kind.

For the Central Committee of Nevada State Grazing Boards.

VERNON METCALF,
Consultant to the Committee.

STATEMENT REGARDING PUBLIC LAND GRAZING POLICIES

Firmly convinced that the Forest and Grazing Services both are employing, in many cases, in Nevada, arbitrary and high-handed methods in their administration of grazing on forest and grazing district lands, especially in the matter of ruinous reductions in grazing permits and without proper steps to give the grazing users fair opportunity to help work out the problems confronted in a way which will not cause such disastrous economic results to the investments in their settled holdings and the business and tax structures of their local communities and that the United States Land Office is threatening to apply an autocratic and arbitrary system of range leases on the open domain, contrary to the letter and intent of the Federal statutes, we, a group representing grazing users of all forest, grazing district and open domain grazing regions of Nevada, in meeting at Reno, Nev., this 11th day of January 1946, under the auspices of the central committee of Nevada State grazing boards, respectfully petition and strongly urge all Members of our congressional delegation to do everything within their power to secure a deferment in the application of these ruinous actions on the part of the Forest and Grazing Services and United States Land Office, and to arrange as speedily as possible for a congressional investigation of our country's entire public land and grazing administration policies, with public hearings in the public land regions where the grazing users and other interests directly concerned can have opportunity to appear and be heard.

We feel that if the arbitrary practices of the said Federal agencies just cannot be curbed in any other manner, our congressional delegation should take steps under which no part of the annual appropriations granted said agencies by Congress would be available for carrying on their activities in this State until the problems involved can be properly investigated.

In the event that he should consider consolidation of the Forest and Grazing Services we hereby petition the President of the United States to first consider the wishes of the grazing users concerned.

Central Committee of Nevada State Grazing Boards, Reno, Nev., by Fred Strosnider, temporary chairman, Yerington, Nev.; E. R. Marvel, Battle Mountain, Nev.; W. M. Gilmer, Wells, Nev; Clyde Mathews, Panaca, Nev.; W. L. Blackwell, Coleville, Calif.; Gordon Griswold, Elko, Nev.; Irving H. Cowles, Reno, Nev.; Lincoln County Livestock Association, Pioche, Nev.: By P. A. Delmue, J. A. Wadsworth, John H. Conaway, C O. Bastian, Dan Stewart, Delegates; Nevada State Cattle Association, Elko, Nev.: By W. M. Gilmer, A. J. Dewar, Delegates; Nevada State Farm Bureau, Reno, Nev.: By Geo. F. Ogilvie, President; United Sheep and Cattlemen's Association, Ely, Nev.; By Geo. N. Swallow, C. E. Horton, John W. Cole, Delegates; Eureka County Livestock Association, Eureka, Nev.: By A. C. Florio, R. J. Wright, Delegates; Western Nevada-High Sierra Livestock Association, Mindon, Nev.: By Norman T. Annett, Warren Simpson, Steve Landa, Delegates; Paradise Valley Cattle Association, Paradise Valley, Nev.: By Geo. J. Miller, Delegate; Livestock Division, Nevada State Farm Bureau, Reno, Nev.: By Geo. J. Miller, Chairman; North Toiyabe Cattle Association, Austin, Nev.: By Howard Akins, Roy A. Brown, Delegates; South Toiyabe and Nye County Livestock Associations, Tonopah, Nev.: By Jim Butler, Chairman; Esmeralda County Livestock Association, Gold Point, Nev.: By Jim Daniels, Delegate; Eastern Nevada Wool Growers Association, Ely, Nev.: By Lloyd Sorensen, President; Jack Bordoli, Tonopah, Nev., D. C. Robison, Ely, Nev., W. S. McGill, Austin, Nev., Bruce H. Chichester, Coleville, Calif., Nevada Wool Growers' Association, Elko, Nev.: By Gordon Griswold, President.

Mrs. Luce and Lincoln

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Post of February 11, 1946:

MRS LUCE AND LINCOLN

At a Lincoln-Day celebration in Washington last week CLARE BOOTHE LUCE, Congresswoman from Fairfield County, made a masterful plea for fair, just, and equal treatment of the colored race in America. It was certainly an appropriate occasion for the uttering of such sentiments and Mrs. LUCE rose to the occasion with the eloquence, the compassion, and the logic which are characteristic of her public discussions.

Indeed her speech bears rereading in full as a statement so noble in spirit and so logical in thought, that it seems to leave nothing further to be said. There are few Members of Congress with the heart, the mind, and the background to formulate such a doctrine and none, so far as we know, to present it so beautifully.

If there ever were an example of Christian ethics in action, this was it.

From the context of Mrs. LUCE's speech the Hartford Courant has unwisely chosen a single paragraph at which to cavil. The real meaning of this paragraph cannot be appreciated without study of the whole of Mrs. LUCE's argument. But in any case, the analogy which the Courant attempts to draw is singularly misleading.

Mrs. LUCE had said that the passage of the Fair Employment Practice Act would be immensely helpful, regardless of the difficulty of enforcing it, because, "it would exert a constant pressure on the moral attitude of law-abiding citizens in a law-abiding community, urging them by the force of moral pressure to conform with the declared judgment of a whole Nation."

To this the Courant somewhat carpingly retorts that if this line of reasoning were true, why was the eighteenth amendment such a failure? Was it not passed by two-thirds of both Houses of Congress and ratified by three-fourths of the States?

The answer, of course, which ought to be apparent, is that there is no resemblance whatever between the issues involved. The eighteenth amendment was an attempt to

impose a narrow sumptuary judgment, generally not held by the people. To give force to this judgment it attempted to take away from the people something which they already had and to which a large majority thought they were entitled. The evil which followed might have been foreseen. It was logical and inevitable.

Mrs. LUCE for her part does not advocate taking anything away from anybody. She was talking about restoring to a very substantial part of our population those civil, economic, and equal rights which have been unjustly denied to them in disregard of our Constitution and in defiance of our avowed purpose in the Declaration of Independence.

Not even the most bitter defenders of discriminatory treatment against the Negro race dare assert that they are doing the morally right thing. They defended themselves entirely on the grounds of expediency or that they know what is good for the Negro better than the Negro knows for himself. If that isn't an utter rejection of the principle of our Government we don't know how to state it in the English language.

Mrs. LUCE asks that the true principle be stated in law in the firm belief that the moral judgment of the people will sustain it. And if the Great Emancipator himself had been able in spirit to hear her speech, how his heart would have been warmed by it. For here was proof, to a man whose single rule of life had been not to harm people because he hated them but to help them because he loved them, that his example and his words had not been in vain.

Another Bureaucratic Absurdity

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. MASON. Mr. Speaker, under leave to extend my remarks, I include Tale of a Doorknob, taken from the leaflet What's Happening in Washington, published by Prentice-Hall, Inc., February 11, 1946, issue:

TALE OF A DOORKNOB

Gate-Way Manufacturing Co. (Los Angeles) figures housing shortage means a lot of doorknobs; decides to make some. May 21, 1945, applies to OPA to set price; receives application forms from Los Angeles regional office; prepares in 3 weeks; mails to Washington before middle of June.

After waiting a month, company in mid-July asks: "How come?" OPA Washington replies: "Unable to determine jurisdiction." Three weeks later: "Send photos of doorknob." Photos are sent in early August. Nothing happens.

Early in September Gate-Way wires Washington: "Production stopped. Workers laid off." Washington wires back: "Expect decision next week."

September 20. Gate-Way wires Washington: "Can we do anything to expedite?"

September 27. Los Angeles regional office urges Gate-Way to keep after Washington.

October 1. Los Angeles regional office itself wires Washington.

October 3. Washington's answer to Los Angeles regional office: Gate-Way can sell its doorknobs at price just equal to cost of manufacture.

October 4. Gate-Way appeals Washington's decision.

October 12. Washington denies Gate-Way's appeal.

October 13. Gate-Way decides not to make doorknobs.

Release of Hoarded Clothing

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. HOOK. Mr. Speaker, on January 30, last, I inserted into the RECORD a wire from the CIO cost of living committee to President Truman urging action to make available 3,000,000 shirts and 400,000 men's suits to the American people.

On February 1, the Department of Justice issued a statement which is carried in the following article in the Washington Post.

Today Mr. Samuel Wolchok, president of CIO's Retail and Wholesale Workers Union wired President Truman further suggestions for freeing 4,000,000 pairs of nylons, 3,000,000 shirts and 1,000,000 men's suits to the American people and particularly to the returning veterans who want to return to civilian attire.

I feel strongly that some immediate action should be taken to force release of these items of clothing so that the returning veterans especially may be able to purchase clothing that they need and not be forced to go ragged on the streets or pay exorbitant prices for the things which they buy or that they need as civilian attire.

[From the Washington Post of February 2, 1946]

CLARK ORDERS SHIRT-HOARDING INVESTIGATION—JUSTICE DEPARTMENT TO SEE IF MAKERS ARE HOLDING BACK

Attorney General Tom Clark yesterday ordered an investigation of reported hoarding of clothing, especially shirts by manufacturers.

Both the Antitrust and Criminal Divisions of the Justice Department were ordered to investigate complaints that clothing was being withheld from the markets, the acting head of the Justice Department public relations section said.

"Complaints are being received by the Department all the time about the clothing situation," the official who refused to permit use of his name, said, adding: "Returning veterans generally cannot get clothes and what they do get is high priced."

The official said the inquiry would seek to determine (1) if clothing was being hoarded by manufacturers and, if so, for what purpose and (2) if the alleged hoarding violated Federal laws.

ASSISTANCE TO CONTINUE

The Government will continue to aid manufacturers obtain rayon and cotton fabrics for inexpensive garments at least through June 30, the Civilian Production Administration announced.

The agency said some time ago that a similar program setting aside woolen materials for low and moderately priced clothing would be carried on until then.

Continuation of the programs beyond next June hinges on whether Congress extends the Second War Powers Act, under which manufacturers receive priorities assistance.

[From the Christian Science Monitor, Boston, Mass., of February 9, 1946]

SHIRT-NYLON STOCK PILES HIT BY CPA

WASHINGTON, February 9.—The Civilian Production Administration yesterday cracked down on a number of shirt and nylon hosiery manufacturers who were reported to be hoarding supplies.

In telegrams to unnamed firms with "excessive inventories," CPA ordered the producers to halt immediately any further production of these items until their stocks are reduced "to more reasonabl· levels."

CPA also informed the companies that until their inventories are cut "to a practicable minimum," they must not accept delivery of yarn or fabric or place new orders for such materials.

The agency said its action resulted from investigations conducted by the CPA Compliance Division.

Firms to which telegrams were sent are charged, CPA said, with violating a priorities regulation which is designed to prevent accumulation of excessive inventories of scarce materials.

Morris S. Verner, Jr., Director of the Compliance Division, said OPA investigators discovered that "one Pennsylvania manufacturer of nylon hose was carrying an inventory of more than 1,760,000 pairs of nylons as of last January 31."

He said this figure included unfinished as well as finished hosiery, and "is substantially higher than this particular manufacturer's total production for January."

Mr. Verner said records of another Pennsylvania nylon manufacturer showed an inventory of 352,596 pairs as of January 31, while only 7,716 pairs had been shipped by the firm.

The company explained, CPA said, that it has approximately 4,000 customers and did not wish to ship any hose until it had sufficient inventory to provide minimum shipments for all customers.

[From United Retail, Wholesale, and Department Store Employes of America, CIO, New York City]

WOLCHOK, DEMANDS RELEASE OF HOARDED MERCHANDISE

NEW YORK.—In a wire to President Truman, Samuel Wolchok, president of CIO's retail and wholesale workers' union, today demanded immediate release of stocks of hoarded clothing, in order to assure veterans and consumers much needed clothing.

Wolchok endorsed the proposal of the CIO cost-of-living committee in its recent wire to President Truman that these hoarded clothing items be seized under the Second War Powers Act and made available to the American people through the Surplus Properties Administration."

He urged this action particularly in view of the need for clothing by many returned hero war veterans who cannot purchase suits, shirts, or other clothing under present market conditions.

Wolchok pointed to Department of Justice reports that 4,000,000 pairs of nylon hosiery, 3,000,000 men's shirts, and 1,000,000 men's suits are being held in storage while the manufacturers of these commodities pressure OPA for further price increases.

Wolchok, whose union represents thousands of workers in department and apparel stores, said: "In addition to denying the consumer this much needed clothing, the withholding of these stocks from the market denies our members the opportunity to sell them and thereby earn their livelihood. This situation is serious.

"Hundreds of workers are losing employment or receiving reduced take-home pay because of the greed and avarice of these apparel manufacturers.

"Strong Government action is needed to force these inventories into the channels of trade. Those who say production is needed to break inflation ignore the seriousness of the extensive hoarding by clothing manufacturers. Distribution as well as production is necessary to secure the filling of consumer demand."

He stated that withholding of materials, as ordered by the Civilian Production Agency, successor to the War Production Board, will not provide sufficient pressure to clear the inventories out of the warehouses. He pointed out that the warehouse space was also needed for other storage purposes and that no justification would be advanced for the withholding of these clothing items.

Lincoln Day Address of Hon. Clare Boothe Luce, of Connecticut

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. CLARE BOOTHE LUCE, of Connecticut, at Lincoln Day meeting in Maxwell House, Nashville, Tenn., February 12, 1946, broadcast over WLAC:

I am happy to be here and grateful for your cordial reception to me as a Republican woman in politics.

It is a winter vacation to come again to Nashville—the Athens, as it has been called, of the South. You are the home of three Presidents: Gen. Sam Houston of the Texas Republic, James K. Polk, and Andrew Jackson. How sorely America needs again a President of their calibers and convictions.

In the time of Abraham Lincoln, when a great principle was at stake, you were a border State battleground, torn between the armies of Hood and Thomas. You know better than most the terrible price a nation, or a community, must pay when some among them are desperately determined to resist the laws of common humanity, which demand justice and liberty for all.

Perhaps that is why the spirit of Tennessee in this new time of human crisis is becoming Republican.

We are come together here today to celebrate the birthday of our greatest living American, Abraham Lincoln. I said "living" because everything is mere matter, dead or dying, which cannot survive its physical self, in endless resurrection. The oratorical resurrection of Abraham Lincoln, on these stated birthday festivals, is a common and happy phenomenon of American political life. But no ordinary phenomenon is the way his spirit really walks through all the land, nay, intimately commands every mind and heart in the civilized world, in times of great trouble and conflict. In times such as these, when brother is locked in mortal combat with brother, seeking to slay him, to starve or torture him into submission, to poison him with soft words, or paralyze him with false promises, all in order to prepare his limbs for the fetters of slavery—in such days Abraham Lincoln alone seems to be a wholly live man, with a shining face and loud ringing words on his lips. And many, who walk among us today in positions of power and authority, mumbling their dreary political inanities, seem to be the dead men.

What did Abraham Lincoln mean? What did he stand for? What was the essence of his belief? When we know that, we know the secret of his triumphant resurrection.

Above all, I think, Abraham Lincoln believed in the brotherhood of man under the fatherhood of God. From this fundamental rock-like credo all his articles of political faith most naturally and nobly derived. A man who held such a belief never talked in terms of "Negro rights" versus "white rights" or "southern rights" versus "northern rights," or the rights of the property holder against those of the propertyless, or the rights of nation versus nation. His belief led with inexorable logic to the conclusion that there are no rights but human rights, and that all human rights derive from man's membership in the whole human family, each member of which is a creature of God, regardless of birth, color, race, nationality, or political condition. Other reasonable corollaries of such a belief were that right makes might; that the conqueror must ever treat the vanquished with malice toward none, and charity toward all; and that as no man would be a slave, so none should seek to be a master. Lincoln believed that in these practices of a profoundly religious definition of political fraternity, lay the genius, the strength, and the glory of American democracy. And Lincoln knew that for Americans to betray this conception of democracy at home, or in our dealings with other nations, would mean in the end, the betrayal of America itself—and of the whole world. Then, as now, the American which stood for this conception was the last best hope of man on earth.

Thus Abraham Lincoln knew that while peace is ever more to be sought and striven for than war, an evil peace is not to be preferred to a good war. So he fought a good war to establish the truth of the dignity and equality of every individual rather than accept a bad peace which would compromise that truth.

In 1918—and again in 1941—this Nation made the Lincolnian decision. This time the masters and tyrants who would enslave their brothers were Germans and Japanese, and their cohorts. And once again we Americans and our great allies vanquished these tyrants. Once again the tree of liberty was watered with the blood of heroic freemen.

No nation, Lincoln said, can long endure half slave and half free. Do we deny today that no world can endure half slave and half free? The drama has widened in scope. The players are numbered by the hundreds of millions instead of millions. But the proposition which was true in the days of flintlock and cannon is no less true in the age of rocket plane and atomic bomb. They merely emphasize the fact that our peril is greater if we do not accept it.

Let us face this fact, too. Abraham Lincoln did not come to his profound belief in the dignity of the individual man and the nature of his rights by consulting Gallup polls or Drew Pearson's column, or even the shrewdest statesmen of his own or other nations. He tells us himself that he came to it on his knees—he got it from God. It is one of the tragic paradoxes of divine justice that those who will not get their political direction on their knees from this Supreme Authority are driven in the end anyway to their knees to get it from a tyrant, with this difference: God lets us rise from our knees to walk like freemen. We stay on our knees for the tyrant.

It is in the light tonight of these cardinal beliefs of Abraham Lincoln, which all Americans share, that I wish to consider the conduct of America's foreign policy since the days of Teheran and Yalta.

Now there are very few Americans who, when the facts are presented to them, do not know the difference between right and wrong even in so-called foreign questions. For example, every American knew, regardless of what he thought his Nation ought to do about it, that Hitler's persecution of the Jews was wrong. He knew that the Fascist suppression of all minority rights, and expressed opposition to that suppression was wrong. He knew that Japan's attempt to dismember China was wrong, and that the rape of Nanking was wrong. And there is not an American today who does not know that a political system like the Soviet system, which keeps 18,000,000 people out of 180,000,000 in concentration and forced labor camps is wrong—morally wrong—however much apologists for that system may seek to justify it in terms of the well-being and comfort of those fortunate enough to stay outside of those camps. Now, it may well be that the Soviet system of secret police, and firing squads, and the obliteration of all minority expression with propaganda or bullets may one day produce a free and prosperous society. All things are possible to the hearts and minds of man, for they are always capable of transfiguration, so we may yet see Russia pluck the figs of liberty from the thistles of oppression. But the present is what it is. And today's crop of evil cannot be justified by the hope of tomorrow's good harvest.

I mention Russia's teeming concentration camps, and multitudinous slave labor gangs, whether native or imported from conquered countries, as they are today, with the acquiescence of our State Department, because this day is sacred to the memory of a man who condemned slavery everywhere. Perhaps some will feel that to mention this most wicked and yet characteristic aspect of our world neighbor, Russia, is to agitate the waters of international comity, and prejudice the goal of international understanding. My retort to any such, is the retort of Lincoln, "You will never get me to support measures which I believe to be wrong, although by so doing I may accomplish that which I believe to be right."

And yet—you will ask at once, should not the Soviet Government enjoy the same right of sovereignty over their internal affairs that we enjoy and must always demand for ourselves? They should decidedly. But this political fact of sovereignty over their internal affairs in no wise alters the moral fact that, wherever our Government and our State Department give aid and comfort to Russian policies or propaganda which seek to extend, and solidify the area of concentration camps, and to acquire from other nations human fodder for them, we are abetting the cause of tyranny and betraying the cause of liberty for all mankind. I cannot speak more plainly, for if I could I would do so. Nor do I exempt from censure our administration's acquiescence in the colonial policies of the Dutch and British and French in Indonesia, where hundreds of natives are being slaughtered for the crime of seeking the freedom promised them by the Atlantic Charter.

Yes, my Republican friends, this administration has abetted the cause of tyranny in many areas through the world, ever since the days of Teheran. I will not burden you with a detailed recital of those betrayals, great and small, of our democratic faith which was once rooted in Lincolnian principles. You know them as well as I do.

In 1914 the conscience of the whole civilized world was outraged when Kaiser Bill referred to his agreement with little Belgium

as a "scrap of paper." And what shall we say today of the Atlantic Charter? This document guaranteed to martyred Poland, no less than every nation in the world, the right to determine its own government by free domocratic processes. Is that an honored document, or isn't it also just a scrap of paper now? Ask Latvians, Estonians, Lithuanians, Hungarians, Austrians, and almost any central European. Ask the Yugoslavs who are alive to answer, or do not fear to answer. The total is staggering of European and Asiatic peoples who fought in this war on our side, valiantly in the open, or hunted like beasts in the undergrounds, because they believed the promises given them by a democratic American administration that if they did so they would win the chance to have an American-type economy, an American-type of representative system, an American kind of freedom. Without them we might not have won the war. What do they think of American honor now?

I ask you, in the name of Abraham Lincoln, why since Teheran has all this been so? Why, why, why, do millions of innocent men, women, and children—the starving, hunted, persecuted, Siberia-bound men, women, and children of our allies, no less than the vanquished ones to whom Lincoln addressed the phrase, "malice toward none and charity toward all" think today that is an American idea that was buried with Abraham Lincoln?

What is the explanation? We must seek it in our own hearts, no less than in the hearts of our leaders. For the slow and bitter betrayal of our noblest American principles in the conduct of our foreign affairs since the days of Yalta and Tehran is a matter for which we may quite suddenly and terribly be called to account in an atomic age.

Three explanations suggest themselves: The first is the kindest—and the most unlikely: The Democratic administration which has conducted our foreign policy for thirteen long years may no longer know the difference between right and wrong. After all, they may have grown hopelessly wedded, through long days in power, to the fashionable thesis that man is altogether an economic animal, and not a moral one. Such a belief goes hand in hand with the thesis that the end always justifies any means, and that the sole end of men and nations is material security. Such men will be forever asking, will this or that policy protect our physical shores, increase our trade, maintain our position as the world's leading power? Such men will never inquire how these policies will affect the liberties of men everywhere, or if they will increase liberty at home or abroad. Such men will not know—or care—that it was wrong to make the promises we did in the Atlantic Charter, and then to break them, because it is difficult or risky or dangerous, or costly to keep them. Such men did not know—or care—that it was wrong to accede to the dismemberment of Poland, when we promised we would not; to fail to carry out our guarantees of free elections in Europe; to fail to resist with every diplomatic means at our disposal what is happening in Indonesia. Above all they just may not know—or care—that it is wrong to allow the innocent nationals of many European countries to be shot, imprisoned, or sent into slavery in vast numbers. I know as you do, that there are men in this administration who are so blinded by that vengeance which properly belongs to the Lord, that they cannot see through the red curtain of their hate that it is wrong for this Nation to adopt economic policies in Germany which will result in the wholesale starvation of children and pregnant women; policies which, if they are not changed, will in the end, turn all of Europe into a pestilential poorhouse. That some members of this administration and the previous one may have lost their moral sense, so that they do not know right from wrong, charity from hate, freedom from slavery, truth from lies, a Christian conscience from a barbarian one, is, as I say, possible. But it is not likely. For all Americans, who are not totalitarians in disguise, have too long lived in the climate of freedom to be easily deceived on such matters. Their forefathers and sons, who died in many wars that it should be preserved, have left them a most intrusive legacy of liberty.

Secondly, the men who conduct our foreign policy may know the difference between right and wrong, but may wish to avoid contemplating it in terms of our Allies and our neighbors, because to do so is too painful to the American mind, which is naturally optimistic, naturally inclined to see the best in everything, naturally indulgent to the ways of others. We are, perhaps, no longer a nation of Pollyannas, but like little Orphan Annies, it takes an awful lot to disillusion us.

I sometimes think that our present policy might be called the "three monkeys policy": "See no evil, hear no evil, say no evil." But, alas, the oceans have been breached at last and troubled Europe and Asia, once so remote, are on our very threshold. This is the age of rocket bomb, atomic bomb, radio and radar which reaches to the moon. This is one world, and Europe and Asia are in it, and there is evil there, such as we have never known here, or had to deal with before. If evil is to be vanquished, it must be understood, it must be seen and heard; and hard and true things must be said of it, that it may be shamed, which, by God's mercy it often surprisingly is. And we must be encouraged to face it, in order that we may resist it, and diminish it, before it can thrive and grow beyond our strength to resist or diminish.

If only our own leaders knew today how a little plain courage, some honest speaking of the truth, a small but clear challenge to man's love everywhere of freedom, could stop much of this evil dead in its tracks. There is nothing more infectious than courage. And if our leaders did not know this yesterday, they should know it today, since Prime Minister Ernie Bevin, that proletarian, horny handed and exceedingly rude son of toil, spoke up at London.

So there are two possibilities which might explain the pusillanimous conduct of our foreign affairs by New Deal statesmen, (a) that they have not known, since Teheran, the difference between right or wrong, and (b) that like optimistic monkeys, they have ignored the moral obligation placed on men, to look right and wrong squarely in the face and choose between them—at least in their utterances. Either ignorance or fatuousness or both may have formed a foreign policy, which is carrying us and the world to the brink of another catastrophe.

But there is a third and, I believe, sounder reason, why the men of this administration have all but failed the cause of international justice to which the Atlantic Charter, no less than the blood of our sons have pledged us.

The answer, I believe, is fear, outright, downright, funk. Fear for their political fortunes and their offices.

We hear them tell us that the world is wearied of war, wearied to a point of despair, so that every appeasement is justified as a charitable act which spares the world even the shadow of a shudder about further bloodshed. Is it not then remarkable that in Europe and Asia today many men who have already endured long terrible years of fighting and bombardment and pestilence and famine, are still not too wearied to risk torture and exile and slavery, and still seek arms to defend their political convictions? Does this not suggest that the question in Europe is still not settled? Certainly Americans are wearied of the war and want peace; want their men home; want to disarm; want to get on with their American lives and fortunes. And this weariness is certainly something of which even the most fearless statesman today must take cognizance. But this is not altogether the reason why our New Deal statesmen gloss over every European and Asiatic incident which might agitate our war-torn nerves. The reason is that they will not, dare not, tell the American people the plain truths and the solid facts of the European and Asiatic situations, that have developed as a result of Teheran, Yalta, London, and Potsdam. They will not, or dare not, tell us the commitments that were overtly or secretly made in moments of war's extremities by a mortally ill President, and perhaps mortally scared State Department advisers. Some of these commitments were bad, and ought to be reviewed by the whole American people before they are fulfilled; some of them are good, but cannot be fulfilled without a realistic and idealistic explanation of why they must be fulfilled, even at the further sacrifice of our national wealth and individual comforts. Why is it so hard for the men in power today to tell these truths? Because the man in the White House today, and the men who run our State Department, have inherited from a former administration and furthered, alas, a policy full of commitments so complex, so oblique, so secret, so confused, so personal, and whimsical, that it would take a political genius to unravel it alone. But perhaps if it were laid before all the people, perhaps all of us together could unravel it.

Perhaps all of us together, if we were inspired anew with the principles of Lincoln, would see the gigantic rehabilitation program through, to which we have been committed. Cowardly men now in office fear that we shall rebel as a nation if asked to assume it. And, oh how they fear our wrath when we discover all that has been done, or left undone, to make a peace in Europe. So, unable to confess the failure of a previous administration, with whose prestige their own is politically linked for better or worse, Democratic leaders today, in House and Senate and in State Department, have been forced to adopt appeasement as their policy—appeasement of nations that they fear to speak up to, or back to, lest secret agreements, or agreements that now seem to betray the common man of Europe and Asia, be angrily revealed, and the revelation will blast them all out of office; appeasement of the electorate, that is naturally demanding the reward that a previous administration promised so lavishly out of this war—an immediate, long, happy democratic peace in the world. Dare these men who served that administration and also serve this one, admit that this peace has already been frittered away bit by bit? They do not. The old New Deal curse now falls upon far less inspired and less adroit successors. They are doomed still to please everybody every Monday morning—and to promise endlessly what no man alive can deliver: A painlessly achieved Utopia come next Michaelmas. However, they are wise enough to know that even though they told the truth, it might save the people, but it would not save them. For when Americans see that New Deal statesmen scuttled the ship, they are certainly not going to vote for them to salvage the cargo.

What is the result of a foreign policy which sometimes cannot distinguish between right and wrong, which sometimes does not wish to see, hear, or speak of evil, and which always fears to tell the people that evil has been done by ourselves, and by others? The men in power hope that the result—the immediate result will be reelection, power, prestige, patronage. Yes, plums for the few today, but what for the many tomorrow? You know the answer to that. It was the same thousands of years ago, it is the same today: a time of parlous peace, and dubious prosperity. Men will buy, sell, prosper a little, marry, build houses, eat, drink, and be merry—and then the flood, or the fire, the

rain of atomic bombs upon our cities, wiping out millions. Then, indeed, we may all fall on our knees—but too late ever to rise as free Americans.

Will this come to pass? Quite honestly I believe that it will not come to pass. Because I believe that there is no situation in Europe or Asia today which is not amenable to wise statesmanship. And I believe that in the crucial years ahead we will choose wise statesmen, and an administration whose policies will conform to the principles of Abraham Lincoln. Then the ways of peace will begin to open for all men.

The way to begin is to elect a Republican Congress in 1946, and a Republican administration in 1948. And only in this way shall we learn the truth about the conduct of our foreign policy—the truth that when revealed will set us free to work in the cause of freedom everywhere. The choice is the people's. It is our task to lay before them the nature of the choice. Let us see to it.

And then indeed this Nation, under God, will have a new birth of freedom. And government of the people, by the people, for the people, will not perish from the earth.

Gen. Omar N. Bradley

EXTENSION OF REMARKS
OF
HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial from the Shreveport Times of February 10, 1946:

IS BRADLEY TOO BIG FOR HIS BOOTS?

The curt refusal of Gen. Omar N. Bradley, Administrator of the Veterans' Bureau, to attend a special session of the American Legion executive committee for a man-to-man talk on GI problems is direct affront to every member of that organization. His trite statement that he is too busy to attend the Legion committee session called by National Commander John Stelle, but that the committee may call at his office if it wishes is amazing indication of narrow and picayune viewpoint. It is in no way compatible with efficient and sympathetic handling of vital problems of millions of men who wore their Nation's uniform in two world wars.

General Bradley's job is not to dictate to veterans and their representatives, but to seek to serve them in every possible way. He is not now holding down a battlefield combat post where everyone must go forward or backward at the snap of his fingers. He is in a post of civilian administration of billions of dollars worth of postwar benefits provided by Federal law for millions of men who have gone back to civilian life, or shortly will do so.

The invitation of Commander Stelle to General Bradley was courteous and timely. It followed the exchange of statements in which Mr. Stelle, in his official Legion capacity, revealed that GI benefit cases and queries of several hundred thousand veterans are stalemated in the Veterans' Bureau—7,000 of them being cases requiring immediate hospitalization and more than 200,000 of them being applications for medical attention. General Bradley never has answered these charges adequately. He merely has cast personal aspersion on Mr. Stelle—and now deliberately has slighted the guiding body of the whole Legion. Mr. Stelle went all the way in calling a special session of the executive committee and in offering to turn its whole session over to General Bradley in the hope that some means could be found to end the confusion, delay, and incompetency which concededly exists in various activities of the Veterans' Bureau. Instead of seizing this opportunity to help the GI's, General Bradley turned his back.

General Bradley should realize that no man is too big to go to the American Legion on its invitation and in behalf of the problems of veterans. Presidents of the United States never have hesitated to do so and General Bradley, even with his record of combat leadership, still is only one veteran among millions who fought in two wars, and who made him great, and he still is only one general among scores of magnificent generals. He should realize also that every law on the Federal statute books today in behalf of veterans was put there mainly with the backing and sponsorship of the American Legion and that the GI bill of rights, which is the "constitution" under which the Veterans' Bureau operates today, not only was conceived and put through Congress by the Legion, but was conceived and spearheaded personally by Mr. Stelle.

All of the GI benefits which General Bradley now administers, and all of the power and prestige of the office from which he administers them, stem directly or indirectly from the American Legion as an organization or from its members as individuals, with other minor organizations giving all the help they could. If General Bradley is not big enough to understand that and to profit by the knowledge, then in our opinion he is not big enough for the biggest veterans job in the world and Commander Stelle may have been entirely right in suggesting that it would have been better to have appointed a civilian with greater administrative perspective, broader viewpoint, and more sympathetic realization of the job at hand.

Cut Bank Jaycees Send Invitation to UNO

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. D'EWART. Mr. Speaker, under permission to extend my remarks, I include an article from the Cut Bank Pioneer Press, Cut Bank, Mont., February 8, containing the text of a letter received from Mr. Wilbur P. Werner, president of the Cut Bank Junior Chamber of Commerce. In addition to the paragraphs contained in this article, Mr. Werner added the following postscript:

The UNO delegates to San Francisco meeting are familiar with Glacier National Park, for their special train stopped 1 day on their return east.

JAYCEES SEND INVITATION TO UNO

(EDITOR'S NOTE.—The following, inspired by the objections of some of the landed aristocracy in New England to having the center of the United Nations Organization located in their back yards, was dispatched early this week to Associated Press and United Press for publication in eastern newspapers.)

The Cut Bank (Mont.) Junior Chamber of Commerce views with alarm and amazement the inhospitable attitude of certain areas along the stern and rock-bound coast of New England, in protesting the location of headquarters for UNO. The smug silk-stocking residents of that part of America by this act are casting discredit upon the entire Nation.

The friendly and hospitable mountain west wishes to save our country further embarrassment by suggesting consideration of Glacier National Park as the permanent home for this peace-promoting organization.

Here they will find a haven of detachment amid the Nation's most scenic surroundings, a perfect spot for rest, recreation, contemplation and inspiration, far removed from the foggy and soggy locales of the eastern seaboard or the congested industrial areas of the western coastal country, with rail, plane and highway conveniences to transport them at leisure periods to other nearby scenic places, particularly the majestic Canadian Rockies.

Nearby is the reservation of the West's most romantic and dominant Indian tribe, the Blackfeet, once robust and gallant warriors, who now dedicate their days to the arts of peace. Their contribution to two World Wars was outstanding and their returning sons would give warm welcome and wise counsel if such were solicited to the leaders of this world organization.

Montana's congressional delegation is being urged by the Cut Bank Jaycees to present the Glacier Park invitation to the proper UNO authorities.

WILBUR P. WERNER,
President, Cut Bank (Mont.) Junior Chamber of Commerce.

Obstacle to Peace

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks, I include the following article by George Fielding Eliot which appeared in the New York Herald Tribune of February 8, 1946. It is well worth reading:

NINETEENTH CENTURY NATIONALISM CALLED OBSTACLE TO TWENTIETH CENTURY PEACE—RUSSIA IS SEEN LAGGING BEHIND UNITED STATES AND BRITAIN BY CLINGING TO OLD SUSPICIONS, OLD PRESSURE POLITICS, AND OUTDATED IDEA OF SECURITY

(By George Fielding Eliot)

One of the chief obstacles to fruitful progress in world organization is the tendency to think of twentieth century problems in nineteenth-century terms. Future relations between the Western World and the Russians will depend almost entirely on whether we of the West can get the Russians to come out of the nineteenth century and join us in the twentieth.

The nineteenth century was the century of nationalism. The struggle between nations for power, for wealth, for colonial possessions was its unvarying motif. It saw the partition of Africa and much of Asia among the European powers. As it closed, men were talking—some with anxiety, some with eager greed—of the partition of China. It saw no great wars after Waterloo, but it sowed the red seeds of the two most terrible wars in all history.

The twentieth century is the century of peoples. It is the century in which man must face the fact that the machines he has made with which to carry on national struggles will destroy him as an individual unless they are controlled in the common interest of all men. It is the century in which imperialism and nationalism become obsolete because they are no longer compatible with human survival. It is the century in which the rights and the necessities of man as an individual must take precedence over the ambitions of nations, else we shall have

neither men or nations remaining on the face of this blackened planet.

In general, the American people have faced up to this elemental change. Not wholly. Not without reservations and nostalgia for the good old days. But pretty definitely, for all that. In general, the British people have faced up to it. It may not have penetrated the centers of intrenched conservatism in either country, but the average man is beginning to understand it, and that is having its effect on Government policy.

So we see Americans in China, for all the mistakes, hesitations, and wrong starts, doing on the whole a good job of helping the Chinese people to stand on their own feet and assume responsibility for their own future—and their share in responsibility for the future of the world. We are no longer thinking in terms of the Chinese market. We are thinking in terms of getting 400,000,000 human beings into useful participation in the world's affairs.

We see the British doing much the same thing in India. The "lifeline of the British Empire" is a nineteenth-century myth. Three million Lancashire cotton spinners no longer exist on the basis of making shirts and loincloths for 400,000,000 Indians. The responsible twentieth-century Englishman is now thinking of India in terms not of "how much can we make out of this country?" but rather "how can we get all these people into a position where they can govern themselves and become responsible citizens of a world community of which we are citizens, too?"

It's becoming pretty generally understood that enslaved people or miserable people anywhere are a danger to all other peoples; that such conditions tend to form a vacuum into which forces which are perilous to all of us may move and where they may take root.

But the Russians do not yet seem to be applying these twentieth-century principles to the conduct of their relations with other States. The Soviet Government has accomplished a literal miracle in its ecenomic progress. The condition of the Soviet citizen as compared with that of the subject of the czars is so vastly improved as to beggar comparison. But the Soviet rulers are still not people's rulers. The few still control the affairs of the millions, rather than being controlled by them. The statesmen of the Kremlin are far less subject to popular anxieties than are the politicians of Washington and London. Their fears and supicions born of nineteenth-century conditions and nineteenth-century survivals are still with them. They still seek nineteenth-century solutions of the problems of Russian security. They still think in terms of buffer states, of acquiring by pressure and intrigue the lands and resources they think they need. They are unwilling to trust others, because they do not yet understand how clearly the American and British peoples see the compelling necessity of a people's peace. They do not understand that we who are living in the twentieth century may be far more frankly dealt with, far more surely trusted, than we could have been 50 years ago, simply because the majority of our citizens are coming to realize that unless we lay the foundations of confidence we shall never build our world-wide edifice of peace and justice--and that we will all perish in the ruins of that failure.

It is not a question of superior morality. It is a question of understanding the necessities of self-preservation.

If, as has often been remarked in these articles, the central political problem of our times is to establish confident cooperation between the Russians and the two great western democracies, surely the heart of that problem is to find means to bring the Russians into the twentieth century—politically as well as economically—to induce them to see that there is no real security and no real hope in the method and devices of the imperialist age.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian, of February 10, 1946:

THE FORTY-NINTH STATE

Congress should hesitate no longer in making the Territory of Hawaii the forty-ninth State of the Union. The report of the subcommittee of the House Territories Committee recommending statehood ought to banish any lingering doubts as to the social, economic, and political readiness of Hawaii's heterogeneous 502,000 residents to take their place in the society of States.

There was a time when politicians of isolationist leanings opposed the admission of Hawaii because of fear that if the Japs attacked the state the United States would have to go to war. The refutation of this shameful theory has been complete. The Japs attacked the Territory, and none hesitated to defend it.

Since the end of the war, in which Hawaiians of all ancestries played a magnificent part, the principal objection to statehood has been on racial grounds. The apprehension has been expressed openly that Japanese-Americans, voting as a bloc, might dominate elections and send Senators and Congressmen of that race to Washington.

We make no distinction between Americans of Japanese or other ancestry. The Hawaiian Nisei have a glorious combat record and there is no reason to believe they would do less well in politics. Of the 1945 population of the Territory, 34.4 percent were Caucasians, 32.5 percent Japanese, 2.2 percent pure Hawaiians, 12.2 percent part Hawaiians, 1.8 percent Puerto Ricans, 6 percent Chinese, 1.4 percent Koreans, 9.3 percent Filipinos, 0.2 percent of other racial origins. While the Caucasian population has increased steadily, the number of persons of Japanese ancestry has declined from a high of 42.7 percent of population in 1920, because of immigration restrictions.

The Japanese have not been active in Hawaiian politics in proportion to their numbers, while the fewer Chinese have been very active. The subcommittee formed the opinion that bloc voting by Japanese-Americans is not likely to assume serious proportions because they are divided among themselves on political, social, and economic questions as markedly as other racial groups. The non-Caucasian and nonnative residents of Hawaii do not look toward the old countries for guidance. Their interest is in Hawaii and the United States.

In any event the population of Hawaii was mixed when the United States annexed the islands. It was not a bar to annexation, and is not an obstacle to Statehood.

The truth is that the people of the islands have learned the lessons of democracy better than many on the mainland. The varied races live and work together harmoniously. Racial intolerance and bigotry are almost nonexistent. Intermarriages have increased. Economic standards are high. Education is far advanced. Legislative movements have been initiated to limit the financial, industrial, and agricultural dominance of the "big five" families, and small business ventures have multiplied.

Hawaii has been a Territory for 46 years. In the plebiscite of 1939 its citizens voted in a majority of 67 percent for statehood. Mainland polls show about the same sentiment for admission of Hawaii. Distance is no longer a barrier—flying time to the mainland is from 12 to 18 hours. The Territory's population is greater than that of any other, except Oklahoma, at the time of admission to the Union.

Hawaiians of all ancestries have adequately demonstrated their patriotism and loyalty and their qualifications for equality of status in the United States of America.

Feeder Air Lines

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the January 28, 1946, issue of the Minneapolis Star-Journal, entitled "Feeder Air Lines":

FEEDER AIR LINES

America already is far into the air age, but the maze of aviation routes visioned years ago hasn't developed. There isn't a single regularly scheduled feeder line in Minnesota and only one application has been heard by the Civil Aeronautics Board—that of North Central Airways of Alexandria.

About 50 towns and cities in the State have fixed base operations with planes available for charter. Some of these charter flights are virtually scheduled runs, as the Bemidji-Twin Cities route and the summer hop between Robbinsdale and Nisswa.

Several others are in prospect for the vacation season between the Twin Cities and northern resort centers. Also, a group of returned veterans, organized as Northern Airways, has filed a brief with CAB, asking a Duluth-Chicago permit.

But there is little indication of the board's attitude on feeder lines. Insofar as it has been expressed by individual members, it is that such lines should develop from charter service.

Perhaps "feeder lines" isn't the best description for the smaller operations. They might better be known as short-haul routes, in contrast to the long haul, trunk lines. Part of their service, of course, could coordinate with that of the main airlines. They would hardly be competitors in any way.

Yet the big lines almost automatically oppose any applications which originate in their territories, just as they vociferously oppose any route extensions of any other big line. Such opposition is an accepted part of commercial aviation tactics and the many briefs filed with CAB on a simple application may largely account for the long-delayed decisions of that agency.

It was refershing, at the CAB hearings at Des Moines last March, to find Northwest Airlines friendly to the application of North Central Airways for routes to serve smaller cities in Minnesota and the Dakotas.

Naturally CAB's main attention is given to national and international air routes. There is little time to give to feeder lines within a State or region. Action is held up for months and the whole application procedure is too expensive for small operators to undertake.

Why wouldn't it be desirable, then, for the national board to establish working agreements with State authorities? Minnesota has an aviation commission which has done splendid work in encouraging sensible air projects. The commissioner knows the situation in this State thoroughly. Yet when

he takes part in a case, it is on the same basis as an individual or company or city which may be interested in the matter before CAB.

Unless some such cooperation can be worked out, CAB is going to get so involved in hundreds of applications that decisions will be delayed even longer than in the past.

Hundreds of military pilots now home are eager to get going on short hauls. New planes will not be available for some time, but surplus Government ships, like the twin-motored Cessnas, can be acquired. Airports are ready.

The main bottleneck seems to be CAB.

International Problems Multiply

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 13, 1946

Mr. PITTENGER. Mr. Speaker, today's headlines offer a lot of food for thought. Not only Members of Congress but the average American citizen can take heed of some developments now going on. Sooner or later, in some form or another, a multitude of questions resulting from World War II will come before Congress for solution.

EIGHTEEN YANKS HURT IN CALCUTTA RIOTS

The above is a headline in a newspaper item from Calcutta. Just read these two paragraphs which directly concern every family and every American home where there are sons eligible for military service. One paragraph reads:

Police fired into a threatening mob of Indian Nationalists in Calcutta's Wellington Square today, adding an undisclosed number of casualties to the toll of 17 to 20 killed and 200 wounded in the rioting of the past 2 days. Eighteen Americans were among the injured.

This newspaper item then goes on to say that there were demonstrations, which in our language means riots, and that British troops had orders to shoot down the rioters, and so forth. Then here is another paragraph:

United States headquarters announced that 5 officers and 13 GI's were injured in Calcutta Tuesday when they were stoned by the mobs.

I am just wondering if we have the answer to a lot of questions. Why are these American soldiers in Calcutta, India? Who put them there? When are they coming home? Why does the mob throw stones at American soldiers? Is this part of that universal brotherhood which is developing out of international thinking? Are demonstrations such as these responsible for the Administration's announcement that the Selective Service Act will be continued when it expires March 20, if Congress will pass the necessary legislation? These are only a few pertinent questions.

Another headline says that 900,000 men have enlisted for military service in the last 5 months. Another question: Why continue the draft law? All of these questions add up to the one big question which a lot of us would like to have answered. What is our foreign policy and why? In this connection let me read another suggestive headline in today's paper:

JILTED GI BRIDES LEFT HOLDING THE BABY AROUSE BRITISH IRE

Under the above headline I quote a portion of the newspaper article which reads:

LONDON, February 13.—The town guardians of Dartford, Kent, sent a resolution to the British Health Ministry today urging Government action to protect GI brides against being left "holding the American baby." Thousands of United States officers and men were stationed at Dartford during the war and many of them married local girls. The guardians were perturbed at the number of brides being divorced after their husbands returned to the United States.

The article goes on to say that there was indignation shown by our English cousins against the American soldiers who had been extended hospitality and then apparently changed their minds after getting back to the United States. I am not concerned with the merits of the situation. But I do point out what is going on to show that after wasting our treasure and blood on foreign soil, the outcome seems to be an additional full measure of hatred for America. Is this a part of our vaunted good neighbor and universal brotherhood program? Where is it leading us? Then again I read this headline in today's paper:

MRS. F. D. BESTS RED IN UNO CLASH

LONDON, February 13.—Defeated twice on major issues yesterday, one in which Mrs. Eleanor Roosevelt defeated Soviet Delegate Andrei Vishinsky in a debate over a refugee issue, Russia faced another UNO show-down today over demand for a Security Council commission to investigate the Indonesian crisis.

The newspaper item then goes on to say that Mrs. Roosevelt asked one of the Russians this question:

Are we in the United Nations so weak that we are going to forbid human beings from saying what they believe to be true?

Of course this question was answered in the affirmative by the Russian delegate.

No questions are necessary in order to demonstrate that different countries differ widely from each other in the name of friendship, love, and truth. In this connection, let it be noted that the military occupation of foreign countries, and especially Germany, is producing nothing by ill will and hatred. How did we start this idea that the United States would remake and reshuffle the peoples of the earth? How do we know that it will work? Were the American people fully advised of its implications and responsibilities? Do we want to make German policemen out of our American soldiers? How long will they continue to be policemen? Sometime the American people will demand a day of reckoning. The administration would do well to take Congress and the American people into its confidence. It should tell us now if we have a foreign policy, and if so, we should be fully advised about that foreign policy.

Proposed Policy-Making Facilities for the Department of State

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an article written by Milton Patterson Thompson which appeared in the January 1946 issue of the American Foreign Service Journal. Mr. Thompson was formerly a foreign-service officer and is now a personnel assistant with the Federal Home Loan Bank Administration, Washington, D. C.

The article is as follows:

The Department of State has undergone a tremendous expansion in its duties and activities since the start of World War II. Many of its wartime accretions were superimposed upon an organization which was reasonably adequate for the restricted demands of former days. But the advent of the postwar era, with its ever greater requirements, raises the question as to the sufficiency of the existing departmental machinery.

A new era in foreign relations has arrived and there is the accompanying need for facilities to cope with new problems and conditions. The time was when Thomas Jefferson personally formulated and executed our foreign policy with the aid of a handful of clerks. It therefore is no disparagement of the pre-World War II Department of State to say that changed circumstances might call for structural and functional modifications in it. It is the considered judgment of some persons that the crux of the Department's ability to meet satisfactorily the new and heavier exactions, imposed by both the American people and the international community, is the perfection of a mechanism to provide over-all policy-making, advance planning, analysis, research, and liaison. Some persons hold that previous reorganizations have failed to come to grips with the heart of the problem.

This blueprint envisions a staff to define true objectives and to insure uniform, deliberative, and expert direction of the line, as well as to make a logical division, with attendant advantages, between planning and execution. It would be a staff of four echelons headed by a career assistant secretary, or better yet under secretary, whose status should be permanent and not subject to frequent change in order to insure continuity of policy and the effectuation of a program of long-range planning. The head of the staff would report directly to the Secretary of State. The staff would be divided into these major units, called offices, each having subunits: Intelligence (S-1), formulation of policy (S-2), execution of policy (S-3), management planning (S-4).

The symbols following the titles may be used for convenient reference, the letter "S" standing for staff.

Such centralized, policy-making functions would have to be based on accurate knowledge, hence it would require the establishment of an intelligence unit. The formulation of policy should be a deliberate, thoughtful process, and it is recommended that a second office be established for this purpose. Policies merely adopted but not applied are ineffective and valueless. There consequently would be needed a unit to initiate action and supervise the adoption and implementation of the decisions reached. A fourth office would be desirable to facilitate the work of the first

three and the Department; it would be concerned with management planning. This arrangement would appear to rest upon a logical sequence of activities.

This plan is calculated to enhance the effectiveness of the Department and the foreign service and to enable them the better to discharge their increasingly difficult responsibilities. It should permit them to cope more easily with emergencies and to anticipate future developments. New operational activities, on a large scale and global basis, accentuate the need for more effective policy-making. The Department is the senior in the Government and closest to the President, which, with its exclusive functions in the conduct of foreign relations, give it a rightful place as foremost among all other departments. Proper liaison, planning, and leadership can influence the other agencies tacitly to recognize that role. The State Department is the logical agency for the analysts of international political and economic matters. They should be centralized there and the Department should furnish appropriate reports, warnings, and indications of policy to other departments and agencies, some of which now maintain their own specialists and operate independently. The Department already has taken steps to create a more workable relationship between it and the American people. One goal of the suggested mechanism is the strengthening of that tie, which would minimize public criticism.

It is hoped that only profit would result from this plan and that the position of no one would suffer or be prejudiced. It would be of inestimable value to the Secretary of State. New Secretaries, who rarely can be as experienced in the foreign field as their office demands, would find in it a continuing entity in policy making and experience. No person or unit should be displaced, although transfers would be inherent in the regrouping. The now overburdened geographic divisions would be relieved of having to determine policy under the present extremely difficult conditions. They would be given more freedom and time in which to conduct the vital relations and negotiations with other countries. The foreign service should benefit in having its field operations facilitated. Foreign-service officers, moreover, would serve in the proposed new organization, and some of them might prefer careers in it. There would be the greatest demand for ability and the rewards should be satisfying.

The present staffless State Department is reminiscent of the War Department prior to the secretaryship of the farseeing Elihu Root, who, at the turn of the century, inaugurated its first general staff.

The above concept of a staff for the Department of State is opposed to the present system in which the same officials both plan and execute policies. They are so burdened by administrative, routine duties and an unending flow of papers over their desks that they have little or no time for the detached study of policy and objectives. Inevitably the results sometimes are unsatisfactory. Some of the decisions so reached are major ones, of far-reaching consequence, which go to form that body of precedents which, perforce, must exercise tremendous influence in such an agency as the Department of State. There nevertheless at times have to be improvisations and temporizations, made on a day-to-day and ad hoc basis, under relentless pressure, and without due regard for precedent and the repercussions. A concomitant weakness is that there is insufficient coordination and correlation between units. An over-all policy-making staff would be a safeguard against the course of action pursued in one line division being at variance with that in another division. Under reasonably optimum conditions, it would also place planning on a nonpersonalized basis, thereby removing, or reducing, the opportunity for the adoption of the personalized ideas, programs, and even whims of individuals.

The necessity for more analysis, which essentially is a staff activity, is shown by its limited use now. I believe that only one office (American Republics) wisely has any formalized provision for political analysis, except for the particularized Office of Special Political Affairs. The latter is the nearest existing approximation to a staff, but neither it nor the Joint Secretariat wholly fill the void nor completely meet the challenge. There are also the Divisions of Foreign Service Planning and of Management Planning, which have very restricted scopes of activities. However, the Offices of International Trade Policy and Financial and Development Policy are believed to operate along the lines of the proposed staff in the economic field.

With the foregoing not fully adequate exceptions, it is understood that the Department has no organized instrumentality to weigh new ideas, suggestions, and proposals. It has been charged that the Department is lacking in creative imagination and initiative. Those rare qualities can be expected to flourish in direct proportion to the facilities provided to produce and to nurture them.

The staff would offer the necessary instrumentality for the needed integration of all phases of our national policy in the international field, and especially as among the State, War, and Navy Departments for the national defense. This function would be simplified if the two fighting services were to be merged. It is patent that there must be closer correlation between our foreign policy and our national defense policy. It is convincingly stated in these words, addressed to the writer, by a brilliant professor at West Point and authority on geopolitics:

"From now on, the sphere of statesmanship and generalship are inseparably linked. We return them to their separate pigeonholes after the war only at a very real peril."

A staff in the Department of State is indicated to correlate and integrate the multifarious activities abroad of numerous Federal agencies, now only too often working uneconomically, and in competition with and duplicating each other.

The broadened scope of the interests of the Department call for such a facility as a staff. The Department undoubtedly must play a more assertive, active, and diversified part henceforth than it has in the past. Examples of this increase in the range of its responsibilities are found in the anticipated early cessation of such agencies as the FEA, OWI, and OSS, some of whose activities can be expected to devolve upon the Department of State.

The staff would be in addition to the Department's mechanical organization as presently constituted, for this study proceeds on the assumption that that organization will continue to perform line functions. The geographic divisions would remain as the nucleus of the line. Some functional divisions would be integrated into the recommended staff. Doubtless all of the terminated units in the existing organization would be re-created in the staff, so it would amount to a transfer, or, better said, regrouping, for more efficacious operation. This charter, it may be added, does not attempt to go so far as to specify the detailed organization of the components of each of the constituent units of the staff. Such amplification would follow the adoption of this over-all plan.

This staff would not interfere with most of the existing activities of the nuclear geographic divisions. It would not emasculate them nor usurp their true functions; much less would it supersede them.

The closest and most cooperative relations between the staff and the line would be necessary for success. Teamwork could be attained only by mutual efforts. Frequent meetings and discussions between the line and staff are contemplated. The staff must command the respect of the line because of demonstrated merit and usefulness and not only because it has the support of the Secretary of State, which it, of course, must enjoy. The members of the staff could not function in the rarefied atmosphere of theory and the academic world. They, on the contrary, should be practical and realistic persons—a reasonable number of whom would have first-hand knowledge of other countries.

Members of the staff should be sent abroad, at Government expense, to acquire information in person. This is essential, as there are imponderables about countries which cannot be learned vicariously or from books. A parsimonious financial policy with respect to expenditures for the staff and the level of salaries paid to its members obviously would impair its value. It is imperative that foreign-service officers be detailed to the staff. Members of the staff would call upon qualified persons outside the Government as consultants and advisers to supplement themselves.

The proper operation of a staff is believed to offer more promise in the adequate meeting of our weighty postwar obligations, with their truly awesome implications, which are already offering tests, than any other solution. It unfortunately is questionable whether the majority of the American people are prepared for this country to assume the world leadership expected of it by the remainder of the world. Hence there is the greater need for the foresight which it is proposed a staff would help to supply. "Where there is no vision the people perish." Let American ingenuity devote itself to international affairs. A staff would correspond to a research laboratory, but influence the entire body politic. It would be a safeguard against that state of bankrupt diplomatic relations called war, which von Clausewitz has rightly defined as the continuation of policy by other means. We, as a people, must recognize that there are inescapable requisites of a dawning world society, calling for the breaking with many time-honored traditions which now are obsolete and whose discontinuance would be no real loss to our fundamental, cherished ideals.

THE OFFICE OF INTELLIGENCE (S–1)

The suggested activities of this office would be as follows:

"Collects, catalogs, analyzes, and speedily distributes appropriate information received from the foreign service and other sources, including the submission of proposals for the public dissemination by the line, of information regarding foreign policy and relations consistent with security and obligations to other countries. Cooperates closely with G–2, ONI, and the FBI. Plans security measures in the field of intelligence to protect the United States, with emphasis on the foreign aspect. Maintains liaison and (assisted by S–2 and S–3) exchanges with the War and Navy Departments full information for the defense and welfare of the United States at all times. Cryptography."

It would be the counterpart of, and exchange material with, G–2 of the Army General Staff and the Office of Naval Intelligence. It should be concerned with improved and expanded sources of information, such as American travelers abroad and Americans resident in other countries. While it would be concerned primarily with the foreign field, it would be in possession of pertinent information touching the domestic scene, which latter would be received from the FBI, among other sources. Subversive ideologies and activities in the United States, particularly those having foreign ramifications, are embraced in this category. This twofold interest would be necessary to enable it adequately to furnish complete, timely intelligence to the appropriate departmental units, especially S–2 (Formulation of Policy).

This office should undertake without delay a comprehensive survey of the organization and operation of the espionage and counter-espionage systems of the leading foreign powers, especially the excellent ones of Great Britain. Our past efforts in this highly technical field have been too characterized by dilettantism. The writer makes that assertion on the basis of intimate knowledge of both peace and wartime activities abroad of the military and naval intelligences services and the FBI, and also as a foreign-service officer, before and during World War II, who had practical foreign experience in this work. The United States has placed itself at an immeasurable disadvantage in its failure to operate in this field under conditions of at least equal advantages with other countries in gaining intelligence and, on the other hand, of coping defensively with the international practice of other powers in the premises. It is a recognized and universal medium of obtaining information and our authorities should be in possession of all possible information to enable them to plan intelligently. Not only would the United States be acting for itself, but for international peace. In appropriate cases, information of contemplated breaches of the international peace would be made available to the United Nations Organization. The atomic bomb and jet propulsion place a premium upon time and the element of surprise in initiating war. Once the formula is known, that obliterative bomb doubtless will be within the financial ability of many of the smaller countries. These new circumstances revolutionize the functions of the services of security and self-defense. The present offers an unsurpassed opportunity to initiate such a long-needed change, before the experiences of World War II are dimmed, organizations disintegrate, and personnel is lost. It is a matter that calls for the most serious study. The most outstanding personnel of military and naval intelligence and the Office of Strategic Services should be obtained for this office.

It would cooperate with the Office of Formulation of Policy in the determination of policy as to the public dissemination of information regarding foreign policy and relations, being guided by the principle that, in a democracy, the people, who constitute the mainspring of authority, should be taken into the confidence of the Department to the fullest possible extent. An effort might be made to present factually to the American public the position of other governments, the delicacy of which task is appreciated, yet it is not insuperable. A broad policy would be in the interest of keeping the people informed, and of stimulating public interest in world affairs. It is the plan most tenable in the democratic process. How otherwise can the people fulfill their function of sustaining the Department? There also is the necessity for additional action to bridge the gap between the Department and the people it serves under the President and the Congress. More satisfactory public relations should be established.

The division of activities in the drafting of material for the Department, public statements, press releases, and news digests could be reached subsequently between the Office of Intelligence and the line.

It should be charged with the most essential duty of maintaining liaison with the War and Navy Departments for the complete interchange of intelligence and knowledge of plans to insure the full defense of the United States at all times. The antecedents of the attack on Pearl Harbor testify to this need.

THE OFFICE OF FORMULATION OF POLICY (S-2)

"This office formulates national policies, present and future, in the field of foreign relations and affairs, and makes recommendations thereon to the Secretary of State, both on its own initiative and in response to directives, being duly governed in this function by the principles of legitimate geopolitics, precedents, the interests, policies, traditions, public opinion, and political philosophy of the United States. Devises over-all diplomatic strategy of an adequate and timely nature and coordinates the policies abroad of all Federal agencies. Considers all determinants (domestic, vis-à-vis other powers, and within other powers) and, as a result, defines those positive objectives essential to the welfare of the United States and its citizens. Plans so to stabilize relations with and among other countries as to make for equitable peace. Maintains close relations with the Army and Navy to the end that harmonious and sound national policies shall prevail at all times. Its scope embraces the political, economic, and social spheres. Periodically examines international agreements and commitments to determine their status. Devotes particular attention to national social psychology and the science of human relations in its understanding and appraisal of foreign peoples. Recommends the enactment of legislation. Prepares reports and studies, outlines trends, makes forecasts, and digests noteworthy publications. Keeps research facilities, including complete geopolitical files on all foreign countries, absorbing the archives of OSS. Draws freely upon the resources and services of all Federal agencies and reciprocates in appropriate cases. Maintains liaison with pertinent governmental agencies."

Its discharge of the above heavy responsibilities would offer a supreme test for sound, creative imagination, evaluation of the lessons of history, apperception of the foundations of other powers, and sense of timing. It would bring to bear perspective in the study of historical diplomatic objectives, stressing the thread of continuity, of all powers. Historical precedents and courses likely to be followed by modern powers, including those of the late Axis, would be inherent in its task. The destiny of the Nation would rest appreciably in its hands. It would forcefully engage in efforts to preserve peace as the alternative to atomic warfare.

It would use the most modern tools and methods. This might require that the study of the principles of legitimate geopolitics be fundamental to its mission. Note that "legitimate" geopolitics is specified, which is done to prevent confusion with the prostituted and egregious variety of the Nazis and the Japanese. Geopolitics is only a synonym for power, the possession of which by ourselves and other leading nations is plain and must be taken into consideration in foreign policy. This is not imperialistic nor is it deprecatory of the nascent United Nations Organization. The basic essentials of that science probably have been vindicated in World War II. Sir Halford Mackinder's theory of the command of the world being made possible by the rule of the world island following the rule of the heartland and eastern Europe is of greater interest than ever incident to changed international positions after World War II. Some authorities are of the opinion that geopolitics holds the key to lasting peace. One quintessential task of this office, in collaboration with the Army and Navy, would be to ascertain the feasibility of a North American heartland as a defensive counterpoise. This is not an alarmist attitude; even less is it directed against any specific foreign power or powers. It is only that realistic forethought must be given to the continued welfare of the United States.

Another branch of modern science which has a major contribution to make to equitable and amicable relations between nations is that of social science. President Roosevelt declared, just before his death, that "if civilization is to survive, we must cultivate the science of human relationships." The specific approach contemplated is what might be called national social psychology for want of a more explicit term. It offers a promising orientation to understanding, and hence coping with, such enigmas as Hitler's Germany, Japan, and Argentina. More fruitfully it affords even greater hope in assuring a lasting peace. Miss Dorothy Thompson has mentioned a national psychoanalysis for Germany at this critical juncture of history. Dr. Richard M. Brickner has written a book, Is Germany Incurable? which, regardless of his own postulates, poses the absorbing question of the possession by the entire Germanic people of a psychosis—paranoia. As Lange puts it with unassailable logic:

"Emotions are not only the most important forces in the life of the individual human being but they are also the most powerful forces of nature known to us. Every page in the history of nations testifies to their invincible power."

Can a modern foreign policy afford to ignore such a field? Dr. Harold Lasswell, author of World Politics and Personal Insecurity, and the Psychopathology of Political Behavior, is an authority in this unfolding field.

It is suggested that this office devise a formula of pertinent conditions and requirements which would be considered in connection with all questions and matters in the field of foreign relations and affairs. A formula of this type would preclude the probability of any errors or oversight, especially in cases of emergency when pressure might be severe. Another reason calling for such a safeguard is the increasing complexity and number of aspects of such matters, requiring consideration by various persons and organizations.

This office would have the necessary facilities and material for that intensive and extensive research precedent to the formulation of policy. This service likewise would be useful to other governmental agencies and to private entities and individuals.

In the field of background intelligence this office would serve as a depository of the most complete geopolitical information, indexed and evaluated, on all other countries. The absorption by it of the files of the Office of Strategic Services would be a good first step. This facility would serve a function similar to that of the famous Institut Fur Geopolitik at Munich of Dr. Karl Haushofer, which gave such a tremendous political and military advantage to the Third Reich. Such knowledge is required even more by a peace-loving democracy than by a predatory nation.

The office would supply background knowledge, cataloged, digested, and correlated, on all countries, for its own use in planning, for the remainder of the staff, and for the Department. It thus would analyze current developments in the framework of history and forecast future trends. Included in this function would be the study of contemporary printed material and literature in appropriate fields. The facilities of the Office of Intelligence would be freely utilized by it.

It would coordinate the policies in the foreign field of all Federal agencies and harmonize them with the over-all policy of the Department of State.

It would function with the Office of Execution of Policy in taking the necessary preliminary action incident to international conferences and meetings.

While primarily concerned with the foreign field, the office also would be fully informed of conditions within the United States and the prevailing public opinion as determinants in the casting of foreign policy. This imposes on it the dual function of having accurate, full, and timely knowledge of (1) all interests, regions, and segments of the United States and (2) of all foreign powers, bringing to bear a global point of view and the realization that the welfare and security of all of the countries of the contemporary world and international peace are indivisible.

It should be consulted by the legal adviser in legal policy and cases to assure conformance with over-all policy. The legal adviser should retain his present independent status and not be integrated into the staff.

This office should evaluate the conclusions submitted by the Advisory Council on Foreign Policy (hereinafter described) and make recommendations based thereon.

It would advise with the Division of Intelligence on the democratization, as much as is expedient, of foreign policy and relations.

The duties to be performed by this office and that of execution of policy are so important that it might be advisable to have one person head both units. This would insure desirable integration in the closely related functions of policy framing and its implementation. It would not overgrade the specifications and responsibilities of the position if it were given the rank of an assistant secretaryship. The incumbent, of course, would be subordinate to the Assistant Secretary or Under Secretary in charge of the entire staff.

THE OFFICE OF EXECUTION OF POLICY (S–3)

The description of the responsibilities of this office follows:

"Develops specific methods and formula by means of which the line organization can implement the policies and recommendations decided upon by S–2 and approved by the Secretary of State. Its function relates to diplomatic tactics and embraces the actions abroad of all Federal agencies, exploring and deciding upon the most satisfactory methods and techniques of achieving objectives. Operates in the closest cooperation with S–2 and the line, particularly the geographic divisions in their relations and negotiations with other countries. Performs the supervisory functions of follow-through and follow-up. Is concerned with relations (collaboration, reportorial, and communication in general) between the staff, and the line and the field. Cooperates with S–1 and S–2 in keeping the War and Navy Departments appropriately and currently informed as to the diplomatic relations with foreign powers."

This office would assume the staff function where the Office of Formulation of Policy (S–2) terminates its role. There otherwise would be a vacuum without provision for responsibility for developing the specific methods for the translating into action by the line of the plans and decisions reached by S–2. It would insure over-all uniformity and coordination in the execution of policies in all areas of the world.

A primary weakness in the administration of agencies of the Government and private business is the lack of follow-through. Admirable conception may launch a program, but there are too many cases where inertia or other activities supervened slowly to strangle it to death. This office would supply the follow-up function and hence offer another point in favor of an over-all staff.

There accordingly is no conflict between this office and the line and the former would not encroach upon the latter.

The relationship between this office and the line and the field make it the logical unit to be concerned with the relations, in the large sense, between the staff, and the line and the foreign service. This applies especially to collaboration, reportorial activities, and communication in general.

It would cooperate with the Office of Intelligence in liaison with the War and Navy Departments in assuring a full exchange of information regarding the status of diplomatic relations with foreign countries to insure the welfare of the United States at all times.

THE OFFICE OF MANAGEMENT PLANNING (S–4)

This is a summation of the proposed jurisdiction of this office:

"Plans in the sphere of management and administration to enhance the efficiency and effectiveness of the Department and foreign service. Performs broad personnel planning, including recruitment and training. Determines the proper salaries and allowances conducive to the most satisfactory functioning of personnel, particularly abroad. Makes studies and recommendations as to appropriations to be requested. Maintains current files of persons, Americans and aliens, in the United States and abroad, with such qualifications as might be useful, particularly in time of emergency. Cooperates with and advises institutions of higher learning in their curriculums and methods to prepare students for official and private activities in the foreign field in keeping with the new international orientation of the United States."

This office would apply the principles and findings of the science of management in an effort to increase the operating efficiency and effectiveness of the Department and the Foreign Service.

Its functions in the field of personnel would be on the top level. It would serve in an advisory role to the President and the Secretary of State in the selection of the increasing number of higher appointees in numerous capacities in the international field. It would maintain a current file on persons, Americans and aliens, in the United States and abroad, with such qualifications as might be useful, especially in time of emergency.

In the fulfillment of its functions with respect to the foreign service, it would not impinge upon the duties and powers of the Personnel Board of the Foreign Service. This office could perform investigations and make studies in the personnel field for the Secretary of State.

A prerequisite to the planned expansion of the Department and the foreign service is the obtaining of sufficient appropriations from the Congress. It is highly doubtful if the Congress will deny the necessary funds where convincing presentations are made to it. This office would perform that vital function and be staffed with competent personnel for that purpose.

THE ADVISORY COUNCIL ON FOREIGN POLICY

The essential data concerning this new organization[1] may be summarized thus:

A nonpartisan body, of representative officials and citizens appointed by the President, to assemble in Washington at stated periods or in emergencies, on the call of the Secretary of State, to deliberate in executive session on questions of foreign policy, whose confidential, advisory conclusions and recommendations would be made to the Secretary of State for his discretionary guidance as a reflection of public opinion, as befits the operation of a democracy. Membership might consist of:

All living former Presidents of the United States;

All living former Secretaries of State;

A senior representative of each executive department of the Government, including State;

The chairman and ranking minority member, Senate Committee on Foreign Relations;

The chairman and ranking minority member, House Committee on Foreign Affairs;

A Justice of the Supreme Court;

A representative each of industry, labor, agriculture, education, scientific research, social science, political science, political economy, and finance;

And perhaps other citizens from strategic professions and vocations, and also citizens qualified to make suitable contributions.

This body well might mirror geographical and regional viewpoints, the alleged absence of which in foreign policy has been criticized. One course is to include the governors of strategic States and even the mayors of certain cities.

The advisory council would have an executive or interim committee, which would be available on shorter notice than the entire council and whose conclusions would be more quickly reached because of its smaller size. It would convene on the call of the Secretary of State and be composed of the following 10 persons:

The Secretary of State;

The Secretary of War;

The Secretary of the Navy;

The chairman and ranking minority member, Senate Foreign Relations Committee;

The chairman and ranking minority member, House Foreign Affairs Committee;

One representative each from scientific research, industry, and labor, appointed by the President.

It would be calculated to further the democratization of foreign policy by furnishing a group of responsible citizens to bridge the gap between the Department of State and the public. The people and the Congress, the fountainheads of power and on whose support and mandate the Department is dependent, thus would have as effective a consultative voice in the conduct of foreign relations as would be feasible, and within the framework of the Constitution.

President Truman has shown a marked policy of including Members of the Congress in the conduct of foreign policy, which is a statesmanlike recognition of contemporary realities and complexities. The executive branch would not relinquish any of its constitutional power or prerogatives in the field of foreign relations by the operation of the Advisory Council. The fundamental idea underlying the inception of this Council is to make permanent and to formalize the salutary principle exemplified in the advisory and consultative roles played by Members of the Congress and public opinion in the vital conferences of Chapultepec and San Francisco. The public criticizes the Department for being too removed from the people of the country and as being too inclined to confront the people with fait accompli, at times to the surprise and disapproval of the public.

The composition of the Council should not exceed 35 persons to prevent it from becoming unwieldly. As outlined above, a more compact group of 10 persons would be at the disposal of the Secretary of State in his discretion, as might be preferable in emergencies or in the consideration of certain subjects.

CONCLUSION

This project has been in the mind of the writer for a long time, but it has been reduced to writing within only the last few days. It is realized that there are imperfections in it and that refinements will result from more deliberative and prolonged consideration. No effort has been made to engage in research.

If this memorandum, by indirection, has seemed to place the major emphasis on the political aspect to the exclusion of the economic, it was unintentional and not meant to understimate the essentiality of economic

---

[1] Since drafting this proposal for an Advisory Council, it has been discovered that Senator WILEY proposed a somewhat similar body in 1942 to be known as the Foreign Relations Advisory Council. But his idea called for its restriction to the Secretary and Under Secretary of State, technicians of the Department of State, the chairmen and ranking minority members, Senate and House Foreign Relations and Affairs Committees, and other Senators as designated by the President. The more representative character and broader base of the body now proposed are manifest. A precedent in the field of trade promotion work for the projected Advisory Council on Foreign Policy is the current establishment by the Department of an advisory committee of businessmen, which was announced after the completion of this memorandum. Also, the Business Advisory Council for the Department of Commerce, consisting of 60 active members and more graduates, founded over a decade ago, is reported to be very successful.

activities—economics being politics in action. This applies especially to the wholesome expansion of our export trade and, as a condition precedent to a stabilized, international, economic structure, purchases from other countries. A staff would devote appropriate attention to this necessary phase and serve as liaison with other agencies of the Government, notably the Department of Commerce.

It might be that this concept of an initial staff is on too comprehensive a scale and that a smaller one of diminished functions would be preferable at this time. Be that as it may, it is submitted that an over-all staff of some description appears to be indicated. While not a panacea, such a staff is thought to be the logical instrumentality to answer that at times perplexing departmental questions. "What is the policy?"

Prevention of Strikes in Public Utilities

REMARKS
OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. HAND. Mr. Speaker, I think we are all aware that what we have been trying to do in the House is to lay down some future rules and guides which will improve the very troubled relations existing between labor and management. The present wave of strikes is vexatious and very hurtful to reconversion; but it must be remembered that to a large extent it is a byproduct of reconversion. It is inevitable that our national economy should have some struggle to adjust itself in the difficult transition from war to peace. It is to be hoped therefore, that in the heat of the moment, and in the very laudable effort to improve industrial relations, the House does not go too far in infringing upon the well-recognized and fundamental rights of labor to bargain collectively, and to strike when collective bargaining fails. Likewise, if labor leaders are prudent they will refrain from opposing every type of regulation which is suggested. Certainly, labor itself does not condone violence in connection with strikes, and yet even attempts to prevent violence are bitterly opposed by some groups. No one believes more firmly than I in the rights of American labor to obtain its proper share of industrial profits by means of adequate and generous wages, nor in their rights to obtain the best possible working conditions. They must have the right to bargain collectively by representatives of their own choice, and most certainly the right to strike in an effort to effect these conditions where other means fail. But even these rights, as is the case with all rights, must be modified in the public interest.

Mr. Speaker, I am convinced there is a limited field in which there is not the right to strike at all. There should be no interruption which threatens the health and very lives of the American people.

I propose, therefore, that the Congress give mature and careful thought to the special field of public utilities and other establishments whose interruption paralyzes society. I certainly do not propose that we rush into this subject today or this week. What I suggest is that the Committee on Labor give the fullest kind of consideration to this problem, and for that purpose, I am introducing a resolution, which reads as follows:

Resolved, That immediately upon the adoption hereof, the Committee on Labor shall investigate proper and equitable means to prevent any interruption of work in any industry or establishment the continuous operation of which is necessary to life and health.

Such industries or establishments, for the purpose hereof, shall be limited to all operations now defined as public utilities, and to hospitals, and the processing and transportation of essential foods and fuel.

In the course of its investigation, the committee shall give full attention to special compensation, pension rights, and other forms of security to workers in such industries.

No report shall be made by the committee until a full and fair hearing is afforded to labor, management, and the public.

Mr. Speaker, the Governor of New Jersey, in his annual message to the State legislature on January 8 1946, said:

There is no right at any time to strike against the security, welfare, and lives of the people—and heat, light, power, transportation, water, and food are the life essentials of the people.

I think this is so.

But if we are going to ban interruptions in these essential public services, we are likewise going to have to provide a special compensation and special type of job security to the workers. If a worker in such essential industries renounces the right to strike, he must have special rights to protect and compensate him. My resolution provides that the committee shall give full consideration to this requirement.

Mr. Speaker, this is a difficult and complex problem. It obviously cannot be decided at once, nor without full and fair hearings. It must be thought of in an atmosphere of calm impartiality, and with primary consideration to the social welfare of the people. I am not even sure that the approach I am suggesting is the correct one, but I am quite sure that it is an approach which requires careful and conscientious attention of the Congress. The problem is hard, but the goal is worth achieving. Its solution is vital to the health and lives of Americans; moreover, the elimination of such strikes will reflect an everlasting benefit on organized labor generally. For when the public is deprived of food, fuel, and other necessities of life, it is seriously hurt, and will strike back at the cause, regardless of the merits of the dispute, and the fundamental rights of labor will ultimately be impaired.

I hope, Mr. Speaker, that this resolution will be adopted, and that the Seventy-ninth Congress will deal with this great problem with calmness and courage.

[From the Camden (N. J.) Courier-Post of January 11, 1946]

BAN STRIKES IN UTILITIES?—IF WORKERS GET SECURITY

With the telephone strike spreading rapidly, "Mike" Quill threatening a general strike in New York City, and a walk-out of PTC workers in Philadelphia set for February 11—

There's intense public interest in the proposal of Governor Edge for outlawing utility strikes.

This newspaper, on a number of occasions, has urged a similar step. On November 24 last, the Courier-Post said editorially:

"Just as the right of free speech does not include the right to holler 'Fire!' in a crowded theater, so the right to strike must not include the right to paralyze a State.

"Every human right is limited by the public safety.

"Legislation is needed to regulate labor in essential public utilities as well as in police, fire, and water bureaus."

At that particular time, electrical workers of the Public Service Corp. were threatening to strike throughout New Jersey, but Governor Edge didn't want to come back from his vacation in Georgia.

Finally, he did so, chiefly, he admitted, because the Courier-Post newspapers demanded the Governor be on the job.

We are flattered that Edge has further followed our suggestions—by proposing to outlaw utility strikes.

But—and this is a big but—

Governor Edge's message omits the other half of this newspaper's proposal. We said:

"Utility labor must renounce the right to strike in exchange for special compensation, extra perquisites, pensions, etc."

Edge says nothing about giving utility labor any concessions in exchange for giving up the right to strike. He merely proposes compulsory arbitration in utility labor disputes. And that's not enough.

When a man takes a civil-service job, as a cop, or a fireman—or a judge—he forfeits some rights and gains some privileges.

The cop and fireman give up the right to strike and gain economic security, in the form of sick leave, vacation pay, pensions. The judge gives up the right to be active in politics and gets not only a pension for himself but in most States a pension for his wife.

If utility workers are to be put in the same class; if, when a man takes a job at a power plant, he gives up his right to strike, then he, too, should get security benefits in exchange.

How far the ban on strikes in utilities should extend is a question.

Obviously it should include those who operate power and light plants, water and sewer services and the transportation of food. Those are essentials, without which communities could be hit by epidemics.

Whether telephone, bus, trolley and taxi service should be included is debatable. It can be argued that all the public suffers from a strike in those fields is inconvenience.

Anyway, most reasonable Americans agree with Edge's statement:

"There is no right at any time to strike against the security, welfare, and lives of the people."

If labor is wise it will make clear that it does not want the right to wreck a whole community to punish one employer.

[From the Washington Post]

STRIKE LEGISLATION

(By Walter Lippmann)

If Congress is to go further than that, into what we might call a second phase, it should then, it seems to me, fix its attention on measures to prevent strikes in the essential public services. Strikes which isolate communities, or deprive them of light, heat, power, transportation, medical care, and essential foods, are in a class apart, and there can be and should be no doubt that the public interest is paramount. Here the people have an indubitable right to enforce peace upon the owners and the employees.

Soldiers, policemen, firemen have no right to strike. The fact that they are employed

by the State whereas the workers in public utilities are employed by privately owned companies has to be taken into consideration. But public utilities are not private enterprises. They are Government-created monopolies, which exist by virtue of a public franchise, and they are privately owned and managed only because the people prefer to let this kind of public business be carried on in this way. Those who own them, manage them, and work in them are in fact public servants, and Congress and the State legislatures would be fully entitled to legislate on that principle.

No one is compelled to invest his money in a public utility. No one is drafted to work for a public utility. But if he invests in one or takes a job in one, then it might well be stated in the law that the service may not be interrupted, that disputes must be settled without interrupting the service. If this means compulsory arbitration, let it, and anyone who dislikes it should not go into the utility business. For it would be the condition of his investing and of his being hired that the public service must go on.

Loan to Great Britain

REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. JONKMAN. Mr. Speaker, it was interesting on Tuesday last to read in the newspapers Secretary of State Byrnes' sales talk on the proposed $4,000,000,000 loan to Britain. Mr. Byrnes said it would provide "tangible, firm gains for the United States and the rest of the world."

However, when he came to analyze these "gains" the Secretary of State dribbled off into saying what we would gain was a "chance" for certain of those gains; and that if the loan is approved we can "expect" certain of those gains.

Now the difficulty with those of us who are realistic is that in the past we have advanced loans of real "dough" for such a "quid pro quo" of chances and expectations, and they have never materialized. So, in this respect the Secretary's sales talk leaves a realist quite cold, even though he may have enlightened self-interest.

And then the Secretary gives us this gem in his sales talk:

> This credit is not a precedent for anything. It is unique because the position of Britain in world trade, her need for working capital, and the effect upon world trade of her acquiring that working capital, all are unique.

I do not cite this quote of Secretary Byrnes to show that it will be a precedent. That would only be argumentative. Nor do I want to show that he contradicts himself a little further on, when he says that the loan will be used for "food and basic raw materials, some of which are in surplus here"; nor do I desire at this time to call attention to the fact that Britain stands to lose much of her trade with her dominions in the nature of importing food and raw materials, and that we are being asked to supplant these colonies and dominions in furnishing food and raw materials to Britain for competition in world trade; nor do I wish to emphasize that in addition we are asked to furnish the purchase price, which, of course, the colonies and dominions never did. We will just pass all of that over.

The point we wish to stress in the above quotation is that the Secretary says the loan is unique, and that in fact everything about it is unique. With this statement we are in full accord. The proposed loan is unique, which means the only one of its kind, being without equal, singular, uncommon. Synonyms for "unique" are odd, queer, anomalous, bizarre, crotchety, curious, droll, eccentric, erratic, fantastic, funny, grotesque, laughable, ludicrous, peculiar ridiculous, strange, unmatched, unusual, whimsical.

Yes, Mr. Speaker; the proposed loan to Britain is unique, and all and everything about it is unique. We might even go a little further and say with charity that the State Department is unique in its dealings with Britain.

I said a moment ago that all we gain is a "chance" or an "expectation." In past dealings, that is all we ever got from Britain for our cash. And I am not referring to the First World War loan or to lend-lease.

We have only to go back to the propaganda of the State Department in seeking the second contribution to the United Nations Relief and Rehabilitation Administration, commonly called UNRRA. I discussed that on page 11494 of the December 5 CONGRESSIONAL RECORD. The State Department showed that 17 United Nations made contributions totalling $1,835,000,000. Of this amount, $1,350,000,000 came from the United States, and $485,000,000 from all the other nations, including $319,000,000 from the United Kingdom.

The most unique thing about their accounting and propaganda was that it showed that by February 1, 1946, the United States account would show a deficit of $188,000,000, while the other United Nations' account would be paid in full up to that time. Now, that is unique. It will be noted that the ratio of contributions is 72 percent for the United States and 28 percent for all the other nations, let us say, roughly, 75 percent and 25 percent. Now, if anyone of you was to go on a hunting trip with me in which we figured that the supplies would cost a hundred dollars, and you would generously offer to put in $75, asking me to put in only $25, certainly every dollar, yes, every penny of our combined funds would be spent simultaneously; and even the last penny that was spent would be three-quarters yours and one-quarter mine. There could be no such thing as your money giving out before mine did. And yet, for the purpose of propaganda, the State Department showed that this unique, queer, and odd thing had happened. Newspapers, commentators, and so forth, accused Uncle Sam of dishonor, being a welcher, and so forth, so we would hurry and put up another $1,350,000,000.

The report was unique in that it gave the receipts in columnar form and the expenditures in prose paragraph form. The latter, of course, is difficult to check, especially if it is a conglomeration of allocations, obligations, commitments, shipments, expenditures, and so forth.

Another thing that was unique and intrigued me was a statement above the list of contributions which read, "Paid or available on request." When I asked what was meant by this "available on request," and why, if UNRRA was so desperately in need of funds it was not all paid instead of leaving some of it lying around available on request, I received no satisfactory answer. However, in a remote part of the statement of expenditures from the fund of the other United Nations, I read that of $485,000,000 contributed by countries other than the United States, $183,000,000 had been spent for supplies, and so forth, and $122,000,000 obligated for supplies and delivery in November, December, and then this little statement, "The balance of $180,000,000, consisting chiefly of sterling from the United Kingdom contribution, will be spent for commodities in Great Britain." This, of course, cleared up what was meant by the words, "Available on request," above the list of contributions. It simply meant that at least Britain had, instead of contributing commodities, made available $180,000,000 in sterling, which was nothing more than an I O U. And why did the United Kingdom give an I O U for $180,000,000? The answer is, because the United Kingdom must import foodstuffs and similar commodities herself to survive and therefore has none to contribute to the war-stricken and devastated nations on the Continent.

If I may again advert to the hunting trip, if, instead of contributing my $25 in cash, I put a worthless I O U in the kitty, there would, of course, be a different situation. But still you would not want it said that you were in default and welshing when, of course, it was I that was in default.

It is a fair and simple deduction that as long as we were providing England her lend-lease, of which billions of dollars consisted of these same kinds of commodities, the United Kingdom could use our lend-lease in making her contribution to UNRRA. But when lend-lease stopped she was unable to further contribute, except in sterling, which, of course, is useless. UNRRA cannot buy relief goods outside of the United Kingdom with it, and the United Kingdom cannot spare relief goods within the Kingdom.

In other words, it is a fair conclusion that the United Kingdom never made any contributions to UNRRA out of her own resources, and whatever was supplied under her subscription of $319,000,000 was supplied by her out of United States lend-lease goods.

In spite of repeated demands, I was never furnished with a balance sheet showing the receipts and expenditures of $1,835,000,000 in one account. Finally I did receive two tabulations, one for the United States and one for the other United Nations. These were furnished me by the State Department too late to get into the hearings for the second UNRRA authorization, and I inserted them in the record above stated. They not only verify the foregoing criticisms, but show that up to October 31, or about as long as lend-lease lasted, the ratio of expenditures was three to one, three for the United States, and one for the other

United Nations, as it should be according to the subscriptions. But from there on it will be noted that the State Department stepped up the ratio to four to one, in which we were supplying it all, and Britain's $180,000,000 sterling was simply divided for the months of November, December, and January as available. This they do not say is being spent, but will be spent when commodities are available in the United Kingdom. The fact that these books are out of balance $180,000,000, and that they are raising our contribution by the same amount, does not seem to be of any consequence.

In conclusion, I want to say that I cannot subscribe to or vote for these unique dealings of our State Department with the United Kingdom. The American people are entitled to the facts so they can do their own thinking and form their own opinion.

The New Deal has engaged in too much of Hitler's philosophy on propaganda as found in Mein Kampf, where he says:

> What we mean by the words "public opinion" depends only to the smallest extent on the individual's own experiences or knowledge, and largely on an image, frequently created by a penetrating and persistent sort of so-called "enlightenment."

The American people probably know, and I know, that the situation in the United Kingdom is such that she cannot contribute to UNRRA, and for that we cannot blame her. But the State Department should give us the facts and not propagandize us with unique, queer, odd, and misleading propaganda.

With our national debt at three hundred billions, our budget threatening to run from twenty-five billions annually upward, we cannot extend these proposed loans without imperiling our own security. It is high time that sanity instead of uniqueness again be restored in our administration of government.

The Answer

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following answer by Lewis Ayer Smith to the problems of our age:

THE ANSWER
(By Lewis Ayer Smith)

Eons ago,
From beyond our ken,
An impulse came to Earth.
For countless ages,
In ways incomprehensible.
It evolved.
And yesterday a baby was born.
For unnumbered generations,
The baby quested; ever striving
For mastery over himself.
Today, the baby holds in his hands
The atomic bomb.
Realizing that he now has the power
To destroy himself,
He cries aloud to his God, asking
"What must I do to be saved?"
And his God replies, saying,
"I gave you the answer
One thousand nine hundred and forty-five years ago,"
But the baby, clutching his bomb, mutters
"It is easier to kill than to love."

Winds Can Be Harnessed for Electric Power on Farms

EXTENSION OF REMARKS
OF
HON HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. HAGEN. Mr. Speaker, I have been a strong champion for rural electrification during my years in Congress. Long strides have been made in the past few years to bring electric power to the farms of America, and I earnestly hope that this progress continues.

My district is located in the extreme northwest corner of the State of Minnesota, and many areas there are sparsely settled. The extension of REA power lines into some of these areas is a remote possibility for years to come. In the meantime, the hardy, pioneering farmers and farm women who are literally cutting farms out of old timberlands are compelled to do without labor-saving electric equipment and appliances which is available to farmers in more settled regions. This fact hampers the settlement of these more isolated areas.

It is my belief that in communities where there are too few farms to justify the present methods of the extension of REA power lines, some provision should be made for the loaning of REA funds, on a long-term basis to farmers for the installation of individual farm electric plants.

Last October a subcommittee of the House Committee on Interstate and Foreign Commerce was presented with information to the effect that individual farm electric plants, particularly those operated by wind power, could adequately serve the farmers to whom REA power lines were not available.

Because much of the following information was not printed in the committee hearings on H. R. 1742, I am incorporating in these remarks a letter directed to me by Mr. R. F. Weinig, vice president and general manager of a manufacturing concern in Sioux City, Iowa, engaged in the production of individual farm power plants operated by wind.

The letter follows:

WINCHARGER CORP.,
Sioux City, Iowa, December 12, 1945.
Hon. HAROLD C. HAGEN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN HAGEN: We in the individual farm electric plant industry are 100 percent for economical area coverage, since farm electrification is both a social and economic necessity. We believe that every farmer and rancher deserves electricity, and that every farm and ranch should be electrified. But let's give each farmer and rancher the benefits of electricity at the lowest possible cost per kilowatt-hour. The facts included herein should help establish whether central-service power line electrification, or individual farm electric plants will yield the lowest cost energy in each individual instance.

I stated to the subcommittee of the House of Representatives Committee on Foreign and Interstate Commerce on June 15, 1945, that I believed the cost of electricity delivered by power lines to individual farmers and ranchers in the sparsely settled areas could be calculated. Since that time we have been able to establish what we believe to be a fair and accurate estimate of the cost per kilowatt-hour of electricity delivered by REA power lines, assuming these lines to be both self-liquidating within a period of 35 years, and self-continuing without additional Government financing after the initial loan.

Along with these figures I shall present the estimated cost of electricity from certain individual wind electric plants. The cost of power-line electricity was developed from REA reports and data, and from the United States Census reports. The calculations have all been traced to their original source, the method of calculation approved and audited by David Himmelblau & Co., a firm of certified public accountants, who are located in Chicago, Ill.

Table 1 shows the estimated cost per kilowatt-hour of power-line electricity, based on actual REA experience, under conditions assuming the user's average electrical load to be 71 kilowatt-hours, 89 kilowatt-hours, or 100 kilowatt-hours per month.

TABLE 1.—*Estimated cost per kilowatt-hour on present REA lines in the States shown* [1]

Name of State	Number of miles energized to Dec. 31, 1943	Number of consumers connected to Dec. 31, 1943	Number of consumers per mile	Estimated cost (in cents) per kilowatt-hours of energy delivered if line is to be both self-liquidating within a period of 35 years and self-continuing without additional Government loans beyond that period		
				Monthly load of—		
				71 kilowatt-hours	89 kilowatt-hours	100 kilowatt-hours
Arizona	620	1,313	2.118	10.359	8.436	7.602
Colorado	5,955	14,851	2.494	7.656	6.353	5.796
Kansas	9,306	17,085	1.818	8.090	6.745	6.162
Montana	3,075	7,052	2.293	8.046	6.673	6.078
Nebraska	10,782	19,811	1.837	7.778	6.410	5.817
Nevada	112	433	3.866	7.707	6.227	5.585
New Mexico	1,247	2,462	1.974	8.793	7.232	6.555
North Dakota	2,967	5,931	1.999	7.948	6.592	6.003
South Dakota	2,226	4,184	1.880	8.323	6.975	6.389
Texas	37,913	86,756	2.288	6.161	5.097	4.637
Wyoming	2,071	5,053	2.440	7.487	6.294	5.776
Total 11 States	76,364	164,931	2.160	7.012	5.808	5.286

[1] Based on method demonstrated in table 2.

Table 2 shows in general the method which was used to determine cost per kilowatt-hour of electricity delivered.

TABLE 2.—*Method used in calculating the cost of REA power line electrification*

Construction cost per mile: $89,994,927 (total funds allocated for distribution systems, generation and transmission, but not including wiring and plumbing)÷90,972 (Number of miles to be constructed)	$989.26
Cost per mile per year for amortization of loan, depreciation, and maintenance:	
Annual cost per mile if initial loan is to be repaid in 35 equal annual installments (with interest at a 2-percent rate):	
Annual amortization of total cost per mile ($989.26×0.04000221[1])	39.57
Annual depreciation per mile ($989.26 ×3.48 percent[2])	34.43
Annual maintenance expense per mile	$7.00
Total annual cost per mile	81.00
Average number of consumers per mile as connected as of Dec. 31, 1943	÷2.16
Total annual amortization, depreciation and maintenance per consumer	37.50
1943 operating expenses per consumer, excluding power and maintenance[4]	13.20
Annual cost per REA consumer, excluding power	50.70

Revenue required per kilowatt-hour of energy:

	Number of kilowatt-hours used per month		
	71	89	100
Annual cost per REA consumer excluding power	$50.70	$50.70	$50.70
Annual cost of power[5]	9.04	11.33	12.73
Total annual cost	59.74	62.03	63.43
Divided by number of kilowatt-hours used annually	852	1,068	1,200
Revenue required (in cents) per kilowatt-hour	7.012	5.808	5.286

[1] Amount of annual payment required to repay principal of $1 in 35 years at 2-percent interest compounded annually. Source: Handbook of Financial Mathematics, Prentice Hall, Inc., 1929, p. 1124.

[2] Annual depreciation rate recommended by REA for distribution plant. Source: Depreciation Procedure as applied to REA Financed Systems, Jan. 1, 1944, p. 5.

[3] Annual service cost per mile as estimated by Mr. Neal of REA. Source: REA letter, Feb. 27, 1945, from William J. Neal, Acting Administrator, to CHARLES B. HOEVEN, House of Representatives.

[4] 1943 operating expenses per consumer, excluding power and maintenance, is based on REA's 1943 Annual Statistical Report for the States of Arizona, Colorado, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota, Texas, and Wyoming. It is calculated as follows:

Operating pay-roll for year ended Dec. 31, 1943	$1,371,393.00
General expenses for year ended Dec. 31, 1943	754,860.00
Insurance, taxes, and miscellaneous for year ended Dec. 31, 1943	489,587.00
Total	2,615,752.00
Number of consumers connected as of Dec. 31, 1943	÷164,931
Average operating expense per consumer, excluding power	15.86
Annual cost of maintenance per consumer. Source: REA letter, Feb. 27, 1945, as above	−2.66
1943 operating expense per consumer, excluding power and maintenance	13.20

[5] Annual cost of power per consumer is based on the REA's 1943 Annual Statistical Report for the States listed above and is calculated as follows:

REA cost of power, year ended Dec. 31, 1943	$2,557,026.00
Kilowatt-hours billed, year ended Dec. 31, 1943	÷240,900,759
Cost per kilowatt-hour	$0.01061
$0.01061×852=$9.04	
$0.01061×1068=$11.33	
$0.01061×1200=$12.73	

Table No. 3 shows the estimated cost per kilowatt-hour of electricity from power lines if they were extended to cover every farm or ranch in the more sparsely settled counties in a group of our Midwestern States. In none of these counties will the farms average more than 1.25 per square mile. In the aggregate they average only 0.517 farms per square mile, and we believe would therefore average only 0.517 potential consumers per mile of power line, if every farmer were to accept power-line service.

TABLE 3.—*Estimated cost per kilowatt-hour if REA should extend power lines to every farm. (Only those counties are considered where the farms average less than 1.25 farms per square mile)*

Name of State	Counties	Farms	Farms per square mile	Maximum potential farm or ranch consumers per mile[1] (estimated)	Estimated cost per kilowatt-hour (in cents) if all farms and ranches are electrified, and all REA lines are both self-liquidating within a period of 35 years and self-continuing without additional Government loans		
					Monthly load of—		
					71 kilowatt-hours	89 kilowatt-hours	100 kilowatt-hours
Arizona	11	12,571	0.331	0.331	46.838	37.537	33.502
Colorado	39	24,292	.673	.673	18.800	15.259	13.723
Kansas	32	20,839	.845	.845	13.691	11.213	10.138
Montana	47	34,291	.493	.493	24.843	20.073	18.003
Nebraska	33	23,352	.600	.600	18.992	15.356	13.778
Nevada	13	2,314	.411	.411	49.999	39.965	35.613
New Mexico	26	24,750	.432	.432	29.526	23.772	21.273
North Dakota	28	31,127	1.031	1.031	12.746	10.419	9.410
South Dakota	36	25,456	.644	.644	17.927	14.637	13.208
Texas	99	44,862	.388	.388	25.371	20.422	18.276
Wyoming	21	13,766	.321	.321	34.846	28.120	25.201
Total	385	257,620	.517	.517	20.999	16.966	15.217

[1] Based on 1 mile of line per square mile of land area.

These electrical loads used in this study were not selected at random. Seventy-one kilowatt-hours per month was the load used by the average REA consumer in 1943. Eighty-nine kilowatt-hours per month was the average load used by consumers who had been connected for 61 or more months. One hundred kilowatt-hours is the load we recommend for a representative wind electric plant when properly installed in a suitable location. Based on REA experience, it appears that 100 kilowatt-hours per month meets the average farm or ranch electrical load requirement, and provides in addition latitude for an increased load. Incidentally two or three such plants in multiple could handle loads greater than 100 kilowatt-hours per month.

I believe that tables No. 1 and No. 3 accurately show the increased cost per kilowatt-hour which can be expected and which must be borne if power line farm and ranch electrification is used exclusively in these areas. And I do not believe such costs can be borne by the average farmer in normal times. I do not believe, however, that the progress of rural electrification need be retarded, nor the farmer penalized, because of these facts. Nor is subsidization either by Government or present users of electricity needed to promote speedy electrification. The use of individual farm electric plants to augment the power line can provide the solution, and thus speed sound rural electrification by providing the farmers or ranchers with adequate, dependable, and economical electricity.

By analyzing the foregoing and the following table, I believe the relative cost of electricity from central service power lines and individual wind-electric plans can be determined:

TABLE 4.—*Estimated cost per kilowatt-hour from a representative wind-electric plant*[1]

[Cost in cents per kilowatt-hour when the monthly load is 100 kilowatt-hours]

Purchase plan	10–12 miles per hour	12–14 miles per hour	Over 14 miles per hour
No. 1. Cash purchase	6.63	6.20	5.80
No. 2. 10-year loan with 2-percent rate of interest	7.19	6.71	6.27
No. 3. 10-year, 2-percent loan with reserve for replacement	9.01	8.37	7.78

[1] When properly installed in a suitable location.

Take, for example, the State of Texas. As of December 31, 1943, there were 86,756 REA consumers receiving electricity at an estimated average cost of 6.161 cents per kilowatt-hour for 71 kilowatt-hours per month, 5.097 cents per kilowatt-hour for 89 kilowatt-hours per month, or 4.637 cents per kilowatt-hour for 100 kilowatt-hours per month. It is estimated that should every one of the unelectrified 44,862 farms and ranches located in 99 of the more sparsely settled counties in Texas be electrified by power line only the average cost of electricity would be 25.371 cents per kilowatt-hour for 71 kilowatt-hours per month; 20.422 cents per kilowatt-hour for 89 kilowatt-hours per month; 18.276 cents per kilowatt-hour for 100 kilowatt-hours per month.

Now, by referring to table No. 4, we note that the estimated cost of electricity from the representative wind-electric plant, under the conditions shown in our examples, would not exceed 9.01 cents per kilowatt-hour. Under certain conditions, the cost might be as low as 7.78 cents per kilowatt-hour, based on 10-year financing at a 2 percent interest rate and setting up a reserve for depreciation to provide replacement as outlined in the example used in my testimony of June 15, 1945.

Clearly then, individual electric systems can provide much more economical electricity than could power lines for many of these Texas farms and ranches. It will be noted that this is also true for many farms and ranches in the other States shown in tables No. 1 and No. 3.

On the basis of the facts which I have shown, what then can be said to be the point of minimum farm or ranch density, above which point power-line electrification can serve most economically, and below which point individual wind-electric plants are most economical?

To answer that question I refer you to table No. 3. The 28 counties of minimum farm population density in North Dakota contain 1.031 farms per square mile. This area is the most densely settled of all of the State areas considered in table No. 3, and it happens that this North Dakota area has a farm density almost exactly equal to the average of 1,000,000, farms—in the 17 States west of the Mississippi River—which average in density 1.1 farms per square mile. As shown in table No. 3, the estimated cost of power-line electrification, if carried to all of the

farms and ranches in the 28 counties under consideration in North Dakota, would be 9.41 cents per kilowatt-hour on the basis of a load of 100 kilowatt-hours per month.

Referring to table No. 4, plan No. 3, the estimated cost per kilowatt-hour of 100 kilowatt-hours per month of electricity with the representative wind-electric plant would be 9.01 cents per kilowatt-hour. Twelve- and fourteen-miles-per-hour average velocities could be expected in North Dakota. As shown in table No. 4, these higher wind velocities could have the effect of lowering the cost per kilowatt-hour of the wind-electric energy to under 9.01 cents per kilowatt-hour.

In view of all these facts, we feel that REA should use individual farm electric plants as well as central service power-line electrification, each to the extent it is most feasible and economical. Further, REA should determine the minimum number of customers per mile of farm and ranch power line where central service power-line electrification will be used, and below which point of farm and ranch density individual electric plants will be used.

It appears that the 1,000,000 farms in the 17 Midwestern States which average under 1.1 farms per square mile, would generally come within the category where individual plants can serve most economically and should, therefore, be used.

To permit REA to finance individual farm electric plants appears to require an amendment to H. R. 1742, which has been referred to as the individual farm electric plant amendment. It is the adoption of this amendment that I urge in the interest of a complete, swift, and economical program of rural electrification.

Very truly yours,

WINCHARGER CORP.,
R. F. WEINIG,
Vice President.

Exportation of Critical Building Materials

REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. RICHARDS. Mr. Speaker, the building-material situation constitutes one of the major problems now confronting the Nation. It follows that the situation relative to lumber, lumber markets, and lumber prices is of supreme importance. In many sections of the country there is a critical shortage of building material, particularly pine and hardwood lumber. Veterans are trying unsuccessfully to obtain pine lumber with which to construct homes. Home owners want boarding for long-needed and long-delayed repair of their residences. Large and small industries wish to increase the space of their buildings, or to repair the buildings they already have, with little lumber on the market. It is, therefore, pertinent to call to the attention of the proper committee of this House one of the factors causing this lumber shortage.

It was called to my attention recently by the engineer of a manufacturing company in my district, now trying to carry out plans for the erection of an addition to its plant which will mean jobs for hundreds of people, that he attempted to purchase lumber from several of the large lumber mills in my State and found that they were not interested at all in getting out planking for the home market, under domestic ceiling prices, because they could get higher prices in the export trade.

I immediately began an investigation of this situation because it is obvious that, if lumber manufacturers can secure export licenses and higher prices abroad for their lumber than are allowed in this country under our existing ceiling prices, they are going to sell abroad, and our postwar-building program for veterans, other private individuals, and businesses which plan to increase their production, will receive a stunning blow.

When I took this matter up with OPA, I found that this agency is not chiefly to blame. It was admitted that export licenses have been granted for shipment of some lumber to foreign ports at a higher price than our own ceiling price. I was further informed that there is an established trade practice which allows a higher price for export lumber, but that the difference is actually a brokerage rather than a premium. As to the effect of this differential, I was advised that, although 1,043,000,000 feet of lumber were authorized for export in 1945 and export licenses were granted for about 700,000,000 feet, the amount actually exported during the year amounted to only about 380,000,000 feet. The total production of lumber in the United States in 1945 was about 27,500,000,000 feet. This means that about one and one-half percent of the total production was exported last year, whereas in normal times, exports amount to about 6 percent.

Mr. Speaker, these facts and figures may be correct as to 1945 which was a war year. But this year, I am reliably informed, the monthly export percentage is far and above what it was last year and is increasing steadily. If so, something should be done about it or our reconversion building program will be stalled. The manufacturer is simply not going to sell his lumber on the home market when a higher price is allowed for it abroad. Either no export licenses should be granted for shipments abroad at a higher price than the domestic ceiling price, or the home markets should be subsidized to the extent of the difference.

I believe that Mr. Bowles, OPA Administrator, fully comprehends the disaster lurking behind this situation. His efforts are hamstrung to some extent, however, due to the fact that export quantities are allocated by the Civilian Production Administration and export licenses are issued by the State Department. I have requested the Civilian Production Administration to explore this field at once with a view to correcting existing inequities between domestic ceiling prices and prices allowed for foreign shipments of lumber. It is a serious situation and must be corrected if our own people are to receive a fair deal and the United States is to go ahead with reconversion.

Aged Entitled To Pension, Not a Dole

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. HAGEN. Mr. Speaker, during these flush days when the present administration is willing and anxious to loan billions of dollars to most any nation in the world, we are continuing to ignore the older people pioneers of our own country who are existing on as little as $15 and $20 a month pension.

A great many people who are entitled to old-age assistance will not even apply for it for two major reasons. First, our State and Federal Governments so grudgingly hand out a mere pittance, that it is obvious in many instances that pensions are in fact a dole and nothing more; and secondly, in some States, including Minnesota, the State has laws called homestead liens which require persons applying for old-age assistance to execute a lien upon their property and give it to the State and Federal Governments, with the view to wholly or partially diverting that property into the hands of the State and Federal Governments at the time of their death in payment for the "pension."

Following is an article which appeared in the October 6, 1945, issue of the Townsend National Weekly, relative to the homestead-lien laws, which will be of interest to my colleagues and to the readers of the CONGRESSIONAL RECORD:

SURVEY SHOWS THREE STATES RECENTLY REPEALED LIEN LAWS

WILLMAR, MINN.—An extensive survey on old-age assistance laws, with especial emphasis directed toward lien laws and homestead exemptions, has just been compiled by Charles Nelson, Seventh Congressional District chairman. It took 3 months to complete.

Nelson was prompted to launch his investigation by conditions existing in Minnesota, which legally require oldsters applying for age-aid to execute a lien upon their property while living, which lien, upon execution, will result in one-half of the property being diverted to the Federal Government.

Why, asks Nelson, shall Minnesota people, or people of any State, for that matter, be required to pay back money to the Federal Government, as long as 35 of the 48 States have no similar laws?

Three States, according to the report, have recently repealed their lien laws and canceled their back-pay accumulation of assistance. They are Florida, Kentucky, and Oregon. Arkansas proposed a lien law this year but it failed of passage.

There are 21 States where there is definite protection to home owners against execution by reason of debts and judgments. These States have no homestead lien laws, according to Nelson.

The following table shows how the States stand on lien laws, homestead exemption, and average old-age assistance payments according to Social Security Board figures.

The following table is the result of a letter which was addressed to each of the attorney generals of the 48 States, except Minnesota:

Homestead lien laws existing in the States in connection with old-age assistance, June 1945

State	Lien	No lien	Exemption	Age aid

Unless OPA Removes Ceilings on Louisiana Strawberries, Growers Will Suffer Tremendous Losses This Year

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I have written to Hon. Chester Bowles explaining the plight of the Louisiana strawberry farmers. If the OPA does not remove these ceilings on strawberries or increase the same, the growers of Louisiana will suffer a tremendous loss due to unfavorable weather conditions and the lateness of their crop. The following is my letter to Mr. Bowles:

DEAR MR. BOWLES: On January 23, 1946, the Honorable Harry D. Wilson, commissioner of agriculture of the State of Louisiana, wrote you requesting that price ceilings be removed on fresh strawberries.

I cannot too emphatically support Mr. Wilson's position and as the representative from the largest strawberry shipping district in the United States, I ask that you give this your immediate attention and that the ceiling be removed.

Unless the ceilings are removed, the growers of Louisiana will take a tremendous loss, as the crop this year appears to be the latest of record, and, if indications for this late crop continue with the unfavorable weather conditions thus far encountered, together with the greatly increased costs of the present crop, with the present ceilings in effect, these growers will suffer a tremendous loss.

Last season the crop was abnormally early, and for that reason they were able to show a small margin of profit, notwithstanding existing ceilings.

In contrast this year's season is abnormally late and the cost of production has increased more than twofold over last year.

The United States Department of Agriculture has stated and recommended that ceilings be removed on such perishables as strawberries. On several occasions your associates in OPA have stated that ceilings on strawberries were unworkable and that they suggested that they be removed.

If you wish price control to be continued for another year and you want to do the fair thing, I feel sure that immediately after giving this matter your earnest consideration you will go ahead and remove the ceilings on strawberries due to unusual and abnormal crop conditions as set forth above.

Sincerely yours,

JAMES H. MORRISON,
Member of Congress.

The following is a letter from the Honorable Harry D. Wilson, commissioner of agriculture of the State of Louisiana, which explains the plight of the Louisiana strawberry growers and how the present ceiling price will be disastrous if not changed:

LOUISIANA DEPARTMENT OF AGRICULTURE AND IMMIGRATION,
Baton Rouge, January 23, 1946.

Hon. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

DEAR MR. BOWLES: I am writing you in the interest of the Louisiana strawberry growers to protest the ceiling on strawberries for the following reasons:

Present indications are that the crop will be quite late. We experienced a drought during the fall months that prevented the setting of plants in the field to the latest date in the history of the berry industry. The drought was followed by excessive rains, with no relief at present, which has caused wet fields and the growers have been unable to work the plants which are now full of grass. In addition, this has prevented the top dressing and mulching of the plants which will add to the lateness of the crop.

My observation is that this has been, up to the present time, a very unsatisfactory season.

Another point I want to call your attention to is that the cost of labor has increased from 75 to 100 percent

I want to appeal to you to abolish the ceiling on strawberries this season. It is our understanding that the United States Department of Agriculture has recommended that the ceiling be abolished, and we sincerely hope we may have your cooperation by removing the ceiling on berries.

Thanking you for anything you may do for us in this most important matter, and with best wishes, I am

Sincerely yours,

HARRY D. WILSON,
Commissioner.

Collaboration Between Argentina and Nazi Germany

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a comprehensive story in the New York Times of February 13 by Harold B. Hinton, Washington correspondent, based on the now famous blue book of the State Department showing the existence of collaboration between Argentina and Nazi Germany during the war. Mr. Hinton's article sets forth clearly the complicity which existed between these two nations and shows the assistance and sympathy which Nazi Germany received from the Argentine leaders, against the best interests of the United States.

The article follows:

UNITED STATES REPORT FINDS ARGENTINA GUARDS SEEDS OF NAZISM—OTHER REPUBLICS GET DOCUMENT DETAILING AID TO GERMANY IN WAR AND UP TO PRESENT—FRANCO LINK BROUGHT OUT—TOTALITARIAN ECONOMIC SET-UP FIRMLY IMPLANTED IN BUENOS AIRES, STATEMENT HOLDS

(By Harold B. Hinton)

WASHINGTON, February 12.—Charges that the Argentine Government and its predecessors since Pearl Harbor not only gave active support to the German war effort, even after Argentina's declaration of war against Germany, but furthermore still gives refuge to powerful Nazi interests which may result in the resurgence of nazism in the world were filed today by the United States Government with 19 other republics of the Western Hemisphere.

The indictment took the form of a printed memorandum of 131 pages which had been prepared since 1943. Copies were handed to the chiefs of all Latin-American diplomatic missions here except that of Argentina with the request that they be formally handed to the foreign offices in each capital.

Little official comment was available, but the document's issue was obviously timed for its possible effect on the Argentine elections on February 24 and on the Inter-American Conference, to be held in Rio de Janeiro late in March to draw a pact of mutual assistance, to be implemented by the creation of a permanent military agency charged with the defense of the hemisphere.

"GRAVE COMPLICITY" CHARGED

Officials have publicly stated on several occasions that the United States will not sign such a pact along with Argentina. Today's memorandum reiterates that position, referring to the "grave complicity with Nazi Germany" charged to the regime in Buenos Aires and expressing doubt whether this regime "can merit the confidence and trust which is expressed in a treaty of mutual military assistance among the American Republics."

At this press conference today, Secretary of State James F. Byrnes said only that the United States had been scrupulously following a policy of nonintervention in its dealings with other American Republics and that it would not now assume to speak for the others in respect to their possible association with Argentina in a mutual-assistance treaty.

The memorandum contained much material that has been made public during the interchanges of oral and written communications between the two Governments in the last 3 years. It also included added documentation obtained not only from scrutiny of German papers seized since the end of hostilities but also from the interrogation of German diplomats and others.

TALKS BEGAN LAST OCTOBER

"In October 1945, when consultation concerning the Argentine situation was requested by the United States," the memorandum stated, "it had substantial reason to believe from the evidence then at its disposal that the present Argentine Government and many of its high officials were so seriously compromised in their relations with the enemy that trust and confidence could not be reposed in that Government.

"Now the Government of the United States possesses a wealth of incontrovertible evidence. This document, based on that evidence, speaks for itself. The Government of the United States looks forward to receiving from the other American Republics the benefit of their views in the premises."

The activities of the Argentine Government, from the Castillo regime through its various military successors to the present time, were pictured as a conspiracy on the part of a handful of totalitarian-minded persons against the Argentine people, the American Republics, the Allies, the United Nations and, finally, the peace of the world.

No American Republic, in the official view, could safety entrust any of its military secrets to the Argentine Government for reasons of security.

CURE IS SUGGESTED

"Such lack of trust will not be cured by decrees of administrative orders, by signature to charters or by adherence to final acts of conferences," the memorandum said. "It can be cured only when our brother people of Argentina are represented by a Government which inspires full faith and confidence at home and abroad."

It was charged that the rulers of Argentina, despite changes in personalities and jobs, had desired throughout the war the victory of the Axis Powers and had believed almost to the date of Germany's surrender that such a victory would result. Such a hope and belief was first expressed by Acting President Castillo in 1942 and lasted to the end, it was said.

On the extent of German influence in Argentina the report said:

In Argentina the Germans have constructed a complete duplicate of the economic structure for war which they had in Germany. They possess today in Argentina the economic organization—industrial, commercial and agricultural— which they need to provide a base for the reconstitution of German aggressive power during the period when the homeland is still occupied."

Among the specifications of "grave complicity" was included a long account of continuing efforts by the Argentine Government, with the assistance and active interest of the Franco government in Spain, to obtain arms from Germany.

Starting in 1942, negotiations continued undisturbed by the coup of June 1943, which put the Ramirez regime in power, until the arrest of Oscar Hellmuth in Trinidad in November 1943, when he was en route to Berlin, via Spain, to clinch the deal.

HIMMLER ACCUSED OF BUNGLING

The publicity surrounding Hellmuth's seizure caused the Argentine Government to disassociate itself with the affair and aroused considerable resentment in Berlin. Foreign Minister Joachim von Ribbentrop accused Heinrich Himmler of bungling and apparently convinced Hitler finally that Argentina would be more of a liability than an asset if she became an ally.

According to the evidence presented by the State Department, the various Argentine regimes wanted substantial military material, including tanks and antiaircraft equipment, for hostilities against other American countries, notably Brazil, in the event their hand was forced and they declared war on the side of Germany.

The memorandum presented a picture of ineffective, uncoordinated plotting to get the arms from Germany. One group, which included Gen. Domingo J. Martinez, then head of the Buenos Aires police; Ambassador Aunós, head of a Spanish economic delegation to Argentina, and Oscar Ibarra Garcia, Argentine Minister to Denmark, then in Buenos Aires on leave, was negotiating with Erich Otto Meynen, German Chargé d'Affaires.

Another group, which included President Ramirez, Colonel Gonzales, Major Filippi, the President's aide and son-in-law, and Major Bernard, personal aide to then War Minister Farrell, was dealing with Hans Harnisch, a key secret agent of the German intelligence service. Neither group apparently knew of the activities of the other for some time.

Encouraged by their German contacts, both groups went on to ask not only arms but also U-boat escorts for convoys between Argentina and Spain in an involved-barter scheme. Since Argentina was officially neutral, the Spanish Government was to import from Argentina articles critically needed by the German war machine, such as foodstuffs, diamonds, quinine, iodine, oils, mica, platinum, insulin, and vitamins for reexport to Germany.

The Spanish Government was to sell to the Argentine Government arms and war materials to be supplied from Germany. Deals of this character, the memorandum said, were continually under negotiation and failed not for a lack of effort in Argentine authorities but for a lack of interest by the Germans, added to Germany's increasing inability to spare arms for such a distant outpost as Argentina.

Col. Juan D. Peron, former Vice President and now the dictator as well as candidate for the Presidency of Argentina, was depicted as principally occupied in heading an organization of Nazi agents and native collaborators whose object was the formation of a Nazi bloc to be composed of Argentina, Chile, Bolivia, Paraguay, Uruguay, and possibly Brazil if the Integralistas under the leadership of Dr. Raimundo Padilha, who was then in hiding, could be assisted to overthrow the government of Getuleo Vargas.

BLAMED FOR BOLIVIAN COUP

About the only success given to the clique in the memorandum was the fomentation of the Bolivian revolution of December 1943, which it said was engineered by President Ramirez, War Minister Farrell, Colonel Peron, Paz Estenssoro, who is Bolivian finance minister, Gen. Angel Rodriguez, and a few others.

The German Embassy in Buenos Aires was kept currently informed of all these plots, according to the memorandum. Among the informants named was Alberto Uriburu, son of a former President of Argentina, who was then Argentine ambassador to Peru, and Foreign Minister Ruiz-Guinazu. The plan apparently lost German approval and financial support after the Bolivian revolution had aroused great hostile sentiment in Latin America.

Another chapter of the memorandum was devoted to the aid and protection given by Argentine authorities to Axis espionage. After Pearl Harbor, vigorous action by the authorities of the other American republics drove Nazi agents to seeking their only remaining refuge, Buenos Aires. There they came under the command of Johannes Siegfried Becker, German security chief for all South America.

All the ramifications of the Nazi intelligence and sabotage machine in the Western Hemisphere have not yet been uncovered, the memorandum said.

LOSSES BY ESPIONAGE ADMITTED

"What is known," it continued, "is that these Nazi forces carried on in the Americas an attack against the Allies as dangerous as a Nazi advance on the battlefields. Through them the Nazi war leaders received important information on the war effort of the American Republics needed to plan Nazi strategy; through them the Nazis were enabled to torpedo Allied ships and otherwise destroy Allied resources and manpower; through them the Nazis carried forward their objective of fostering disunity, discontent, and divisions among the peoples and the Governments of the American Republics, a strategy of first importance and value in the Nazi concept of total war."

When Colonel Farrell and Colonel Peron took over the government from President Ramirez they informed the German security service, according to the memorandum, that the rupture of diplomatic relations with Germany was to be viewed lightly, as it had been made merely because of pressure by the United States and that the new regime would continue to be pro-German, as its predecessor had been.

Quoting testimony of an unnamed "informed official of the German Foreign Office," the memorandum named Col. Filomeno Velazco, Buenos Aires, chief of police; and Gen. Armando Verdaguer as the officials who could be trusted to get Axis spies quickly out of jail on the rare occasions when they were arrested by mistake. This German informant said that the Buenos Aires jail was known in the foreign office circles as the Hotel Velazco.

DIPLOMATIC POUCH USED

Captain Ceballos and Colonel Santillana, Argentine naval and military attachés in Berlin, and Juan Carlos Goyeneche were said to be the principal agents through whom valuable information from Argentina was passed to the German authorities. The information was sent to them by diplomatic pouch to the Argentine Embassy in Madrid.

At the Argentine end of the pipe line the German Chargé d'Affaires listed among his valued and valuable friends Admiral Leon Scasso, inventor, of the Province of Cordoba; Dr. Carlos Ibarguren, president of the National Cultural Commission; Gen. Juan Bautista Molina, head of several nationalist organizations; Gen. Basilio B. Pertine, Mayor of Buenos Aires; Manuel Fresco, publisher; Dr. Justo Dergada Mujica, legal adviser to the German Embassy; Dr. Homero M. Guglielmini, secretary of the Cultural Commission; Dr. Gregorio Araoz Alfaro and a dozen or more lesser lights.

The memorandum dealt with the difficulties experienced by the United States and Britain in obtaining the expulsion from Argentina of known German agents, many of whom were interned. As lately as last month, none had been deported, although the Argentine Foreign Minister had assured the State Department that he hoped to repatriate 30 or 40 German nationals.

A number of Argentine newspapers were listed as having been subsidized by the German and Italian Embassies. They included the Cabildo, Choque, Clarinda, Crisol, Cruz del Sud, Epoca, Fronda, Hechos, Mediodia, Momento Argentino, Neuvo Orden, Pampero, Restaurado, Pueblo and Tribuna.

Turning to the present situation, the memorandum charged the Argentine Government

with protecting German economic interests in its country, adding that the sequestration of German firms and assets folowing the Argentine declaration of war had served as a shelter for them.

Argentine military expenditures, the memorandum said, reached a total of 1,428,000,000 pesos (about $356,000,000) in 1945, a sum described as 105 percent of the nation's ordinary total revenue.

The Hall Plan To Feed the World's Starving Now

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. EDWIN ARTHUR HALL. Mr. Speaker, last week I expressed emphatic opposition to the administration's plan of feeding starving Europe because I felt it to be too late and therefore ineffective in saving hungry millions.

Since it is not fair to criticize one proposal without offering a better one, I submit the following suggestion for what it is worth.

It is my understanding that the President under his war powers is drafting an order to mill the darker flour. There is, of course, nothing anybody can do to prevent such an order.

Realizing the inevitability, then, of the use of dark flour as the result of President's Truman's action, I foresee a way of feeding Europe's starving without taking away any of the normal bread supply from the United States.

A prominent official in the Department of Agriculture told me that experiments are now being made which show that 100 pounds of wheat will produce about 10 percent more flour under the latest Presidential decree than formerly. This being true, the same amount of wheat can be milled into more flour, thereby creating a surplus large enough to bake into bread for starving Europeans.

I quote from a letter written me by a GI:

> I was in Rheims, which is the champagne center of the world, and grain is needed for champagne. The conditions were so bad when the Germans left, the French left their farms and celebrated in the villages and let their grain go to waste and ruin from lack of men to harvest.
>
> I have seen thousands of German prisoners of war in the fields harvesting this grain for the French Government with American GI's as their guards.

Will grain sent by the United States to Europe be used for making champagne? The President will not permit grain to be made into liquor in this country, but how can he prevent such a thing happening in France?

If we follow the plan of the present administration to ship grain to Europe that is needed in America, we will fail to save the starving millions over there and in addition deprive our own people of their basic diet.

It is stupid to believe that Europe can make bread out of raw grain in her present crippled condition. Scarcely a mill or bakery, for that matter, remains standing after the bombings sustained during the recent war.

If those who clamor the loudest to denude our granaries are sincere in their desire to see Europe fed and fed immediately, I invite them to consider the plan which I herewith submit.

It will take time for starving nations to change raw wheat to flour. Even if they are sent flour, all they can make is paste because there are no facilities to bake bread in any amount. Millions of people are wandering over Europe without even an oven to say nothing of a home and dying by the roadside. Young orphaned children roam and grope among the garbage dumps. How can they bake bread for themselves?

What starving Europe must have is bread, baked in American ovens and flown directly to the scene of hunger. We have the ovens and we have the planes to carry the bread to the hungry.

Let us keep our grain to mill into flour to make the bread which must be sent now in order to save our allies and our former enemies from starvation.

I am willing, my six children are willing, the country is willing, to share our food if it will save those lives. But the bread must be sent now. A month from now, or 3 months from now, will be too late.

Our planes can fly the bread and this will make it available to the starving within a few hours. I repeat, it is stupid to think we can save Europe by the plan of shipping millions of bushels of grain that will rot on some far-off shore because it cannot be used, just as the prefabricated houses which the United States shipped to England are doing now when we are needing them so badly here in our own housing crisis, as I am told by another GI.

Let those sincerely interested in solving this awful problem follow the plan I now offer and really bring salvation to the countless unhappy peoples throughout the western world.

I am hereby introducing the following resolution which I hope will be adopted and its provisions carried through by the President of the United States:

Whereas shipments of grain to Europe will not meet the immediate and pressing demands of feeding millions of starving men, women, and children due to utter lack of facilities in European countries for handling grain; and

Whereas thousands of ovens in the United States are available for and capable of turning surplus flour into millions of loaves of bread immediately; and

Whereas there exists ample cargo space in transocean air carriers to send enough bread to feed starving areas in Europe and Asia: Therefore be it

Resolved, That Congress request the President of the United States, through the War Powers Act, to direct that an adequate supply of bread be flown immediately to nations now suffering from acute lack of food.

Exportation of Critical Building Material

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. McDONOUGH. Mr. Speaker, with reference to the exportation of lumber may I say that I have received a copy of the same letter from the State Department that the gentleman from Michigan received, and I am at a loss to know what kind of lumber cannot be used for the construction of homes that they state in their letter is being exported. I do not think it is possible that lumber, any kind of lumber, cannot be machined to be used for home construction.

Mr. Speaker, I received a telegram from the Governor of California who states that he definitely protests the exportation of lumber and that he is about to sign a $1,000,000 bond issue for the building of homes for veterans in California. The OPA is proposing to ship lumber from the Northwest—Washington and Oregon—to the east coast at a premium of $2.50 in order to send coastwise vessels back there with a load, leaving California without sufficient lumber to build needed homes for returning veterans and civilians who are living in chicken coops, auto trailers, and every conceivable type of structure, waiting for permanent homes. I think the exportation of lumber should be stopped. We need homes here too badly.

The telegram I received from the Governor of California follows:

SACRAMENTO, CALIF., *February 12, 1946.*

Hon. GORDON L. McDONOUGH,
Washington, D. C.:

Since VE-day differentials in favor of export trade in lumber have siphoned off at least hundreds of millions of board feet of lumber urgently needed in this country, and particularly in our State, for home building In spite of our protests, I am informed that Federal Government is increasing quota of exportable lumber. I have also been advised that the OPA is considering a differential on water-shipped Douglas fir, which will have the result of siphoning off the remainder of our western lumber. This is unfair to the Western States, and particularly California, which has absorbed a new population of 2,000,000 people during the war, with very little new housing, and which has recently received over 600,000 veterans who are in distress for lack of housing. I am signing a bill submitting $1,000,000 bond issue for veterans' homes and farms, but such legislation is of little value if there is no lumber for home building. This telegram is being sent to California congressional delegation in the hope some action can be taken to make our western lumber available on fair terms to the people of the Western States.

EARL WARREN, *Governor.*

Surplus Building Materials

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. ANDERSON of California. Mr. Speaker, on December 12, 1945, I addressed a letter to President Truman calling attention to the extent to which surplus materials were being frozen or hoarded by various Federal agencies. Not having received a reply after a month of waiting, I decided to communicate with Wilson Wyatt, the new housing expediter, calling his attention to my letter to the President.

Mr. Wyatt's reply to my communication has just been received and I wish to call it to the attention of the Congress and the country. It is gratifying to learn that the Army and Navy have now taken positive steps to place into normal construction channels any surplus materials not immediately required by them. If the Government will put these materials in the hands of our building constructors and stop excessive shipments of building materials abroad we will have gone a long way toward solving some of our immediate housing problems.

The exchange of correspondence follows:

JANUARY 21, 1946.

Mr. WILSON WYATT,
Housing Expediter,
Washington Building,
Washington, D. C.

DEAR MR. WYATT: I am enclosing herewith a copy of my communication to the President in connection with the critical housing problem which confronts the country today.

I have not yet received a reply from President Truman but I am convinced that if he will take the action indicated in the enclosure a great many critical items can be released for the construction of much needed homes

I would appreciate having your views on the subject.

With every good wish, I am,
Sincerely yours,

JACK Z. ANDERSON.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 12, 1945.

The PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I am becoming more and more concerned over the increasingly serious housing shortage which exists throughout the entire country. Nowhere is this critical situation more apparent than in the congested areas of California. Something must be done at once to relieve the problem or literally hundreds of thousands of American families are going to be without homes. This, of course, will include a large number of returning veterans who have been married during the war or who are contemplating marriage when released from the service.

It is now conservatively estimated that approximately 3,000,000 veterans and their families will be without homes by the end of 1946, unless there is an enormous increase in the rate of construction of new homes. Private building contractors are ready and willing to assist in the immediate construction of private dwellings and apartments, but the acute shortage of lumber and other building materials has slowed their efforts to a standstill in many sections of the country.

In this connection I continue to hear rumors and to receive numerous communications to the effect that the Army, Navy, and other Government agencies are hoarding lumber, plumbing supplies, roofing, and many other critical building materials that are in short supply. I have made numerous inquiries in an effort to obtain the facts about the matter, but so far have received little in the way of information.

The National Housing Administrator in reply to one of my recent inquiries said in part: "This Agency is actively working on the problem of trying to stimulate production of building materials which are in short supply and trying to secure release of surplus materials held by other Federal agencies." This would seem to indicate that Mr. Blandford is aware of the fact that some agencies are indeed holding fast to surplus materials that are badly needed in the housing field. He does not, however, indicate how much of this material might be made available in the immediate future.

I am personally of the opinion that through your high office the facts can be obtained. In this connection may I call your attention to an incident that occurred last March, when a special subcommittee of the House Naval Affairs Committee visited the Hawaiian Islands in an effort to assist in solving a critical housing shortage which existed there at that time. Here, too, the building industry was confronted with a shortage of lumber and materials, plus the bottleneck of approximately 2,400 miles of transportation by water and not enough cargo ships to go around.

Soon after our subcommittee arrived we were advised by the ranking Army and Navy officials in the area that there was no lumber or other materials available in Army and Navy stock piles for the construction of badly needed dwelling units for civilian workers and other island residents. However, visual inspections by members of the committee, plus testimony by various witnesses, indicated otherwise. At the repeated and urgent insistence of the committee the Army and Navy finally agreed to resurvey their stock piles, and before we left Hawaii for the return trip to the mainland the two services advised us that they would be able to release approximately 4,000,000 board feet of lumber for the construction of badly needed housing units.

Mr. President, I am firmly convinced that a similar survey at this time, and by your direction, would disclose a vast quantity of surplus stocks that could be made immediately available to the home-building industry throughout the United States. May I respectfully request that you use your good offices to expedite this necessary and desirable action at an early date?

Thanking you for past courtesies and with my very best wishes to you and your family for a happy holiday season, I am,

Sincerely yours,

JACK Z. ANDERSON,
Member of Congress.

The Honorable JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

MY DEAR MR. ANDERSON: Thank you for your letter of January 21 and for giving me an opportunity to review the communication you addressed to the President concerning the hoarding of lumber and other building materials by the Army and Navy and other Government agencies.

Both the Army and the Navy have now taken positive steps to place into normal construction channels any materials they have which are not immediately required by them. They have also issued orders restricting their construction activities to that which is essential to maintenance, health, and the preservation of life. They are permitting the sales to builders and contractors of materials and supplies to the value of $300, whether surplus to their needs or not, when such materials and supplies are needed to complete the construction of new homes and are not obtainable from commercial sources. They have established minimum inventory requirements at their various facilities, and materials in excess thereof are declared surplus. In cooperation with the Reconstruction Finance Corporation, they have arranged for on-site sale of such surpluses.

In the sale of surplus materials referred to, 30 percent is offered for preferential sale to the Federal Government and its agencies, States, and local governments and their agencies for a period of 10 days. Thereafter, any part not sold reverts to the stock pile. Seventy percent of the surplus materials, and any unsold materials originally offered for preferential sale, are sold to the holders of HH priorities or to dealers who will hold the materials for sale to the holders of HH priorities. For your information, the HH priority is designed to give assistance to builders and others who wish to construct homes for sale or rent within established ceilings to veterans of World War II.

We realize that housing conditions in urban centers in California are particularly acute and we wil keep this in mind as our program to meet the present emergency develops. The passage of the amendment to title V of the Lanham Act, making it possible for the National Housing Agency to utilize existing public temporary housing for veterans, and the issuance of Civilian Production Administration Priorities Regulation 33 can be considered as preliminary steps in our program. We feel, however, that additional measures and possibly drastic measures must be taken immediately in order to avoid a national housing crisis in the months immediately ahead.

If you desire additional information or have suggestions or recommendations, I hope you will feel free to write me.

Sincerely,

WILSON WYATT,
Housing Expediter.

School Lunches and Child Care Centers

EXTENSION OF REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, to women a vitally important bill is the Flannagan school-lunch program, which would also assist in nonprofit child-care centers. This measure would provide for grants-in-aid to the States, with the States at first matching Federal funds and then gradually increasing their share up to 80 percent. The program would aid children whom the local school boards find unable to pay for their lunches. It would also provide for nutrition education and supply a ready way of disposing of farm surpluses. Selective-service experience tells us that 70 percent of our boys who were ill fed, grew up physically unfit. Surveys have

also shown how school attendance and good work are closely related to adequate meals. This bill concerns our most precious resource, the youth of America. It would supplant the present temporary program based on agricultural surpluses which today is serving some 557,300 Illinois children at some 1,742 schools, and 8,223,900 at some 47,635 schools in the United States. Letters and telegrams are coming to me from all over Illinois in regard to this measure. One petition from the Illinois Parents Council for Nursery Schools, Inc., has 7,000 names, in behalf of the child-center section.

OPA Should Be Extended

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. COFFEE. Mr. Speaker, pending in Congress are legislative proposals for the continuation of the Office of Price Administration for a period from 6 months to 1 year after the end of the fiscal year 1946. At the head of this organization is a remarkable character, Chester Bowles. Though a businessman himself—and a successful one—though his political and social interests throughout his life have been with management and with the operators of businesses, large and small, Chester Bowles has managed to look at the whole Nation objectively and to see the side of the consumer as well as the producer. He has stood like a rock against enormous pressures for lifting price ceilings. True, some of his subordinates have at times made errors and have been obstinate and occasionally unreasonable in their decisions, but on the whole the OPA has been a very effective instrument with which to combat inflation and by which to protect all Americans from the disastrous rise in the cost of living.

Whatever weaknesses have developed have been due to the fact that the conservatives in Congress have refused to provide the OPA with sufficient inspectors and operative appropriations to enable them to do the job as efficiently as they would like.

In the Seattle Daily Star appeared recently an editorial which sums up the situation accurately. Here it is:

OPA'S LIFE EXTENSION SHOULD BE GRANTED NOW

The Government's power to control prices should be extended beyond June 30, the present date of expiration.

Legislation extending this power should be enacted soon, as recommended by President Truman. If Congress waits until just before the expiration date to act, many holders of scarce goods will have "jumped the gun" and raised prices. Black markets may develop on such a scale that they never can be controlled thereafter. Moreover, continuing uncertainty as to whether price control powers will be extended undoubtedly will have the effect of encouraging goods to be withheld from the market, in the hope that better prices can be obtained later.

In seeking the extension of price control powers, the administration should make it plain that these powers will be used realistically and fairly.

It is plain that wages are going up, throughout industry. They should go up, certainly to the extent of compensating workers for increases in living costs. And in this connection the matter of take-home pay becomes a big factor. The worker who was able to keep ahead of rising living costs through his overtime earnings, and perhaps because other members of the family also had war-time jobs, is plainly in a different position when he operates on a 40-hour week basis, with no time and one-half, and when he is the only breadwinner in the family.

Granting that wages are going up, they cannot go up indefinitely and allow industry to operate profitably if no leeway for price increases is permitted. Industry simply will not operate, under a profit and loss system, unless there is at least the hope of profit. And this country's best hope of checking inflation is to get full scale production, as soon as possible, from all branches of industry.

This doesn't mean that all prices should be raised to buy the cooperation of industry by offering extortionate profits.

On the contrary, increased production, in all branches of industry, probably will permit many, if not most industries, to operate profitably on present prices. Every manufacturer has a "break-even" point for a given level of wages. If he produces less than a certain number of automobiles or brooms or washing machines he loses money. If he produces more he begins to make a profit.

Of course, if the wage level is raised, so is the "break-even" point. More volume is required to keep the industry out of the red.

While our national economy is going through this transition period some agency of government must be in a position to determine what price increases are justifiable and which are not, whenever such proposals affect the necessities of life or seriously affect the general economy.

That is the function of the Office of Price Administration. Many will say Chester Bowles, the present Administrator, has done a difficult job as well as anyone could do it. Many others voice specific criticisms, and a considerable number want OPA done away with, lock, stock, and barrel.

In our judgment, these outright opponents of OPA are wrong. We believe OPA should be continued. We believe it should operate flexibly, because it is obvious that a high degree of flexibility is necessary when wage levels are being changed as they are. But to abolish OPA at present, or even to create serious doubts as to its operations beyond June 30, would be to invite economic anarchy.

Founders Day 1946 Resolutions

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. STEFAN. Mr. Speaker, by leave granted me, I include in my remarks resolutions unanimously adopted at the annual Founders Day celebration held at Lincoln, Nebr., February 12, 1946:

Whereas we are again assembled to celebrate the anniversary of Nebraska's statehood on the anniversary of the birth of that most distinguished American who was the first Republican President of these United States, Abraham Lincoln, for the annual meeting of Republicans on Founders Day; and

Whereas we are proud of our pioneers and of the development of our State in resources, governmental programs and the well being of this great State, and are proud of that great American, Abraham Lincoln, who as a President was matched only in ability, patriotism, and sound Americanism by the great Washington; and

Whereas the Republican Party throughout the history of this State has at all times led in progressive action for the welfare of all classes of our citizens and for the advancement of good government; and

Whereas the second or Truman edition of the so-called New Deal has by pursuing and pressing fundamentally unsound economic and political philosophies, stimulated strikes, encouraged irresponsible labor leadership from communistic ranks, pressed for legislation that encourages loafing, chiseling and dependence on Government hand-outs, blown up the Nation's debt balloon until it is about to burst, applied price controls under the false guise of assisting the war effort in a manner that cuts production rather than increasing it, and has permitted and abetted the issuance of orders by a small group of collectivist so-called labor leaders resulting in the paralysis of our great Nation so that communism may sweep the Nation and throw into the discard all those virtues and industry that made this Nation the greatest that history has ever known: Now, therefore, be it

Resolved, That this meeting does congratulate all the Republican governors of the United States and the other officials of this State upon their contribution to the development of a prosperous and progressive government and people and that this meeting pledges the Republican Party to continue its leadership in keeping Nebraska in the forefront of all the States of the Union.

We hereby acknowledge our indebtedness to Governor Baldwin and Congresswoman BOLTON for coming to Nebraska to assist in making this meeting a success. We know they have done so at considerable sacrifice of their time and energy, and we express our recognition of our great debt to them for this effort on their part.

We deeply appreciate the presence of Gov. Dwight Griswold and the other State officers at this meeting. The progress of our State and its preeminence both in wartime activities and those of peace under the leadership of Governor Griswold, and the sane and economic administration of our State government is a source of pride and satisfaction and lends hope to all of us for the future.

We are proud of our Senators and Congressmen from Nebraska and have watched with satisfaction their efforts to further everything designed to successfully prosecute the war and to win the peace, and to preserve our constitutional Republic at all times. We are happy that Senator HUGH BUTLER and Congressmen STEFAN, CURTIS, and MILLER have honored us with their presence at this meeting and regret that Senator WHERRY and Congressman BUFFETT were forced by pressure of their official duties to be absent. We know they would be present were such a thing possible: Be it further

Resolved, That this meeting stresses the necessity for a return to our constitutional form of government as a republic, and we denounce the attempt by the present national administration to destroy the Republic and substitute a vile form of staism or communism no matter under what pretext as among the gravest of crimes.

Under the Constitution which exists until changed in a lawful manner the Congress is the policy-making agency of the American people. American government is based on the principle that the people shall be subject to only such laws as they have assented to through their chosen representatives, the Congress. We demand that Congress enact the laws and that the Executive honestly

administer such laws only as the Congress after open debate shall enact.

The consent of the governed must exist if we are to remain a free people. When policies and restraints which have the effect of law are determined and imposed by administrative agencies which do not come from the people on a free ballot, then government assumes authority without the consent of the governed and we are no longer a free nation.

Our Constitution requires the consent of the United States Senate to all treaties with foreign nations, and we denounce any and all agreements by the present or any other Chief Executive which attempt to subvert that rule and bind the people without the consent of their chosen representatives, the United States Senate.

Our Constitution is based on a dual system of government, with the Federal Government supreme within its sphere and the States supreme in their sphere, and as the present administration and the one which preceded it are attempting to destroy the States for the purpose of imposing a communistic dictatorship on the people, we declare that the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend.

We welcome home the veterans of this late war. We demand that the administration return our citizen Army and Navy to their homes as soon as possible, and we denounce the maintenance of a wartime Army since hostilities have ended. The boys must come home, and we welcome them in the Republican Party as being truly representative of the principles for which they fought and for which so much blood and treasure has been expended. We demand for them the opportunity of a free America.

We demand a square deal for the American people. The late move of the President to seriously harm the farmer who is the one who feeds us all for the benefit of the people of some other lands must be prevented. We do not want to deprive anyone of the necessities of life, but we demand that the President recognize the right of Americans to live, and he must not be permitted to destroy the American farmer, no matter by what means he attempts to do so. We recognize that the American farmer is a strong bulwark against attempts to communize America, and we pledge ourselves as Republicans to do everything possible to prevent the President from liquidating the American farmer.

A Republican majority in Congress after the election this fall can do much to thwart the attempt of this administration to foist a combination of communism and Pendergastism upon the United States. It must be done.

We thank our president, Earl Moyer, and our vice president, Mrs. Ruth Thornton, our junior president, James Anderson, our junior vice president, Mrs. Maxine Fiss, and all the officers of Founders Day for their long hours of effort spent in producing this splendid meeting. We congratulate them on their success.

We thank the Nebraska newspapers, the radio stations and the press associations in making known the program of this occasion and the high ability and reputation of our honored guests from other States. A free press and a free radio service are vital to a free people. We should be ever alert to defeat attempts to throttle that freedom, regardless of the guise in which it is offered.

We thank the management of the Cornhusker Hotel for the efficient supervision and courteous service that has contributed so much to make our meeting successful.

Many others too numerous to mention have contributed to the vast amount of planning and carrying out of details so necessary to a meeting of this kind. We wish to make due acknowledgment to them of our appreciation.

Respectfully submitted.

HERBERT T. WHITE,
Chairman.
ZELMA DERBY.
LADD J. HUBKA.
E. D. BEECH.
MERRILL KARNAPP.
JOHN R. DUDGEON.

Letter of Capt. George S. Wuchinich

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ARMY SERVICE FORCES,
REGIONAL STATION HOSPITAL,
Fort Belvoir, Va.

ALBERT KAUFMANN,
Burgess, Borough of Brentwood,
Pittsburgh, Pa.

DEAR SIR: I am writing you as burgess of my home town in Pennsylvania to ask you to use your good offices in requesting our serviceman Congressman JIM FULTON to put this letter in the CONGRESSIONAL RECORD for me so that my views and experiences may be brought to the attention of our elected Representatives and get a wide circulation.

I am a paratrooper now receiving hospital treatment pending my discharge from the Army. Since 1942 I have been attached to the Office of Strategic Services and have served nearly 26 months overseas—19 in Europe and 7 in the Pacific. Those in Europe were in the Balkans, and in the Pacific in both north and south China. For my work in Europe I was awarded the DSC by General McNarney, now American commander in Europe.

In Europe I jumped behind enemy lines in northern Yugoslavia in November 1943, 8 months before D-day, and served that whole time until the end of July 1944 working with Tito's Partisans in Slovenia. In November 1944 I returned to America for a month's leave and volunteered to fight in China. In North China I served with both the Nationalists and Communists during the period from July to October 1945. In fact, I am the only American officer in the world who has been with both the Yugoslav Partisans and Chinese Communists. This is a unique privilege of having had close personal contact with two big people's movements that fought so well against the common enemy in World War II.

When I left Europe I was convinced of the solidarity of the Yugoslav people in their desire for democracy, and this view of mine has further been confirmed that the people of China have the same feeling and goal.

While I lay here on a hospital bed trying to get well the thought of what took place in China and what has been printed in our press, especially the statements of General Hurley, is a bit hard for me to understand. It is true that I have not seen the whole of China, yet I have been both in the north and south, and have seen both sides. I can truthfully say that if I had seen only the Nationalist side I would have left China a pessimist and without hope of China's people ever advancing toward democracy. I am an optimist and know that there is the yeast in the Chinese people that will bring out those things we take for granted in our own country—a democracy built around the direct and secret ballot, bill of rights, woman suffrage, a decent livelihood for the average Chinese, and the right of the people through their own elected representatives to determine the kind of laws they shall have and live under.

In South China, at Kunming, where I stayed during June 1945, I saw no regard for the Chinese peasant by the government. It was a province under the Nationalist flag and is called Yunnan. Taxation was set by landlords without process by law, inflation was rising—in 3 weeks the Chinese dollar went from 1,200 to 3,200 for one American dollar. I saw beggary and misery side by side with wealthy Chinese riding in big American Buick limousines, model 41. Elections were unknown, and schools in the small villages were very rare. And China is 95 percent small villages. This province lived by the old feudal principle of a big shot living in Kunming as governor, and drawing his rake-off from the whole province of Yunnan. He maintained a private army, which was nominally on the Nationalist side, and the recruits for this army were peasants who were impressed. Those who could bribe their way out were only the wealthy and merchant-landlord class. The poor guy had to take it in an army in which the officer could flog and beat the soldier if he (officer) so wished.

I was glad to go north on my assignment, because I had the hope that maybe I would find different Chinese generals, officials, government, and a bit of real fighting against the Jap. My mission was to get behind Jap lines in Shansi Province and this I did on August 8, 1945, where I served with a Nationalist general by the name of Marshal Yen. It was no different behind enemy lines with Marshal Yen. He followed the same pattern of not caring for his people. The same lack of schools, hospitals, and general social care was evident. He, too, did not hold elections. He appointed himself 32 years ago as the war lord, and if anybody did not pay taxes he simply used the famous feudal measure of flogging. He set the taxes, had a private army and everybody paid. Yen maintains a feudal province, and he was supposed to be our ally; yet I lived only 3 miles from Jap garrisons and never heard a rifle shot. In fact, he placed us in a beautiful Chinese home and did his best to wine, dine, and entertain us.

I had hoped that there would be a feeling of resistance against the Japs, and what I found was collaboration of Yen with the Jap. He had no intention of fighting and when we tried to go farther north to find out just what he was doing he very nicely arranged a trap for us which might have resulted in our death. At a place 5 miles east of Fenyang, a big city in Shansi Province, he, through one of his generals who was our guide, led us into a crossfire between the Jap puppets and the Communists.

However, the best of betrayal plans go awry and instead of the Communists killing us in the crossfire, which is what Yen hoped, we were in reality rescued by them. The Communists won the battle, which was all around us, and, in driving off the Jap puppets, came across us. The Communists, who were guerrillas, were at first suspicious, then quickly became friends and at night led us past Jap garrisons still holding Chinese towns. For 3 days and nights we marched swiftly to their headquarters and from there we marched for 6 weeks in north China for a distance of over 600 miles.

We saw a different spirit for the first time in China. The people liked their army, and when we heard this we could hardly believe it. They simply said, "It is a good army because it keeps the Japs away who have only three purposes—to kill, to burn, and to loot." Nowhere in China had we heard a Chinese civilian say an army was any good. We saw children learning to read and write, and doing their homework on the soot-blackened sides

of their cave homes. We saw hospitals, farmers' clinics, newspaper plants, libraries, cooperatives, and a general healthy being of a people united in a common purpose of driving out the invader and raising their own standard of living. At night we heard rifle shots, machine-gun fire, and mortar explosions. It was like Yugoslavia all over again. Here was a land and a people really at war with an enemy all Americans have hated since Pearl Harbor.

People were better dressed, better fed, and we saw no beggars—not a one. As allies, we were welcomed in every village, and many old slogans on the walls plainly said, "Long live the victories of the allies of the Chinese people—England, America, and Russia." Nowhere else in Nationalist China had we seen any slogans praising the west. We saw no slogans attacking the Gissimo; instead, they all called for unity and a coalition government for China. We saw and talked to men who had been farmers, small businessmen, teachers, students, workers, and others who came from low social levels and who now were in command. They were all elected, and old women, farmers, muleteers, soldiers, etc., explained to me that they held elections; all could vote who were 18 and older, except criminals, idiots, and those collaborating with the enemy. We visited small village schools with less than 20 pupils in a town of 100 persons, and from these went to universities such as the one at Yenan, which has several thousand students. We visited the art school and medical school at Yenan University and saw activity similar to that in our own schools, except that the facilities were much poorer.

The Nationalists have blockaded them for years so that nothing comes in. The doctors told me that one of the things done was the blockade on medical supplies and surgical tools being maintained at Chungking by the Nationalists. Thousands of Chinese people have died because of lack of these, and they are bitter about this inhuman practice of Chungking. Despite this, north China wants a coalition government. They do not want one to dominate it. They ask that the Gissimo only broaden the base. There are liberals in Chungking who are afraid to speak out because of the Nationalist secret-service head, Dai Li, who had stifled all free speech. The Communists are willing to include their armies in a Nationalist force if the Nationalists will allow free elections and give an opportunity to all of China to vote freely. Plainly put, the word "Communists" is fooling a lot of us. Hitler tried scaring us, and in the end we had to fight him.

My judgment is based only on what I saw and if America continues to support the Nationalists in their present drive toward a one-party system and dictatorship we shall be guilty of putting up on one side of the world what we help destroy on the other.

It is my opinion that our marines and other armed forces be drawn out at once, and that any economic help we give China be based only on the understanding that a real broad political government be formed including all parties and all sections of the Chinese people.

Very truly yours,

GEORGE S. WUCHINICH,
Captain, Army of the United States.

Conditions in Europe and the Middle East

REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. FEIGHAN. Mr. Speaker, on last October 15 the Wickersham committee, of which I was privileged to be a member, issued a report on its investigation in Europe and the Middle East.

In that report we called attention to the painful plight of millions of the European victims of war. We noted especially the need for proper succor in the following words:

Cold, hungry, starving, sick, and dying people in Europe are easy victims for dictators. This widespread condition and the need of transportation, coal, food, clothing, medicine, and shelter increases as the supply diminishes. It will be necessary for us to exert every effort to prevent delay in fulfilling at least a portion of their needs; otherwise, a revolution may ride in the wake of want. Even then, we were told that countless thousands upon thousands would die of hunger, exposure, and lack of proper aid. Peace cannot be built on misery or despair. We fought a terrible war. But it will not have been fully won until the people can secure bread, work, food, shelter, medical aid, clothing, and stability.

Today, exactly 4 months from the issuance of this warning, we find that our direst predictions are being fulfilled.

Reports multiply that millions of Europeans are starving, and it must be confessed that we have not followed up the recommendations of the Wickersham committee when it said, "It will be necessary for us to exert every effort to prevent delay in fulfilling at least a portion of their needs."

Even now, however, it is not too late. We must triple our efforts to lend instant aid to these millions of our fellow men.

Recently there came to my attention an appeal by the Save Europe Now Committee, of South Bend, Ind., which clearly indicates the need for action and the steps which must be taken.

In the belief that these suggestions will go far toward alleviating the present horrible conditions in Europe, I wish to include in my remarks the statement issued by this committee, as follows:

The dire conditions in Europe call for immediate action. To delay means misery, suffering, and death for hundreds of thousands of innocent victims in war-devastated Europe. It is our duty and right to exercise humanity and charity toward all, whatever their religion and nationality and war status.

The Save Europe Now Committee, composed of Americans of all faiths and creeds, offers a program in the interests of peace and human reconstruction, a program recommended in whole or in part by the Catholic bishops, the Federal Council of Churches, the Central Conference of American Rabbis, the American Friends Service Committee, and the 34 Senators who have signed a petition to President Truman. This program stresses:

1. An urgent appeal to Congress to authorize a humanity loan necessary to do the job of relief and rehabilitation in a way worthy of Americans.

2. It is also imperative that the Government mobilize with all speed food and transport so as to raise the minimum diet in all countries, including Italy, Germany, Austria, and Hungary, to 2,000 calories a day, and in the liberated countries to 2,600 a day.

3. In addition to UNRRA, which should be fully supported, private relief agencies such as the Red Cross and American Friends and other religious groups should be given the fullest freedom of operation.

4. The mails to Austria and Germany should be opened at once, so that private persons can send food, medicine, and clothing.

These are some of the facts:

1. The infant mortality rate in parts of Germany is estimated at 90 percent, and the death rate in Berlin is said to be 4,000 a day, and in a year and a half the population will have perished.

2. No private persons or agencies are allowed to furnish relief of any kind in certain ex-enemy countries, where it is needed most; and we hold as a principle that a government has not the right to forbid persons or groups to exercise charity.

3. UNRRA at the present time provides no food for the following ex-enemy countries: Bulgaria, Germany, Hungary, and Rumania.

4. The United States is supposed to furnish 1,550 calories a day per person in its zone of Germany; but the Colmer committee of the House of Representatives said that the official ration "now runs as low as 800 to 1,300 calories a day." Even a diet of 1,550 calories, if continued, means certain death, since it amounts to less than two-thirds of a normal diet.

5. Over 7,000,000 are homeless as a result of air bombing and 20,000,000 are now driven back and forth, presumably to build new frontiers, but in fact to freeze and starve.

6. Human Events reports (December 19, 1945) that the yet secret directive for the deindustrialization of Germany sets a permanent ceiling for the German standard of living: The diet would never rise above 2,600 calories and industry would never rise above the depression level of 1932; and no allowance is made for rebuilding cities or rehousing or any reconstruction.

Of course, to save the starving is but a temporary measure. What is more important is a positive and constructive policy. We want reconstruction that moves toward hope and peace, and an economic and industrial policy that can take care of itself. It is contrary to religion and to any constructive rehabilitation program to attempt to punish humanity with deportations by the millions and a semistarvation diet. Vengeance can do no good to anyone. For the good of Europe and the good of the world, we must find ways of reconstructing Europe and of safeguarding military security without breaking down the economic and spiritual life of the people. The sooner we learn that a reconstructed Europe is our problem, the better. We cannot afford to dismantle industry, particularly nonmilitary industry, or destroy the economy of any nation. Such a procedure must inevitably lead to misery, starvation, and unrest, and revolution.

The Save Europe Now Committee calls for a long-range objective of reconstruction in industry and agriculture for all peoples.

Employees and Employers Pay for Reuther's Fiddling

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. HOFFMAN. Mr. Speaker, the following letter and statement show how innocent employees and employers, who want no part in strikes, get drawn in—employees deprived of their wages; employers of a profit:

EVANS PRODUCTS CO.,
Detroit, February 9, 1946.

Hon. CLARE E. HOFFMAN,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN HOFFMAN: I address this letter to you not only in my capacity as president of Evans Products Co., Detroit, but

as national chairman of the Nonbasic Steel Coordinating Committee.

Copy of a news release which will shortly be distributed on a Nation-wide basis is inclosed herewith together with a copy of my letter written about 2 weeks ago to Mr. John W. Snyder, Reconversion Director, at his request, following a conference in his offices in Washington.

Since you may not be apprised of the facts in connection with these some 700 miscellaneous companies who are involved in the so-called steel strike, I think this information should be helpful to you in giving a true picture of what is happening to these small business enterprises who have been drawn into this strike not only in the State of Michigan but throughout the Nation and from coast to coast.

As pointed out in the news release attached, these companies have never been given an opportunity to be represented nor heard in the deliberations in the steel case. The only consideration that seems to have been given has been to the manufacturers of basic steel and Philip Murray, head of the CIO United Steelworkers Union. This despite the fact that when the union called the strike of its steelworkers it included not only the basic steel-producing companies but the miscellaneous nonbasic companies who held contracts with the steelworkers union.

As a matter of fact, these nonbasic companies have no dispute with their employees; they have not been given an opportunity to bargain collectively. They have been called out needlessly and uselessly in this strike merely to support in numbers, if for no other reason, the strike of the union in its demands against basic steel.

I know that you, like many others, will be surprised to learn that economically and from a collective point of view, these nonbasic workers represent between 350,000 and 400,000 of the workers belonging to the steelworkers union. Yet many of these companies do not even handle nor use steel in the fabrication of their finished products. Included in this group of nonbasic companies are producers of pork and beans, ceramics, wood boxes, mattresses, fire and paving brick, abrasive grinding wheels and a wide variety of other products. How in the name of common sense can they be classified as being on a steel strike?

Philip Murray constantly refers to the "750,000 steelworkers on strike." I ask you if any workers in the list given above could, by any wide stretch of the imagination, be termed steelworkers.

A grave injustice has been done these nonbasic workers by calling them out on strike. They should at least have been given the opportunity to settle by means of collective bargaining any dispute that existed between them and their employer.

In your own State of Michigan, for example, there are 98 such companies and in the city of Detroit alone there are 50. They have not been told by their union that any settlement arrived at between the President, Benjamin Fairless, and basic steel will not automatically apply to them. On the contrary, they have been told the exact opposite. As a matter of fact, many of these companies cannot stand a wage increase at this time. They are caught in a two-way squeeze. Not only must they pay whatever increased tonnage price is allowed the basic steel companies but they also face the settlement of their cases by allowing a wage increase.

I bring these matters to your attention in your capacity as Congressman from this State so that you will be fully apprised of the true status of affairs relating not only to these small companies but to the employees as well. I also trust that you will discuss this matter with your colleagues so that we can proceed with the great task of reconversion and settle any and all disputes that might arise by means of peaceful, honest, sincere collective bargaining.

Sincerely yours,

E. S. EVANS, JR.,
Chairman, Non-Basic Steel Coordinating Committee.

DETROIT.—Small industry with its hundreds of thousands of workers is quickly being placed in the position of "the forgotten man" despite President Truman's assertion that small industry is the backbone of our national economy, according to E. S. Evans, Jr., president of Evans Products Co., Detroit, and national chairman of the Nonbasic Steel Coordinating Committee.

"In the so-called steel strike, now 3 weeks old, more than 700 companies who hold contracts with the steelworkers union have been called out on strike by national headquarters in Pittsburgh. None of these companies has any relation to basic steel except that some of them use steel in their finished product and that they hold a contract with the steelworkers union. Other than that there is no similarity.

"As a matter of fact, these nonbasic workers have needlessly been called out on strike to support the union in its fight against the basic steel manufacturers; that is, the actual producers of steel, of which there are only 16 companies.

"These nonbasic companies represent approximately 80 percent of the companies holding contracts with the steelworkers union. Despite the fact that these nonbasic companies employ between 350,000 and 400,000 workers and are, therefore, numerically and economically greater than basic steel, they have not been given an opportunity to place the facts of their cases before the administration in Washington. On the contrary, the only persons who have been in on the President's conferences have been basic steel and the union, and no consideration has been given to these hundreds of companies employing hundreds of thousands of men upon whom the union hopes to impose the same pattern of settlement that is eventually arrived at in basic steel.

"It would be just as logical to set a pattern of settlement of a dispute in the carpenters' union and then have the union employ this settlement as having established a pattern for settlement of a dispute in the teamsters' union. The illustration is apt. Many of these nonbasic companies do not even use steel in the fabrication of their finished product. For example, you may take those companies that manufacture pork and beans, wood products, clay bricks, glass boiler injectors, wooden toys, cedar products, cement companies, cooperage companies, some textile workers, mattress manufacturers, and many others.

"This great group of some 700 miscellaneous companies, whose manufacturing activities extend from coast to coast, face a double squeeze play in the present steel controversy. Not only would they have to meet any tonnage increase that is allowed basic steel, but they would also face the possibility of increased wages.

"Many of these companies are little fellows employing as few as 10 persons. They face, along with a number of larger companies, the possibility of being forced completely out of business.

"While many of these companies need price relief at the moment, even before facing these possible increases in basic materials and wages, there are also many to whom price relief by the OPA actually would be no relief at all. I refer to those companies who are selling their products in a close competitive market on a close margin against manufacturers who are not subjected to this double squeeze and in those cases many of such companies would be priced right out of competition.

"The cases of these widespread miscellaneous companies are totally different from those of basic steel who produce only the basic product and not heterogeneous masses of things such as these fabricators do. Their cases are entirely dissimilar from those of basic steel and not by the widest stretch of the imagination should they be classified in the same category.

"I say again that a great injustice has been done the workers in these miscellaneous plants by calling them out on strike to supplement the dispute of the basic steelworkers. It was purely a means to give strength of numbers in what the union is pleased to term 'strike of the steelworkers.' Certainly, no workers in the nonbasic plants are so naive as to believe that the basic steelworkers will, in turn, go out on strike to give support to them while their conferences with management are under way.

"No consideration has been given to the fact that the settlement of the basic steel dispute will not settle the cases of these some 700 nonbasic manufacturers. When the steelworkers return to their jobs, the nonbasic workers who are now on strike will still have to bargain collectively with their separate and individual employers, since any basic steel settlement will not in any way predetermine the cases of these individual companies. I am convinced, from my talks with many workers now on strike, that they were misguided in the belief that any settlement arrived at in basic steel would in turn apply to them. This is a grave injustice perpetrated upon these men and their families. There is no sane reason why these men in the nonbasic companies should not have been permitted to work throughout this period instead of being called out on strike, thus causing them to lose collectively millions of dollars in wages."

Letter of Resignation of Secretary of the Interior Ickes

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I include the letter of resignation of Hon. Harold L. Ickes, Secretary of the Interior:

MY DEAR MR. PRESIDENT: I have concluded to resign as Secretary of the Interior and this letter is for that purpose. I understand that hearings on the proposed Anglo-American oil treaty, which I have nurtured and raised by bottle from the beginning, will begin on March 4. I would like to be here for those hearings.

Moreover, it will be no easy task, shorthanded as I am in the Secretary's office, after such a long tenure, to put the affairs of the Department in order for my successor. For these reasons I propose that my resignation take effect at the close of business on March 31, but if you desire an earlier date I will be glad to comply with any wish that you may express.

In thus presenting my resignation without recourse, I am moved by compelling circumstances over which I have had no control. I cannot stay on when you, in effect, have expressed a lack of confidence in me.

NO APOLOGIES FOR TESTIMONY

I shall go somewhat at length into my reasons for resigning as Secretary of the Interior because I owe a full explanation, not only to you, but to the country, in view of the evidence that the political gnats in Washington are already swarming. Despite them,

I cannot accept the theory that I should have told to the Naval Affairs Committee anything less than the truth. I have no apologies for having done so, although I did regreat the unhappy personal position in which I involuntarily found myself.

You will remember that on July 6, 1945, I took to you personally my written resignation to take effect the following August 31. I told you that the 12 years of the great adventure that I had shared as a member of the Roosevelt administration had been an inspiring experience, adding that they had required me to remain in continuous Government service much longer than any man would wish and had left me beyond desire for further official work.

UNDERSTANDING ON ACTION

You insisted that you did not want me to resign and that your wish had been that I should continue as Secretary of the Interior. You had no one in mind to take my place, you said, and the office was a danger spot in the administration. So it was left that I would continue. If at any time I should feel that I could no longer remain, I was to tell you first and you volunteered that if you should decide that you would like me to resign you would tell me first and directly.

I had understood that this meant a personal conference between us. But since I have not been able to get an appointment with you from the time that I undertook to do so on Tuesday afternoon, February 5, I have decided that, while I would have preferred to talk with you personally, the only course left open to me is to write you this letter.

Several days have already elapsed since your press conference of last Thursday and I cannot remain longer than is necessary in the equivocal position in which certain of your remarks on that occasion placed me, although I shall continue to be available for further hearings on the Pauley nomination. Therefore, I feel that I owe it to myself to make my position known publicly before noon of tomorrow.

OTHER EXPRESSIONS OF TRUST

I deeply appreciate the wish that you made known to me on the occasion mentioned that I continue as a Member of your Cabinet. During the interval there have been other expressions of trust and confidence on your part that have meant much to me. Now, in view of your evident conclusion that you no longer feel as you did, coupled with the desire that I have had for many months to retire from Government service, my resignation seems to be in order.

You may recall the passing allusion to my possible retirement at our interview on Wednesday, January 30, on which occasion you told me that you wanted me to stay on to help you solve some of the problems that lay ahead. At the previous Cabinet meeting you had asked me not to wind up the affairs of the Solid Fuels Administration until May 1, and in explanation of this you told me during this Wednesday interview, that, in the event of a strike of the coal miners on April 1, you wanted me to handle that situation.

However, since that interview, some of your close friends have felt moved to resent keenly the fact that when called as a witness by the Senate Committee on Naval Affairs to testify on the nomination of Mr. Edwin W. Pauley to be Under Secretary of the Navy, I told the truth, which I later verified.

DUTY TO SPEAK TRUTH

I am at a loss to understand what these gentlemen think I could or should have done in the circumstances. I am willing to believe that their view is that I should have committed perjury—it will be remembered that I was under oath—or that I should have spoken anything less than the truth. After all, the constitutional provision that calls for ratification by the Senate of a nomination of this sort imposes a duty upon all citizens, if called as witnesses, to speak the truth.

I feel that it is my due that I should recall certain circumstances with reference to this nomination and my appearance before the Naval Affairs Committee upon a telegraphic summons by its chairman, Senator WALSH.

On no occasion did you ever tell me that you proposed to nominate Mr. Pauley for Under Secretary of the Navy. I had seen reports to this effect in the newspapers and this possibility seemed to be on the tongue of many people in Washington. Having the convictions that I have about the propriety of putting a man active in the oil business in a position in the Government, except under the pressure of necessity during a war emergency, where one of his important duties would be to deal with oil matters on behalf of the Government, and anticipating that you might have in mind the nomination of Mr. Pauley to be Under Secretary of the Navy, I suggested to you on two or three occasions, as you will doubtless recall, that the administrative responsibilities with respect to petroleum that lie in the Navy Department be transferred to a commission consisting of the Secretaries of War, Navy, and Interior.

SUGGESTED EXECUTIVE ORDER

Your reply was that you had been thinking of doing this. Time continued to run and, not hearing from your further on this matter, I caused a suggested Executive order to be drafted which I sent to you. The signing of this order would have removed this aspect of the question of oil so far as Mr. Pauley and the Navy Department were concerned. Unfortunately the order was not signed, so that when Mr. Pauley's nomination went up there immediately arose the question of the propriety of nominating an active oil man for a job that carried with it responsibility for Government oil.

Word came to me indirectly that Mr. Pauley himself had told you of my probable opposition to his nomination. In the circumstances, it surprised me that you did not frankly ask me what might be the basis of such opposition. You will recall that, after the Cabinet meeting on January 18, you stepped aside with me into the corner of the room. We discussed one or two matters relating to my Department.

The nomination was undoubtedly at that moment on its way to the Senate, if indeed it had not already been received there. It was that same afternoon that I learned from the news ticker that the nomination had gone up. Yet during this interview you did not mention Mr. Pauley, although his nomination was no longer a secret and you already knew from Pauley himself that I had reservations about his qualifications.

WORRIED OVER SITUATIONS

On the day to which I have previously referred, January 30, as I was about to leave your office, I told you that I wished that, on occasion, I could feel that I might talk frankly and freely with you. There were, I remarked, situations arising from time to time that worried me.

Your answer was a general one to the effect that some day we would "sit down and talk things over." Persisting, I brought up the name of Mr. Pauley, remarking that it was not true, as had been printed in an oil journal the preceding week, that I had inspired the fight against his nomination. You replied that you knew this. I added that it was not my intention either to initiate any opposition to Mr. Pauley or to "plant" anything with respect to him. Mr. Pauley's name was thus brought definitely into our conversation. Still you did not ask me what objections, if any, I had to him.

Late Thursday afternoon, January 31, I received a telegram from Senator WALSH, chairman of the Naval Affairs Committee of the Senate, asking me, at the request of Senator TOBEY, to appear before his committee on the nomination of Mr. Pauley the following morning at 11:30. The Cabinet met at 10 o'clock that day. At almost exactly 11, as we were about to adjourn, I left my chair so as to reach you first and showed you the telegram from Senator WALSH. However, you still refrained from asking me if I had any objections to this nomination.

BEGAN ON FALSE SCENT

I proceeded to the meeting of the Naval Affairs Committee and I think that the record will show that I did everything that I could in behalf of Mr. Pauley except to forswear myself. The committee, it seemed to me, had gotten off on a false scent by considering evidence about Mr. Pauley's interest in building and operating a 100-octane gasoline refinery in Mexico.

I could not see that this had any bearing upon his qualifications to become Under Secretary of the Navy. However, this presented an occasion to criticize sharply Mr. Max Thornburg, at one time petroleum adviser to the State Department. When Senator TOBEY asked me whether, in any conversation with me, Mr. Pauley had ever linked the proposition of campaign contributions from oilmen in California with the possibility of abandoning any claim of Federal title to the offshore oil lands of that State, my answer was "yes."

At that time Senator TOBEY did not pursue the matter further than to ask whether anyone was present at this conversation and whether I had made a memorandum of it. My answers were that Under Secretary Fortas had been present and that I had made a memorandum.

Mr. Pauley followed me on the stand. Senator BREWSTER asked him whether he had heard my evidence that morning to the effect that he had suggested to me that if he could be assured that the tideland bill would not be filed, he could raise $400,000 or $500,000. Mr. Pauley replied, "That statement is not true." Subsequently I received another telegram from Senator WALSH in response to which I attended a further meeting of the Naval Affairs Committee on the afternoon of Tuesday, February 5.

This summons required me to take with me all memoranda relating to conversations with Mr. Pauley with respect to campaign contributions and Federal title to offshore oil lands in California. Of course, I responded to this summons. On this occasion, under questioning from Senator TOBEY, I read my memoranda—there were several of them on the subject—to the committee and introduced them into the record.

POSITION MADE UNTENABLE

I followed your press conference on Thursday, February 7, at which you definitely alined yourself with Mr. Pauley as against me, thus making my position as a member of your Cabinet untenable. Of course this was your privilege but, if I may, I should like to question the propriety of your saying that I had not consulted you in advance of my testimony with respect to Pauley and particularly of your statement that "Ickes can very well be mistaken as well as the rest of us."

It seemed to me clear from what you said at this press conference that you had prejudged this case without giving me a chance to be heard. In any other circumstances that I can conceive of I would have considered it my duty to continue in my present post until the issues had been finally determined. In the circumstances I see no such duty. On the contrary, I feel that as a matter of principle it is clearly my obligation to submit my resignation now.

As to your statement that I might have been mistaken in my testimony, my feeling is that, since you were not present at the hearing and presumably had not read the record, it was not proper for you, even although you be the President of the United States, to pass judgment on a question of veracity between Mr. Pauley and myself.

After all, I am a member of your Cabinet at your own request and I do not have a reputation for dealing recklessly with the

truth. On the issue of veracity as between Mr. Pauley and myself, I am ready to appear before any competent tribunal at any time, although, of course, I should want one that would not announce, or even form, its opinion in advance of a full and careful consideration of all of the evidence.

WAS WILLING TO TALK

As to whether I had or had not consulted you in advance of my testimony on the Pauley nomination, my reply is that you had full notice of the probability of my embarrassment, plus several opportunities, in addition to those that you might create at will, to ask me the reason why I might oppose him.

After all, one may not thrust his unasked advice upon the President of the United States and I did not feel that I could go further than to indicate to you, as I clearly did, that I was willing to talk to you about Mr. Pauley, although, of course, you did not need such an affirmative assurance.

Even at the risk of making this letter too long, I would like to explain why I was shocked by the suggestion that liberal campaign contributions might be forthcoming if the Government should forego whatever claim it might have to the oil-rich lands lying off the coast of California. Above all departments, the Department of the Interor must always be on guard against any association of money with politics, and even overzealous, by the standards of some men, in defending the Government's legal proprietary rights. The forces that ruined Secretary Fall will always be playing upon anyone who is Secretary of the Interior.

It is not now certain that other departments will be immune to similar sinister pressures, and the forces that ruined Secretary Fall because he made the mistake of deciding that, politically he had to yield to them will always be seeking to oust or to discredit any Secretary who will not surrender to them.

Always, in one form or another, they will be urging (a) that because of what it has to give out to the public treasure the Department of the Interior can be made a flush source of money for use in politics, and (b) that a Secretary who insists upon protecting the public domain, as if it were his own property, from the encroachments of men politically and acquisitively ambitious is an intolerable scold and a brake on progress.

WARNS OF CLOUD

The incapacity to resist this kind of political pressure spiritually wrecked the Republican Party in the days of Secretary Fall, long before its debacle in 1932. And so, as I leave the Department, I feel that I ought to warn you of a cloud, now no bigger than a man's hand, that my experience sees in the sky.

This cloud is the brash criticism of me voiced by party members other than yourself for the alleged failure of my Department to make a contribution during the last national campaign of an amount deemed satisfactory. That I have found it necessary on occasion to decline to produce lists of the names and addresses of the Department personnel to be used for purposes of political solicitation is quite true. My justification has been that such a procedure would be against my principles and, furthermore, would violate the law.

It is also undoubtedly true that my personal contributions have not been as large in terms of money as those of some others, although I have contributed within the limit of my ability to do so. Aside from financial contributions, I doubt if many members of the administration have given more than I. However, even if I could afford it, I would not care to enter into a competition for political favor on the basis of cash contributions made.

It continues to be a source of satisfaction to me to recall President Roosevelt's word to me at my home on the Sunday afternoon following the last election. He said that he had come out to thank me personally for my services in the campaign, services which he appraised so generously that I refrain from quoting his exact words.

NEED STEADY SUPPLY OF OIL

I need not emphasize the concern that I have felt about the oil situation along the Pacific coast, where we have a steadily declining production with a paucity of new discoveries. For strategic as well as for domestic purposes, we need in the Pacific Coast States a steady and reliable supply of crude oil.

Naturally, in view of my responsibilities as the head of this Department, I have felt that the national interest in the oil lying off of the shore of California should be carefully guarded. It may be that our future supplies in this area will come more and more from under the waters of the Pacific Ocean.

I have felt that the national interest requires the determination of the ownership of this oil by the branch of government set up by the people to decide such questions, namely, the courts. It is for this reason that I have for a long time pressed for the prosecution of a suit so that the courts might say whether or not the Federal Government has any title in or to any part of this oil.

For the same reason I have opposed all proposals that, without waiting for the courts so to decide, Congress simply quit claim any interest of the United States to other and private interests. It would be strange if, in view of my interest in the oil situation along the Pacific coast, I should not feel some concern about the business affiliations and the natural aptitudes of any man nominated for the critically important post of Under Secretary of the Navy.

INTERIOR STAFF PRAISED

I cannot understand why any American should be afraid to entrust to the courts such a question as they were instituted to pass upon—and I am suspicious when I find such distrust. You must know how much I appreciated your instructions to the Attorney General to file an original suit against the State of California to test this question directly in the Supreme Court of the United States, thus moving to resolve legal doubts much more quickly and definitely than could be done in the suit that was pending in the District Court of Southern California.

I will leave the Department grateful for the opportunity that President Roosevelt gave me and humble in my appreciation of the help and loyalty that I have had at all times from as fine a group of public servants as can be found in the Government. It is they who have moved the Department forward into new ground.

I have been fortunate in being permitted to work shoulder to shoulder with the splendid men and women of Interior whose only politics have been the desire to accomplish for their country without self-seeking or partisanship. I thank you, too, for the opportunity that you have given to me to continue my public service to this date.

And so, Mr. President, I shall vacate my office on March 31 next unless it is your desire that I should retire at an earlier date.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

Price Stabilization

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. WEICHEL. Mr. Speaker, with reference to the matter of stabilization, I am including a discussion by Carl A. Schmidt, of Dayton, Ohio, entitled "An Approach to Moral Justice," together with a news item from the Dayton Daily News, of Dayton, Ohio, commenting on Mr. Schmidt's plan of stabilization.

Mr. Schmidt is a native of my district who has spent a number of years in the study of money and its relationship to our economy.

The matter follows:

AN APPROACH TO MORAL JUSTICE—AN EXACT SCIENCE

(By Carl A. Schmidt)

If democracy means anything, it means self-government, self-rule, self-control. If we are to govern ourselves with no rulers to tell us what to do, surely then it must be done according to God's law and God's will. With this thought, I wish to bring to your attention an approach to economics as an exact science.

In bringing to your attention certain claims that I have made, it must be understood that I am asking no one to agree with what I say, all I ask is a hearing.

It took much effort to get a hearing from our Government. I was finally heard and certain statements were made. If these statements are truth, then many other things will have to be adjusted to these truths. If others govern us we must put up with their conditions, if we govern ourselves, then we must set up other conditions.

As an approach, I will relate some things concerning the efforts made to get a hearing in Washington, then pass on to the set-up as printed. Much of what I have written must be explained that there be a proper understanding. Questions will be welcome. A subject as broad as the one I am discussing must be studied, and it is extremely difficult to begin and to end. However, if there is a willingness to study, then progress can be made.

I have set out these six subjects, which are fundamental. These are, of course, subdivided many times.

1. Price and wage.
2. Stable price and stable money.
3. How money behaves.
4. Correct tax.
5. System of reward.
6. The number of individuals.

1. PRICE AND WAGE

It was no easy matter to get the newspapers to publish my advertisements 3 and 4 years ago. The ad which is, "The argument," was at first turned down. The original draft contained the sentence, "In order that we may know our respective worth." I was forced to eliminate that so the rest could be published. The reason for the study of economics is, "How much shall I get?" The other question is, "How much does it cost?" In my business we generally accept economics as it is taught in the schools. All is guesswork, because the problem is never correctly stated. We fill a prescription. The rule for getting the selling price is the cost of ingredients plus the labor charge plus the profit. That is the selling price. This formula is used throughout industry and is the cause of misunderstanding. We use money as a measure, and money measures what we buy, not our services. Our services are measured by what we accomplish. What we produce should tell us how much we should get. If it takes me twice as long to perform a service, should the same service cost twice as much because I performed it, or should I get less because I am less efficient?

If economics is an exact science, then we must start with price and figure pay from that end and not figure pay into price. Experience is the best teacher. In my business I have never accepted the classic formula for price and wage and therefore have no trouble in understanding what I am trying to point out.

2. STABLE PRICE AND STABLE MONEY

When I was a young man there arose a great argument as to what money was. Some thought of it as gold, others as of silver, and some as of both gold and silver. The truth is that money is the relation of prices, and gold and silver may be security for money. The argument then arose as to the relative value of gold in terms of silver. This is a function of money, for money should show the relative value between all forms of wealth. An ounce of gold was assumed to be worth 16 ounces of silver. Silver and gold arguments are still going on and will become very great should we have inflation. Suppose we use the 16-to-1 proportion to illustrate what is meant by a stable price and a stable money. If we confine ourselves to a simple problem we will understand each other, remembering that through proportion we can solve the more complex problem if the simple problem is solved. One ounce of gold equals $16. Sixteen ounces of silver at $* an ounce equals $16. Together we have a total of $32. If we wish a stable money, then the sum 32 is the starting point of our calculation. We make 32 a constant. If we add another ounce of gold and 16 more ounces of silver, then the value of each ounce of gold is reduced to $8 and each ounce of silver to 50 cents. That is what is meant by a stable money. A stable money becomes a very, very intricate problem. However, suppose we add an ounce of gold and 16 ounces of silver and keep the price the same, we have then a total of 64, which tells us that there is more of something than there was before. Price becomes the constant. This problem is much simpler to perform and it is the formula suggested for our economic use.

3. HOW MONEY BEHAVES

We are all familiar with the behavior of money as it circulates. It passes from one to the other and from the individual to the bank. We have formed an idea that money was only a medium of exchange, forgetting that money is first of all a measure. We try to think that money measures our services in regard to what we buy. Here is a fundamental error. It must never be thought that money can form a proportion between what we give and what we get. The proportion is between various items of wealth. This is important. For each of us money measures only the proportion of the various items that we buy, not what we do to obtain money. Money is the relation of prices. Money could also measure wealth if it would not circulate. This is easier to understand if we think of a ticket. The ticket tells us exactly what we are entitled to. Under a stable price, all our money would be like a ticket; that is, we would always know just what it was good for. It would not circulate from one person to another, but would be issued like a ticket and would be canceled as it was used. By using money in this form we would always know what we were working for. There would be no guesswork.

4. CORRECT TAX

Government is established principally to enable people to trade. Because of this function, it has also set out to punish people. Tax enables government to sway trends of trade and to influence the lives of people. Wide search has been made for correct method of taxation. If we understand the function of money, that is, money is the relation of prices, then the correct method of tax becomes evident, at least theoretically. All wealth is measured by money, therefore wealth and money are equal. Wealth is what money buys. It must be sacred to the individual. A money system is provided by government, therefore the proper tax is a tax on money, not on wealth. This is theory and in practice could not be put into effect because of the difficulty in figuring price starting with a stable money as explained above.

5. SYSTEM OF REWARD

A system of reward which is the system used by all industry would enable us to put into effect the science of economics. There would be no debt. All of it would be paid, that is, money would be issued for all debts. There would be no tax because money would be issued for all new wealth, whether this were natural increase without effort or a studied increase through labor. If more money were outstanding we would know that we were richer. If less money were out, we would know we were poorer. This brings us back again to the problem, have we faith enough in God and in each other to set up a system of reward? Can we adjust ourselves to His law and His will so that we can live in peace with one another?

6. THE NUMBER OF INDIVIDUALS

In thinking of replacing tax by reward, the problem of the number of individuals becomes very acute for it is clearly seen. If we have a pie to divide among four boys, we can divide it equitably or equally. We can give in proportion to what each deserves or we can just give the same amount to each. No matter how we divide, if we have more boys it is evident that there will be less all around than if there were only four. If there were three, the pieces would be larger. Proportion tells us that the number of individuals has a bearing on the economic problem. Many methods of tax have been tried to encourage or discourage the birth rate. Some nations encourage large families, others discourage them, because the number of individuals has a bearing on the economic problem.

The science of economics makes it possible for every man, woman, and child in the world to become self-supporting from birth to death through insurance. The problem involved is: Can this be done in conformity with God's will without violation of His law? First we must study all the facts; that is, we must know the truth, the whole truth, and nothing but the truth. In a system of reward, government becomes the sole customer of industry, that is: Everyone works for himself and is paid for his services by government. This includes everybody, no exceptions whatsoever. Government becomes sole guardian of all wealth. No one gets anything without a ticket. Nothing, no nothing at all without a ticket. If everyone were self-supporting for life and everyone knew the conditions, everyone would only punish himself if he failed to provide for emergency. Such a system would be better than putting a person in jail for he would be his own judge and jury. If God's law were observed and God's will were clearly understood, then we could have both economic and moral justice.

God's law is found in the Ten Commandments. God's will is that He does not wish for the sinner to perish, but that he might live. This means eternal life. Jesus taught us to pray, "Thy kingdom come, Thy will be done on earth as it is in heaven." If this means anything, it means that God does not wish a single family to perish, but that each family should live on and on. Life has come from Adam to me and should go forward on earth from generation to generation; the only exception are those, who through greater love devote their lives to serving God.

Moral justice must come with economic justice and we can have it without violation of God's law. Another petition in the Lord's prayer is, "Give us this day our daily bread." This petition is automatically answered by the science of economics, for that would be our first concern, namely: To see to it that each individual received bare necessities. "Forgive us our debts as we forgive those indebted to us," could mean, relieve us of all debt, public and private so that none of us would ever again be in debt. Stabilization of price will pay every debt. "Lead us not into temptation." All of us must exercise self-government and self-control so that each family will become a sacred unit as it should be, and it is easier to avoid temptation than to resist it and much more satisfactory.

All of this would "deliver us from evil, for Thine is the kingdom and the power and the glory, forever and forever. Amen."

[From the Dayton Daily News of February 5, 1946]

OFFERS STABILIZATION PLAN—DAYTON DRUGGIST DISCUSSES RELATION OF MONEY TO PRICE

(By William L. Sanders)

Carl A. Schmidt, Dayton druggist, outlined and discussed his price stabilization plan at a meeting of the St. Borromeo Society, University of Dayton, Monday night in the Albert Emanuel Library.

The plan rests on the assumption that money is not only a means of exchange but also a measure of wealth, Schmidt explained.

"If a dollar is stable, price must vary. If price is stable, the total number of dollars must vary. A stable dollar is forever the same fractional part of all the money. However, when we speak of stability of money, we mean that price has been worked out for us, and we need not concern ourselves that the price problem will confront us," Schmidt insisted.

To illustrate his theory, Schmidt said, "Let us look at one transaction. For example let us have 10 cents on one side and a loaf of bread on the other. The bread represents wealth and the dime money. If the bread were all the wealth and the dime all the money, then the dime would be stable money for it would represent all the wealth. Now let us add another loaf of bread; then the two loaves would be all the wealth and 10 cents would be all the money. The price would have to be computed in proportion."

The druggist then declared, "If money as we know it were stabilized, every bit of additional wealth would of necessity reduce price so that it would be a great advantage to have money. To remedy this situation, it has been practice to add to the total amount of money either through debt or other means, so that prices would not fall."

According to Schmidt, "a currency in which price is stabilized removes debt." Stabilization, he asserts, will automatically remove debt. "Every debt will be paid, none canceled."

How then will bankers be paid? he asked. How will endowments be sustained? How will we get money when we can no longer work? How about insurance as we know it? Bankers would be paid like every other individual, by the Government, Schmidt said. "Endowments, interest, and insurance would all be paid by the Government, to living individuals by a new form of insurance which would replace debt, and which would be all-inclusive. Stabilization would change only the method of accounting, Schmidt emphasized.

As Schmidt envisages economics, there would be only one middleman, the authority that issues money. Money, he says, would be received by every individual in proportion to his worth to society for the wealth he produced and he in turn could buy anything he desired at the same price every other individual would pay. "This would stabilize prices because we would always have money and wealth balanced," he held.

With respect to taxes, Schmidt said taxes should be levied on money, not on wealth. Linking taxes with the individual, the druggist suggested that "if we are to govern ourselves, no one can tax us; instead, we would be obliged to reward each other." As explained by Schmidt, such a form of government is suggested by a self-serve restaurant. "An institution of this kind requires intelligent management. If we wished to live in a world in which each individual governed

himself, we would have to reason together as to just what changes must be brought about. In a self-serve restaurant each customer chooses the food he wishes and can afford. Much choice is offered. In a real democracy, each individual would contribute whatsoever he desired to the welfare of others and would receive, therefore, whatsoever he wished and could afford in return. This would be real self-government."

Schmidt's address evoked a great array of questions on all phases of his proposals. Among these, one stood out, "What is the role of government in this stabilization proposal?"

"Government," Schmidt said, "would be one giant corporation which owned nothing but acted as custodian of all the wealth."

Schmidt's Approach to Economics was presented to the Seventy-seventh Congress on April 16, 1942. On October 31, 1945, it was presented personally to the Department of Commerce in the east wing of the White House.

Schmidt has been in business for himself 27 years, 10 of them at 114 West Fifth Street. All that time he has been studying the American economic system.

Asked what prompted him to go into business for himself, he said, "To show how the individual must compete with the power of money; that is, how the individual can compete with the chain store."

Americanism—A Chapter From a Book the President and Every Member of Congress Should Read

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. WHITE. Mr. President, it is inspiring to find a clear-cut expression of American ideals in a book that has recently come to my attention, which I submit for the consideration of every American with the best interest of our country at heart:

(Extract from the book, England's Decadent International Economy, by Dr. William F. Hauhart, Ph. D.)

Since I am not willing that we should underwrite England and her empire for the future, it is appropriate to indicate the path that I would like to have my country follow in making her contribution to peace and international progress. I have indicated on various occasions that I am a nationalist so far as my wishes for the future of my country are concerned. This means that I should like to see her long-time interests considered and cultivated in an appropriate fashion.

On the the other hand, there seem to be a number of Americans who wish to save and exalt other nations and apparently forget about the interests of their own homeland, which should be one of their prime responsibilities. Shall we explain this by saying that they feel that we cannot stand on our own feet? I am not sure about this, but believe that I am safe in saying that we shall have to depend practically altogether upon ourselves in the future—the United States with Canada and Latin America as friendly unallied neighbors.

There are indications that when this war is over the people of the United States will have no desire to participate again in Europe's quarrels in a military way. Our present enemies will then be defeated and it would be useless for us to intervene in any contest between England and Russia. The U. S. S. R., with its huge land empire, can hold its own, and England is too weak to cross swords with Russia even with the help of our military might, which some Americans would no doubt be willing to throw into the scales. We surely would not wish to make the same mistakes which were made by Napoleon and Hitler in trying to pursue the Russian bear to his uttermost haunts. With all our power, we are geographically too far removed from the scene of struggle to make ourselves really effective in eastern Europe.

Hence the suggestion that we devote ourselves to the development of the economic resources and the cultivation of the people of the Western Hemisphere. We would fight, too, if necessary, but only in self-defense. We would concentrate our interests geographically and this would permit us to carry out an extensive program of internal development. This would not mean that we could not then help materially and morally in any part of the world wherever the opportunity presented itself. It has recently again been brought out that the American people have never failed to offer assistance to other groups whenever a specific project was held in view. They do shy away from vague global concepts of world betterment and security, so-called, which would dissipate their material and moral resources.

Our economic productivity, our science, and our genius for business management should all be at the disposal of human projects everywhere, not in the sense that we should pour out our resources in prodigal fashion to enable other countries to engage in practically continuous wars, but they would be available partly as gifts to mitigate distress at home and abroad, and partly, let us hope, as model methods of internal governmental procedure and as instruments for the cultivation of international good will.

Mr. Lin Yutang, the well-known writer, has expressed his thoughts concerning the future position of the United States in international affairs as follows:

"I am not worried lest America may not be able to assert a leadership of force and power: I am worried lest she may. I am concerned to see America assume a moral leadership, a leadership of humility, so that the world may pay her glad homage and uphold her forever. Like the great river that nourishes life along its valley, she shall by the exuberance and richness of her life be a blessing upon the peoples of the earth. She shall stay above, and the world shall not feel her weight; she shall walk in front and no one will wish her harm. For she shall then lead in kindness and unselfishness and justice and by that secret of unused power bring a new era of brotherhood to mankind. No one can dethrone her because of her power for goodness, and no one can take away from her, because she does not take possession. She shall not contend, and no one in the world can contend against her, and because she takes no credit, the credit can never be taken away from her. This is my dream America. Will it come true?

I know that this does not satisfy the ambitions of some of our citizens who want the United States to use its Military Establishment in all parts of the world. The suggestion looks forward to the time when our influence may be a world force in a moral sense only. Oliver Wendell Holmes once expressed in his unique way how we might teach our type of democracy to the world. "Not by aggression but by the naked fact of existence we are an eternal danger and an unsleeping threat to every government that is founded on anything but the will of the governed." Some time ago Senator CAPPER said over the radio: "American leadership toward a better world can best be made effective by this Nation working out its own destiny." In that way only can we become strong and develop along the path envisaged for the United States by Mr. Lin Yutang.

I am aware of the fact that we are supposed to get ready now to participate in all the world's troubles everywhere in a military way. Dire forebodings are held before us if we fail to undertake that responsibility as a nation. Opposition to such a plan is to be stifled, if possible. I shall, no doubt, be dubbed an "isolationist", that supposedly deadliest of derogatory terms that can now be applied to an American citizen. If that is deemed necessary, I shall accept it cheerfully. Also, if someone wishes to call this book, or any part of it, propaganda, I shall offer no objection, except to suggest that some of it was intended to be counterpropaganda. The latest threat held before us is that war weapons are becoming so terrible that we all have to huddle together to prevent any groups except the peace-loving nations, so-called, from using them. I have been wondering why universal disarmament, at least progressively over a period of time, is not a better suggestion. It should be mentioned that the eighth point of the Atlantic Charter, in part, reads as follows: "They (the signers?) believe that all of the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force."

There are certain groups who have aimed to take the attention of the American people from their interests at home and direct their eyes to Europe. They did not encourage us to become self-reliant, to depend on our own resources, and stand on our own feet. We have been told repeatedly that our strength lies in a combination with Europe with its ages of feuds, wars, and bickerings. In a subtle fashion, our moral nature was appealed to. We were told that we had the duty of giving our all to Europe and the world at large. Thus, our attention has been often turned from our own interests, from developing and strengthening our homeland, to distant parts of the earth where lie the interests of imperialistic nations. As the end of the war is approaching and we are trying to win the peace as well as the war, we are gradually getting acquainted with our allies. We are learning by and by what their aims are and what their purposes have been in urging us to use our resources at the four corners of the earth.

NO LASTING NATIONAL COMITY

After every war the victorious nations that have fought on the same side are obsessed with the idea that they are going to remain friends ever after. Even the most recent history shows that two nations, Italy and Japan, who were on our side from 1914 to 1918, have been our enemies in the current conflict. The international attitude of nations may change very quickly as a further study of history will abundantly show. Then, too, the evolutionary process in human and national affairs is bound to produce shifts, regardless of the number of seals and ribbons that were placed on the last signed agreement.

Certain groups at the present time particularly seem to think of the problem of international comity and peace mostly in terms of organization. And the Dumbarton Oaks proposals have been brought forth as the basis for a league to enforce peace. However, we have no idea of the type of peace that the Dumbarton proposal is supposed to guarantee. We do know that the clause to provide for subduing aggression will not apply to the Big Three. The small nations and the defeated nations only can be prevented from becoming aggressors. The League as planned, therefore, turns out to be a military alliance of nations holding permanent membership on the Council. There are five of those members, the Big Three, together with France and China. The proposed Charter is silent on imperialism, and colonial peoples

have no chance even to get a hearing. Any member of the Big Three can veto consideration of its own aggression, and any action on cases of that sort by the League would, therefore, be out of the question.

Since colonial disputes have been ruled out as domestic issues, England's desire to take the island Pantelleria off Sicily, several provinces of Haile Selassie's domain, and repossess Hong Kong, if consummated, either in a peace treaty or by unilateral action as things are now being done, could not be called into question by the Dumbarton league. I suspect that the haste which is now urged in suggesting that each member nation, including the United States, be ready to act at once in case of aggression, is thought advisable in order to squelch immediately colonial uprisings in all parts of the world. Colonial disputes are to be considered domestic issues, but it appears that if any aggression occurs on the part of any colonial domain the members of the league nevertheless would be expected to put it down. The Dumbarton Oaks proposals have been informally discussed in the United States Senate. One Senator declared that "it would be pointless for the President to send the Dumbarton Oaks proproposals to the Senate unless Russia and England completely changed their present policies in Europe."

Is there a possibility for such a change? President Wilson's experience in Europe would seem to answer this question. It was there that he received the blow that broke him when he found out that his idealism was not wanted or appreciated by the people whom he wished to assist and to whom he had previously sent our armies. He was seriously offended by the lack of response to his overtures and the refusal of England to take the lead in Europe by modifying her imperialism in the interests of future peace.

The thought has been assiduously cultivated in this country that Mr. Wilson's disappointments were due althogether to the small group of willful Senators who refused to approve his League of Nations and the Versailles Treaty. His pride may have been hurt by this, but he knew that the principles he was fighting for had been irretrievably lost at the peace table. Moreover, the League of Nations was regarded by European members as an instrument of power politics. Nevertheless, many Americans seem to insist today that if we had been members of the League, we could have used our influence to modify the imperialistic ambitions of European nations and could have guided them in such a way that the Second World War would have been avoided. Let them observe the situation as it prevails in Europe today, and the difficulties which we are having in making our influence felt.

APPLICATION OF ATLANTIC CHARTER

A good many of us missed from the Dumbarton Oaks proposals some of the principles which were enunciated in the Atlantic Charter. Recently there has been a revival of this Charter in the thoughts of the American people. The signers and authors themselves seemed not to welcome this rediscovery. It is often thus with political statements made chiefly for political purposes. Shortly after the meeting of the two statesmen at which the Charter originated, Mr. Churchill reported that when it was finished, "we sang: 'Onward Christian Soldiers,'" and suggested further, "We had a right to feel we were serving a cause for the sake of which a trumpet had been sounded from on high." But not long after he announced that the Atlantic Charter did not pply to India, and later on he assisted in emasculating it still further.

When the original of the Charter recently seemed to be lost, Mr. John O'Donnell, a newspaper correspondent in Washington, traced it to the Smithsonian Institute where a signed copy was hanging on the wall. He was told that the OWI printed and distributed about 300,000 copies to schools, colleges, libraries, and others. Later the same day Mr. O'Donnell went back for another view of the Smithsonian framed copy, but found that it had been removed in the meantime. A copy of the Atlantic Charter is printed in the appendix of this book by courtesy of the Dallas Morning News.

Reverting to the main topic we may ask again: Shall we continue to support England and her imperialism after this war? Also, can we save her and her possessions even if we give her our utmost support? She seems to have the pious hope of preventing the plans of Russia from clashing with her own. Of course, she wishes to reinsure a goodly part of that risk in the United States, if we will only submit to it. We should, in pondering this question, consider that the Orient is awakening and no one knows how long the imperialism of the white man will be tolerated there. Since Russia will very likely hold the whip hand in the future in both Europe and Asia, England's possessions can no longer be defended by force. After this war she would seem to be safe as long as her interests do not clash with Russia.

FINANCIAL HELP

Nevertheless England seems to want from us a continuous drawing account, moral and material, and imagines that in this way her possessions can be held with our help. She wants a moral drawing account consisting of our promises which she can use in a diplomatic way in her quarrels with other nations. And she wants a practically unlimited material drawing account to support her in any way. And now she has come to the point where she even needs our material support in times of peace. Her own white paper, as recently published, pleads for practically continuous lend-lease from the United States.

There are many of us who would offer no objection to the economic support of England by the United States after this war if there were a good chance of having her restored to the economic position which she occupied at the beginning of this century. But this possibility does not exist since her geographical position and the forces of natural evolution have made her island economic setting obsolete. She has been unable, since 1914, to maintain an active trade balance, and the prospects for the future have continually worsened since that time.

There is not involved in this discussion an estimate of the efficiency of the individual Englishman. To be sure, while his economic position was becoming worse, he did show a tendency to rest on his laurels and at times lacked the ability to adapt himself to rapidly changing world conditions. The latter applied, I would say, more definitely to the managerial or political element that had to do with international business which was the most important part of England's economy. The individual worker and technician usually did his part as well as could be expected.

Environmental influences to a great extent brought England to the apex of her economic achievements in the nineteenth century and environmental influences have placed her at a considerable disadvantage during the twentieth century. During the nineteenth century she was the first to exploit her own resources of coal after inventing the steam engine. With the help of these two elements, she could produce enormous quantities of manufactured goods that could be sold on a world-wide scale. Through her early success a century ago in textiles, chiefly cotton, which she manufactured and sold at a great profit, she laid the basis of her foreign investments. To be sure, there was some exploitation of labor in this process which helped to bring forth that margin of profit which could then be invested in foreign countries. In shipbuilding she was supreme after steam had been applied to the propulsion of vessels. Her own ships brought her income by carrying the goods and passengers of other nations. Her primacy in shipbuilding enabled her to sell tonnage to foreign countries on a large scale. In short, she paid for her imports not only by exports of manufactured goods, coal, etc., but also by rendering services of shipping of capital and of credit on a world-wide scale.

During the twentieth century these environmental influences went into reverse. Keen competition came from the United States and from the Continent. During the nineteenth century most of her international business was monopolistic, since other nations were not in a position to compete very much, but the turn of the century brought this competition to the fore. Since 1900 her costs of production increased. Her navy and her high-class ships now had to be propelled by oil which she did not produce, and therefore oil became one of her necessary imports that had to be paid for by other goods and services.

CONTRACTION BRITISH FINANCIAL CARTELS

But fate was most unkind to her when a goodly part of her foreign investments disappeared as a result of the First World War. We allowed her to forego the payment of an indebtedness of about $4,000,000,000 to us at that time so that her foreign capital investments were not reduced by that amount. But she bought heavily of war goods and foods from other countries during the conflict, and since she could not produce civilian goods on a large scale in the emergency, this forced a reduction of her foreign investments and there followed a relative reduction of dividends and interest income.

There is considerable discussion of this point at the present time. The answer which the English themselves give is: We must increase our exports so that we can pay our necessary imports. This increase in exports is expected to be 50 percent, according to some estimates. Other estimates are much higher. There are two questions involved in this: (a) Can England produce the additional goods to make up these hoped-for exports? (b) Will there be markets available to absorb these exports?

England's far-flung network of commerce and finance as it spanned the entire world was unique in its structure and relationships. Compared with the system of other nations, it may even be called somewhat artificial. It stood up well as long as the invisible elements involving the services of capital, credit, and shipping could be kept in a sound, active condition. When England engaged in wars of the magnitude of the First and Second World Wars, she had to consum a goodly part of her foreign investments. The winning of the war would leave her in a greatly weakened economic condition. It was then extremely difficult to build up again and replenish her foreign investments because her other international business had suffered and her profits were not sufficient to rebuild her capital in foreign countries.

It seems to take practically a monopolistic position to maintain an economy such as England's through all the vicissitudes of wars, intensified competition of other nations, as well as the falling off in demand for manufactured goods on the part of those nations who are striving to become more self-sufficient. I have called her economic position during the nineteenth century a natural monopoly, since she was the first on the scene with industries that could supply a world market with manufactured goods. When she lost her advantageous position in the early part of the twentieth century the heyday of her economic supremacy was soon over.

Now, she has been trying hard by various methods to establish an artificial monopoly by means of cartels and special bilateral arrangements, through both of which she hopes to be able to exploit the consumers of some of her goods with higher prices than she could get in a free competitive market. Two instances may be mentioned. The Stevenson Rubber Cartel which for a number of years forced American consumers to pay higher than competitive prices. The rubber was

grown largely in the British and Dutch East Indies and the cartel was operating under the aegis of the English. Another instance is the cocoa monopoly or cartel which the English have organized, including first of all their own colonies in Africa, Gold Coast, and Nigeria. The future program provides for the incorporation into this monopoly of the supplies of cocoa from Bahia, Brazil, and French West Africa. These imperialistic cartels increase their incomes not only by exploiting the consumer through high prices, but they also exploit the laborers in the colonies by low wages.

Their nineteenth century natural monopoly gave them bountiful profits and enabled them to accumulate large amounts of capital investments. And now they hope to find prosperity in the cartels, price agreements, and other methods of exploiting the consumer on top and the producing laborer below. The latter cannot be done domestically any more as it was effectively carried on by the English in their textile factories once upon a time in Lancashire. But they still expect to do it with the colonial laborers in other parts of the Empire as their proposed handling of the British state cocoa monopoly for the Gold Coast and Nigeria well shows. Inordinate profits they would like to have in many of their industries. Otherwise they cannot pay for the large amounts of imports which they need to sustain the living standards of their people and provide themselves with indispensable raw materials.

We may summarize the reason for the inability of England to equate her international trade balance in the future without assistance in the form of lend-lease. Most of the points relate to the narrowing market areas for British exports as well as the need for rationalizing her industries more extensively.

1. The trend toward self-sufficiency in practically all actively producing countries is growing stronger all the time. The spread of technology has helped to promote the manufacturing industries in many countries that formerly were producers of foods and raw materials and depended for their manufactured goods mostly upon imports from England and other industrial nations. The increased output of synthetics and plastics has also contributed to make nations less dependent on imports. In general, the number of commodities that it is necessary to exchange between economic areas is constantly diminishing.

2. One of the factors which facilitated England's exports in the past was her investment policy in foreign countries. When a good-sized city, let us say in a South American country, wished to introduce electrification, England stood ready to furnish the engineering skill, the capital loans, and then sell the city the necessary machinery and equipment. Today there is in some of these countries a disposition to frown upon foreign investments in their economy. A prominent lecturer from a South American country recently informed an American audience that these investments, particularly when made for the development of some natural resource, were looked upon as a form of exploitation. The origin of this prejudice is hard to determine but it does hamper the influx of foreign funds for investment, and as a secondary result it lowers imports of foreign goods and services.

3. Competition among industrial nations in selling manufactured goods in export trade has become more and more intense. England's costs of production apparently have been higher than those of some continental countries. She may have paid better wages in some cases. In some instances the high costs of production were due in part at least to lack of modern up-to-date equipment and management.

4. During the two wars England's investments in foreign countries have to a great extent been consumed, chiefly by the necessity of supplementing her own production of the sinews of war by materials of other countries which could not be sent to her on a lend-lease basis. This reduction of her investments in foreign countries has not only reduced her income of dividends and interest but it will have repercussions on her ability to expand her foreign trade after this war is over.

5. England has adopted a policy of protectionism. After nearly a century of free trade she changed over to the imposition of customs duties on many of her imports in 1932. Her empire preference agreements with the dominions came under this head, too. It is doubtful, even in the minds of some leading Englishmen, whether this will improve her foreign trade position or not. This is part of the general policy of economic restrictionism which has recently been adopted by England.

But most unpalatable to the United States is her plan to foster a great development of cartels and cultivate more extensively various kinds of special trade agreements with other nations who may be induced to cooperate with her. Hence there is today a disagreement between the United States and England in their discussions of trade and finance. We are talking of multilateral trade on a world-wide scale, while the English are talking in terms of cartels and special bilateral arrangements or group agreements among the trading nations. England would like to have us come over to her point of view. Hers is a siren voice which seems to be saying: "You and I together can control the world" of commerce and finance if you will but join me in the cartelization of all the world's business. It remains to be seen what the people of the United States will decide to do about this.

We as a Nation may have a strong urge to help perpetuate England and her empire. No serious objections would be offered to such a program if it were possible to carry it through permanently and effectively. But that is the question. We might pledge her our military might for the future, but her economic problem would remain what it has been since 1914. There is no way by which she can restore her erstwhile favorable active trade balance except by continuous lend-lease shipments from other parts of the empire or the United States.

The dominions have a small population and are not economically strong. Their loyalty may be excellent in time of war, although internal difficulties may in the future prevent cooperation with the United Kingdom even in war. Since the dominions are in the developmental stage, they are prone in time of peace to look upon the English chiefly as competitors who do not welcome their industrial developments but would prefer to have them buy their manufactured goods in England. The United Kingdom, sensing this attitude and knowing the insufficiency of the help which the dominions could give in time of stress, has always turned first to the United States for assistance, the part of the original empire which she lost.

Unofficially some Englishmen have recently suggested that if we do not join them wholeheartedly in their economic and political plans, England may decide to associate herself with Russia. I would be inclined, as one American citizen, to accept that suggestion, because it would tend to relieve us in the United States of a great burden. But Russia, as I see it, does not need England at all, and what England needs most of all after this war she cannot get from Russia. She needs mostly a continuous stream of lend-lease goods and a guarantee of her colonial possessions. Russia will not be in a position for a number of years to lend-lease materials to other countries, and she seems at present unwilling to guarantee the integrity of any territorial possessions except her own.

So the suggestion of English-Russian cooperation, without the United States, is probably an empty threat—if it was meant to be a threat. And those Americans who wish to perpetuate England and her Empire, at whatever costs to the United States, are still perturbed. It should be suggested to them that their program would tend to become more burdensome year after year; that it will continuously draw more resources from us as time passes on. The colonies are becoming more and more restless. If we undertake, nevertheless, to underwrite England and her empire, we may find ourselves in the position of Sisyphus of old, who had the enforced task of rolling a stone to the top of a hill, but the stone at intervals, in spite of all his efforts, rolled back again.

A Halo for Herbert Hoover

EXTENSION OF REMARKS
OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Oscar Vogl, from the National Food Distributors' Journal for January 1946:

HALO FOR HERBERT HOOVER

(By Oscar Vogl, merchandising and public relations counselor)

If the forgotten soldier could voice his sentiments he would no doubt have something to say about the forgotten public servants. In the hustle and bustle of limelight it is generally overlooked by the men and women in the street that we are fortunate to still have with us the one living ex-President of the United States of America, who from demonstrated experience could contribute much to the welfare of the world.

He was a retired businessman when World War I found him abroad and drafted him into service where he emerged as the greatest food administrator the world had ever known. Though not then and really never inclined toward politics, he again was selected for the difficult post of Secretary of Commerce. Without fanfare or publicity promotions, he quietly and efficient-mindedly organized, organized, and organized this Department until it became an outstanding world-wide functioning operation. Thus, he laid the foundation to the good-neighbor policy and really aided big and small business alike to expand in world markets. Elected to the Presidency following the golden-age period of Coolidge, he accepted the task, fully realizing that it was no sinecure.

Few men have lived and seen so many heartaches and radical changes on this planet of ours. Few men have been in position to observe impartially and hold their own council and tongue, awaiting the time when a higher power beckons them to action.

It is not only timely, but proper that we who work in the food industry should give proper recognition to one who has served long and faithfully in that field. One who handled food distribution world-wide without a single one on his staff acting improperly though temptations were as great then as they are today.

Indeed, Herbert Hoover, now past three score and ten, deserves not only a vote of thanks from this Nation and others in the world, but before his departure to the other side, the Congressional Medal of Honor for distinguished services rendered efficiently at all times.

When all is said and done, Herbert Hoover is neither a partisan politician nor a spellbinder, he is and always was an organizer,

statesman, and at heart a humanitarian, a Quaker. One who loves to serve humanity without regard of consequences.

Thus in his retirement he is donating much time to the boys' club movement, same as he diligently fed the starving women and children in the war stricken areas after World War I, irrespective of nationality or religious affiliations.

After his recent visit to the White House, he wrote to a friend: "I am certain Harry S. Truman is trying to do the best he can for the American people."

Whatever the smear campaigners may say or have said and whatever narrow-minded souls may think, Herbert Hoover is the living ex-President we can proudly hail and endow with a halo. He is another American boy off the farm and the land we love so dearly who made good.

(Oscar Vogl is not only well known to our members and readers as our merchandising counselor, but as a capable writer and lecturer who pulls no punches. During World War I he was one of the first to volunteer his services to the American Relief Committee in London. He also was one of Herbert Hoover's minutemen in this country, lecturing on food conservation before leading women's clubs and church organizations. While visiting in Vienna after the war, he induced the city fathers of the gay waltz town to change the name of Kaiserstrasse to Herbert Hoover Strasse. In World War II he served as a consultant on the War Production Board and as public relations counselor for Appreciate America. While his comments are his own and do not necessarily present the views of this Journal, we recommend them as worth while.—The Editor.)

In another Journal item the following statement is made concerning Oscar Vogl:

OSCAR VOGL KNOWS HIS GROCERIES AND HIS MERCHANDISING

He received his early training on the sales staff of the H. J. Heinz Co. of Pittsburgh, where he was constantly listed among the first 25 leaders of a sales force of over 400 top-notchers.

As sales manager of Steele-Wedeles Co., Chicago's live wholesale grocers, he managed a staff of 100 salesmen of all nationalities so successfully that the firm reached its highest volume under his direction. He was the first to introduce label saving through church organizations, the first to inaugurate one-cent grocery sales, the first to introduce 5- and 10-cent grocery departments. He was a regular food feature writer for Hearst's Chicago Examiner and as such founded the Standardized Food Bureau of Illinois.

When some Pittsburgh steel men searched for a man to bring the German monopoly of the potato-flour industry to this country, he was selected to do the job. Aided by Herbert Hoover, he studied the business abroad and set it up here, helping the farmers utilize profits out of formerly worthless cull potatoes.

His articles in our Journal have caused Nation-wide favorable comments and some like Sell 'em Enough have been widely reprinted, having been selected by Business Digest as the best of the month.

He is a fearless fighter and an enthusiastic supporter of honest government and high ethical standards in business. He is never tied down by tradition.

In passing, it is interesting to note that his father, the late Carl Vogl, was for years James Gorden Bennett's European representative of the New York Herald. His mother, an English woman, is closely related to royalty as first cousin of the late Princess of Monaco, the Duchess de Richelieu, and Princess de la Rocca. His son, Oscar J. Vogl, Jr., is a flying cadet at the West Point of the Air at Randolph Field, Tex.

Educated here and abroad, Oscar Vogl has a wide circle of contacts and experience to draw from. His comments are worth while listening to, and, as one well-known editor remarked, he possesses the rare faculty to express himself forcefully, correctly, tersely, and epigrammatically.

"New Dealirium" Exposed

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, since the President's fireside chat requesting the people to write their Congressmen and express their views on the issues of the day, we Congressmen have been receiving an avalanche of mail, pro and con. Most people who think for themselves and are not tied into the administration in any way, directly or indirectly, but who like to create and maintain their own security, emphatically express themselves as being against further encroachments of bureaucracy. They do not hesitate to expose this "New Dealirium."

We have had "New Dealocracy" for 12 years, and now we have "New Dealirium." The people are not delirious—but the bureaucrats are. The people have found out that the bureaucrats have become so steeped in their bureaucratic theories that it amounts to a delirium.

As example of what the people are thinking and writing their Congressmen, I am pleased to quote the following letter from a man and his wife, constituents of mine, just everyday Americans who love and cherish American ideals and principles. They write:

FEBRUARY 6, 1946.

Hon. GEORGE B. SCHWABE,
Washington, D. C.

DEAR SIR: My wife and I are not politicians and are little known. However, we are completely disgusted with this special annual build-up for the continuance of the OPA. In this evening's paper we are again threatened with rationing. As long as that simple organization is permitted to exist it will be threatening someone.

It has been only a few months since they wanted grain fed to stock. Now we are supposed to eat black bread, and so forth. Production is the price control we want. Please give our businessmen, laborers, and other workers a chance for full employment.

Please put the OPA out by June 30, and give our country a chance.

Yours very respectfully,
Mr. and Mrs. ——— ———.

Another constituent of mine, who lives in one of the thriving little cities of my district and who has always supported himself by his own efforts without handouts from Uncle Sam, has voluntarily written me as follows:

FEBRUARY 8, 1946.

Hon. GEORGE B. SCHWABE,
House of Representatives,
Washington, D. C.

SIR: While I think I know what the majority of people around here are thinking about the labor situation, I am talking only for myself when I say that the New Deal has everything jumbled up. They are still experimenting. Of course we, the people, do not expect them to bite the hand that is feeding them, and we know the labor moguls voted them into power, and now the New Deal has no choice but to take orders from the unions, but we do expect our duly elected Representatives to vote out these wartime restrictions which are now entirely unnecessary. The New Deal and its rationing has caused the shortages and waste. The OPA has made hoarders and liars out of the American people. I know, because I worked on the ration board for 3 years.

The unions are now demanding higher wages from the New Deal and the New Deal has no choice but to dance; but they are unable to get higher wages for the unions without raising prices, so the employers are raising their products, taking advantage of the situation, and raising them way out of reason, in many instances 100 percent, and the public is being crushed to death in the middle. Of course, the result is inflation. But the people expect inflation. A nation cannot waste its resources without paying. Every citizen knows that we will have another depression. The New Deal, the UNO, or even the smart guys who think they can stop time in its flight, can do nothing about it. As night follows day, so starvation, want, death, and depression follow war and times of great waste.

The proper reconversion would have been for the unions to have allowed manufacturers to produce plenty, and even a surplus, in order to give all returning servicemen work; and the increased purchasing power would then have brought about a certain prosperity, and that prosperity could have brought about normalcy. But the New Deal and the unions saw a chance to raise wages while the veterans were still overseas and before they could come back and make their wishes felt in running the country; so they came out for higher wages for the union members, and, of course, higher prices always follow higher wages, and higher prices always cause inflation—and now the sky is the limit.

There is only one way to stop higher prices and that is for the people to boycott all business and quit buying until prices get to a decent level, and that is almost impossible because the war has lasted so long that folks are pretty much out of everything; and now the New Deal is helping to make things more scarce by calling it patriotic for people to give away their clothes to foreign countries, which articles they may need themselves before long in order to keep clothed.

Yes; we will have to take our medicine for not having been prepared for war when it came, and then going into it at high prices and cost-plus contracts. A country can prepare for war when war material is cheap, and then it can wait until prices are exorbitant—and the latter is what we did. Prices will not go down now until the New Deal allows the law of supply and demand to control our economy. With this system in effect, prices will go up, but they will come down again when the supply exceeds the demand and there is competition in business. But the artificial interferences and control of the New Deal will cause prices to be up all the time.

Yours truly,

——— ———.

During the recess of Congress the latter part of December and early part of January, I visited every community in my district, and I found the overwhelming sentiment of the people to be just that expressed in the above letters. They are not being fooled; and the propaganda that is being put out by the New Dealers is not swaying very many of them from their normal American equilibrium. They know what is back of the scene well enough to know that the theories of the

bureaucrats are not right. They may not always be able to appraise the consequences of the programs that are being advocated, but they are literally fed up on expediences and every known form of contrived scarecrow to get them to believe that we should turn from our American ideals and be guided by "New Dealirium."

Former Representative Ramspeck Advocates Better Pay and Retirement Benefits for Members of Congress—Collier's Magazine Endorses Increase

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. RANDOLPH. Mr. Speaker, it was my privilege to join with more than 350 friends of former Representative Robert Ramspeck at a testimonial dinner in this city February 11. The Honorable Fred M. Vinson, Secretary of the Treasury, acted as toastmaster, and the speakers were the Honorable Sam Rayburn, Senator Walter E. George, R. R. Zimmerman, administrative assistant to the President, and myself. The remarks which Mr. Ramspeck made, in part, follow:

Whatever I may have done in benalf of the employees of the Government has been accomplished in an effort to provide our people with better administration of their affairs.

Fair pay, reasonable hours, adequate vacations, and proper retirement system are a necessary part of any good personnel policy.

To this must be added fair opportunity for promotion and reasonable assurance of security of employment, if good people are to be retained in the Government service.

I am not one who believes that political endorsement is a disqualification for employment in the Government. I do believe that no one should be employed if not qualified for the position sought, regardless of political considerations.

I have long believed that the best policy for any political party is to do a good job. The best way of accomplishing this is to employ only well qualified persons—and to keep them without regard to political changes.

Of course, the policy-making positions should be filled with persons in sympathy with the party in power. However, there is no reason why expert career employees cannot serve either party in other positions without regard to their personal political beliefs.

In the early days of the history of our Nation government at the Federal level was simple. It affected very few of our people. It had little effect upon economic conditions. That day has passed. Now government at the Federal level is complex. We cannot do a good job without trained employees. We must have the best brains we can attract. We must keep them after they have acquired experience. No political party will succeed by following the outmoded patronage system of appointing unqualified personnel simply because they have political endorsements.

Good government is less a matter of law than of personnel. Good administration can make poor laws satisfactory. But unqualified personnel can destroy the results of beneficial legislation.

The first and most important qualification of any public employee is ability to get along with people. They must also have the ability to do the work, but no matter what their education and training may be, if they do not understand dealing with the public they have no place in Government service.

Pay scales in the higher-level positions in the executive branch of the Government have not kept pace with the times. Our country is losing too many experienced employees. Private employment is taking them away and paying them much more than they can receive in the Government.

The pay of Senators and Congressmen has also lagged behind. If $10,000 per year was reasonable pay in 1925, it is certainly too little now. It should be increased at once.

I can understand why the average citizen thinks the pay of Senators and Congressmen is sufficient. It is because most of them do not make that much. However, the public does not understand that at least half of this salary must be used for expenses incident to holding the job. In private employment no such situation exists. If a privately employed person receives $10,000 he uses every cent of it for his own personal needs. That is not true of any public official. Every city, county, State, or Federal official, elected by the voters, will testify to the accuracy of this statement.

When the present salaries of legislative officials was enacted in 1925, the executive branch of the Government had about 300,000 employees. At the peak of war employment there were 3,000,000. Just prior to the war there were approximately a million.

Every increase in the size, and all expansions of the operations of the executive department of our Government, bring a corresponding increase in the burden placed upon Senators and Congressmen.

Neither the pay nor the personnel and facilities of the legislative branch have kept pace with this increase in the volume of work thrown upon the legislators because of the expansion of the executive branch of our Federal Government.

When a great State like Virginia loses three fine Members of the House, within a period of a year, due to their need for better incomes, it is time for the people to take notice of this trend. Other Members from other States have left, or have failed to stand for reelection for the same reason.

It is not too much to expect that men make some sacrifice in occupying the high office of Senator or Representative, but when that sacrifice becomes too great, the country will suffer the loss of many men of experience and ability. That situation has been reached today. I have personal knowledge that many Members of the House are finding the sacrifice required by their service difficult to bear.

The people would serve their own interests if they would encourage the Congress to increase the pay of its Members. I also believe that a proper retirement system should be provided.

The committees of the Congress should have experts to advise the Members, and each legislator should have an assistant capable of handling all but legislative duties.

With increased pay, a retirement system, and more adequate staff assistance, it would still be a sacrifice for most men to serve in the Congress. That is true today because of the vast expansion of governmental activity, the press of public demand upon each Member, the long sessions, and the constant play of opposing opinions which keep the Members torn between opposite points of view. It is a most difficult service and many men cannot stand up under the grind.

In a country ruled by the people the legislative branch must be strong or freedom will be lost. Our people should remember this. They should be willing to have the Congress provide whatever is necessary to preserve the legislative branch at full strength.

None of us would like to see a legislative body composed only of men of wealth. None would like to have it composed of men willing to serve under conditions of inadequate pay, no security for old age, and without proper assistance.

If present conditions are not changed we may get just such a condition.

My colleagues, I believe you will be interested, as will citizens generally, in reading the following editorial from Collier's magazine for February 9, 1946:

MORE PAY FOR CONGRESS

Congress recently had another of those arguments about raising its own pay. This one flared up in the Senate, on a proposal to increase Senators and Representatives' salaries from $10,000 to $13,300 a year. It ended in the usual way. Congressional elections are coming next November, and the Senate voted down the proposal.

To help along a cause which we consider good toward what we hope will be eventual victory, we will here restate a few pertinent facts about Congress.

For one, these men and women do not have soft jobs. They are among the hardest worked of our public servants. Attendance at House and Senate sessions is only one of their manifold duties.

In addition, there is a large amount of committee work to be done, plus innumerable chores to be attended to for constituents, plus heavy correspondence to handle, plus a lot of people (bores and otherwise) to be seen every day.

For another thing, a salary of $10,000 a year is not as big as it looks. The Internal Revenue Bureau takes a husky income-tax bite out of that congressional salary; and whoever else may be able to do a bit of polite tax dodging here and there, a Member of Congress can't. There are numerous unavoidable expenses connected with being a Member of Congress; and Washington is one of the highest-price cities anywhere.

We don't pay Congress enough. Then we yell bloody murder when now and then it fails to measure up to public expectations and acts from timidity or bullheadedness or plain misinformation. Some of us yell the loudest when some Congressman takes his courage in both hands and suggests that Congress' pay be raised to somewhere near Congress' importance as a legislative body.

It is much to be hoped, we think, that public opinion will catch up with these facts of congressional life before long, and will not only favor a substantial salary increase but will insist on it.

Mr. Speaker, Bob Ramspeck's service in the House of Representatives covered exciting and critical years for our Nation. New and ever-changing problems have thrust increasingly heavy responsibilities on the Federal, State, and local governments. As our society and economy have grown in size and complexity with the advancing years, the Federal Government has been forced to play an ever greater role in meeting problems of a kind, intensity, and scope previously unknown. It is now clear that the Federal Government must accept an important part in effecting a successful transition from war to peace. The unfolding problems of peace demand, for their successful solution, a Federal Government adequately prepared from the standpoint of both policy and administration.

To meet the needs of coming years, the management of Federal affairs must be further improved. Much will naturally depend upon the soundness of the policies determined by the Congress. Of equal importance will be the skill and leadership of officials in the executive branch.

We must attract able personnel to the Federal Government and find ways of holding them in its service. Only in this

manner can the public business be effectively and economically conducted. More specifically, it is essential that the intermediate and higher administrative positions be filled by persons with imagination, courage, and competence. They must be able to think and act in terms of the general public good and not solely on behalf of any single segment of our society.

We must make a calculated effort to select, train, develop, and assign administrative personnel to the end that men and women of caliber are attracted to executive posts and that they reach high places by intent and as a result of wise personnel policies, rather than by luck or favoritism or in spite of doubtful personnel practices.

The administrative gains achieved, in large part as a result of Bob Ramspeck's influence, over the past 10 years must be held and extended. I have previously made public some shocking facts which indicate the waste in lives and dollars, resulting from our negligence in dealing with this problem. As President Truman has well stated, "The Government should lead, not lag, in the important field of employee safety." We should conserve our human resources in Government through adequate employee health services. We should emphasize the development and placement of people to the end of maximum utilization of personnel in peace as well as in war. For the next few years, particularly, we should emphasize the employment and proper placement of veterans.

We should also eliminate those in Government who are unwilling or unable to do their share, even after we have tried remedial measures of training, transfer, and discipline.

Now that the war is over, American citizens, through their elected Representatives, are demanding a discriminating tax dollar. We should strive to have fewer, more competent, better-paid personnel in Government. Unnecessary personnel, duplication of agency effort, and preventable red tape must go. With the rising cry for governmental services, we are challenged to use our utmost ingenuity in promoting administrative efficiency and economy.

Government by teamwork is essential if we are successfully to meet this challenge. The legislative and executive branches must work together more effectively, and a common feeling of pride and enthusiasm for the public service must be developed.

Bob Ramspeck has pointed the way toward many of the future goals. The rest of us must do our part to achieve them.

Bonneville $17.50 Per Kilowatt-Year Will Pay Out Federal Investment

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release from the Bonneville Power Administration:

The basic rate structure of $17.50 per kilowatt-year for wholesale power from Bonneville and Grand Coulee Dams fully protects the Federal investment in the two Pacific Northwest projects and in the Bonneville Power Administration transmission systems, two reports transmitted by Secretary of the Interior Harold L. Ickes to Representative WALT HORAN, of Washington, disclosed today.

"I feel certain that these reports will give all the needed information for a detailed examination of the $17.50 per kilowatt-year rate upon the basis of which Columbia River power is sold in the Northwest," Secretary Ickes wrote Mr. HORAN.

The reports, which had previously been requested by Representative HORAN, include a study by an independent public accounting firm, Arthur Anderson & Co., and a comprehensive study of the pay-out structure of the projects based on current Government wholesale power rates, made in conjunction with present discussions of the adequacy of the Bonneville rate in paying off the Federal investment in the three projects, Dr. Paul J. Raver, Administrator of the Bonneville Power Administration, said.

"The audit demonstrates that the fiscal position of the projects is sound and has become increasingly so as operations have progressed," Dr. Raver declared. "Not only have aggregate revenues been sufficient to meet all financial requirements from the inception of construction of the Bonneville and Grand Coulee Dams and of the extensive transmission system in Oregon and Washington, but at the end of the last fiscal year had accumulated net revenues of $11,572,052 above all costs of power operations, including interest and depreciation on the Federal investment.

"Of the $11,572,000 accumulated net revenues more than $3,000,000 has been applied in addition to the $10,000,000 provision for depreciation, as advanced repayment on the Government's investment, leaving a net surplus of more than $7,500,000 over and above all costs and scheduled amortization of investment. This net surplus, together with $5,800,000 of estimated net surplus from the current year's operations will enable the Administration to continue to meet its full obligations through the reconversion period despite the loss of temporary war loads," the Administrator said.

"The Administration takes considerable pride in presenting these reports to the people of the United States," Administrator Raver stated. "We have sought to have this and this audit made for several years. Arthur Andersen & Co. is regarded by financial and business leaders of the country as one of the outstanding independent firms in the field of accounting. For many years it has audited the books of companies owning more than half the private electric utility plant in the United States."

The Administrator said that the audit and pay-out reports show that operations have more than satisfied the Administration's financial obligations to date, and that there is "every reasonable prospect" for the full satisfaction of its total obligations in the future "with a reasonable margin of safety."

"And this can be accomplished under the present Bonneville basic rate structure of $17.50 per kilowatt-year," he stated.

The pay-out study was based on figures set up in the allocation of costs for the Bonneville Dam as determined by the Federal Power Commission. The allocation of costs for the Columbia Basin—Grand Coulee—project set forth in House Document No. 172, Seventy-ninth Congress, and from the financial statements certified by Arthur Andersen & Co. in its audit for the initial operating period ending June 30, 1945.

Revenues from the sale of Bonneville and Grand Coulee power by the Power Administration under existing regulations are required to repay (1) $58,708,309 of the estimated completed cost of $85,610,872 for Bonneville Dam, (2) all of the cost of the Bonneville-Grand Coulee transmission system, representing a current investment of $82,486,594 and an estimated completed investment of $168,332,747, and (3) $382,547,068 of the $506,459,180 estimated ultimate cost of the Columbia Basin project. The Columbia Basin project amount of $382,547,068 includes irrigation costs to be repaid by power revenues and $35,519,577 for river regulation benefits to future downstreams hydroelectric plants.

The Administration's power revenues of an estimated $1,863,000,000 over the repayment period will provide 93.07 percent of the total funds required to repay reimbursable construction costs and operating cost, including interest and a reasonable margin of $160,000,000 for contingencies, on the Columbia River Basin program embracing Bonneville Dam, Grand Coulee Dam and irrigation works and the transmission system.

The pay-out study, Administrator Raver said, shows that the present wholesale rates will fully cover the operation and maintenance expenses and that reimbursable construction costs, including replacements, allocated to power will be returned to the Treasury with interest within 50 years from the date that such construction costs are incurred, and that construction costs allocated to irrigation will be returned within 50 years after water is first made available to each block of land.

The construction costs of the Bonneville-Grand Coulee transmission system and of the Bonneville Dam project—allocated to power—are to be returned within 50 years with interest at 2.5 percent, the approximate average cost of money on long-term United States Treasury bonds during the 11 years ended June 30, 1943. This is in accord with the findings and order of the Federal Power Commission.

In addition to repaying the construction costs of the Columbia Basin project allocated to power within 50 years, provision is made for 3 percent interest annually on the unamortized balance of such costs and for repayment of that portion approximately 65 percent of the construction costs allocated to irrigation which exceeds the repayment ability of the landowners. In no case are the costs not to be repaid, and in every case provision is made for interest annually on balances of power costs remaining to be repaid. The subsidy to irrigation of $228,404,676 is in fact a contribution to the Federal Treasury in lieu of taxes.

Dr. Raver stated that in view of the withdrawal to date of 300,500 acres from the project and the increased efficiency of earth-moving operations, he doubted whether the total subsidy required from power for irrigation would be increased beyond the original estimates. In case 1945 construction costs were actually experienced for the irrigation works, an additional 11 years of power subsidy would repay the $74,000,000 increase, he said.

Administrator Raver asserted in commenting on the pay-out study that full consideration had been given to the cut-back in war-borne loads which resulted in a 500,000 kilowatt reduction in sales during the latter part of 1945. He added that an upward trend in power use and revenues from Grand Coulee and Bonneville was certain following a 2-year period of adjustment to peacetime conditions. He predicted a drop from $22,990,000 in revenue during 1945 to $13,800,000 in 1948 and then a gradual rise to $25,500,000 annually by 1953. The estimates, he said, were conservative and that present indications were that it might be necessary to revise them upward. Substantial demands from peacetime operations were already in evidence. Domestic consumption is moving up rapidly and in some areas at the present time there is an actual scarcity of power, he said, be-

cause of the inadequacy of existing facilities in certain areas which had to be left with insufficient supplies during the war years because of construction difficulties.

The GI's Can't All Be Wrong About Unfair Demobilization—Just Read This Letter

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I quote the following letter written to Hon. Powers Higginbotham, mayor of Baton Rouge, La., from a GI still stationed in Manila:

MANILA, P. I.

MR. MAYOR: Those of us who have spent between 2 and 3 years in the Army, many months overseas, have wondered for some time if there were any common denominator for the continued bungling which characterizes the redeployment situation. Our immediate experience and our personal interest in the problem have brought to light a few facts which we would like to have you see. We need your help in arousing sufficient public opinion to get us home. For we are all too well aware that if demobilization is left in the War Department's hands, we will waste additional months in the Pacific.

Here is how the situation looks from our vantage point. During the early postwar months the War Department assured us and the general public that, as soon as transport became available, all men of two or more years' service would be returned and discharged. Despite proven failures to use available shipping during this period, Army authorities claimed that they were doing their best. But, now sufficient shipping is available to return all men within this category by the end of February. What happens? Although all the shipping after the 10th of January in Manila Harbor is surplus, the authorities refuse to drop the points until February and then less than five, according to Lieutenant General Collins. Worse still, after a person does finally become eligible under this snail's program, he still can be held overseas for another 3 months.

Both these turn-abouts are wholly inconsistent with the earlier statements. The War Department's record is a constant series of lies and unfulfilled promises. Unless you and the rest of the American people lend a hand in rectifying this confusion, we shall wonder if we were fighting for our freedom and liberties or for the greater glory of the War Department. If one looks behind the haze of Army claims, denials, and contraclaims one fact stands out: The War Department and its General Staff desire to perpetuate as much personal power for themselves as the American people will tolerate.

You are being told at home that we are needed overseas because, "Our overseas forces would be dangerously under strength in occupying hostile countries if all eligible men were returned before sufficient replacements arrive" (Lieutenant General Collins). MacArthur said long ago that only 200,000 men would be necessary to occupy Japan. Since when were the Philippines, Hawaii, or the like hostile countries? Sounds silly doesn't it? But it is with trumped-up excuses such as this that we, the citizen soldiers of the United States, are being kept in forced exile. You see, the dangerous part of demobilization is that too many generals may lose their jobs. And, it may be considered that a good many men on Capitol Hill will lose their jobs at the same time.

Do you know what our occupation duties consist of in the Philippines? Beyond waiting on each other we have absolutely nothing to do except keep ourselves from stagnating. The Philippine people are as capable of looking after themselves as they were before the war, and our being here is but a hindrance to their return to normal life.

Well, there is the situation. Will you please lend us your help?

The University of Texas World War II Memorial Fund

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. LYNDON B. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to state that on January 26, 1946, the Ex-Servicemen's League of the University of Texas inaugurated a campaign to raise $1,000,000 for a University of Texas World War II memorial scholarship fund. It is proposed that the fund will be used to provide educational opportunities at the college level for the widows and children of men who lost their lives, and to construct a permanent addition to the housing facilities of the university.

I consider this scholarship program to be an inspired concept of what a war memorial should be—an unusually vital and appropriate commemoration of the names and spirit of the men who made the supreme sacrifice on battle fronts throughout the world in order that we might continue to live as freemen and to improve, through education, our individual and national standards for democracy and all things that are really worth while.

Mr. Speaker, I hope this scholarship fund campaign at the University of Texas will serve as a model for war memorials throughout the country, and I am confident it will receive the wholehearted and unselfish support of all good citizens.

I am including for printing in the RECORD the radio program and the very thoughtful and inspiring address delivered by Prof. Walter T. Rolfe at the ceremonies on January 26, 1946, which launched the University of Texas Memorial Scholarship Fund. The program and address follows:

ANNOUNCER. Good evening, ladies and gentlemen, we are speaking to you tonight from Gregory gymnasium on the campus of the University of Texas, where thousands of students of the university and veterans of World War II are dancing for a purpose. The gym tonight is the scene of a benefit dance sponsored by the Ex-Servicemen's Association of the University of Texas—the kickoff in a University of Texas servicemen's campaign toward a million-dollar memorial fund. The past weeks have been busy ones for campus ex-servicemen. In addition to attending classes and working at part-time jobs in the city of Austin, many of these veterans have taken time out to set into motion this million-dollar drive. To explain to you the organization of the University of Texas World War II Memorial Scholarship Fund, Inc., sponsored by the Ex-Servicemen's Association of the University of Texas, its objectives and the plans for their realization, we present to you at this time Walter T. Rolfe, chairman of the Department of Architecture at the University of Texas, a veteran of World War I, and a member of the Memorial Fund's board of directors. Professor Rolfe.

ADDRESS OF PROFESSOR ROLFE

Dr. ROLPH. Ladies and gentlemen, tonight we begin again. This night can well be one long to be remembered by us here at this friendly party. It can be the beginning of an idea that will never be forgotten in this great country of ours. This is the time when great spiritual impulses should guide our thinking to a plane far above the backwash of war, which is gruesome and ugly. It is also even more fitting that this impulse shall have come from the men who did the fighting in that war—from the men and women who served their country through its greatest period of peril.

It is therefore a distinct pleasure to be selected to say these words here tonight and to help enlist your thinking, your loyalty, and your contributions to this idea and program. I say what I have to say with sincere and deep convictions. For the 14 months prior to November 1, 1945, it was my pleasure to serve our returning service people as coordinator of the university's veterans' advisory service. From that delightful experience I came to know veterans and, I feel, to understand them and their desires, their hopes and plans. They have my respect—and my affection. Never have I known such a mature and thoughtful group of students at such young years. It is natural that their thinking should soon turn to such a program as I am about to relate to you.

Purged of their small fears in the awful heat of mortal combat, impaled within the gloom of impossible fox holes, they fought, some died, but many thought of the things they wished to see done if they were allowed the freedom of home and country again. Those who came back carry in their souls a hallowed memory of those who lie tonight beneath the regiments of little white crosses from Normany to Salerno, from Sicily to Iwo. They cannot forget the thousands of little crosses that might also have been had we been forced to invade Japan. They are glad to be alive, for well they know the fate of fortune that might have left them, too, on some lonely shore forever.

They are fully conscious that in the larger good, the lone individual becomes another sailor, another marine, and another soldier. However, in the spirit of our democracy, no one of these is small, no one unimportant. In the tomb of any unknown soldier, in our spiritual thinking, lie the hopes of a great people.

Some died that others might live and, in the baptism of death, came a greater strength that binds men together with a bond as strong as right itself and as lasting as eternity. Men who have come back from these awful yet moving experiences, now pause to propose a fitting memorial. In their search for an appropriate idea or theme for this memorial, it became more and more apparent that its living qualities should be uppermost. This was to be no monument of stone or bronze alone. It should be a commemoration of the gallantry and group magnificence of all those who served. It should be an appreciation of those who fought and lived as well as a benediction for those who fought and gave their lives for their neighbor's welfare. There is in this group spirit, a challenging example to all of us who would win

and hold an adequate peace. We are therefore here tonight to initiate this idea of a memorial that shall live.

MEMORIAL SCHOLARSHIPS

The first thought of this memorial is for the wives and children who were left only a name instead of a husband and father. They too are entitled to a larger share of the fruits of peace. For them it is proposed that a system of scholarships be created to meet their needs and to offer them encouragement to carry on the task that was begun for them. It is fitting and proper that all of us should extend a sincere hand to help our veterans do this thoughtful and lasting act. We surely can see that this living thoughtfulness has a more permanent value than some costly show of marble that soon will pall upon us all. This is what we mean by living commemoration.

MEMORIAL HOUSING

The second theme of the memorial is that of housing veterans while they attend the University. This again is a realistic yet very worthy plan for doing community good where it is most needed. The national housing emergency only lends emphasis to this good planning by the men and women who so recently have come back to us.

MILLION DOLLAR FUND

To accomplish this broad program the Ex-Servicemen's Association has founded a Corporation known as the University of Texas World War II Memorial Scholarship Fund, Incorporated. The men, whose names appear as charter members of this corporation, have pledged their honor that by intent and act all funds given to this worthy plan shall be used only for these purposes just described. The board of regents of the university are the trustees for the fund, as provided by charter.

The corporation proposes to secure a minimum of $1,000,000 from all those who appreciate this opportunity to thank those who went away to do a piece of work for us and our country, which we could not do. This is indeed a small way for us to express our thanks for the splendid performance they gave in every fighting theater in the world. When we compare what they did with what they ask, the amount is indeed modest.

Of the million-dollar fund, the first $100,000 shall be set aside for scholarship purposes. The remainder shall be used for erecting a dormitory on the campus, of such design and construction as to be comparable with our present high standards of permanent student housing. The income from the dormitory over and above immediately operating and maintenance budgets shall also accrue to the scholarship fund. The housing program will thus serve two very useful purposes at the same time. This program has been approved by the board of regents of the university.

The corporation shall be limited to the collecting of funds for this program and such funds shall be deposited with and disbursed by the auditor of the university. No part of the subscriptions to the memorial shall be used for operating expenses or any other purpose. The operating expenses for the raising of the memorial fund shall be maintained in a special account to be known as the World War II memorial operating fund. Any balance remaining in the operating budget on the dissolution of the corporation shall be transferred to the memorial fund.

To raise a fund of these proportions is indeed no small task. It requires capital to operate. To date, more than $1,000 have been raised for this purpose, not including the accomplishments of this program tonight. The members of the corporation are very sure that this operations budget should be adequate before such an important memorial plan is projected. They have been particularly careful to safeguard all interests and the future of such a proposal. It is the sort of planning we appreciate from mature people—the sort of initiative that won our greatest war in such unbelievable haste.

We have come together tonight to enjoy ourselves once again, to share the pleasures of being normal people again in a world at peace. We have the pleasures of song and laughter, of dance and food. We can enjoy this gay throng with lessened inhibition and fear of the unknown that have held our nerves in tense restraint these many months just passed. The golden bars of service are giving way to the golden eagle of the civilian—the kind of wings so many of you have waited so long to receive. This is our kind of a night—the kind you dreamed about in jungle, in tent, and fox hole—in prison camp. We hope no one is disappointed.

But if pleasure alone were all, then this higher purpose would be lost to us. We could feel a lot more free, much more cheerful, if we knew this party was the beginning of another important plan in our first days of peace. We can find a greater release in the knowledge that we, too, have given to an ideal that is beyond our personal gain; that we have stopped these few minutes this unusual night to offer our humble and simple gratitude to those who did so much more for us than we can ever repay.

But tonight we can only begin. We have told you what this plan contains. We have pledged our work, our loyalty, and our sincerity. We now look to you to work with us in this worthy cause—to tell your fathers, your mothers, your friends, and any person who may find it in his heart to share with us this privilege. This plan, we believe, is as large as Texas and we hope that its very size will prove the challenge that will set the minds of millions of us in Texas to work. We want everyone to help us at least a little.

This twofold plan is imaginative; it is challenging, important. By building the housing unit, the united income will provide additional help to those who deserve and need it. I am personally proud that these young citizens of the university have thought through this plan to this constructive conclusion. To those who may have some doubt about the straightforward thinking of those who have been our able representatives abroad, this sort of straight thinking is recommended.

May these thoughts mean much to you and may they clearly express what is intended to be expressed. The charter of this corporation is open to your inspection. The acts of this body are for you to scrutinize. May this program be given the broadest of expression and then—may the eyes of Texas be upon us all.

Surely in a land that has so freely spent more than three hundred billions for war we cannot fail to find a mere million for peace—for our widows and children and the education of our youth.

Should the OPA Be Extended?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. BUFFETT. Mr. Speaker, Congress will make some decision soon about the Office of Price Administration. Seeking to influence Congress by public pressure, the OPA is carrying on a gigantic propaganda drive. It seems designed to force Congress into extending the OPA for a year or more with blanket powers.

OPA HAS POWERFUL PROPAGANDA MACHINE

Obviously, a propaganda machine fueled by OPA's $150,000,000 appropriation is well financed. With gigantic tax funds, plus effective use of the radio, the administration has propaganda weapons to mold most people's opinions on inflation and prices. These weapons, like those of the late Nazi propaganda minister, Goebbels, would seem to be irresistible.

Accordingly, getting the inflationary problem fairly before the people may become almost impossible. If the administration, to protect its political power, determines to mislead the people, it may do so successfully.

So the road back to economic freedom in America may be very difficult.

Besides the propaganda blitzkrieg, other devices are being used to fool the people on price control. Examples are the peacetime subsidy on coffee, the citrus fruit frameup, and the hamstringing of the building industry by OPA.

Everyone wants low prices on the things he buys and high prices for the goods or labor he sells. That is human nature. President Truman has proposed higher wages and lower prices at the same time. Suggest to your barber, like I did, that he lower his prices and raise his wages at the same time. You will quickly learn how unfortunate the President's assertion was.

OPA PROVIDES CUNNING PEOPLE RICH GAINS

However, this kind of talk in high places is not fooling the rich and well-informed. The burden of such deception falls on the humble people, who place full faith in official utterances.

Shrewd people have long been buying jewels, land, houses, stocks, paintings, and other tangible property. Shortages are increasing this desire to trade currency for goods. But instead of permitting increased production to offset this demand, OPA creates new restrictions. These spread the decline in confidence in the future value of our money. Is a ruinous increase in the cost of living to result?

It can be avoided only if President Truman will plan First, a balanced budget; second, instruct OPA that production of goods must be their paramount objective; and third, announce the date for the end of the OPA.

These three simple acts are immediate leadership responsibilities. Only these actions promptly can prevent a smash-up in reconversion.

If these three steps are not taken promptly, disaster is ahead—and not too distant. Who says so? The history books.

HISTORY OF PRICE-FIXING IS A RECORD OF DISASTER

Fiat Money Inflation in France, by Andrew Dickson White, details a French price-fixing experiment that our OPA has paralleled to date. It ended in hunger and misery, and before it was over the streets ran red with the blood of the common people. How Nazi Germany Has Controlled Business, issued by the Brookings Institute, details price control under Hitler. That report outlines Nazi

price-fixing policies. OPA today is its almost exact duplicate.

The causes of inflation in America go back many years. But the battle against inflation thus far has been a constant retreat. Why? Because there is little understanding of this economic disease.

WHAT CAUSES INFLATION?

The truth about inflation and the high cost of living is not so easy to understand as propaganda slogans. But the truth will be a more digestible and helpful diet for the American people. What causes inflation?

The OPA says that high prices bring inflation. Let us measure that claim against the testimony of the top administration man on money and prices, Marriner Eccles.

In official hearings, Mr. Eccles, Chairman of the Federal Reserve Board, testified:

Inflation comes from appropriations of congressional or legislative bodies in excess of their willingness to impose taxes to pay for the expenditures.

Compare that statement of what causes inflation with the OPA's claim. Either Eccles or the OPA is deceiving us.

Stated more simply, Mr. Eccles declares that when the Government spends more than the amount it collects in taxes it is inflating. So inflation begins with deficit spending. We will not remedy this situation until this fact is generally understood. Deficit spending is the cause of inflation and high prices are the consequence.

What does a parent do with a child who gets the stomach ache from eating green apples? Obviously the vital move is to stop the child from eating green apples. Similarly, to stop inflation, first deficit spending must be stopped. The administration must balance the Budget.

CAN THE OPA STOP PRICE RISES?

Millions of humble citizens have been led by propaganda to believe that the OPA can stop higher prices. What are the facts?

The OPA did a necessary job of wartime price control. The OPA was used to prevent sharp price rises resulting from short production of civilian goods. But the war is over. Now shortages can exist only if the OPA causes them by shackling production. There is no shortage in America of productive capacity.

OPA IS NOW OPERATING AS A NARCOTIC

The OPA does not stop price rises because the OPA does not combat the cause of price rises—inflationary deficit spending. The OPA now operates as a narcotic. A drug which conceals pain or other symptoms can deceive an ill person, and such a delusion may be fatal.

We face the danger that the OPA may now similarly mislead us. Deficit-financing goes unnoticed by the same groups that want the OPA continued. Thus the OPA already is fooling these people into believing price controls can evade the natural law of supply and demand.

The OPA now has a further evil effect. A drug often stops normal healing processes. Now the OPA is preventing natural economic healing processes from keeping prices down.

For example, ordinarily a scarcity of bricks results in a higher price for bricks. That increase both causes many factories to step up production and also slows down demand. Both the increased supply and decreased demand multiply the supply of brick. The increased supply makes a market surplus and this condition brings prices down again.

The OPA prevented that natural remedy from expanding brick output for 6 months in 1945. As a direct result, thousands of homes for veterans were delayed many months. Finally OPA adjusted the price, brick labor wages were raised, and with adequate labor the brick output is increasing sharply.

IF RECKLESS SPENDING CONTINUES CAN PRICE FIXING STOP HIGHER PRICES?

What is ahead if the Government continues to create billions of dollars of excess purchasing power, and tries to hide this evil by price-fixing?

We then face one of two alternatives.

One alternative is much higher prices, by black markets or official prices. In either case the frugal, thrifty, and trusting citizens will be systematically and ruthlessly cheated by their Government. The buying power of their savings, now in war bonds, insurance, and other dollar obligations will become smaller and smaller. During inflation, those who have invested their savings in forms of cash, present or future, have a uniform fate. They all get poor. That happened in Germany and elsewhere.

Already price rises from diluting our money is bringing distress to the humble people and workers generally. It is rewarding the cold-blooded, cunning, and heartless. It is destroying honesty among all citizens by frequently requiring black-market deals to get necessities of life.

As individual economic distress becomes acute, serious social disorders are probable.

The President and Congress have been warned about this danger many times. But even President Truman does not seem to comprehend that the root evil is the deficit spending, and not the high prices that must result from more dollars than goods.

IS AN AMERICAN GESTAPO AHEAD?

The American people have not been told about the other alternative of continued deficit spending. It is ruthless regimentation. Price fixing is crippling production. As plants lose money and close down, goods disappear from the market place. Then a ruthless gestapo is set up to cope with the shortage scramble to get food, clothing, and shelter. Witness the effect of the closing already of over 500 butter-making plants.

The Nazis controlled inflation by using a gestapo. Already the OPA is copying the mild early methods of the Nazis. Ruthless gestapo methods will come later, unless OPA is soon eliminated.

LABORING PEOPLE ARE CHIEF VICTIMS

Always the crushing blow of price control falls hardest on the working people and the white-collar classes. That is why the humble people of America are so disturbed today.

The fixed incomes and small earnings of teachers, public employees, and pensioners cannot stand large price rises. Will the frugal financial independence of the great middle classes of America be broken and destroyed? Undoubtedly the communistic elements in the OPA gleefully anticipate such a catastrophe. But I am likewise sure the patriotic Americans within the Administration do not want this tragedy to happen.

President Truman and the OPA can tell the people the truth—that deficit spending causes price rises by creating purchasing power in excess of production. They can also tell the people that price-fixing slows down production and creates the shortages that make prices go up. Only a balanced budget, plus a Government policy that encourages full production, will keep prices down. In this direction is found the only genuine solution for the high cost of living.

Extending the OPA without such action puts us in the position of the opium smoker who knows that the habit will destroy him, but who lacks the courage to face the distress resulting from breaking the habit.

Extending the OPA without balancing the Budget and encouraging full production will make black marketeering, bootlegging, and thievery necessary for survival. It will destroy the fundamental morality upon which our Christian civilization is based. How? By crippling production, OPA will make legally impossible the satisfaction of human needs for food, clothing, and housing. But these needs must be met. Americans will satisfy them by transactions outside the law. Our current experiences with black markets, to say nothing of the prohibition era, have demonstrated that Americans know no law when their needs or appetites are thwarted by arbitrary governmental decrees.

Should the OPA be extended? Only if these three conditions are met: First, if Congress secures assurance of President Truman of genuine cooperation in balancing the Budget; second, if Congress can get adequate assurance that the pledge Mr. Bowles made at Hartford June 15, 1945, will no longer be simply campaign oratory for the OPA. That pledge declared "that OPA pricing policy shall not stand in the way of all-out production of civilian goods and services which is the only final answer to tremendous inflationary pressures now threatening our economy." And, third, if the extension provides for its elimination by a definite date.

Should Congress now fail to insist on the restoration of free production and free markets quickly, it will mean that this generation has given up for a mess of temporary pottage the American birthright of liberty, justice, and opportunity.

Oregon's Tax Economy

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD,

and hold an adequate peace. We are therefore here tonight to initiate this idea of a memorial that shall live.

MEMORIAL SCHOLARSHIPS

The first thought of this memorial is for the wives and children who were left only a name instead of a husband and father. They too are entitled to a larger share of the fruits of peace. For them it is proposed that a system of scholarships be created to meet their needs and to offer them encouragement to carry on the task that was begun for them. It is fitting and proper that all of us should extend a sincere hand to help our veterans do this thoughtful and lasting act. We surely can see that this living thoughtfulness has a more permanent value than some costly show of marble that soon will pall upon us all. This is what we mean by living commemoration.

MEMORIAL HOUSING

The second theme of the memorial is that of housing veterans while they attend the University. This again is a realistic yet very worthy plan for doing community good where it is most needed. The national housing emergency only lends emphasis to this good planning by the men and women who so recently have come back to us.

MILLION DOLLAR FUND

To accomplish this broad program the Ex-Servicemen's Association has founded a Corporation known as the University of Texas World War II Memorial Scholarship Fund, Incorporated. The men, whose names appear as charter members of this corporation, have pledged their honor that by intent and act all funds given to this worthy plan shall be used only for these purposes just described. The board of regents of the university are the trustees for the fund, as provided by charter.

The corporation proposes to secure a minimum of $1,000,000 from all those who appreciate this opportunity to thank those who went away to do a piece of work for us and our country, which we could not do. This is indeed a small way for us to express our thanks for the splendid performance they gave in every fighting theater in the world. When we compare what they did with what they ask, the amount is indeed modest.

Of the million-dollar fund, the first $100,000 shall be set aside for scholarship purposes. The remainder shall be used for erecting a dormitory on the campus, of such design and construction as to be comparable with our present high standards of permanent student housing. The income from the dormitory over and above immediately operating and maintenance budgets shall also accrue to the scholarship fund. The housing program will thus serve two very useful purposes at the same time. This program has been approved by the board of regents of the university.

The corporation shall be limited to the collecting of funds for this program and such funds shall be deposited with and disbursed by the auditor of the university. No part of the subscriptions to the memorial shall be used for operating expenses or any other purpose. The operating expenses for the raising of the memorial fund shall be maintained in a special account to be known as the World War II memorial operating fund. Any balance remaining in the operating budget on the dissolution of the corporation shall be transferred to the memorial fund.

To raise a fund of these proportions is indeed no small task. It requires capital to operate. To date, more than $1,000 have been raised for this purpose, not including the accomplishments of this program tonight. The members of the corporation are very sure that this operations budget should be adequate before such an important memorial plan is projected. They have been particularly careful to safeguard all interests and the future of such a proposal. It is the sort of planning we appreciate from mature people—the sort of initiative that won our greatest war in such unbelievable haste.

We have come together tonight to enjoy ourselves once again, to share the pleasures of being normal people again in a world at peace. We have the pleasures of song and laughter, of dance and food. We can enjoy this gay throng with lessened inhibition and fear of the unknown that have held our nerves in tense restraint these many months just passed. The golden bars of service are giving way to the golden eagle of the civilian—the kind of wings so many of you have waited so long to receive. This is our kind of a night—the kind you dreamed about in jungle, in tent, and fox hole—in prison camp. We hope no one is disappointed.

But if pleasure alone were all, then this higher purpose would be lost to us. We could feel a lot more free, much more cheerful, if we knew this party was the beginning of another important plan in our first days of peace. We can find a greater release in the knowledge that we, too, have given to an ideal that is beyond our personal gain; that we have stopped these few minutes this unusual night to offer our humble and simple gratitude to those who did so much more for us than we can ever repay.

But tonight we can only begin. We have told you what this plan contains. We have pledged our work, our loyalty, and our sincerity. We now look to you to work with us in this worthy cause—to tell your fathers, your mothers, your friends, and any person who may find it in his heart to share with us this privilege. This plan, we believe, is as large as Texas and we hope that its very size will prove the challenge that will set the minds of millions of us in Texas to work. We want everyone to help us at least a little.

This twofold plan is imaginative; it is challenging, important. By building the housing unit, the united income will provide additional help to those who deserve and need it. I am personally proud that these young citizens of the university have thought through this plan to this constructive conclusion. To those who may have some doubt about the straightforward thinking of those who have been our able representatives abroad, this sort of straight thinking is recommended.

May these thoughts mean much to you and may they clearly express what is intended to be expressed. The charter of this corporation is open to your inspection. The acts of this body are for you to scrutinize. May this program be given the broadest of expression and then—may the eyes of Texas be upon us all.

Surely in a land that has so freely spent more than three hundred billions for war we cannot fail to find a mere million for peace—for our widows and children and the education of our youth.

Should the OPA Be Extended?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. BUFFETT. Mr. Speaker, Congress will make some decision soon about the Office of Price Administration. Seeking to influence Congress by public pressure, the OPA is carrying on a gigantic propaganda drive. It seems designed to force Congress into extending the OPA for a year or more with blanket powers.

OPA HAS POWERFUL PROPAGANDA MACHINE

Obviously, a propaganda machine fueled by OPA's $150,000,000 appropriation is well financed. With gigantic tax funds, plus effective use of the radio, the administration has propaganda weapons to mold most people's opinions on inflation and prices. These weapons, like those of the late Nazi propaganda minister, Goebbels, would seem to be irresistible.

Accordingly, getting the inflationary problem fairly before the people may become almost impossible. If the administration, to protect its political power, determines to mislead the people, it may do so successfully.

So the road back to economic freedom in America may be very difficult.

Besides the propaganda blitzkrieg, other devices are being used to fool the people on price control. Examples are the peacetime subsidy on coffee, the citrus fruit frameup, and the hamstringing of the building industry by OPA.

Everyone wants low prices on the things he buys and high prices for the goods or labor he sells. That is human nature. President Truman has proposed higher wages and lower prices at the same time. Suggest to your barber, like I did, that he lower his prices and raise his wages at the same time. You will quickly learn how unfortunate the President's assertion was.

OPA PROVIDES CUNNING PEOPLE RICH GAINS

However, this kind of talk in high places is not fooling the rich and well-informed. The burden of such deception falls on the humble people, who place full faith in official utterances.

Shrewd people have long been buying jewels, land, houses, stocks, paintings, and other tangible property. Shortages are increasing this desire to trade currency for goods. But instead of permitting increased production to offset this demand, OPA creates new restrictions. These spread the decline in confidence in the future value of our money. Is a ruinous increase in the cost of living to result?

It can be avoided only if President Truman will plan First, a balanced budget; second, instruct OPA that production of goods must be their paramount objective; and third, announce the date for the end of the OPA.

These three simple acts are immediate leadership responsibilities. Only these actions promptly can prevent a smash-up in reconversion.

If these three steps are not taken promptly, disaster is ahead—and not too distant. Who says so? The history books.

HISTORY OF PRICE-FIXING IS A RECORD OF DISASTER

Fiat Money Inflation in France, by Andrew Dickson White, details a French price-fixing experiment that our OPA has paralleled to date. It ended in hunger and misery, and before it was over the streets ran red with the blood of the common people. How Nazi Germany Has Controlled Business, issued by the Brookings Institute, details price control under Hitler. That report outlines Nazi

price-fixing policies. OPA today is its almost exact duplicate.

The causes of inflation in America go back many years. But the battle against inflation thus far has been a constant retreat. Why? Because there is little understanding of this economic disease.

WHAT CAUSES INFLATION?

The truth about inflation and the high cost of living is not so easy to understand as propaganda slogans. But the truth will be a more digestible and helpful diet for the American people. What causes inflation?

The OPA says that high prices bring inflation. Let us measure that claim against the testimony of the top administration man on money and prices, Marriner Eccles.

In official hearings, Mr. Eccles, Chairman of the Federal Reserve Board, testified:

Inflation comes from appropriations of congressional or legislative bodies in excess of their willingness to impose taxes to pay for the expenditures.

Compare that statement of what causes inflation with the OPA's claim. Either Eccles or the OPA is deceiving us.

Stated more simply, Mr. Eccles declares that when the Government spends more than the amount it collects in taxes it is inflating. So inflation begins with deficit spending. We will not remedy this situation until this fact is generally understood. Deficit spending is the cause of inflation and high prices are the consequence.

What does a parent do with a child who gets the stomach ache from eating green apples? Obviously the vital move is to stop the child from eating green apples. Similarly, to stop inflation, first deficit spending must be stopped. The administration must balance the Budget.

CAN THE OPA STOP PRICE RISES?

Millions of humble citizens have been led by propaganda to believe that the OPA can stop higher prices. What are the facts?

The OPA did a necessary job of wartime price control. The OPA was used to prevent sharp price rises resulting from short production of civilian goods. But the war is over. Now shortages can exist only if the OPA causes them by shackling production. There is no shortage in America of productive capacity.

OPA IS NOW OPERATING AS A NARCOTIC

The OPA does not stop price rises because the OPA does not combat the cause of price rises—inflationary deficit spending. The OPA now operates as a narcotic. A drug which conceals pain or other symptoms can deceive an ill person, and such a delusion may be fatal.

We face the danger that the OPA may now similarly mislead us. Deficit-financing goes unnoticed by the same groups that want the OPA continued. Thus the OPA already is fooling these people into believing price controls can evade the natural law of supply and demand.

The OPA now has a further evil effect. A drug often stops normal healing processes. Now the OPA is preventing natural economic healing processes from keeping prices down.

For example, ordinarily a scarcity of bricks results in a higher price for bricks. That increase both causes many factories to step up production and also slows down demand. Both the increased supply and decreased demand multiply the supply of brick. The increased supply makes a market surplus and this condition brings prices down again.

The OPA prevented that natural remedy from expanding brick output for 6 months in 1945. As a direct result, thousands of homes for veterans were delayed many months. Finally OPA adjusted the price, brick labor wages were raised, and with adequate labor the brick output is increasing sharply.

IF RECKLESS SPENDING CONTINUES CAN PRICE FIXING STOP HIGHER PRICES?

What is ahead if the Government continues to create billions of dollars of excess purchasing power, and tries to hide this evil by price-fixing?

We then face one of two alternatives.

One alternative is much higher prices, by black markets or official prices. In either case the frugal, thrifty, and trusting citizens will be systematically and ruthlessly cheated by their Government. The buying power of their savings, now in war bonds, insurance, and other dollar obligations will become smaller and smaller. During inflation, those who have invested their savings in forms of cash, present or future, have a uniform fate. They all get poor. That happened in Germany and elsewhere.

Already price rises from diluting our money is bringing distress to the humble people and workers generally. It is rewarding the cold-blooded, cunning, and heartless. It is destroying honesty among all citizens by frequently requiring black-market deals to get necessities of life.

As individual economic distress becomes acute, serious social disorders are probable.

The President and Congress have been warned about this danger many times. But even President Truman does not seem to comprehend that the root evil is the deficit spending, and not the high prices that must result from more dollars than goods.

IS AN AMERICAN GESTAPO AHEAD?

The American people have not been told about the other alternative of continued deficit spending. It is ruthless regimentation. Price fixing is crippling production. As plants lose money and close down, goods disappear from the market place. Then a ruthless gestapo is set up to cope with the shortage scramble to get food, clothing, and shelter. Witness the effect of the closing already of over 500 butter-making plants.

The Nazis controlled inflation by using a gestapo. Already the OPA is copying the mild early methods of the Nazis. Ruthless gestapo methods will come later, unless OPA is soon eliminated.

LABORING PEOPLE ARE CHIEF VICTIMS

Always the crushing blow of price control falls hardest on the working people and the white-collar classes. That is why the humble people of America are so disturbed today.

The fixed incomes and small earnings of teachers, public employees, and pensioners cannot stand large price rises. Will the frugal financial independence of the great middle classes of America be broken and destroyed? Undoubtedly the communistic elements in the OPA gleefully anticipate such a catastrophe. But I am likewise sure the patriotic Americans within the Administration do not want this tragedy to happen.

President Truman and the OPA can tell the people the truth—that deficit spending causes price rises by creating purchasing power in excess of production. They can also tell the people that price-fixing slows down production and creates the shortages that make prices go up. Only a balanced budget, plus a Government policy that encourages full production, will keep prices down. In this direction is found the only genuine solution for the high cost of living.

Extending the OPA without such action puts us in the position of the opium smoker who knows that the habit will destroy him, but who lacks the courage to face the distress resulting from breaking the habit.

Extending the OPA without balancing the Budget and encouraging full production will make black marketeering, bootlegging, and thievery necessary for survival. It will destroy the fundamental morality upon which our Christian civilization is based. How? By crippling production, OPA will make legally impossible the satisfaction of human needs for food, clothing, and housing. But these needs must be met. Americans will satisfy them by transactions outside the law. Our current experiences with black markets, to say nothing of the prohibition era, have demonstrated that Americans know no law when their needs or appetites are thwarted by arbitrary governmental decrees.

Should the OPA be extended? Only if these three conditions are met: First, if Congress secures assurance of President Truman of genuine cooperation in balancing the Budget; second, if Congress can get adequate assurance that the pledge Mr. Bowles made at Hartford June 15, 1945, will no longer be simply campaign oratory for the OPA. That pledge declared "that OPA pricing policy shall not stand in the way of all-out production of civilian goods and services which is the only final answer to tremendous inflationary pressures now threatening our economy." And, third, if the extension provides for its elimination by a definite date.

Should Congress now fail to insist on the restoration of free production and free markets quickly, it will mean that this generation has given up for a mess of temporary pottage the American birthright of liberty, justice, and opportunity.

Oregon's Tax Economy

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include the following article by Tom C. Watson from the Sunday Journal, Portland, Oreg., of December 16, 1945:

TWIN EVILS THREATEN OREGON'S TAX ECONOMY

(By Tom C. Watson, Multnomah County assessor)

John Stuart Mills, noted English philosopher and economist, once said:

"History shows that great economic and social forces flow like a tide over communities only half conscious of that which is befalling them.

"Wise statesmen foresee what time is thus bringing, and try to shape institutions and mold men's thoughts in accordance with the change that is silently coming on. The unwise are those who bring nothing constructive to the process, and who greatly imperil the future of mankind by leaving great questions to be fought out between ignorant change on one hand, and ignorant opposition to change on the other."

The writer lays no claim to prophetic wisdom, but it must be apparent to a great many that we are now faced with what may well be considered as the most critical national and international economic problem ever experienced in world history.

No matter what pattern is adopted for future national economy, we may well be assured that high taxes will prevail in spite of all efforts to postpone the liquidation of our public obligations, and let us hope that the people, through its own initiative and through our national and local lawmakers and administrators, will not promulgate unnecessary additional excessive tax burdens.

During the reconversion period, as well as during normal peacetimes, most careful consideration must be given to prevent the power of taxation to utterly destroy the ability to pay.

LOCAL TAX BURDEN UNRELATED TO INCOME

In our State of Oregon prior to the recent war, and in many other States, the bulk of our local tax burden was not related to income. The principal source of tax revenue was derived from property. Property, in its various forms, is the foundation and source of all wealth and income of whatever nature. It naturally follows that excessive tax burdens imposed on property tends to exert a powerful and destructive influence on all income of both business and labor. Such a condition gradually breeds economic depressions and leads to eventual bankruptcy followed by moral and mental degeneracy of many of our people.

Property taxation in Oregon in its present trend will soon reach a dangerous point approaching property confiscation unless other sources of public revenue can be found to relieve the tax pressure on property. This situation is further accentuated by the increasing extension of subsidies in the form of property-tax exemptions which are taking on alarming proportions. The diminishing quantity of taxable property in the State is forced to assume the additional tax burden shifted from nontaxable property, although tax-exempt property receives the same benefits and protection of governmental service as taxable property but at no cost to its owners for this service.

Property tax exemptions have been too generously interpreted and too freely granted. As a general rule, tax exemption laws in this state have been rather loosely drawn. Exemptions have not only been too freely granted, but the laws, in many respects, are lacking in specific directives in the application of the laws. This ambiguity leads to many puzzling conjectures as to where to draw the line between taxable and nontaxable properties.

It is doubtful if many of our taxpayers are aware of the fact that subsidies in the form of tax exemptions are granted to some of the property of certain profit-seeking enterprises that are not of an eleemosynary or of a public character. In Multonomah County alone these exemptions amount to nearly $2,500,000 of assessed value on the current property tax roll.

While the total value of all tax-exempt property in Multnomah County has not yet been determined, it is probable that the figure will run well over $100,000,000 in assessable value, which is approximately one-fifth of the total assessed value in the county.

Tax exemptions for property of the State and its political subdivisions are vital and necessary to public welfare. But there are two schools of thought as to what, if any, exemption should extend to privately owned property of other institutions. This is a matter for the people and its lawmakers to decide.

The fact remains that increasing demands for more governmental service and increasing tax-exemption demands for nonpublicly owned property are exerting a tremendous tax load pressure against taxable property. This tendency discourages home ownership and industrial expansion.

If we are to encourage new industries to locate in Oregon we should at least be able to show a fair and reasonable tax rate.

The value of all tax-exempt public and privately owned property in the State represents a very considerable amount. There is no existing record of the summation of this value; but through an act of the 1945 legislature, the assessor of each county of the State, commencing with the 1946 assessment, will be required to evaluate tax-exempt properties and report the summaries annually to the State tax commission. It is hoped that these reports may provide sufficient facts to form a basis for future constructive legislation without endangering public and quasi-public institutions.

FEDERAL HOLDINGS VASTLY INCREASED

Closely correlated to the subject of State and local tax-exempted property is the matter of the increasing encroachments of land acquirements by the Federal Government from the States and their subdivisions.

At the present time approximately 54 percent of the land area of Oregon is federally owned and tax exempt.

A few of the counties receive some revenue from revested Oregon and California railroad grant lands and from war emergency housing projects. According to reports from governmental sources, more than 50 percent of the land area of the 11 Western States is owned by the United States, and Federal acquisitions, exclusive of military requirements, are building up at the approximate rate of 1,000,000 acres per year.

According to a report of September, 1944 of an interim committee of the Seventy-eighth Congress appointed to make a study of public lands in connection with the effect of tax exemptions on State and local government, recent acquisitions of the Federal Government have created fiscal problems in a number of the counties of Oregon. Also, in the Portland area, shipyards and defense establishments have created problems similar to those created in other areas. Excerpts from the report are quoted as follows:

"Multnomah County, Oreg.: This is the smallest county in area in the State. It has 272,000 acres. About one-third of that area is occupied by the city of Portland and its immediate suburban district. In the last year 73,000 acres, or 27 percent of the total area of the county were federally owned, 69,000 acres being forest land, and the remaining being various Federal agencies. It was brought out that the area of the port of Portland has been one of the largest developments in the shipbuilding program; the Maritime Commission, the Federal Housing Administration, the Navy, Bonneville Administration have made some special acquisitions, have acquired tracts of land, not large in area, but among the highest valued land in the city of Portland and in Multnomah County. The tax loss on the property acquired for the air base by the Maritime Commission now amounts to over $600,000 annually in Multnomah County.

"With reference to the question of acquisition of lands, the cities of the State of Oregon have not been very greatly hurt in the lands taken over. However, the city of Portland has been hurt and other cities can be hurt, in that if lands without a corporate boundary of the city are taken over, then the additional burden of county taxes on that property will be thrown on the remaining property of the county and the cities will then have to bear an additional burden of the property tax.

"The combined levies of counties, schools, and cities in the State of Oregon for cities over 2,500 population last year averaged 62 mills. The average assessed valuation ran somewhere between 45 and 50 cents on the dollar, and it is obvious that $6.20 taxes on that valuation is excessive. If there is more thrown in that tax, there will be a practical limitation reached where additional taxes can't be charged, and that is aside from our constitutional limitation. If that practical limitation is reached, then certain services of the Government will not be given and citizens will demand those services, and it is only reasonable to expect they will be furnished by a more centralized government, and it will continue the trend toward centralization of government and take it away from the people where it should be."

BULK OF ACQUISITIONS IN WESTERN STATES

The bulk of all Federal acquisitions of lands for national purposes has been acquired in the 11 Western States. These appropriations have reached such proportions as to seriously reduce the tax revenue producing area of these States.

The cost of government is increasing in relative proportion to the rapidly increasing populations in these Western States. Consequently the gradual encroachment of Federal ownership of property in the area is presenting a serious fiscal problem.

The burden created by this problem should be shared by the other 37 States of the Union, and a fair distribution of the load could be accomplished through payments of taxes by the Federal Government to the States in which the property acquisitions have been made. The matter of some such relief is under consideration by the Congress at the present time. This should be given further impetus by the motivated interest of citizens and public officials.

It is the opinion of the writer that all property situated in any locality of a sovereign State, appropriated for any national public use other than for the corporate administrative use of the Federal Government, should bear its fair relative share in the support of the local government in which it is situated.

Unless our people make an organized and concerted effort to solve these fiscal problems provoked by increasing tax exemptions, property taxes will soon reach the danger point approaching property confiscation. It is high time that the people of our Oregon communities should take an active interest in the problem here presented.

Address Before Breen McCracken Post, American Legion

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. GRANAHAN. Mr. Speaker, in accordance with my unanimous-consent request, which was granted, I am insert-

ing the following remarks which I made on February 11, 1946, at a meeting of the Sixth District, the American Legion, at the Breen McCracken Post, No. 270, 1 North Fiftieth Street, Philadelphia, Pa.:

I suppose it was inevitable to have been introduced to you as Congressman WILLIAM T. GRANAHAN. While I am proud of the opportunity to serve you in the House of Representatives I think I should prefer to speak to you tonight as just BILL GRANAHAN—legionnaire.

Among you tonight I see a good many young fellows. They are the fellows who just polished off the minor incidents we've been bothered with during the last 5 years. They are the fellows who have taken part in the greatest war in history. We of World War I can appreciate to some extent the hardships you have endured. Ours was the lesser; yes, yours, the greatest in world's history.

The truth of the matter is that all war is tough. War is cruel and ugly. No matter what your job in the armed forces; no matter where you found yourself—stateside or overseas—war was tough for you in relation to your civilian status. The discipline you endured; the physical punishment you took; the long hours of watchful waiting; the days and months of gnawing loneliness you suffered were experienced by all men, in all wars. The difference was in the degrees we experienced it—not in the things themselves.

Recognizing this, then, we can sense a spirit of comradeship between men of both wars. We can acknowledge the relationship between the legionnaire of yesterday, and the legionnaire of today. Our experiences were pretty much the same except they happened to different individuals, in different generations, and in varying degrees. The thing itself ever remains the same—ugly, horrible, wasteful.

There are those who take the position the new veteran needs an organization of his own. They say he needs to be the keeper of his own destiny. They say that we, of the first world war, cannot bridge the gap between us. They say all these things not really believing them because they can't be true. Logic tells us they can't be true.

Everyday in Congress I bridge that gap. In fact, for me, there is no gap.

Man's problems, fundamentally are the same. He is hungry, tired, sick—he may be all of those things together, and at the same time, but it doesn't make any difference whether he served in World War I or World War II. He can be just as hungry, tired, or sick, as those who served in either war or for that matter, in no war at all. The difference lies in the degreee of his suffering. The treatment is invariably the same.

No matter what a new organization can accomplish, the American Legion has already accomplished. No matter what problem the new veteran can, and does, present, the American Legion is already familiar with it—and its treatment. Years of bitterness, heartache, and men's lives have gone into the growth of the American Legion. Today it stands as a monument to the greatness of the American ideal:

"For God and country; to uphold and defend the Constitution; to maintain law and order; to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy."

Can any new organization do more than that?

Yes, comrades, there is a kindred spirit between us of the last war and those of this. We have all made the same identical sacrifices and pretty much for the same purposes. We served our Nation to the best of our individual ability and we can face the future with pride in the knowledge that we were strong, fearless Americans—Americans who bow before no man; Americans who have never been vanquished in battle; Americans who stand ready to defend, again and again, the great principles of democracy.

Yes; we have won wars, but what about the peace?

I don't mean peace as we have come to read about it in the press. I mean the individual peace of each man and his family. I mean the peace of mind and soul so precious to every man. I mean the peace that comes only from individual security, a job, medical care, education, and the right to free enterprise.

What about these things? How will they be accomplished and by whom?

The answer to that lies in legislation which only you can make possible. You can make it possible by your desire to accomplish certain aims. You can make it possible by looking upon me—and all elected officials—as your friends. I am not only willing to create—and endeavor to have passed—legislation beneficial to veterans—I am eager. I want to do it because I am one of you. I understand your problems and I want to help.

I can't do it without your help. I need your support, your energy and your power to make my office effective. We cannot pass our days in apathy toward these problems and expect satisfactory results. We cannot, feeling secure in our own job, ignore the comrade who has none. We cannot find satisfaction in our own health knowing our comrade needs care. We cannot be pleased with our own well-being, knowing our comrade shows the burning marks of war on his mind and body.

We have got to be strong in unity to help one another. We cannot be divided in ideas and ideals. We cannot allow our comrades to foster small, ineffective organizations and hope to accomplish the things for which this, and other, wars were fought. We must go forth and preach the gospel of unity and oneness of purpose we have got to back ourselves to win if this war for security of the individual is to mean anything more than empty phrases and vacant, useless lives.

We must be living examples of man's responsibility to man.

I stand ready to help you with every ounce of energy; every waking minute; with every resource at my command. I am a Legionnaire. I am a veteran. I am a Congressman. I am your elected representative because you helped to make me so. I can do much on my own initiative. I can do more with your help.

To me this need for helping our fellow man is more than just an ideal—it is a deep and abiding conviction that therein lies the salvation of all mankind. We must give to get. We must help each other. We must have faith in each other; faith in the future; and above all, faith in ourselves. Only with the deepest of faith in the motives and purposes of our fellow man can we progress.

Tonight, right now, there are those who cry out in anguish for help. They are here; they are in foreign lands; they are everywhere—the world over. They need us. They need you. They need me. We, comrade, need each other. I'm ready. Are you?

Housing Crisis

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article from the February 1946 issue of the American Federationist, official magazine of the American Federation of Labor:

HOUSING CRISIS

The American Federation of Labor, its central labor unions, building and construction trades councils, and other affiliates in local communities are organized and prepared to give the fullest measure of cooperation to the industry and to the government, Federal and local, in a concerted drive to meet the Nation's critical housing shortage.

The building and construction trade unions of the A. F. of L. are formulating a series of positive programs to assure to the Nation an ample supply of building trades mechanics and laborers in all classifications of skill in every community to build the volume of housing construction urgently required under the existing conditions.

Fullest cooperation is being given by our unions in developing and putting into effect apprentice-training programs to provide employment opportunities under fair labor standards to returning veterans and to workers displaced from war jobs. Our unions have assumed their full share of responsibility in expediting these programs, which have already been set up in cooperation with construction contractors under the standards approved by the Apprentice Training Service of the Department of Labor. There are today nearly 12,000 contractors who have joined with unions in establishing area-wide programs in 800 communities. The executive counsel commends the building and construction trades department for its leadership in this vital work.

Acute shortage of certain scarce building materials is the biggest barrier in the way of rapid expansion of home construction. We urge the adoption of the following emergency programs to accelerate increased home construction and expedite reconversion:

1. Congressional appropriation to establish a revolving fund for loans and special financial aids to building materials manufacturers which would enable them to expand production to capacity volume. Requirement of minimum wage standards as a condition of such financial aid.

2. Immediate action to raise the low wages which prevail in the manufacture of certain building materials to a fair standard. Provision should be made for price adjustments in cases where wages have been actually corrected, but only where there is a proved need to modify price ceilings for this purpose.

3. A temporary emergency program of allocation of scarce building materials which would:

(a) Assure a supply of materials for the essential minimum of industrial and other nonresidential construction, and

(b) Direct the flow of the bulk of building materials into the construction of moderate-priced and low-rent homes under firm quality standards. This temporary allocation program should be decentralized in order to fit the needs of different areas and should be subject to quarterly revision. Allocation should be terminated as soon as the supply of materials is adequate.

Wage incomes are being generally reduced. Wage earners and veterans must be protected against further increases in the cost of living due to the inflated cost of shelter. Continuation of effective rent control until the supply of rental dwellings is adequate is a vital necessity to all workers and to the whole Nation.

The postwar housing emergency was aggravated but not created by the war. It is the outgrowth of a quarter century of failure to provide an adequate supply of moderate-priced homes within reach of families of small means.

America's housing emergency will not be met by emergency means alone. We make

an emphatic call upon Congress to enact without delay the Wagner-Ellender-Taft general housing bill, S. 1592, which embodies a long-range program for housing families of all incomes with the maximum reliance on private enterprise and local initiative.

This bipartisan legislation contains the major objectives of the national housing policy formulated by the A. F. of L., and has the unqualified support of the great mass of wage earners. It is the only program which will provide the complete answer to America's housing need.

The executive council welcomes the appointment of Wilson Wyatt as the national housing expediter, and his nomination as Administrator of the National Housing Agency. The A. F. of L. will give Mr. Wyatt fullest cooperation in every sound measure he undertakes to accomplish his difficult task. The Nation-wide drive just launched by President William Green and Chairman Harry C. Bates of the A. F. of L. housing committee in 800 communities for labor's active aid in carrying out local housing programs is evidence of labor's preparedness to make a real contribution to the public interest.

An Open Letter to the Congress of the United States

EXTENSION OF REMARKS
OF
HON. ED. V. IZAC
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. IZAC. Mr. Speaker, under leave to extend my remarks, I am including an article appearing in the February 1946 issue of Seapower, by Ralph A. Bard, president of the Navy League of the United States:

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES FROM RALPH A. BARD

As president of the Navy League of the United States, I want to comment on President Truman's recommendations to Congress covering the unification of the armed services. While the Navy League agrees that coordination of the armed forces must be accomplished, we do not agree with the program as outlined by President Truman in two important respects.

Although President Truman held his present high office and acted as Commander in Chief of the armed forces for but a few months of the war just concluded, his presentation definitely indicates that he is well informed and that his conclusions as to the necessity for coordination are sound. However, with all due respect to the President, many other men who have served their country loyally and with distinction have been in an even better position, over a longer period of time, to observe the operations of the armed forces both on land, in connection with their business procedures, and in the field, and their honest views deserve thoughtful and deliberate consideration before final action is taken. That there is no need for further discussion of this most important subject, we do not agree.

Speaking both for the Navy League and from my own experience as Assistant and Under Secretary of the Navy for 4½ years ending July 1, 1945, I respectfully disagree with the President's conclusions as to the best method of achieving this coordination in two important parts of his program.

We believe that the top military command should reside in a joint chiefs of staff rather than in a single chief of staff; the Joint Chiefs of Staff should be composed of the Chief of Staff to the President, and the military heads of the Army, Navy, and Air Forces.

We also believe that the civilian control of the armed forces, which, under the President's plan, would be a single Secretary of National Defense, should not be placed in the hands of one man appointed by the President, but that it should reside in a national security council composed of the Secretary of State, Secretary of the Army, Secretary of the Navy, Secretary of Air, and the Chairman of the National Security Resources Board, an agency which should be created to coordinate domestic and economic policies somewhat comparable to the War Production Board in the war just concluded. Either the President of the United States could be the Chairman of this National Security Council or the President could appoint the Chairman.

It is our opinion that this is the type of control of the military forces of this country which fits a democracy such as ours and which I am convinced that majority of our citizens would support and prefer.

No single individual except the President of the United States, who is elected and not appointed, has ever been in control of both the Army and the Navy in our history, and this autocratic power over our military forces in the hands of any individual, either a military man or a civilian Secretary not elected by the people but appointed by the President, is not in line with our past democratic procedure, and such a departure from precedent is unnecessary at this time, if ever.

We are of the opinion that the coordination of the armed forces can be made more effective under the program as outlined by the President with these two changes.

Decisions of greatest importance emanating from a Joint Chiefs of Staff or a National Security Council will have received more expert consideration, with a broader viewpoint, and should be wiser than those emanating from a single Chief of Staff or a single Secretary of National Defense, and I am confident that such decisions will be more readily accepted by our citizens. This will be particularly true if we are to have compulsory military service.

It is our belief that, with these two important changes in the plan presented by President Truman, a coordinated program acceptable to all branches of the service and to the great majority of our citizens can be worked out.

Price Control

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the February 1946 issue of the American Federationist, official magazine of the American Federation of Labor:

PRICE CONTROL

America is already afflicted with a high spending fever—the unmistakable first symptom of inflation. The flush of false prosperity can be detected not only in Wall Street but in every grocery store in the Nation. Prompt action is required to check the infection.

Past experience has taught us that economic upheavals travel in the wake of wars. The uncontrolled boom that followed World War I collapsed in 1929 with a shock which upset the entire world's economy. In America the ensuing depression was never overcome until a new war started. Our country must not embark upon that disastrous cycle again.

Yet conditions are ripe for another economic spree. The American people, starved during the war for necessities and comforts which modern civilization provides, are stampeding empty markets, begging for a chance to spend their savings in a hurry. Speculative activities and luxury spending are reaching new heights. Pressure for higher prices obtains powerful support from the shortages of supplies and materials which inevitably will continue for many months, until production for peacetime needs reaches greater volume.

Under these circumstances it would be suicidal for our Government to drop price controls on June 30, when the present law expires.

President Truman has asked Congress to extend the law for another year, until June 30, 1947. The executive council of the American Federation of Labor supports that recommendation. It also urges that action be taken promptly because uncertainty as to future policy already is slowing down production. Business is reluctant to make advance commitments in the dark.

Let it be clearly understood, however, that the American Federation of Labor regards price control as a necessary evil. In normal times we would vigorously oppose any such Government interference with a free economy. Even now, controls should be exercised cautiously and selectively. The moment production of any particular article comes within safe range of meeting the demand for it, the OPA should remove its artificial ceilings and allow natural competitive forces to bring the selling price down to its natural level.

The administration of price control during and after the war has been spotty and needs to be tightened up. Even with price control, the Government admits the cost of living has gone up 30 percent since 1941. The actual figure is closer to 50 percent, in our opinion, because of the devious artifices by which the law has been evaded and the public victimized.

Despite the many obvious failures of price control, the American people realize how much worse they would have fared without it. They also understand how dangerous it would be to drop price controls now. For example, rent ceilings, which have been fairly successfully enforced, would burst right through the roof because of the acute housing shortage.

It has been argued that price controls cannot be maintained without parallel wage controls. The impression seems to be that the Government has dropped wage controls. This is not the case. The Government's policy, administered by the new Wage Stabilization Board, forbids the granting of wage increases which would be used as the basis for an employer's demand for a higher price ceiling. Departures from this rule will be made only in exceptional hardship cases.

Hon. J. Harry McGregor, of Ohio, Offers Aid to Housing Needs and Urges Stopping Exports of Critical Building Materials

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. McGREGOR. Mr. Speaker, housing is one of the major problems con-

fronting us at this time. Legislation will soon come before the Congress covering this subject. I am wondering if any legislation is actually needed. Would it not be better to do away with some of the strangling rules and regulations that are now hindering production, construction and repair, so that our people can be given a free opportunity to carry on this program with a minimum of Federal regulations. I think we are all in agreement that housing should be made available at the earliest possible date.

The new national housing executive, Wilson Wyatt, recently made a suggestion that Congress enact legislation to put ceiling prices on all houses, old as well as new, and that price controls be extended to building lots in cities as the means of bringing the cost of housing down into line with veterans' pocketbooks. Another Federal official has recommended the use of subsidies to spur construction. Congress will soon be given the opportunity to decide what policy they want to follow.

Mr. Speaker, I contend that regimentation and subsidies are the stock solutions of bureaucrats to any problem. I insist that we tackle this problem with logical weapons and not simply allow more controls and more Federal spending. The facts of the housing situation are well known. The cost of home building could be materially reduced if common sense were applied. Wartime restrictions were imposed on home building to save materials and labor. Home building is one of the basic hopes for high postwar employment, and certainly, Mr. Speaker, the country needs millions of new houses.

I am of the firm conviction that mandatory restrictions discourage new building, inflate the price of homes already built, and allow black market in housing. Federal directives and red tape are preventing private capital from constructing new homes and from making necessary repairs.

I firmly believe that private industry can and will build new houses at fair prices if they are not "bossed" by Washington bureaus. What my people want is an opportunity to build and repair without Government interference and access to the materials necessary.

Mr. Speaker, building supplies are critical. Such being the case, why are we shipping millions upon millions of board measure feet of lumber prefabricated houses, and other critical housing materials to foreign countries? Let us look at the record in order to prove that we are not doing everything possible to help the housing situation. Recently I contacted the Foreign Trade Division of the Bureau of the Census and asked them to give me figures relating to the export of lumber and building materials during the year of 1945. I find in the figures obtained that we exported from the United States in 1945 the following amount of lumber, in round figures:

January, 28,000,000 feet; February, 32,000,000 feet; March, 29,000,000 feet; April, 26,000,000 feet; May, 30,000,000 feet; June, 24,000,000 feet; July, 38,000,000 feet; August, 44,000,000 feet; September, 41,000,000 feet; October, 43,000,000 feet; November, 39,000,000 feet; December, 49,000,000 feet.

This represents approximately 423,000,000 feet of lumber exported for the year of 1945.

Under the quota set up by the present Civilian Production Administration, they are contemplating exporting 1,000,000,000 feet of lumber in 1946, and, Mr. Speaker, definite arrangements are now in effect to export 225,000,000 feet of this lumber during the first 3 months of this year.

In addition to this, we are exporting approximately 300,000 doors, trims, and so forth, per month that are necessary for house construction, 14,925,000 brick per month, and nearly 3,000,000 square feet of plaster and wallboard; also, I might add that we are exporting in excess of 27,000 bath tubs and fixtures per month.

Now, I firmly believe that, in all fairness, we should put the blame where it rightfully belongs, and I, therefore, insist that our Government immediately stop exporting this building material which is so critical in our country and which is so badly needed for house construction and repair work.

In order that my colleagues may know where some of this lumber has been exported, I beg to cite the record as furnished me by the Bureau of Foreign and Domestic Commerce, and, in order to be perfectly fair, I am citing figures covering the period since VJ-day:

To Canada there were exported from the United States, in October, 5,249,000 board feet of lumber; November, 5,710,000 board feet of lumber; December, 4,539,000 board feet of lumber.

To Cuba: October, 1,705,000 board feet of lumber; November, 2,053,000 board feet of lumber; December, 1,506,000 board feet of lumber.

To Mexico: October, 1,253,000 board feet of lumber; November, 892,000 board feet of lumber; December, 1,363,000 board feet of lumber.

To United Kingdom: October, 20,247,000 board feet of lumber; November, 11,141,000 board feet of lumber; December, 29,310,000 board feet of lumber.

To the Netherlands: October, 1,100,000 board feet of lumber; November, 622,000 board feet of lumber; December, 613,000 board feet of lumber.

To Palestine and Trans-Jordan: October, 3,898,000 board feet of lumber; November, 2,795,000 board feet of lumber.

In addition to this, may I call your attention to the fact that in October 1945 we shipped 1,159,462 square feet of plaster and wallboard to France, and in November 1,471,928 square feet of plaster and wallboard.

Mr. Speaker, I think this program of exporting is seriously affecting the entire building program within the United States, and especially affecting our veterans in their efforts to secure homes upon their return from service overseas.

I do not deny that we have a greater demand for housing material than we have the supply, but it certainly seems ridiculous to me that we continue to reduce that supply by this large program of export. I think this administration should take immediate action and, before coming to Congress and suggesting a continuation of bureaucratic control, it should stop the exportation of lumber and other building materials. We want to truthfully say we are leaving no stone unturned in our endeavors to solve the housing problem. Let us give some definite consideration to our people here at home.

What Price Strikes?

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. SCRIVNER. Mr. Speaker, the Kansas City Labor Bulletin is the official weekly publication of the American Federation of Labor local unions in the greater Kansas City area.

In the issue of February 8, 1946, the editor, George J. Harrison, points with pride to the fact that A. F. of L. unions have succeeded in obtaining benefits for their members with a very few strikes, and that they have kept their demands within such a range that wage hikes would not require price hikes. He observes that when wage demands are such that price ceilings must be lifted the workers obtain no real gain, but in fact sustain a serious loss.

In the same editorial column Mr. Harrison presented the following:

WHAT DOES A STRIKE COST?

Some strikes are unavoidable because management refuses to bargain in good faith. The AFL maintains, however, that a strike should be the last resort, used only after genuine efforts at collective bargaining, conciliation, and arbitration have failed. The reason for this is clear. Count the cost of a strike to the workers:

Suppose the workers are earning an average wage of $1 per hour. The company offers an increase of 12 cents to $1.12, but the union turns down the offer because they think a Government board may give them more. They go on strike and stay out for 8 weeks. Each worker loses an average of $358 (pay for 8 weeks of 40 hours at $1.12 an hour). At the end of that time the Government board awards 18 cents, 6 cents more than the company offered. The company accepts the award and grants 18 cents, but it will take the workers nearly 3 years' work before this extra 6 cents will amount to enough to repay their loss. If, as seems more likely, the company refuses to accept the award and gives only 3 cents more (15 cents in all), then it will take the workers nearly 6 years of work before their extra 3 cents per hour will add up to the amount they lost by the strike, if the extra 3 cents per hour will add up to the amount they lost by the strike. If the extra 3 cents or 6 cents breaks a price ceiling, workers may take losses they can never regain.

If, on the other hand, the workers had avoided the strike and used every means to build up a sound relationship of good will between their union and the company, and both sides had turned their attention to getting out production, they could have gained much more than the extra 3 cents or 6 cents in further wage increases. They could have saved their strike loss and won public good will by turning out the products other people were waiting to buy. That is why responsible AFL leaders bargain in good faith and make every effort to avoid strikes.

The sound, logical, common sense of this editorial should appeal to the reasoning of every member of organized labor in every instance where wage questions are discussed.

With such a labor philosophy prevailing, is it any wonder that in Kansas, American Federation of Labor unions are able to point to their record of no major strikes either during the war or since VJ-day? It is a record of labor-management harmony unsurpassed in any of the other States.

Samples of CIO Leadership

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. MASON. Mr. Speaker, Walter Reuther, leader of the General Motors strike, and his brother, Victor Reuther, once went on a tour of social engineering in Europe. This was in 1933. They liked the Communist set-up in Russia so well that they spent 16 months working in a Communist factory in Gorske in order to orient themselves in the industrial system of Russia. They returned to the United States in 1935 and were leaders in the Michigan sit-down strikes of 1937.

The Reuther brothers were Socialists before they went on their tour of Europe. Today they condemn the American way of life and our free enterprise system. Victor Reuther in an article in Common Sense magazine says:

> Private ownership of monopolistic industries (General Motors) must be replaced by forms of social ownership such as TVA and cooperatives, all fundamentally democratic in character.

This quote, coupled with their Socialist background and their Communist indoctrination while in Russia, gives the key to the Reuther brothers' program for the future of American industry. Is that the road we want to travel?

Mr. Speaker, in connection with my statements concerning the Reuther brothers as leaders of the CIO, and to show how ruthless and inaccurate the CIO leaders are in their publicity program, how they distort facts in an effort to further their power, I include as a part of my remarks the following article by Frank Kent, taken from the Washington Evening Star of February 13, 1946:

THE GREAT GAME OF POLITICS—WRITER SAYS CIO'S ATTITUDE PREVENTS REASONABLE ACCEPTANCE OF CLAIMS

(By Frank R. Kent)

It does seem that since the inauguration 8 months ago of the calculated effort to force submission of both industry and Government to its demands, the character of the CIO arguments, the absurdity of its accusations and the general quality of its propaganda would make it impossible for reasonably sensible persons to accept its claims or support its position.

True, the CIO has great publicity advantages over the other side, but the stuff it has been putting out recently is so largely phony and unfounded that, however palatable it may be to the gullible masses, it is difficult to understand how it can fail to revolt any fairly informed person. The truth is that in its controversy with the General Motors and the United States Steel, the CIO has utilized its superior propaganda position to consistently distort the facts and misrepresent its opponents.

DISTORTION OF FACTS CHARGED

Normally that would seem a serious charge against any organization. It is not a serious charge against the CIO because there isn't even a pretense of being accurate or fair about its propaganda or about its propagandists. They are unconcealedly determined to present the best case for themselves and the worst for industry with which they possibly can get by, regardless of the facts.

With an easier and less costly access to the channels of communication, it is their shameless practice not only to denounce as false everything the other side puts out but to repeat their own false statements after they have been disproved. Unencumbered by ethics or standards, the CIO propagandists regard that as a perfectly sound policy and are rather contemptuous at the failure of industry to operate along the same lines.

EXAMPLES ARE PLENTIFUL

Examples of CIO distortion are plentiful. In the General Motors strikes the basic charge was that there is an "organized plot" upon the part of the automobile industry to "destroy organized labor." Over and over this was repeated. And then Ford and Chrysler signed up and settled with the union, leaving General Motors to fight alone.

This seemed the complete answer to the "plot" charge, but it has not prevented it from being repeated and repeated again and again. A second example is the charge that United States Steel would receive under the existing tax law a huge refund as a result of the shutdown.

United States Steel promptly answered that it would receive no refund at all, quoting the law and citing figures. Completely ignoring the figures and the reply, the CIO merely repeats the charge.

CIO ALTERS ATTITUDE

Another striking example is the CIO attitude toward the President. When Mr. Truman first made his fact-finding proposal Philip Murray and his publicity machine denounced it as a "vicious betrayal of labor." But when Mr. Truman's Fact-Finding Board recommended an 18-percent increase and Mr. Truman approved, Mr. Murray and his aides eagerly lined up behind the President and have been berating the company for "defying the Government."

If Mr. Truman had not created his Fact-Finding Board and endorsed the 18-percent increase (which is more than they expected to get when they started their strike), it is conceded the union would have no chance at all of getting any large increase either in this or the steel strike.

Yet a few days ago Mr. Thomas, of the CIO Automobile Workers' Union, went before a Senate committee, denounced Members of Congress as "old fuddy duddies," and branded Mr. Truman, who saved his union from defeat, as "weak." This is a sample of union gratitude which politicians of both parties might well take to heart.

LEADERS IGNORE CHARGES

Also, though the language of its contracts with the General Motors and United States Steel do not permit of even a reasonable doubt that both strikes violate the existing contracts, the CIO leaders blithely ignore the charge and continue to assert that the companies, acting in bad faith, are out to "destroy organized labor."

Actually, there is not on record any campaign publicity of such consistent disregard for the truth and such wholehearted misrepresentation of the situation. The appeal is entirely to the emotions, through sensational allegations which are continued with unabated enthusiasm long after they have been refuted.

Through the intervention on their behalf of President Truman (whose help they accept, but whom they still ungratefully berate) the CIO has averted defeat. The ultimate outcome, of course, will be a gain in wages for the workers, increased prices for the companies, with the public paying the bill and inflation brought a little closer. But the methods and manners of the CIO leadership, as revealed in these strikes, can hardly fail to damage it in public esteem—and in political circles.

General confidence, never very high, has been lessened in the intelligence and character of the labor leadership. And the tolerance of the great unorganized majority has been worn a little thinner.

Maximum Employment

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, in view of the fact that those who opposed the full employment bill from the time it was first introduced are now attempting to misconstrue and misinterpret the final legislation, I should like to call the attention of the Senate to an editorial entitled "As a Starter," which appeared in the Nashville Tennesseean on February 6.

This editorial states that the full employment act is "an important pioneering advance and as such should be accepted as a beginning which can be improved in the light of experience." The editorial also points out that the final legislation "is far better than the sickly thing concocted by the House reactionaries."

Let me also quote the following statement from the editorial:

> Under a liberal President and a responsible Congress the substitute bill can be made a means to achieve an expanding prosperous economy. Under a conservative President and a recalcitrant National Legislature, the strongest measure possible could be reduced to a mere front behind which the majority could chant a pious belief in full employment while doing nothing. It all depends upon the zeal and faith of those who administer the act.

Mr. President, I ask unanimous consent that the editorial from the Nashville Tennesseean, to which I have just referred, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS A STARTER

After a month of conferring, the joint Senate-House committee on the full employment bill has agreed on a compromise which will probably be enacted into law and signed by the President. While it is far from the formula proposed by President Roosevelt, endorsed at the polls in the national elections of 1944, and recommended by President Truman, it will represent an important pioneering advance and as such should be accepted

as a beginning which can be improved in the light of experience.

The compromise measure makes it the Government's responsibility to promote maximum employment, production, and purchasing power. It sets up a permanent board of specialists in economics who will aid the President in preparing an annual report showing trends in employment, production, and consumption and carrying the President's recommendations for strengthening the economy.

Though the measure does not mention full employment, it would not prevent the President from setting that as his goal in submitting his recommendations. And though nothing is said about an annual budget of production and employment, the conference bill would not make it impossible for the President to make his recommendations in the form of such a budget.

The original bill provided nothing more than a statement of economic objectives, machinery for annual and quartely factual summaries of the condition of our economic health, and a mandate for Congress and the President to consider what immediate steps, if any, were necessary to keep the national economy in good health. The conference bill weakens but does not destroy the statement of economic objectives. It creates a board which is expected to inquire into the economic facts of life less thoroughly than the budget board set up under the Senate bill, but it does leave the way open through later legislative action to make this agency a most thorough research body when time, experience, and a better knowledge of political economy among our Congressmen point the way.

Under a liberal President and a responsible Congress the substitute bill can be made a means to achieve an expanding, prosperous economy. Under a conservative President and a recalcitrant National Legislature, the strongest measure possible could be reduced to a mere front behind which the majority could chant a pious belief in full employment while doing nothing. It all depends upon the zeal and faith of those who administer the act.

In the face of serious unemployment, no administration or congressional majority can pursue a do-nothing policy and survive. The unhappy fate of the Hoover regime is a reminder. Henceforth, no administration which fails to take precautions to prevent a break-down in the national economic health can long survive. The American people take no stock in economic Calvinism. They believe that the economic cycle can be forestalled, that millions are not foreordained and predestined to unemployment and insecurity, that the commitments of science and religion hold the promise of a real economy of abundance.

The half-a-loaf substitute full employment bill makes it possible to take preventive steps against economic crises. Thus far we have lacked the information on production, consumer demand, and the labor supply to diagnose our economic health. Risks of free enterprise have been grave because of guesses in the dark about the market. Thousands upon thousands of business failures annually may be attributed to ignorance of the nature and strength of consumer demand, the national stock of goods, production plans, and other fundamental economic data. For many years we have needed a national agency constantly collecting, studying, and interpreting such data. The research staff to be established will perform this all-important work, which of itself will remove many of the unnecessary risks which have weighted the neck of free enterprise.

The bill also makes it incumbent on the Government to use its vast powers in the Federal Reserve System, the Security and Exchange Commission, the Reconstruction Finance Corporation, the Treasury Department, and the revitalized Commerce Department to achieve the goals of maximum production, employment, and consumption. Beyond that lies a budget of public works held in the reserve which the President and Congress can call upon.

If the bill is not what had been hoped for, it is far better than the sickly thing concocted by the House reactionaries. Let it be translated into action without further delay. If the program has merit, the deficiencies will be supplied.

Lincoln Day Address by Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Abraham Lincoln and the New Emancipation," delivered by me at a banquet given by the Lincoln Club, at Louisville, Ky., on February 12, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ABRAHAM LINCOLN AND THE NEW EMANCIPATION

I am glad to be here in Louisville and in Kentucky in the midst of thoroughbred Republicans.

Yours is a city and a State with which every American schoolboy and schoolgirl is acquainted. Your commonwealth and your city are parts of the woof and the warp of this great Nation.

The very mention of Kentucky brings before us the panorama of the Nation's westward march. It is the pioneer land of Daniel Boone. Though known as the Blue Grass State, it is divided in sections which differ sharply in geography, culture, economics, and activity. One Kentucky Methodist preacher is reported as saying, "Heaven is a Kentucky of a place."

Your city of Louisville blends the commerce and the industry of a northern city with a southern city's enjoyment of living. It speaks to us who live outside your borders in terms of prosperity, the Kentucky Derby; a city of beautiful homes, churches, and schools; the city where John James Audubon lived; a city of stalwart men and beautiful women.

It has been my privilege to know both of your Senators, Senator BARKLEY and Senator STANFILL. In the brief time I have known your junior Senator, I have become very fond of him. He is a man of fine character and ability, who is interested not only in the economics and politics of better government, but in the spiritual things of life. In the short time that he has been in the Senate, he has made many friends and is doing good work. Your senior Senator, though of different political faith, I have admired for his ability and energy.

Your former Senator, now Congressman JOHN M. ROBSION, is a Lincoln type of a fellow. For hours he can entertain you with the stories and sayings of Lincoln.

THE OCCASION FOR OUR MEETING

Yes; I am very happy to be with you this evening to commemorate the one hundred and thirty-seventh birthday of one of Kentucky's sons—one of humanity's truly great men.

"The Lord must love the common people; He made so many of them."

As you so well know, my friends, these are the homespun words of the sixteenth President of the United States, Abraham Lincoln. He spoke of the common men—the builders of America, the sustainers of America—the men of thrift, of industry, and conviction. Here in America there is no caste system, no classes, but every man here is a king in his own right.

The Lord must have loved Abe Lincoln just as the Lord loves common folks. For Abe Lincoln was of the stuff of common folks. He lived and died for common folks. He lived and died to set them free and keep them free and united.

The Lord must have loved Abe Lincoln, for He made this lowly backwoodsman adequate to meet the greatest challenge ever faced by his Nation—the challenge of union or division.

On February 12, 1809, he was born in a log cabin over in Hodgenville, in your fair State. Self-taught, schooled in the university of hard knocks, he became a rail splitter, a storekeeper, a country lawyer. At last he rose to the highest office of the Republic—the Presidency. In that office he did his noblest work. In that office he made the supreme sacrifice.

THE REASON FOR THIS CELEBRATION

Why do we celebrate the birthday of this humble, homely man in this and every year?

This celebration is no empty symbol. It is no meaningless gesture, no mere formality.

We celebrate Abe Lincoln's birthday in order that we of this generation may, in his words, "dedicate ourselves to the unfinished work which lies before us." It is the work of securing justice for the common man, the work of maintaining and strengthening the Republic and building a better world.

We celebrate Lincoln's birthday in order that we may emancipate ourselves anew from the forces of bondage which rise in every generation to chain us as individuals and as a nation.

We celebrate his birthday so as to bring about the new emancipation—the emancipation of ourselves as individuals from hate and bigotry, from doubt and fear, from worry and inadequacy; the emancipation of our Nation from strife and subjection to selfish interests.

EMANCIPATION OF THE INDIVIDUAL

Fellow citizens, let us see a few of the personal lessons which Abe Lincoln taught us and which we may use in our own individual lives.

1 He taught us love of the Republic.

This was Lincoln's great love—the love of the soil which bore him, of the freedoms which gave him opportunity. Lincoln respected his responsibilities and obligations as a citizen and as a leader under the Republic. He approached public office as a servant of the people and not as their master. He sought to husband the spiritual and material resources of the people rather than to squander them as a prodigal. He knew that he was but the trustee of the great values which future generations would enjoy. And he wanted to pass those values to them vital and unimpaired.

He wanted to make sure that, in his own words:

"This Nation under God shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

This, then, is the first of Lincoln's great loves—the love of the Republic. She needs our love and attention today.

But his heart was warm enough to hold many pure loves, and another of them was the love of motherhood.

You remember his devoted words:

"All that I am and all that I ever hope to be I owe to my sainted mother."

We've seen Lincoln's love of the Republic, his love of motherhood; now let us see more of his lessons for us. Like him, we know life has meaning. We want to learn.

Next, he taught us the value of humor. Who among us could forget his fame as a spinner of wholesome, rib-tickling yarns?

He used humor—to relax men, to refresh men, to save them from the iron grip of taut nerves and high tension. We, ourselves, can use humor today—to emancipate ourselves from these old chains of nerves and tension.

A fourth lesson from Lincoln's life is that he used prayer effectively. He said:

"I have often been driven to my knees in prayer in the conviction that there was no other place to go."

Yes; Abe Lincoln communed with his Maker and gained strength from his Maker. He knew that God is greater than any of our problems and could help us to solve our problems. Like the darky he knew "Lord, there is nothing you and me can't handle."

And so, Abe Lincoln taught us another lesson, a fifth lesson: How to meet defects and overcome them. What disappointments he had, what failures, what tragedies, and how he overcame them by faith and work. He said: "I'll study and prepare and be ready when the opportunity comes."

His beloved mother, Nancy Hanks, died when he was but 9. His sweetheart, Ann Rutledge, was taken from him, too. He entered business, failed, and spent 17 years paying up the debts of a worthless partner. He tried to get an appointment to the United States Land Office but failed. He ran for the Senate and failed. He was a candidate for the Vice Presidency but was defeated. He lost out in a race for the Senate to Stephen Douglas.

When at last he became President, the South seceded. A dreadful Civil War came. The Union forces suffered defeat after defeat. Voices such as Horace Greeley's called to him to let the South go.

But Abraham Lincoln persevered. He would not sacrifice his principles. He would not down. He came smiling through and the Republic was saved.

What would have happened had he listened to the siren voices of the Greeleys of his day, had he allowed the South to secede? Ours would have been not one Nation, but many nations—quarreling, jealous, hating one another. Our continent would have been another Europe, torn by the endless feuds of national States.

How fortunate it was that God raised up Abraham Lincoln, this man of vision, and that the divided situation which I have just pictured did not come to pass. The Union was preserved. You remember the words of the Bible, "Without vision the people perish." Abraham Lincoln had vision, therefore, the Republic stands.

These lessons add up to greatness. What finer lessons could you and I learn from any mortal—love of the Republic, love of motherhood, use of humor, use of prayer, and faith that could not be licked, that could move mountains. Abe was a growing soul. Life to him was a garden for the soul of man to grow in.

EMANCIPATION AS A NATION

But, my friends, I have said that from Abe Lincoln we can gain inspiration also for our new emancipation as a Nation. How?

Well, just listen to Abe Lincoln telling us what the attitude of labor should be today. I quote:

"The strongest bond of sympathy outside the family relation should be the one uniting all working people: nor should this lead to a war upon property or the owner of property. Let not him who is houseless pull down the house of another, but let him labor diligently and build one for himself; thus by example assuring himself, his own will be safe from violence when built."

Hear what Abe Lincoln tells us today about the role of Government. I quote:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well in their separate or individual capacities. In all that people can individually do for themselves, the government ought not to interfere."

Now, let Lincoln speak to us on our relations with our former foes and our care of our ex-servicemen:

"With malice toward none, with charity for all, with a firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle, for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

But there are so many other great thoughts of Lincoln which have dynamic meaning to us today. Listen to these, good friends, on how we may triumph over our difficulties:

"Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust in the best way all our present difficulty."

It was Abe Lincoln, too, who told us of the need for national unity. He said:

"A house divided against itself cannot stand."

It was Abe Lincoln who told us how to face great new challenges, such as those of the atomic age. He said:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves, and then we shall save our country."

Yes; it was Lincoln, too, who taught us to respect the traditions of the past while moving ahead in progress. Here are his words:

"I do not mean to say that we are bound to follow implicitly in whatever our fathers did. To do so would be to discard all the lights of current experience, to reject all progress, all improvement. What I do say is that if we would supplant the opinions and policy of our fathers in any case, we should do so upon evidence so conclusive, and argument so clear, that even their great authority, fairly considered and weighed, cannot stand."

And so, my friends, we have visited with the Great Emancipator—in his thoughts and words and spirit. Let us take a few moments and apply the same to the challenges of the President.

BUILDING A BETTER WORLD

One of the responsibilities which I have stated are upon us is that of building a better world. It is a responsibility which Lincoln carried on so well but which we of this generation, in this atomic age, must advance still further.

It is my belief that every American might well in his own mind prepare a statement of his creed for a better world.

Let me present to you a few points in what constitutes my own creed for a better world.

I believe that the United Nations Organization will be a success and will be adequate to its responsibilities if the peoples of earth follow the injunction of Lincoln and disenthrall themselves. Disenthrall themselves from what, you ask? From limited man-made views, from international lust for power, from international rivalries—economic and political.

Individually, and as a Nation, it is well for us to remember the song of Solomon, wherein it is written:

"Take (from) us, the little foxes, that spoil the vines, for our vines have tender grapes." These ancient words are particularly applicable today to international relations. The "little foxes" of misunderstanding and fear, at home and abroad, are gnawing at the infant vines, and devouring the embryonic grapes of international relationship. The snarls of recrimination can be heard in the air. Let us hope that these differences are coming out in the open to be eliminated and that the United Nations Organization will become effective.

Lincoln said, "As our case is new, so we must think anew and act anew." This calls for putting first things first. It calls for keeping our perspective and not magnifying the molehills of international difference into mountains. We must be patient. We must remember that we are dealing for all time to come. We must consider issues from the other nations' point of view. There are many things that unite us. But on those things that would divide us, we must seek to find a common ground for adjustment. Yes, we must iron out disagreements in a rational manner. As individuals, so with nations, let us develop poise, not poison, within ourselves—humility, not bravado—restraint, not rashness.

We know that the mere signing of treaties or international agreements will be of no effect unless there is back of the contracting parties the will, the intent, the purpose, and the faith to fulfill those agreements. We must not lose our hope and our faith for a just and lasting peace.

In Lincoln's words, "the occasion is piled high with difficulties." The carnage of World War II stares us all in the face. The threat of the atomic bomb and rocket warfare hangs over mankind. The world's need is for world understanding. (And never before was there such a need.) This should spur the nations to a demonstration of their adequacy.

America, as the most blessed Nation on earth, has the responsibility of being a good samaritan, helping the world, so it can again become competent to help itself. The road ahead is no easy road. It is filled with difficulties—yes; even road blocks—which must be removed. America must not be divided in this great adventure. Like Lincoln, we must rise with the occasion.

BUILDING A BETTER AMERICA

The international house of nations must not be divided, and America's own house must not be divided, in order that we may successfully meet the problems of the stormy present. The great need of America today is for full production. Without such full production, such uninterrupted production, this Nation may be in for ruinous inflation. If this takes place, we will not be able to pay with sound money the interest on our $300,000,000,000 national debt. We will not be able to fulfill our international responsibilities for relief and foreign trade.

Americans must unite to gain full and uninterrupted production. The epidemic of strikes must be halted for the good of the general public, for the good of labor, and for the good of management. But how are we going to do all this?

I have proposed on the floor of the Senate a 10-point program designed to get full production now. May I read to you the items of this program?

1. Reevaluate the entire Wagner Act. That act obviously filled a certain need in bygone years, but it is hopelessly obsolete and even harmful today to the best interests of the American people, including labor. It is a segmental act, designed for only one segment of our population. It must be revised in the interest of the public welfare. We have legislated segment-wild. We have made legislation for this segment and that segment. But one great over-all segment has not been regarded, and that is the public.

Now, if we have any vision, we are going to see to it that the public is not disregarded.

2. Immediately enact legislation to have machinery for compulsory arbitration so as to protect the public interest in the case of utilities and Nation-wide industries.

3. Establish the policy of having representatives of the public participate in every labor-management conference.

4. Enact any necessary clarifications of the draft law so as to insure full protection of the reemployment rights of veterans.

5. Insure full protection by law enforcement officers to all veterans and others who want to take up jobs vacated by strikers.

6. Establish the legal responsibility of unions for all violations of contract in the form of wildcat strikes, and so forth.

7. Require the full and accurate reporting of union finances and officers in the same manner as we require such reports from corporations.

8. Establish the labor-management-public conferences in Washington on a continuing basis rather than on a one-time basis.

9. Request of labor leaders that they themselves come forth with suggestions for legislation that will end the menace of strikes.

10. Amend the Sherman Antitrust Act so as to make labor organizations whose members are engaged in interstate commerce subject to that act.

Prohibit them from engaging in unreasonable restraints of trade, for example, those restraints designed to compel the hiring of useless labor, to prevent the use of cheaper materials, improved equipment, or more efficient methods.

I believe that if Lincoln were alive in the flesh today, he would stress to the American people the importance of keeping intact the constitutional American way of life, he would stress the importance of seeing to it that this house were not divided and the importance of maintaining our system of checks and balances so that no group could get a stranglehold on the liberties of the common man.

The Bible to Lincoln was a source of light, faith, and inspiration. Listen to his words: "I have been reading the Beatitudes and have at least one claim for the blessings there unfolded. It is the blessing promised on those who hunger and thirst after righteousness."

CONCLUSION

And so we have reviewed the ways in which our American house and our international house may be made to stand. We have seen the ways in which Abraham Lincoln, born 137 years ago, guides us as individuals and as a nation, and how his ideas and spirit can be made to guide the nations. He guides us toward our new emancipation.

It was his ideal, as it was the Master's, to help the meek to inherit the earth. It was Lincoln's ideal that the common people of all the earth—the builders, the sustainers—should truly come into their own.

Yes; the Lord loved Abraham Lincoln, for Lincoln loved the common people, and the Lord loves the common people. In that spirit let each of us carry on the unfinished work which lies before us.

The President's Wheat Program

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram from M. W. Thatcher, president of the National Federation of Grain Cooperatives, with reference to the President's wheat program.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

Hon. BURTON K. WHEELER,
Washington, D. C.:

After discussing the President's wheat program for 2 days, and after hearing it explained by a representative of the United States Department of Agriculture, the annual convention of the National Federation of Grain Cooperatives, meeting at Chicago, February 8-9, wired the President the following message:

"The Federation represents over 500,000 cooperative grain farmers from the Canadian border to the Gulf, and from Ohio to the Pacific.

"To effectively handle the wheat emergency and make available the maximum amounts of food possible for other nations' needs, the National Federation of Grain Cooperatives believes there are some realistic requirements which must be immediately understood and met:

"1. The railroad transportation system is broken down so far as the immediate requirements are concerned. We, as practical operators, can demonstrate that fact.

"2. Transportation equipment exclusively directed to wheat to the exclusion of feed grains will defeat the wheat program because of spoilage from wet corn and other grains needed for the total feed program.

"3. More than half the wheat is on the farms; not enough wheat will move off the farms unless the future of ceiling prices and OPA is determined now.

"Too many farmers will not market both their inventory and the coming crop because of the income-tax burden which would fall upon them in 1 year. Farmers would loan wheat and feed grains to the Government if protected by a program to assure 90 percent of parity price and to permit the farmers to elect the year for price determination and sale."

Respectfully yours,
M. W. THATCHER,
President, National Federation of Grain Cooperatives.

Lincoln Day Banquet Address by Governor Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an able address delivered by Maj. Gen. Edward Martin, Governor of Pennsylvania, at the annual Lincoln Day banquet held by Republican Members of Congress and the Women's Republican Club of the District of Columbia, at Washington, D. C., Thursday, February 7, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster and fellow Americans, in this time of critical and momentous decisions, it is appropriate to consider American policies at this Lincoln anniversary meeting. Abraham Lincoln more truly typifies our way of life than any other American. A Republican meeting is an appropriate place for such discussions, because under Republican Party leadership this Nation has made its greatest material, cultural, and spiritual progress.

Lincoln was born in poverty. He knew the value of work, tolerance, thrift, and persistence. He advocated equality of opportunity for every American. He urged everyone to acquire property. He took part in government. He was proud to be a politician. He suffered political disappointments, but he did not sulk. He believed in party discipline

Lincoln's place in history is secure, and the Republican Party needs no apology. His way of life and the accomplishments of our party are a great part of the real America. The greatest honor we can pay him is to strive for a government of the people, by the people, and for the people.

To do this in a representative republic we must have two great political parties. If one becomes too powerful, the country may drift into dictatorship. Germany and Italy were examples of one-party government. With more than two parties, party responsibility is lost. France is an example of party paralysis.

Our parties have decided the great issues of the past: State rights; banks; central government; sound money; territorial expansion; slavery; free trade; imperialism; conservation; education; labor policies; taxation; the public debt; the Monroe Doctrine; the protective tariff; and a host of others.

Our political parties must again decide great issues. The Republican Party has always been the progressive party. Today, as the minority party and the "loyal opposition," it must again declare its position on the great issues of these times.

The preservation of freedom is the basic issue. America is a land of dreams. It has been so since the days of the first settlers. They came here to escape tyranny. They wanted to be free to work out their own destiny, to worship as their conscience dictated, and to govern themselves. They carved a government out of the rough to maintain certain inalienable rights. They have fought for these rights in their courthouses, in legislative halls, and on bloody battlefields. The story of America is the most dramatic story in history. We should recite it with pride and reverence, because freedom is costly. Millions have paid for it with blood.

There are great words in the story of the American Nation and its Government: independence; freedom; inalienable rights; the pursuit of happiness. They are sacred words. Wars have been fought to maintain them. Through the fabric of our laws runs a golden thread preserving the rights of the individual.

The word "liberal" once meant much to Americans, but its integrity has been destroyed by the blatant, breast-beating, rabble-rousing, tub-pounding politician, seeking votes at any cost. "Liberalism" once meant freedom. Today it is used by Communists, Socialists, and revolutionaries; and many so-called "liberals" would now extend government at the expense of individual liberty.

The Bill of Rights is the keystone in the arch of our liberties. Every attack upon it must be defeated. Legislation destroying property, the rights of the public, the right to work at the job of our choice; public grants and governmental subsidies—all these must be watched by the picket-posts of freedom.

The right to liberty and the pursuit of happiness is older and greater than those three great documents: the Magna Carta, the Declaration of Independence, and the Constitution. It is a God-given right. Free governments are constituted to preserve it.

That is why religion is hated in dictator-ruled and communistic countries.

Strange doctrines are now being preached in the United States. They menace freedom. Discontent is being sown here as it was for generations in Europe. Ways are being opened here like the roads over which Hitler and Mussolini marched the people of the Old World to destruction and death.

Many politicians are playing with communism. They are playing with political death and national suicide. Communism teaches hatred. It rules by hate and raw force. It offers something for nothing until it gains control, and then sets its steel-shod boots upon the neck of the common man.

Are we following that pattern? We are now offering everybody something: lower taxes; higher wages; more subsidies; more profits. Are we trying to fool ourselves?

The Republican Party must face the threat to national financial solvency. We are told tax reduction is coming and the Budget will be balanced a year from now. We heard the same solemn announcements before the war. Year after year we saw the Budget swing further out of balance. Budgets can be balanced only by spending less money than we collect in taxes. Beware of fancy bookkeeping.

Germany and Italy started downward over the road of bad fiscal policy, and in the end led their people through the red gates of war.

As the party of loyal opposition, we must demand a sound fiscal policy, with a balanced Budget and an equitable tax system. We need a complete audit of the United States, for in 12 years the New Deal has spent at least $500,000,000,000. The records should be examined to see where this money went. The audit should be extended to social security, pump priming, public projects, and to the costs of the war itself. This was the people's money, and they are entitled to know how it was used.

There should also be an audit of all our commitments, actual and proposed, to the nations and the peoples of the world. How much have we loaned or given? How much do we propose to give and loan?

What is the reason for much of our trouble? It is the debt. Today it totals two hundred and seventy-five billions. It is the greatest debt in all history. Sixty billions of it existed before the war started—sixty billions spent on doubtful projects and huge Federal pay rolls.

What can be done? We can demand the swift demobilization of the huge army of Federal pay rollers. Senator BYRD says there are at least 2,000,000 surplus Federal employees, who are adding a burden of more than $5,000,000,000 a year. This is a terrific waste, in view of the fact that the entire cost of the Federal Government in any peacetime year prior to 1932 was less than four billions.

Tax and tax, spend and spend, elect and elect—that is still the New Deal formula.

We know it is bad. We know it is dangerous. We know that all expenses must be cut. We know we must start to liquidate that giant debt and stand as a solvent America in an insolvent world.

The Republican Party has another heavy responsibility. It must give a sense of direction and balance to American foreign policy. For years before World War II the New Deal muddled, sidestepped, and evaded on foreign policy. Its blundering diplomacy may now fumble away the peace. The present national administration has no battalion of direction.

We saw what happened before the war. We saw Mussolini move; Japan drive into China; Germany march into the Ruhr—but we did not get ready. We came down to Pearl Harbor unprepared. The people are entitled to know who blundered there, for an Army or a Navy may be defeated but there is no excuse for a surprise. After years of warning we came unready into battle, fighting for our lives almost barehanded.

Certainly we did a magnificent job after the war started. Certainly we organized and trained the greatest and best Army, Navy, and Air Force in the history of warfare. Certainly we fought all over the globe and destroyed the undefeated armies of the world.

After Pearl Harbor we did build 72,000 ships; 250,000 airplanes; 100,000 tanks; 3,400,000 motor cars. We did make 43,000,000,000 rounds of small ammunition; 17,000,000 rifles and pistols; 600,000 cannon; and 1,000,000,000 artillery projectiles.

But remember that much of this great undertaking could have been done, and should have been done, before the guns roared at Pearl Harbor. Remember, also, that it was done under the free competitive enterprise system, fostered and encouraged by the Republican Party for half a century, in a free land where men work in freedom at the job of their choice.

The Republican Party must guard against over-centralization. Our forefathers were farsighted. They feared centralized government. They set up plans for checks and balances to protect us against ourselves. They gave us three branches of government: legislative, executive, and judicial. They created three levels of government: local, State, and Federal. They tried to bring government closer to the people. They gave the citizens of each local unit power to govern themselves. As Republicans we must as a sacred duty maintain these wise checks and balances.

Republicans must deal with another and vital domestic problem. We eagerly seek the industrialization of all suitable sections of the country. This can b done gradually in the spirit of free enterprise. It cannot be done by Government direction, for Government cannot change the bases of industry without destroying the morale and the welfare of the worker. We cannot do it in the Russian way.

Nor can we deal with labor in the Russian way. Republicans have recognized that labor has three inherent and inseparable rights: the right to work where it chooses; the right to organize and bargain collectively; and the right to strike. The Republican Party should and will defend these rights.

We should encourage sympathy, understanding, confidence, and cooperation between employee and employer, and make Government the impartial friend of both. All organizations must be responsible organizations whose agreements are kept. Before employees and employers can join with Government in a national effort for production, prosperity, and good will, Congress must lay down a clear and definite labor policy. That policy must be based upon laws and not men.

In fixing wages we must never forget that the worker's savings at the end of the year are what count. The worker as well as the employer must have a profit.

Our tax programs must encourage risk capital. Taxes must be kept as low as possible. They are paid by the sweat of labor. Taxes are deducted from the gains of both labor and capital. Subsidies and grants are paid in taxes. They must be sparingly made.

We Republicans will remember that our Nation has earned world leadership. The war has shown that the American form of government and our way of life are the soundest in the history of organized nations. Dictatorships, limited monarchies, and parliamentary governments all failed to stop the savage drive of the Axis Powers to enslave the world.

America must assume leadership in the movement to insure world peace. That effort will require all the intellectual, material, and spiritual resources of the world's best nations. It must be based upon justice and righteous living. Its terms must be fully understood by the people of the contracting nations.

Material gains and new territory are not American objectives. We do seek the privilege of living in peace and good will in a friendly, liberty-loving family of nations. We do not demand that all groups accept the pattern of the American Republic, but we do insist that all war-breeding forms be eliminated.

"Spot assistance"—food for the hungry, clothing for the naked, and warmth and shelter for the unfortunate—must, of course, be given to the limit of our ability to give.

Loans of money and industrial goods must be made more guardedly. In the past we have helped nations and they have used that aid against us. These forms of foreign help must be scrutinized. The American people must know about these loans. They can be a cause of future disagreements, disruption, and conflict. The people should know the purposes, terms, and security of these advances. Before they are made we should know whether we have the money to loan and the rate of interest. We cannot remain solvent if we loan at an interest rate less than the money costs our taxpayers.

For the long pull, the best foreign aid is prosperous trade. Regardless of all the solemn nonsense of the economic morons, money and profit make the wheels go round, abroad as well as at home. World prosperity depends upon large-scale and profitable exchange of goods.

The Republican Party has always believed in world trade. It is a fact that the sound progress of commercial relationships among nations, as well as the industrial expansion of America, has always advanced under Republican administrations. Our party has always favored a trade policy giving all nations equal access to world markets.

In noncompetitive goods, which form two-thirds of normal trade, that is simple enough. It is not so simple in competitive goods.

Living standards must be considered. We cannot lower the living standard of American workmen and farmers. We hope to raise the living standards of other nations to our own level. We cannot do this by destroying our own economic stability.

In the field of foreign policy, America has not defined its intentions toward Germany and Japan. Our job in these conquered nations is to prevent future aggression, harness the energies and abilities of their people to useful purposes, which in the fullness of time will permit them—chastened and sobered—to reenter a friendly family of nations as full members.

Here again, as in all foreign relationships, our help must be spiritual as well as material; perhaps as much of one as the other. These demoralized people need inspiration as well as food, courage as much as coal, and guidance even more than cash.

It is time for action here at home. We must form our order of battle against the forces of regimentation and governmental control; against bureaus and commissions; against hundreds of thousands of political Federal employees; and against government by Executive order. Congress must again assert its full powers.

Free competitive enterprise, with the freedom of the individual, is at stake. The day of the political opportunist and patronage hunter must end or we can fail as a nation. It is a time for courage. The Republican Party can win in 1946, but it must stand for the old-fashioned American ideals of thrift, tolerance, hard work, and the love of God. It must be aggressively led and aggressively organized. It must be aggressively financed by all those who believe in its principles and value their liberties. The "dollars for freedom" program announced by Chairman Brownell today offers the opportunity to help in a great cause.

We can help make America solvent by hard work and common sense. It cannot be done

by planned economy that is planned by men who never earned a dollar. It takes more than planning to create wealth. It is created at the forge, in the mine, and in the fields by men with tools in their hands—by the bitter sweat of men's bodies and brains.

America has seen wealth created by men seeking work, making work, and finding work. It has seen men carrying the Bible, the rifle, and the axe carve a land of plenty out of the wilderness. That same spirit still lives.

The inalienable American right to the pursuit of happiness for which 12,000,000 men and women in uniform served and suffered is sacred. It must be preserved.

Every consideration must be given to the veteran and his dependents. Remember, he is the cream of the crop, the doer and producer of the future, and he will pay the greater part of the tax.

In the memory of Lincoln and of the more than 1,000,000 Americans who in all our wars have died that liberty might live, let us by humble, sincere, and thoughtful effort safeguard the ideals for which they perished.

The war that has ended was the worst catastrophe in the history of mankind. No other war approached it in magnitude. It was both the greatest effort and the greatest disaster in the annals of the world.

The scope, the accomplishments, and the unselfishness created by its terror and brutality have given America a mighty asset in the millions of fine, brave, and self-disciplined men and women who can be depended upon during these critical times. They know their America was a wilderness continent that has been made into a land of industry, plenty, culture, and good will. They know it is a land of deep religious convictions. They know it became great through free, competitive enterprise, and under the inalienable right of the individual to the pursuit of happiness.

These veterans want a land of opportunity. We all want a land of opportunity. We want a free and dynamic America. We can have it by all working together, through divine providence and under the Constitution.

Let us glory in American achievements. Let us keep the watch and avoid a surprise attack from within our gates.

America Alert

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, it was my privilege to have been present at an Americanism meeting sponsored by the American Legion Auxiliary of the District of Columbia on Lincoln's birthday. It was a most inspiring gathering. One of the speakers was Rear Adm. Robert B. Carney, USN, formerly chief of staff for Admiral Halsey. This fine officer thrilled the audience by the timeliness of his remarks. I include his address in full for all of it is pertinent to our problem of national defense in the postwar world:

Mr. Chairman, honored guests, and fellow veterans, I deem it a great privilege to be able to speak to this group of the American Legion. It was suggested that I might talk about the Pacific War, but, as I see it, the Pacific War has been settled, whereas the future holds all sorts of knotty problems which will require our best efforts and our undivided attention without wasting time admiring ourselves for the job we did on our recent enemies.

The dedication of a month to the contemplation of Americanism is timely and smart; and the self-dedication of the American Legion men and women to the task of making people Americanism-conscious should augur well for the future. I say "should" advisedly—the American Legion, with its great membership of proven patriots, can be a powerful instrument for good in this country, but those members are only people, and people today are beset on all sides by perplexities the like of which the world has never seen before. The American Legion and its auxiliaries can exert a powerful influence in channeling public opinion into lines of sound conclusion on this matter of Americanism, but that ideal can only be reached if the doctrines you preach are rooted in broad understanding and are free from any taint of narrow selfishness.

I would probably be forgiven if I came before you today advocating a big Navy, selling you a bill of goods on sea power, or telling you of the Navy's contribution to winning this war against the Axis. However, "Americanism as a topic appeals to me strongly as an American citizen, a taxpayer, a veteran of both World Wars, and one still vitally interested in the maintenance of the peace so recently begun (you will notice that I say nothing in the presence of Washingtonians about being a voter). I believe that if we can write some specifications for Americanism we can make progress toward constructing a yardstick for measuring the problems of the future in terms of our country's welfare. So instead of attempting a brass-hat lecture on sea power and big navies, I am going to explore this subject of Americanism to see if we can find a definition, or set of definitions, which will guide us in our future thinking; and wherever I bring the Navy into the discussion it will only be as a factor in the over-all picture—and, of course, as the subject about which I happen to be best informed.

With such an approach, then, the first thing to do is to define Americanism. Maybe we are inadvertently taking in a little too much territory, because the people of South America call themselves Americans, too. To the people down there we are North Americans; possibly this month should have been dedicated to "USA-ism." However, be that as it may, we know what we are talking about, so let's get on with the definition. "Americanism" is actually a creed or a code of citizens' duties, and for the purpose of a short discussion such as this, these duties divide themselves logically into three more or less geographical groups—internal, hemispherical, and global.

Internal Americanism comprises those convictions which relate to the form and expression of government, the Bill of Rights, the national economy, questions of prices and wages, inflation, labor and management, veterans' affairs, etc. These are questions in which you will be guided by your political and economic beliefs. And I will leave discussion of such matters to those better qualified to discuss them than I am. However, I have no such hesitancy with respect to hemispherical and global Americanism, for those two are inseparably bound up in our foreign policy and our willingness or unwillingness to back up—or back out of—our foreign policy commitments and obligations. The armed forces are an instrument of foreign policy, and so, as a member of the armed forces, I have a stake in external Americanism and some limited qualifications to discuss it.

There certainly can no longer be any doubt in the minds of thinking Americans that isolationism is a practical impossibility; whether we like it or not, we are vitally concerned in world-wide well-being and in any festering spots that threaten the health of the world community; we are up to our necks in world affairs and world politics. Now, what are some of the world problems which vitally affect us and about which we, as Americans, will have to make decisions? Let me list a few of them.

(a) Policing our defeated enemies.

(b) National security and such related questions as bases, trusteeship, etc.

(c) Promoting future peace and curbing frictions which might lead to further armed struggles.

(d) The United Nations Organization as mankind's greatest hope for future peace and security.

(e) The atomic bomb and its implications for the future; these, and matters like them, are typical of the problems with which our country is confronted now and will be called upon to consider in the future; and because our country is a democracy, our Government will eventually act in accordance with the will of the people. If the people are well-informed and think clearly in terms of good Americanism, our solutions to these problems will be good—if our people are ill-informed, or indifferent, or selfish, the over-all results will be detrimental or even dangerous to the United States.

Let me very briefly subject these problems to the Americanism test: First, the policing of our defeated enemies. On this point we need the ladies' support for a special plank in the Americanism platform—I am probably rushing in where even General Eisenhower fears to tread, but I am going to risk it. A large number of unfortunate devils are going to have to occupy Germany and Japan and other overseas areas to look out for our postwar interests; thousands of Navy officers and men will have to bear with the burden of overseas service. These things must be done or we will sacrifice the goals and gains we fought for; we will lose our place as a strong but beneficent world leader; we will get pushed around as we were before the last war—and, in our ultimate resentment of being pushed around, we will get embroiled again just as sure as death and taxes. Now, the women of this country can do great good or great harm, depending on their attitude toward postwar overseas activities. It seems to me that American women, believing in the practice of Americanism, can prove that belief by at least refraining from any insistence on unsafe reduction of our overseas forces.

Any thinking American knows that there is a deep-seated American distaste for large standing armies—the aversion is rooted in the very reasons for the first colonizations of North America. Good United States citizens gladly take up arms in times of national peril, but when the danger is passed they passionately want to return to their normal civil pursuits; this is so, this is a fact, and yet some modification of this concept now seems necessary if the United States is to fulfill the overseas obligations it has incurred. A streamlined, modernized Americanism must replace the Americanism of 100 years ago just as modern Supreme Court interpretations of the Constitution have given legal recognition to many accomplished changes in the American picture. I believe that in this new era Americanism must sponsor a greater military establishment and one which may normally expect to endure a new and hard obligation of citizenship: the obligation of foreign service in support of vital United States policies.

If we as a people cannot stomach a new concept of a larger United States Army doing prolonged foreign occupation and garrison duty, possibly we might extend our traditional acceptance of the idea that it is the duty of the Marine Corps to guard United States' interests abroad. That would be nothing new nor startling to the marines and would only involve the authorization of a larger Marine Corps.

I merely throw that one into the pot as something to think about.

Another problem is Americanism—and the next in immediate urgency as I see it, is that

of national security, which is something that cannot wait. Into the big design of national security we must weave the lesser designs of potential threats, of the composition and size of our armed forces, of overseas and other external bases, of trusteeships, and of the whole subject of collective security. From a practical standpoint we need not worry at the moment about any threatening sea power. There simply is no existing sea power which threatens our safety at the moment; and because there is no sea power which threatens us, we can also eliminate any momentary threat of invasion of our shores; we might be vulnerable to some extent from the air, and the specter of the atomic bomb has all hands worried, but it is most unlikely that any nation could gain a decision over us even with atomic bombs in the course of the next few months at least. These things all point to the fact that for the moment we can retain some reasonable part of our wartime strength and be safe while we are sizing up the world situation—and that is virtually what is being done.

There does not seem to be any possible source of immediate danger to us from the direction of the Atlantic, but the Pacific does present problems; this last war proved that only the United States can amass and project the forces necessary to keep the Pacific pacified, so for our own security, and for the good of the world, it is our obligation to maintain sufficient strength in the Pacific to keep it under control. Any military man—even the most rabid exponent of aviation—will say that adequate bases are necessary for the extended operation of our forces in the Pacific, and therefore these matters of bases and trusteeships are of vital interest to the United States, and it is our moral and bounden duty to make sure that we retain the necessary rights to such bases without any possibility of interference from outside sources; this may not be idealism but it is sound Americanism, and if we do not stick by our guns in this matter we are not profiting by the agonies of 1942, 1943, and 1944.

Moving on from the matter of immediate security, we logically come to the consideration of ways and means to curb frictions which might lead to further armed struggles and thereby disturb the peace of the world. The means at our disposal include diplomacy, moral persuasion, the use of our prestige as a lever, and the offices of a worldwide organization. Diplomacy and persuasion will work just as long as we can make the other fellows see it our way, and it is regrettable but true that many powerful groups in this world are only impressed by strength and the conviction that such strength may be used against them; therefore, until there is a world organization that can keep things under control, we must rely on the prestige inherent in our strength. Men of good faith from all parts of the world met last summer in San Francisco to draft the beginnings of a decent, righteous, and effective world organization. The nations of the world endorsed the principle, and we are watching the birth pangs of the UNO today. If there is to be any escape from pure jungle law in this world it must be through the UNO as mankind's one real hope for enduring peace and security. But in the meantime, if we completely tear down our military structure we leave ourselves not only in a helpless position but also distrusted even by our allies because they doubt our ability to back up our beliefs—in other words precipitate disarmament can actually create doubt and suspicion rather than allay them.

Now then, with these things in mind, Americanism points clearly to a wholehearted backing of the United Nations Organization and, as an absolutely essential corollary, to the maintenance of sufficient force to lend weight to our policies—and to a willingness to apply that force, as a last resort. In its early trials, the UNO may or may not succeed in all of its aims but that is most certainly no reason for condemning the ideal; no such organization can spring full-grown from its cradle—if it is to grow to vigorous maturity it must be fed, exercised, and nurtured like any other organism—it must try its wings and must grow in wisdom through profiting by its own efforts and its successes and mistakes. Specifically then, Americanism would seem to obligate us to standing firm on American convictions, to wholeheartedly supporting UNO, to refusing to be stampeded into appeasement, to living up to our commitments and insisting that others do likewise, and to maintaining the necessary strength to lend convincing support to our policies.

And who knows better than the legionnaires that strength is a universally understood language, and weakness an invitation to trouble?

As to the atomic bomb and its implications for the future, in a few minutes I will offer some ideas and comments on the Navy in the postwar era and at the same time will offer some ideas concerning the atomic bomb. For the moment, suffice it to say that the atomic bomb is being introduced as a factor in many of our current problems, and public opinion is being confused by a great many unsupported statements and arguments on the subject. About all we can do at the moment is to throw out any claim or statement that is not supported by clear and factual reasoning in order that our ultimate policies concerning this vital new factor may be logical and workable.

Summarizing then, with respect to global Americanism, it seems to me that our duty will be defined by security needs, by the tenets of civilized decency, by enlightened self-interest, by self-respect, and by dignified pride in our achievements and our righteous strength. The external problems that can arise are innumerable, but honest adherence to these beliefs should do much toward keeping our feet in a safe and honorable path.

Now let me touch briefly on hemispherical Americanism. The need for Western Hemisphere Americanism is so obvious that it is almost an insult to good intelligence to advocate it. In the first place, the prime requisite of security demands that no dangerous force or movement be allowed to gain any foothold in the Western Hemisphere; for that reason, if for no other, it is imperative that there be a Western Hemisphere solidarity founded in mutual understanding and trust. Such obvious benefits as brisk and profitable trade, and the good satisfaction of liking and being liked by one's neighbors should require no sales talk and are the best arguments for prolonged peace. But from time to time irritations are bound to creep into the Western Hemisphere picture—ideological irritations such as trouble our relations with the Argentine—boundary disputes—trade problems and problems of finance—the natural differences of viewpoint to be expected in discussions between peoples of quite different temperament and national origins. But, after all, these are just normal phases of human relations and none are insuperable. And in this business in keeping things peaceful and profitable in the Western Hemisphere we discover the pleasant fact that for once enlightened self-interest and sensible altruism are one and the same thing and do not conflict.

You will see much in the daily papers about Canada, Mexico, Central America, and South America, and as United States citizens you cannot better serve true Americanism than by exerting your influence toward genuine tolerance, mutual understanding, and fairness, for therein lies our greatest assurance that this stronghold of our fiercely guarded democracy will be impregnable.

Speaking of getting acquainted with our neighbors, I have the feeling that the greatest single factor in really getting acquainted would be a good motor route from Canada to Cape Horn. We are an itchy-footed lot—we love to go places—we are not the least impressed by distances as long as there is a good road and a car that runs. If we could hop into the car and drive to Rio or Santiago it wouldn't be long before we were on first-name terms with our neighbors to the south. Of course, we might squabble a bit—that would be natural between Yanks and Latins—but eventually we would come to understand each other, and real friendships would grow out of social and business contacts. That highway idea makes sense to me as a factor in bringing all of the Western Hemisphere peoples to a common belief in a common Americanism.

So far I have said little about the Navy or the other armed forces in the postwar picture. Instead, I have talked about your project—Americanism. Now I find that if I am to discuss my own pet subject—the postwar Navy—then my thoughts on that subject, too, must be shaped in terms of Americanism.

The subject of postwar armaments is a vast and complex study, but at least we can high-light some of the chief problems if you will bear with me a few minutes longer.

Let me go back into the past for a few moments as the best way to explain how we figure what we need at any time in the way of armed forces.

Back in the 1930's the Navy had worked out elaborate war plans designed to cope with each and every major country, or combination of countries, which might conceivably clash with the United States to the extent to resorting to war. Of course, enemy action is usually not wholly predictable, and degrees of success or failure cannot be forecast over a very long period, so practical planning could only go just so far, making the best possible provision for foreseeable events. The later phases of a long war must be planned after war starts and the situation can be better sized up. So it was in, say, 1935; we had a plan in case Japan attacked us. Much of that plan proved to be good and much had to be changed or scrapped. The Army planning was done under a peculiar handicap because at that time to plan another AEF would have virtually been a crime—and most certainly cause for an investigation.

In 1945 we had the forces and techniques for subduing our enemies. By July 1945 we knew what it took to defeat those enemies and in the case of the Navy the emphasis was on the submarine, antisubmarine measures, the carrier air forces, and the weird and terrible amphibious steam roller. Then a new and more awe-inspiring weapon than the world had ever seen before burst on the scene in August 1945—the atomic bombs over Hiroshima and Nagasaki—and all our calculations and future planning were profoundly affected.

Now then, in 1946, how shall we plan an armed force and its employment? Although the world is in a state of unsettled transition, as I have told you, there is no immediate threat to the actual safety of our continental shores. So we make some stop-gap plans for the present, and we begin a close study of foreign policy trends and of the nations and combinations of the nations with which we can conceivably come into disagreement, and we will make plans under each foreseeable contingency.

As Admiral Nimitz has announced, the Navy has already moved to modernize its organization in accordance with lessons learned and geared to progressiveness, research, and rapid developments. As you know, the Navy is planning exhaustive examination into the possibilities of the atomic bomb, and this summer will conduct the first experiments on a vast and unprecedented scale. In other words, the Navy, during this period of comparative safety, is conditioning itself for the future.

I wish to empnasize the fact that the Navy is taking a cold, open-minded, and judicious attitude toward the atomic bomb, and it might well behoove some of our armchair strategists to adopt the same reserved attitude. We read every day where "The atomic bomb has rendered navies obsolete"; "We want to know just how obsolete the Navy is"; "The next war will be won and lost in the first round"; and similar pronouncements in tones of ominous finality. One scientist recently said that the Navy's scheme of spreading ships all over Bikini atoll would prove nothing because they were so widely scattered. Obviously he did not know that great fleet cruising dispositions covered many square miles at sea. Or possibly he wants them all bunched up, Pearl Harbor style, to prove by their destruction that ships are washed up. You might just as well say that houses are obsolete, or soldiers, or the air planes that sit on airfields between missions. I think we had all better await the outcome of the tests, military men, John Q. Public, and the commentators alike, before laying any bets on the line.

One thing seems certain: Until all peacetime and wartime commerce, travel, and traffic becomes exclusively air-borne, the sea will be used by ships—ships vulnerable to enemy submarines, enemy guns, enemy air attack—ships that must be defended, and by what? Rather obviously, by a navy designed, built, manned, and trained to secure the use of the sea for our side and deny its use to the enemy. It may be a navy having many of the old familiar types, or it may be a Buck Rogers affair; time alone will answer that one; but until the ocean is useless to us and to our enemies, we will need a navy.

Perhaps by 1947 or 1948 our armed-force needs will be discernible, but it would be boyish optimism to predict that they would be clear. Each of the vital questions will be batted around in the press and on the radio; smart patriots, misguided patriots, and speakers of doubtful allegiance will air their views. Isolationists and their opponents will argue; the do-gooders will undoubtedly preach some brand of disarmament; the professional military men will beg for appropriations and other groups will endeavor to divert the money to their own pet projects. Nevertheless, by 1947 or 1948 we may know just how far we can depend on the UNO Security Council to police the world; and if it still looks as though we must be ready to protect ourselves in the clinches, we should be able to figure pretty closely what nations or combinations of nations could conceivably be hostile to us in the course of the next decade; and, consequently, we will be able, by evaluating their strength and intentions, to figure just about how much Army, Navy, and Air Force we should keep on hand to prevent an early defeat, and how much we would ultimately need to secure the final victory. These questions will be translated into terms of ships, planes, equipment, and personnel by the various planning groups, and the military departments will go before Congress and ask for the necessary authorizations and appropriations to guarantee the Military Establishments needed for our safety and success. You will have to listen closely to the pros and cons—you will have to weed out the arguments of the crackpots from the logic of the trained thinkers—and on your judgment may rest the fate of the United States, because it will be your judgment, the judgment of the people, which will find expression in the final action by the Congress.

No, my friends; it won't be easy to sort out the right answers, but a group dedicated to Americanism can be counted on to seek the right answers, and it will be every citizen's duty to try to sift out and support the projects that will further true Americanism at home and abroad.

Finally, at the risk of being repetitious, let us take one last look at a definition of Americanism in the light of the things we have considered here tonight. In its simplest terms we could say that wise Americanism is that policy which finishes the job on our Axis enemies; which furthers peace by lending our weight to UNO; which maintains an armed strength and prestige great enough to impress those who are only impressed by strength and the fear that it will be used; which stamps out in the Western Hemisphere any ideology or movement that threatens the way we choose to live in this hemisphere; which furthers mutual trust among all American peoples; which properly safeguards our commitments and our justified interests abroad; and which is constantly alert to counteract blind, dangerous, and un-American selfishness and bigotry from within. Virtually every project can be given the Americanism test by asking, "Does it do these things or does it violate any of these policies which I believe to be the foundation of Americanism?"

Without a gift for looking into the future, none of us can dedicate ourselves in much more detail than that, because, like the practical war-planners and tacticians, we cannot predict enemy reactions (in this case, trends harmful to our country's well being) very far in advance. We can only learn the good, basic principles, think and speak honestly and fearlessly, and be ever on the alert. The record is not too encouraging in this matter of profiting by our mistakes, but maybe we Americans have learned something this time—and certainly the American Legion and other organizations of unquestionably patriotic and democratic convictions can render a great service to the United States and to mankind, by helping to shape and guide public opinion into channels of sound, decent, and workable Americanism.

The Wheat Shortage

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address on the subject of the wheat shortage, delivered by Gordon Roth, director of public relations, Farmers Union Grain Terminal Association, on February 3, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening from GTA.

There is talk in the papers about bread rationing—talk about a flour shortage and a black-bread diet for the American people. And at the same time there are the prayers for wheat from starving millions of people in Europe and Asia and Africa—prayers that America may "give them this day their daily bread." The people in those countries need 37,000,000 bushels of wheat a month to carry them through the year.

Now, that sounds pretty gloomy. It sounds as though you will not have enough to eat in this country. Bread has been a symbol of our abundance of food, that 10-cent loaf of bread you get at the grocery store, or the bread you bake in the oven at home, bread that you take for granted, but that millions of people in other parts of the world are begging for. The thing for us to do is to try and understand what this talk about shortages of wheat is all about. How serious is it—this shortage of wheat? Can we believe all that we read? And if we cannot, what can we believe?

Let us get at the facts. If there is stupidity, let us root it out. If there is confusion, let us correct it. If there is selfishness, let us expose it. The first thing that you should know is how much wheat there is in the country. After you know that, the next question follows: Is there enough? Right now there are about 600,000,000 bushels of wheat still on the farms and in the elevators in the United States. That is what the Government says—600,000,000 bushels of wheat to carry us to July 1 when the winter wheat crop moves to market.

Now, for the next question: How much wheat do we need until then? Here is the answer: We need about 200,000,000 bushels for flour here at home. Then we need about 150,000,000 bushels to export. That wheat will go to feed people in other parts of the world. Then we also need to plant spring wheat. It will take about 40,000,000 to 50,000,000 bushels to put in the 1946 spring crop. That adds up to 400,000,000 bushels of wheat. So when you subtract 400,000,000 from 600,000,000 bushels, you get 200,000,000 bushels left over. That is what is called a carry-over—200,00,000 bushels of wheat on hand next July 1 when the winter wheat crop starts to move into market.

That is a good supply. All the people talk about supply and demand. You know that law—that the supply on hand decides what the demand is, and the demand decides what the price is. Well, right here we have a supply and demand that just about balances each other. But what happens? Nobody seems to like it. The millers do not like it. The exporters do not like it. None of the buyers like it. But the farmers do. About once in every 50 years the farmers get a good price. That price is good because there is a heavy demand and the farmer has a crop to sell. Funny, isn't it? When supply and demand works, nobody likes it. It is only something good when it is used as an argument to support low prices. The wheat is here, but the catch is that nobody can get it. The farmers are not selling enough of it, and even when there is wheat for sale the railroads are unable to move it fast enough.

Now, all this scare talk about bread rationing and black bread and not enough wheat started this way. The Government needs wheat to export to keep people from starving. The mills need wheat, too. The Government has first call on the wheat. That means the mills must cut their inventories—that is, cut down the supply of wheat in their elevators to a couple weeks or a month. That is one plan. The other plan is to make the millers use more of the wheat in grinding flour. Right now the mills use about 72 percent of the wheat. The Government wants the mills to grind 85 percent of the wheat berry into flour. It would be a coarser flour and not so white. Of course, if the mills used 85 percent of the wheat instead of 72 percent, they could get about 13 percent more flour out of each bushel of wheat. On the face of that you would say, "Go ahead; why not do it that way, then?" But it is not as simple as that. In the first place, you would not save any wheat. You would get more flour out of each bushel, that is, but the amount of "red dog," the coarse flour that goes into feed, would be cut down. So you have more flour, but less feed.

And the millers point out, with some logic, that to change from a 72- to an 85-percent flour, means that the bolting sheets which sift the flour must be all changed. Their processing and grinding operations must be changed. And, of course, the bakers would set up a howl. They have got their ways of baking bread, and a different kind of flour would mean that they would have to make changes. And then, of course, the public would set up a howl. Maybe you and I

wouldn't but a lot of people would. Remember what a howl went up in the war when the Government put a stop to ready-sliced bread? You would have thought that our whole civilization collapsed because you had to slice your bread at home instead of getting it ready-sliced. And so, besides all the inconveniences, you can bet your bottom dollar that this plan would be a terrible political blunder. Men have been beaten for office on things less important than changing the color of bread. If you think that is funny, then you do not know your Congressmen.

But here we are—we have the wheat—then why is there a scarcity? The answer is in the following telegram we want to read you. It was sent to President Truman, Secretary of Agriculture Anderson, Secretary of Commerce Wallace, and several key Senators. It was sent by M. W. Thatcher, speaking as president of the National Federation of Grain Cooperatives. It is a fighting telegram and one that calls for a showdown. GTA is on the warpath against the blunderbusses in Congress. The telegram was sent today after 3 days of conferences and phone calls with Washington officials and representatives of the grain and milling industry and officers of the National Federation of Grain Cooperatives. I am now quoting from the telegram:

"There is a wheat problem, but not one that calls for bread rationing or for use of more wheat in flour, which admittedly would be a coarser and darker flour. Based on the United States Department of Agriculture's figures of January 1, 1946, we had 689,000,000 bushels of wheat on hand. A new wheat crop will pour into market after July 1. Present indications are for at least 700,000,000 bushels of winter wheat. There will be a heavy spring wheat acreage.

"Allowing for a January disappearance of 89,000,000 bushels, we will need up to July 1 no more than 200,000,000 bushels for flour, and 50,000,000 bushels for spring wheat seeding and miscellaneous farm use. This would leave 350,000,000 bushels of present stocks for export, carry-over, and livestock feeding. It would be better to stop feeding wheat than to ask flour mills and bakeries and consumers to adapt themselves to a new product, with all the changes necessary to make a straight run of flour, using 85 percent of the wheat instead of the normal 72 percent. The public and the processors would resist these far-reaching changes.

"Farmers will move the wheat to town and sell it if they are given parity treatment. Farmers know that Congress is in doubt about extending the OPA price control law. That makes farmers doubt that it is wise to sell wheat under present ceilings. Farmers know that on July 1 there will be a big increase in wheat prices if Congress does not extend the OPA law for another year.

"Farmers have the same intelligence as business people who have been and are withholding merchandise for the much higher prices which they hope will be realized either through dropping of OPA or through making exceptions as, for example, in the steel industry. Farmers also know that with wage levels in the process of rising, eventually such increases will be reflected in a new and higher parity price, which under law will force the OPA to lift present ceilings on all farm prices.

"From the standpoint of price, the farmer sees about every advantage in not marketing wheat now. He is not going to succumb alone to any patriotic call when he sees the United States Steel Corp., and General Motors Corp., and others getting away with theirs.

"The farmer feels that all he has to do is wait.

"Another point: the farmer is accustomed to carrying an inventory of wheat on his farm. It is his ever-normal granary and his base money supply. Not for patriotism alone does he intend to market this year both his present inventory and also his new wheat crop. He would then be compelled to pay a 2-year or double income tax.

"In brief, he is not a fool. He intends to be treated as well as other groups in the economy of the Nation, even if he is the most patriotic. He as much as any other person wants to see wheat shipped to the starving people in other parts of the world.

"But the National Federation of Grain Cooperatives cannot honestly urge its wheat-producing members to market their wheat so long as the wheat farmer is at a disadvantage as regards ceilings and double taxation.

"If the farmer knew now what wheat ceiling prices would be until July 1, 1947, and if he could be relieved of double taxation from marketing two crops in the same year, and if he could be assured that he would not be subject to a third tax by the repeal of laws protecting his marketing cooperatives—as advocated by the National Tax Equality Association—then we would be on sound ground to ring the bell of patriotism and save the starving families abroad.

"Further, if all these economic disadvantages were corrected, there is still a transportation break-down, not only from lack of boxcars but from disorganization on the railroads. Now the movement of cars just from the Dakotas to Minnesota frequently takes weeks.

"We want to emphasize that you can get wheat for export without upsetting the operations of flour mills and bakeries or changing the food habits of consumers if you act now on these three problems:

"First. Give us boxcars and transportation facilities that will work and move the wheat.

"Second. Decide now, one way or the other, on the future of OPA and price ceilings for 1946–47.

"Third. Protect the farmer against double and triple taxation.

"If and when these three needs are met, the National Federation of Grain Cooperatives and the general farm organizations will advise farmers to move their wheat off the farms.

"People all over the Nation are now questioning the political integrity and economic sense of both the Congress and the Administration. This problem of wheat is not in the hands of the millers or the bakers or the farmers. It is in the hands of the Congress and the administration.

"We have called a meeting of our grain cooperatives in Chicago on February 8 and 9 and have called officials from the United States Department of Agriculture to confer with us. We also are inviting, through this wire, the chairmen of the House and Senate Committees on Agriculture to be with us in Chicago.

"Our National Federation of Grain Cooperatives is comprised of the regional grain cooperatives from Ohio to the Pacific Northwest, and from the Canadian border to the Gulf of Mexico. Its annual handle of grain is close to 400,000,000 bushels a year. Most of the farmers who own these cooperatives also are members of the Farm Bureau, the Farmers Union, or the Grange. Thus you can rest assured that you can have the solid mobilized support of agriculture to move the wheat that is needed if the Congress and the administration will just move first.

"Respectfully submitted.

"M. W. THATCHER,
"President, National Federation of Grain Cooperatives."

That is the blunt, forthright telegram that Mr. Thatcher sent in the name of the National Federation of Grain Cooperatives to the President of the United States, to two of his Cabinet officers, and to key Members of the United States Senate.

Now the Federation is following up with an emergency meeting. The meeting will be held in Chicago this Friday and Saturday. Represented at that meeting will be cooperatives that handle almost 400,000,000 bushels of grain a year. They will sit down to make plans to get that wheat moving. Government men, whose job it is to help move the wheat, have been invited to attend.

Certainly the plea, the fervent prayer of millions of people in Europe today, is the prayer for wheat—"give us this day our daily bread." America cannot fail them.

Good evening, and we ask you to remember that GTA is the co-op way.

Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Robert Lasch appearing in the Chicago Sun, February 11, 1946, dealing with the organized fight being waged by the drug industry against the Wagner-Murray-Dingell health insurance bill.

The drug manufacturers seem to regard this legislation as opposed to the welfare of the drug industry. The theory, apparently, is that the improved health of the Nation would mean serious curtailment in the manufacture and sale of drugs, and therefore they want to preserve the status quo.

There being no objection the article was ordered to be printed in the RECORD as follows:

DRUG MAKERS WAGING FIGHT ON HEALTH INSURANCE; WHY?

One of the best arguments I have yet seen for the health-insurance plan proposed by President Truman fell into my hands last week.

The plan, embodied in the Wagner-Murray-Dingell bill, would set up a new method of paying for medical care. Some people call it "socialized medicine," but that term has little meaning. The bill provides for weekly contributions by workers and employers to a national health-insurance fund. Out of this fund the Social Security Board would pay the doctor and hospital bills, with suitable limitations, of insured workers and their families.

The result would be a tremendous improvement in the distribution of medical care. Communities and low-income families which now lack adequate care could get it under health insurance. For every insured family, the financial burden of sickness, which is often concentrated and unexpected, would be spread over a long period. Hospital facilities would be enlarged and multiplied. Group practice would be encouraged, and doctors who now tend to congregate in the large cities where incomes are highest would be induced to practice in small towns and rural areas which under the present system must go without adequate service. A long-run improvement in the national health is an almost certain consequence of the change.

A REASON TO CHANGE

It is a strong reason to make the change when we find the drug and pharmaceutical industry waging an organized pressure campaign against it.

The drug industry, if it were interested in national health rather than profits, would

have no special incentive to oppose the Wagner-Murray-Dingell bill. How patients pay their doctor bills is no concern of the drug manufacturer and dealer. Their business is to sell drugs and medicines.

Yet when you go into a drug store nowadays you are almost sure to see a pile of pamphlets entitled "Political Medicine." This tract, published by the so-called National Physicians Committee for the Extension of Medical Service, contains a vicious and unprincipled attack on the national health-insurance plan. It is full of misstatements, distortions, and exaggerations.

Not only the druggists, but the entire pharmaceutical industry has been organized to attack the health-insurance plan. For example, the salesmen for Abbott Laboratories last month were busily spreading the word. They had instructions to visit 10 persons every day for 10 days, asking each, on the chain principle, to make 10 other contacts. The objective, as Abbott Laboratories told their salesmen, was to "roll up a blizzard of a half million or more" communications to Congress against the Wagner-Murray-Dingell bill. Abbott Laboratories called the campaign "a constructive contribution to the welfare of the industry and to the American way of life."

MAJORITY VOICE NEEDED

What is the welfare of the drug industry? Does it conflict with the improved national health which is the goal of the Wagner-Murray-Dingell bill? Would the sales of medicine, and the habit of self-medication which contributes to those sales, be impaired by a health-insurance system which makes good medical care more readily accessible to the people? If so, then this is the best of all possible reasons for inaugurating health insurance.

There is no question that the drug manufacturers, the druggists, and the doctors have a perfect right to register their opposition to the Wagner-Murray-Dingell bill. But the people who would benefit from the bill, which means the great majority of the working population, should take note of this carefully organized effort to preserve the status quo in the practice of medicine. If the money and sales organizations of the drug companies can produce a "blizzard" of messages to Congress against health insurance, the unorganized people who favor the bill should bring off a blizzard of their own.

According to a survey by the National Opinion Research Center, 82 percent of the American people think something should be done to make it easier for people to get medical care when they need it, and 68 percent think it would be a good idea for social security to cover doctor and hospital care. This majority must make its voice heard above that of the organized minority.

How OPA Paralyzes Business

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. VORYS of Ohio. Mr. Speaker, in my remarks earlier today I referred to a letter I have received from Mr. E. C. Raney, president and general manager of Ranco, a company in Columbus, Ohio, manufacturing the highest quality controls for heating, ventilating, and air conditioning. I have secured leave to extend this letter in full in the RECORD.

When I was home during the recess I talked with Mr. Raney and he analyzed for me the specific problems which his company is facing, caused by OPA. His problem was so typical, and his analysis was so interesting, that I urged him to write me a letter telling the full story.

Mr. Bowles has been so notoriously blind and deaf to the pleas of the practical manufacturer that I felt it would be useless to send him Mr. Raney's letter. I heard, and hoped, that Mr. Bowles might be going out of OPA and I thought it might be better to send the letter to his successor. Within the last 24 hours I have learned with dismay that Mr. Bowles is to be Economic Stabilizer, with even greater power, and that Mr. Paul Porter is to come in under him as head of OPA. I have read over carefully the President's Executive order and can spell out no relief from its verbiage for old-line manufacturers who are not having labor troubles. This order probably gives Mr. Porter sufficient discretion to correct this situation, for bureaucratic discretion is sprinkled throughout the order. There is nothing in Mr. Porter's background that shows that he knows anything at all about prices and production and manufacturers' problems, but I am hoping for the best, and wishing him well, and am sending him this letter which shows how OPA is paralyzing production. It does not state a unique situation, but a typical situation, which is probably familiar to every Member of this House.

HON. JOHN M. VORYS,
House of Representatives,
Washington, D. C.

DEAR MR. VORYS: As a Member of our Congress, I feel that you should be interested in knowing how we in industry are progressing under the present OPA's so-called price control.

As a matter of background our company, Ranco Inc., has been in business since 1913, and since 1926 has been engaged in the development and manufacture of thermostatic controls for refrigerators; in the last 2 years, prior to the beginning of the war in 1941, we were also providing thermostatic controls for automobile heaters.

During the time we were engaged in manufacturing refrigerator controls prior to the war, we made constant improvements in methods of production so that the cost of our product to the customer in 1941 was only 20 percent of what the manufacturers were paying for thermostatic controls when we started the manufacture of refrigeration controls. We believe that this was typical of the contributions which have been made by large numbers of manufacturers in the refrigeration industry and was responsible for the cost of electrical refrigeration being brought down so that domestic refrigerators were in reach of practically everyone.

At the same time, we were reducing costs by engineering developments and new production methods, we were also increasing the wages and salaries of our employees so that in 1941 we had established wage rates and prices which now make our situation a very difficult one to solve. The cost of the materials which we use in our refrigerators since the start of the war has risen greatly and different items which enter into our production now cost us anywhere from 10 percent to 100 percent more than they did in 1941.

We have also granted our employees wage increases between 1941 and the present time so that our total manufacturing cost is now more than 30 percent higher than in 1941, while our selling prices have only been permitted, under OPA price control, an advance of 5 percent.

In addition to the higher wages and salaries we are paying, our production efficiency is now greatly reduced and it now takes more than 1,000 employees to produce as much volume of the same items as was produced by 700 employees in 1941. In simple arithmetic, on the net sales for the 3 months, September, October, and November, 1945, our operating deficit is approximately $200,000 on total sales of less than $800,000.

There seems to be a general impression in Washington, particularly in the OPA, that manufacturers like ourselves will be able to get back into peacetime production on a profitable basis at the old prices, due to the things the OPA seems to think we learned about production during the war. As a matter of fact, there was nothing which we learned during the war which has enabled us to reduce our costs in the slightest degree, due to the fact that we had already spent about 20 years of development in cost reduction on these items, and there is simply no possibility of effecting any immediate reductions that will enable us to break even on costs, let alone make a profit. The production rate at which we are now operating is comparable to that before the war, so that we cannot look forward to an increase in production great enough to cure our difficulties.

A great many manufacturers like ourselves showed some remarkable cost reductions on producing war materials, but this was due to the fact that these items had never before been produced in large quantities nor large production mass technique applied to them prior to the war. It was the technique that industry already had developed on other mass production which enabled them to turn these techniques to such tremendous advantage in building war materials at lower costs.

Speaking for our own concern, and I am sure this was duplicated by hundreds of other companies, we developed and built gages for the Army Air Forces which had been sold in small quantities and produced without the benefit of any tooling and mass production technique at prices as high as $175 to the Air Corps; but on our contracts to the Air Corps we started off with prices under $50 and as we progressed through the war we made voluntary reductions to the Air Forces from time to time so that at the end of the war we were producing these same instruments at a profit, and selling to the Government at around $20. However, if we were to continue producing these same instruments over a period of years, further cost reduction could not be expected in the same proportion that was made in the early months of our production, and if we had not had experience in mass production prior to the war I am sure that this record could not have been achieved because we simply applied techniques with which we were familiar to the production of these new devices.

I think it absolutely out of the question to think that any of the manufacturers who had done a good job of reducing prices up to 1941 and who were operating in a highly competitive market can be expected today to produce the prewar items at any ways near the prewar costs, due to the fact that so many uncontrolled items of cost have entered into present-day manufacture.

It seems to us that the only thing that has remained constant in our case is the OPA idea of "price freeze" instead of "price regulation."

On many of the items which we now purchase for our products the vendor from whom we purchased these items prior to the war can no longer supply them to us at the old cost; and wherever OPA prices are still effective it is absolutely necessary for us to find new sources of supply, and these new sources do not have to abide by any prewar price

fixing. As an illustration, we buy large quantities of bakelite moldings which are made on our own tools. The original suppliers cannot make these at the old prices because their labor and materials have increased, and as a result they tell us to take our tools elsewhere. When we do this, the new molder who never made the part before has no price restriction and is free to increase prices to us so as to cover his cost and make a profit.

Another item is regarding tools which we purchase when we are having new tools made. There is no OPA limitation on these tools, so that we have to buy at a much higher price than we formerly did. In the matter of machines, such as punch presses, of which we use a large number, we cannot get delivery from the old manufacturers because of OPA price regulation, but newcomers in the field are permitted to charge any price they may see fit, and we have been quoted as much as $3,000 for machines which were formerly purchased for $1,000 or less. We cannot see how this sort of price regulation is or can prevent inflation. As a matter of fact, inflation is all about us, and, except for individuals who refuse to see and believe, we are all aware of this inflation.

It seems to me that since inflation exists, the price control should be either honestly and fairly administered or else abandoned entirely.

We have no quarrel with the general idea of price control during the war, but we feel that the administration of price control has failed entirely to carry out the intent of the Price Control Act, and we strongly feel that we should have either complete abandonment of price control or a new set-up for administering the existing laws so that selling prices can be made consistent with costs.

The present series of strikes and the Government's approval of wage increase will mean financial ruin to thousands of manufacturers unless prices are adjusted all the way across the board to take the increased costs into consideration. Washington will have to make up its mind whether we have industry bankruptcy or sane price and wage regulation.

Very truly yours,

RANCO, INC.,
E. C. RANEY,
President and General Manager.

Note that before the war this company had reduced costs in its regular lines 80 percent in 15 years, and that the benefits of this reduction were shared with employees and the public through higher wages and lower prices.

Note that during the war costs on Army equipment were reduced by this manufacturer from $175 to $20 a unit, a reduction of 88 percent in 3 years.

Note that this once successful company had a post-VJ-day operating deficit in 3 months of $200,000, or 25 percent of its net sales, in manufacturing its old line under OPA regulations.

Here is the apparent theory underlying the idiotic OPA regulations which have had these tragic results: the bureaucrats, who know nothing about manufacturing, have seen the marvelous reductions in costs which efficient manufacturers have accomplished in making war items; they know of the prewar reductions in costs which were typical of American know-how; they, therefore, blithely planned that these old-line manufacturers would be forced to make similar reductions in costs immediately upon resuming the manufacture of their former peacetime lines, utterly forgetting that competition and ingenuity had already brought these items near the saturation point in cost reduction when their production was stopped by the war; not realizing that it takes time, ingenuity and competition to make such reductions, but gleefully planning that these reductions could be accomplished instantaneously and indefinitely, merely because OPA demanded it. The result has been a creeping paralysis over production which is becoming a galloping paralysis, penalizing experience and efficiency, hamstringing the manufacturers, depriving the public of products, and leaving losses instead of a possibility of increasing wages.

To show that this situation is typical and not unique, here is part of a letter I received today from a sheet-metal and building-supply jobber:

I wonder if you and others are fully informed of the terrible mess OPA is making of our economy. I was for it up to the last week but I do not believe that a price rise of double the present prices would be as bad for everyone as the terrible inequalities the present OPA rules are making. No steel mill will make box or common nails because they can sell all of the nails they can make that have a high extra, so why make common nails? But common nails are nonexistent and an across-the-board rise in steel will never help this situation. In fact, it will hinder it. Everyone is bending their efforts to use their production for things they did not make and are not needed but will sell because of demand. The things that are needed are not made. Then Mr. Bowles looks at an annual statement and sees that the company is not in the red and gives it no help on the nonprofitable items and the management again goes out for new products. Roofing felt cannot be bought for built-up roofs, the commonest kind. It is all going into roofing shingles. Insulating sheathing cannot be bought because the pulp is all going into decorating tile. Integrated steel mills are using all of their common galvanized sheets to make finished products which they fabricate and the small manufacturer can get no raw material. These are not steel-mill strike problems. They existed before the strike.

OPA has been saying to manufacturers "Off with the old; on with the new." Instead, OPA should have said to them "On with the old; compete with the new." If Mr. Porter will only prepare quickly some simple regulations that will permit a manufacturer to make profitably the things he can make best and cheapest because they are his old line, realizing that competition and taxes and collective bargaining will keep that profit from getting out of line, this will go far in speeding up production and avoiding further inflation.

The Full Employment Bill

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, February 15 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, ever since the final full employment legislation was reported from the Senate-House conference committee a desperate effort has been made by its enemies to misconstrue it and thereby render it ineffective. On Monday, February 11, 21 national, civic, labor, and veteran groups addressed a letter to the President pledging their support to the legislation and emphasizing the need for courageous and effective administration. In this letter the following statement is made:

We have been fighting for a congressional statement of policy which would recognize that it is the responsibility of the Federal Government to use all its vast resources to assure employment opportuities to all of our citizens able to work and secking work. This is accomplished by the conference bill.

A similar point of view has been taken by the Christian Science Monitor, whose editorial of February 8 described the full employment bill as "a surprisingly vigorous measure." This editorial concluded on the following note:

In the last analysis, how this legislation works will depend on who is President, whom he appoints as advisers, and what sort of implementing acts each Congress passes. But the bill does pave a road down which both the Executive and the lawmakers must travel as each year rolls around.

I should also like to refer to the column entitled "Full Employment Juggling" by Peter Edson, which appeared in the Washington Daily News of February 11. In this column, Mr. Edson says that—

If anyone will sit down and read the full—pardon—the Employment Act as passed, he will see for himself that it accomplishes nearly everything the original bill set out to do.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the documents to which I have just referred: the letter to the President, the editorial from the Christian Science Monitor and Mr. Edson's column.

There being no objection, the letter, editorial, and article were ordered to be printed in the RECORD, as follows:

DEAR MR. PRESIDENT: The undersigned organization have, for a period of many months, been actively engaged in mobilizing support for a full employment program of which the full employment bills (S. 380; H. R. 2202) was the first essential step.

We are completely convinced, and our opinion is substantiated by all public-opinion polls, that the overwhelming majority of the American people are prepared to support the strongest possible legislation designed to assure the objective of full employment and to avoid the periods of boom and bust which have heretofore marked the course of American history and which, if continued in the postwar period, can lead only to national and international disaster.

Despite this overwhelming support for effective legislation, and despite your vigorous efforts in its behalf, a small but powerful minority has steadfastly opposed any and all efforts to obtain its enactment. Indeed, this articulate minority, by virtue of its strategic representation in certain committees of the Congress and its disproportionately powerful control of the organs of public opinion, almost succeeded in preventing passage of the necessary basic legislation.

While the bill which has been reported out by the Senate-House conference committee does not contain the language and provisions that we believe the overriding significance of the issue demands, it is nevertheless with a sense of real satisfaction that we note that the conference bill makes a distinct contribution to the solution of the basic prob-

lem. The contribution is made along the following lines:

1. The bill establishes the responsibility of the Federal Government "to utilize all its resources" for the purpose of "creating and maintaining * * * useful emloyment opportunities * * * for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power."

While the conference bill does not use the term "full employment," nor does it measure up to our concept—and your concept—of what an ideal bill should contain, we feel called upon to insist, despite the contrary insinuations of some of the opponents of adequate legislation, that we have not been fighting a battle of catch phrases or of slogans. We have been fighting for a congressional statement of policy which would recognize that it is the responsibility of the Federal Government to use all its vast resources to assure employment opportunities to all of our citizens able to work and seeking work. This is accomplished by the conference bill.

2. The bill calls for an annual Presidential report to the Congress on the national employment situation, and specifies that that report should include the basic analyses included in the national employment and production budget proposed in the original legislation.

3. The bill establishes a Council of Economic Advisers to assist the President in this undertaking.

4. Finally, the bill establishes a joint committee of the Congress to receive and analyze the President's report, and to transmit it to the Congress with recommendations.

Thus the conference bill provides you and the Congress with a clear declaration of national policy of full employment and with machinery for discharging the Federal Government's responsibility for full employment. Again, we may not think it is the most perfect machinery—and you may not—but we are satisfied that, in conjunction with all of the agencies in the executive departments, this machinery will work if a genuine and sincere effort is made to make it work.

We, therefore, believe that the Congress should approve the conference bill, and we trust that you will sign it.

But we hasten to add, Mr. President, that the will to make the machinery work is more important than the machinery itself. This is particularly true in view of the fact that the conference bill imposes upon you full and complete executive responsibility for carrying out the provisions of the bill. While the Council of Economic Advisers established by the bill is required to assist you and can, therefore, serve a most significant function, in the final analysis the success of the program in the executive branch of the Government rests squarely upon your shoulders, where it should rest.

In the very first instance, the question of whether or not this program is implemented depends largely on the appointments you make to the Council of Economic Advisers and on the appointments made by the presiding officers of the two Houses of Congress to the joint committee.

Our organizations, representing many millions of Americans committed to an economy of full employment, will necessarily judge the administration's intentions by the caliber of the men named to fill these strategic positions. The three members of the Council of Economic Advisers must be men who have given proof, in action as well as in expression, of their devotion to an America of full production, full employment, and full consumption. They must be men with sufficient courage to refuse to listen to the apostles of defeatism who have so consistently opposed the progressive principles for which you and we have been fighting a common battle.

Insofar as the joint committee is concerned, the appointments must be made by the presiding officers of the two Houses, both of whom are members of the majority party, the Democratic Party, your party. We are therefore justified in assuming that a majority of the 14-member joint committee will be composed of men who, like the members of the Council of Economic Advisers, are committed to a full employment program.

The passage of the Employment Act of 1946, if adequately implemented in terms of personnel and program, can mark the beginning of an American crusade for economic security, stability, and justice, and consequently a contribution of enormous significance to the cause of international peace. Unless, however, the act is adequately implemented, history will record it as a mockery and an affront to the millions of Americans who are determined that our free institutions shall not again be threatened by the curse of unemployment.

Most respectfully yours.

[From the Christian Science Monitor of February 8, 1946]

SURPRISINGLY VIGOROUS

The compromise version of the so-called full employment bill, which just passed the House and seems sure of Senate approval, is a surprisingly vigorous measure. The original House version ran the danger of being so full of generalizations and reservations that an unsympathetic President might have fulfilled the letter of its requirements by more or less meaningless gestures. The compromise bill, like the Senate version, specifically directs the President to assess annually the state of the Nation in definite terms of jobs and all that goes to make jobs.

By its wording the original full employment text had laid itself open to two kinds of misrepresentation: (1) That Government fiat could guarantee jobs for all under a free-enterprise system. (2) That the net effect of the bill would be unlimited Federal compensatory spending. The measure just passed avoids the term "full" and speaks of "maximum" employment. It apparently has quieted fears about spending, for even Senator TAFT is said to be supporting it now.

The basic issue all along has been whether or not the Government should be formally committed to a policy of full utilization of the Nation's capacity to produce and consume—hence, to employ—and to forthrightly placing its influence and resources behind such a policy. Senator MURRAY and Representative COCHRAN, both sponsors of the original measure, say they are satisfied the present bill meets this test. Certainly, the Council of Economic Advisers which the bill authorizes for the President, and the joint committee which it sets up in Congress to consider the President's report, should work toward greater consistency in policy.

In the last analysis, how this legislation works will depend on who is President, whom he appoints as advisers, and what sort of implementing acts each Congress passes. But the bill does pave a road down which both the Executive and the lawmakers must travel as each year rolls around.

[From the Washington Daily News of February 11, 1946]

FULL EMPLOYMENT JUGGLING

(By Peter Edson)

Supporters of the much cussed and discussed Full Employment Act are chuckling quietly over the slick job of word juggling they did to get the measure passed by both Houses of Congress.

It isn't called the "Full" Employment Act anymore. It's just the Employment Act. This is typical of the compromises made to secure passage. Enemies and opponents of the full employment theory think they scored a great victory in knocking out all the objectionable experimental economics stuff. Senator TAFT, of Ohio, went so far as to say that the act passed is definitely not a victory for Truman.

If TAFT, Congressman CARTER MANASCO, of Alabama, and WILL WHITTINGTON, of Mississipi want to think they scored a great victory by watering down the original draft of the bill, they can. But if anyone will sit down and read the full—pardon—the Employment Act as passed, he will see for himself that it accomplishes nearly everything the original bill set out to do. That makes it definitely a victory for Truman and for Senator JIM MURRAY, of Montana.

The way this job was done is one for the book. It took six meetings of the conference committee of Senators and Congressmen to iron out differences between the Senate and House versions. MANASCO and WHITTINGTON sat tight on their watered-down version. They were supported by Senators TAFT, BUCK, of Delaware, RADCLIFFE, of Maryland. It looked like a deadlock. So the other Senators—BARKLEY, of Kentucky, MURDOCK, of Utah, TAYLOR, of Idaho, and TOBEY, of New Hampshire—suggested changes in language.

For instance, take the preamble of the act as passed. It says that Congress declares "it is the continuing policy and responsibility of the Federal Government * * * to * * * utilize all its * * * resources * * * to promote maximum employment, production, and purchasing power."

That's boiling a 100-word sentence down to 20 words to get at the guts of it. But ask yourself what's the difference between "maximum" employment and "full" employment? Tweedledum and tweedledee.

Opponents of the original bill also objected to the declaration that it was the Federal Government's responsibility to provide such volume of expenditure as may be needed to assure full employment.

So that was cut out. Put in its place was this statement that "It is the continuing policy and responsibility of the Federal Government to utilize all its resources to promote maximum employment." and so forth. What do you think the Federal Government does when it "utilizes all its resources"? You could spend a trillion dollars, fight another war, or try to make the Mississippi River run backward under that phrase.

Take the next section: The original draft called for a "national production and employment burget," to be prepared by the President. Critics said that was dangerous. So the "budget" was stricken out and an economic report was substituted. What's the difference what you call it if the report covers the same ground that the Budget does?

In putting over this substitution and getting the House to accept the compromise, the bill's backers were equally smart. In the House were some 84 votes opposed to any kind of full employment bill. If they had been stirred up, opposition might have grown and the bill might have been killed. Congressmen PATMAN, of Texas, MURRAY'S cosponsor in the House, and JOHN J. COCHRAN from Truman's district in Missouri both spoke briefly on the floor, then asked leave to extend their remarks in the RECORD. What they said on the floor was innocuous. Their full analysis of what the bill does is given only in their extended remarks, which few people will ever read.

The whole job was one of the smoothest pieces of legislative legerdemain ever pulled off in Congress.

Surplus Housing

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

AMVETS TESTIMONY BEFORE THE HOUSE EXPENDITURES COMMITTEE ON SURPLUS HOUSING, FEBRUARY 14, 1946

Mr. Chairman and members of this committee, my name is J. H. Leib. I am the legislative director of the American Veterans of World War II, better known as Amvets.

We are the largest veterans' organization that has come out of this war, with approximately 30,000 members.

We are extremely interested in the surplus legislation now before your committee.

While we are naturally concerned with the whole surplus situation, we are at this time particularly anxious to see that the veterans are given a fair break in the sale of Government housing, now declared surplus by the Defense Homes Corporation. These projects come under the jurisdiction of the RFC and the Surplus Administration.

Briefly here is our story:

Last December our local post organized a corporation and publicly invited all veterans' organizations to joint us, in the hope of purchasing the McLean Gardens, which is now up for sale by the Government.

Since submitting our bid—we have run into all kinds of conflicing regulations and red tape.

We have heard a lot about veterans preference regarding the sale of surplus property—but so far, it has just been, empty promises!

Sick and tired of these promises we appealed to Chairman MANASCO and out of a conference with him came House Joint Resolution 297, which asks for a clarification of the Surplus Property Act in regard to the sale of defense housing for veterans.

This committee now has an opportunity to back up those promises with action.

We plead with every member of this committee to study House Joint Resolution 297 very carefully.

Time is short.

We respectfully demand that no Government housing—particularly McLean Gardens—should be permitted to be sold until the Congress has an opportunity to clarify what preference it intends to give to veterans.

The Defense Homes Corporation are attempting to rush the sale of these projects before Congress can act on House Joint Resolution 297.

Everyone realizes that no veterans' group can compete with powerful insurance companies or well-heeled speculators.

We believe that it is the duty of Congress to insist that all bids be made public in the sale of these properties.

Furthermore, just a week ago, veterans read in blazing newspaper headlines, that Wilson Wyatt, new Housing Administrator, would seek ceilings on the sale of private housing, and yet the Defense Homes Corporation is attempting to sell Government surplus properties to the highest speculative bidder!

Why doesn't the Truman administration and the Congress make up its mind on how it is going to solve the housing crisis.

This committee and the Congress must decide immediately before the Defense Homes Corporation can sell its projects out from under the veterans what the policy should be.

It is obvious that this Government agency is attempting to rush the sale before Congress can look the situation over.

Will this committee give the veterans some consideration?

Don't forget that this war is not over until every veteran has a decent roof over his head! Thank you.

[From the Washington Times-Herald of February 14, 1946]

AMVETS RAP DHC WITH NEW CHARGE

The Defense Homes Corporation was charged today with trying to "sell out" McLean Gardens and other Federal housing developments in the District from under World War II veterans.

The statement was made before the House Committee on Expenditures in the Executive Departments by J. H. Leib, legislative director of the American Veterans of World War II.

In a bitterly worded charge before the House committee, Leib said his group had been given the "run-around" by the DHC and had concluded the term "veterans' preference" is nothing but empty promises.

CORPORATION FORMED

Leib said his organization respectfully demands that no Government housing, particularly McLean Gardens, should be permitted to be sold until Congress had an opportunity to clarify what preference it intends to give veterans.

The Amvets formed a corporation in December, said Leib, to buy McLean Gardens. Since submitting a bid they have run into all kinds of conflicting regulations and red tape, he testified.

Raymond Sawyer, president of the local chapter of Amvets, told the Congressmen his group had offered three different bids to DHC, all of which have been rejected. In the last bid the group made an offer of $9,000,000, stating they would pay 10 percent of that sum when they had a 50-percent occupancy.

In reply to a question by Representative MANASCO (Democrat), of Alabama, chairman of the House committee, Sawyer said any veteran could join the Veterans Cooperative Housing Association, which desires to purchase McLean Gardens.

AMENDMENT SUGGESTED

He told the Congressmen the corporation has 250 members, each of whom has put up $25.

At the suggestion of committee members, Leib said he would draw up an amendment to the Surplus Properties Act to clarify the status of veterans' preference on the disposal of Government prop rty. He also said the amendment would provide for making public bids on Government properties.

Leib urged immediate congressional action so the DHC would not sell out the veterans in favor of their own interests.

"Just a week ago," he concluded, "veterans read in blazing newspaper headlines that Wilson Wyatt, new Housing Administrator, would seek ceiling on the sale of private housing and yet the DHC is attempting to sell Government properties to the highest speculative bidder."

[From the Washington Times-Herald of February 14, 1946]

AMVETS TO ASK COURT TO BLOCK HOUSING SALES

The American Veterans of World War II yesterday asserted that they would ask for an injunction against the Defense Homes Corporation to prevent immediate sale of Federal housing developments here to private interests.

In a scathing denunciation of the Corporation, J. H. Leib, national representative of the veterans, charged that Philip Klutznick, president of DHC, and other members of the agency, "are disregarding veterans' rights because of special business interests."

VET PRIORITY CLAIMED

Leib said that veterans have the privilege of priority purchase of the Federal properties "under the Surplus Property Act."

"But DHC isn't interested in the veteran, since the agency is staffed with businessmen who lock out for their friends and own interests. The veteran just doesn't have enough speculative cash for them," he charged.

The Amvets' stand developed after DHC rejection Thursday of its cooperative bid for purchase of the huge $11,000,000 McLean Gardens. The veterans offered $9,000,000 for the property, with a 10-percent down payment.

Earlier an Amvets' offer to purchase the property at an appraisal price under terms of the Surplus Property Act had also been rejected, Leib said.

HEARING TOMORROW

Meanwhile, Representative MANASCO, Democrat, of Alabama, announced that a hearing will be held at 10 a. m. tomorrow on the Amvets-sponsored bill for clarification of the Surplus Property Act. The bill would also halt immediate sale of the properties.

MANASCO scored the DHC for its refusal to make public the list and prices offered by 99 bidders on the six Federal projects up for sale in the Washington area.

"I think the bids should be scrutinized by the public. They will have to give me a lot of good reasons for keeping this information secret," MANASCO declared.

The board of the Defense Homes Corporation yesterday announced receipts of bids on McLean Gardens, Fairlington, Naylor Gardens, Meridian Hill Hotel, the Lucy Diggs Slowe Hall, and George Washington Carver Hall.

FAIRLINGTON BIDS REJECTED

All bids on Fairlington were rejected and Naylor Gardens was offered to the Amvets cooperative and present tenants jointly. The

board did not disclose disposition of the bids on McLean Gardens and took no action on Meridian Hill Hotel and the Slowe and Carver Halls.

Raymond Sawyer, commander of District Amvets, sponsors of the Veterans' Cooperative Housing Association, said its bid on McLean Gardens was rejected.

Commenting on the board's action on Naylor Gardens, Sawyer said, "We will of course accept any opportunity to meet with Government officials to see if anything can be salvaged for us there.

"But if all residents out there decide to buy in on the cooperative there will be no room left for us. It looks as if the veterans have been outbid on McLean Gardens by private capital and are about to be sold out by the Government," he added.

Give Truman a Break

EXTENSION OF REMARKS
OF
HON. R. EWING THOMASON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for today:

GIVE TRUMAN A BREAK

Harry Truman has made some mistakes since he entered the White House. Who else wouldn't?

None of Mr. Truman's mistakes has been fatal. They have been small and human errors, reflecting the trustful qualities of the man who is loyal to his friends and has faith in the good intent of others.

Anyone of any fairness, or sportsmanship, or understanding of the great political and economic forces that sweep our Nation and the world today must admit that even had Mr. Truman possessed superhuman judgment and clarity of vision, even had he done everything exactly right, still, his administration would be in trouble. The difficulties and confusions that beset his administration are largely the legacy of global war, suddenly ended. They are the deluge, coming after another administration which had not prepared for peace. Mr. Truman's mistakes have added, comparatively, only a little to his woes.

Four years of war, destroying most everything produced, and 12,000,000 men to be demobilized from the far corners of the earth. Four years of curtailed or halted production of the things civilians depend upon, while what they had was wearing out. There was bound to be hell to pay. Meanwhile, the development through political pressures of a wage and price structure that didn't add up to getting more production of those things so urgently needed. And into this mess steps Mr. Truman, with malice toward none, seeking the cooperation of groups and factions which had been led for years to live by class conflicts and strife. And he had to start off with Cabinet officers and administrators who felt they owed no allegiance to him.

He has tried to build a new administration, loyal to him and with no axes of self-aggrandizement to grind. Some of his choices of men have been unfortunate. Therein lies most of whatever part of Mr. Truman's troubles have been of his own making.

We think, and hope, and trust, that Mr. Truman will learn by his mistakes—that in time he will gather about him men who have know-how as well as loyalty.

The great rank and file of Americans believe Mr. Truman to be of their own kind. They look to him hopefully for leadership. And they are a little fed up on all the shrill caterwauling and brickbat hurling now being directed at him.

GOP Urged To Make Campaign Hay Now

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am including an interesting political article which recently was published in the Washington Evening Star:

GOP URGED TO MAKE CAMPAIGN HAY NOW—PUBLIC IS BLAMING DEMOCRATS FOR STRIKE WAVE, SAYS WRITER

(By David Lawrence)

President Truman may or may not choose to run in 1948—the left-wingers are already trying to persuade him not to be a candidate—but November 1946 is much nearer and the whole House of Representatives and one-third of the United States Senate will be up for election.

If the Republicans have any sense left they will not waste time making campaign speeches or soliciting campaign funds. All they need to do is call attention to what is happening in Congress and then wait for the votes to be counted and they will find that in the Democratic strongholds of Pittsburgh, Philadelphia, and New York, and elsewhere the shift to the opposite party will be amazing.

For the public is sick and tired of the Democratic Party's indifference to the need for some legislation to prevent strikes. The Democratic leadership in the Senate is stalling on the matter of labor legislation. The House has acted promptly, though it will be noted that the Republican Party made that step possible.

WAVE OF IRRESPONSIBILITY

The country is suffering from a wave of irresponsibility on the part of certain employers and employee organizations.

Vital facilities are tied up either by refusing the reasonable demands of labor or by labor's insistence on demands that are unreasonable. It seems incredible that democracy, which rests on the principle of the consent of the governed, should be unable to exercise its judgment and bring about the passage of legislation to limit strikes, especially in fields closely related to the public safety.

But, judging from the behavior of the Democratic Party, which controls the Senate, there is no alternative available to the American people except to vote out of office the party in power or to make their contemplated action so plain ahead of time that it will have a stimulating effect on the Democrats who control the committee where all labor legislation is now buried and bids fair to remain buried unless the public bestirs itself.

The alliance between the labor union politicians and the Democratic Party in the Senate is so strong that the chances of dislodging the committee majorities which hold the balance of power there depend on the election of Republicans to those committees.

PEOPLE CAN HAVE REDRESS

If the public wants a continuance of economic anarchy and wishes to see the situation disintegrate still further, it can remain indifferent to the real power of the Senate. For, when a President is weak or incompetent, the people can have redress through the Congress if they insist upon it.

Mr. Truman has the influence to force early action in the Senate on his labor proposals, and it should not need the prodding of a President to stir the Senate to action. The newspaper headlines reveal what economic damage the strikes are doing. Whether one believes that the managements are recalcitrant or that the unions are pressing their demands too far, the fact remains that some means of settling labor disputes by orderly processes has not been provided, and the responsibility for keeping new labor legislation off the statute books for 10 years rests solely with the Democratic Party in Congress.

Whatever be the faults of the Republican Party—and they are many—it does present at this moment the only alternative to a continuance of economic unrest and the development of a Nation-wide depression. The labor leaders are so much misled by what political power they have accumulated in the past that they do not realize they are committing suicide and doing more in a few weeks to injure the rightful causes of labor and to imperil the true rights of the workers than all the reactionaries and extremists among employers have been able to accomplish in many years of effort.

A Document for History

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Star-Bulletin of January 26, 1946:

A DOCUMENT FOR HISTORY

The report on statehood for Hawaii of the House Subcommittee on Territories, just made public in Washington, ranks as one of the great documents in Hawaii's history.

With the thousands of pages of exhibits and statements which are part of the record now, it is the most extensive and the most intensive treatise on statehood for the islands that has ever been compiled or presented by any committee here or in Washington.

Its documentary evidence is imposing. Its minute examination of scores of phases of history, or industry, of politics, of education, of culture, of race relations, of sociological factors, is authoritative.

Most impressive is the fact that six Congressmen, from widely separated parts of the Union, have united wholeheartedly and cordially in this report asking early congressional action on statehood.

No magic accomplished this. No legerdemain was used on the visiting group. They were available alike to friends and opponents of statehood. When day after day the witnesses almost without exception were speaking for statehood, the committee emphasized its invitation for opponents to appear. Almost none did so. Of these, only two or three had any organized objections to set forth. The others were mostly shouters and gripers.

The committee reached its unanimous conclusion that Hawaii is ready for statehood on the basis of extensive open hearings, and even more extensive study of all pertinent aspects of Hawaii's history and life today.

The report which this six-man subcommittee made to the full territories committee

will take rank at once as a standard reference work on Hawaii. And, as it will be put into printed form and issued to Members of Congress, it will be available to interested persons.

The Star-Bulletin published it in full Friday so that everyone in the Territory could get it quickly and fully. It was telegraphed from Washington—probably the longest public document ever sent by land wire and wireless from the Nation's Capital to Hawaii.

Sam Daube

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. STEWART. Mr. Speaker, I read with a heavy heart of the passing of Sam Daube, a pioneer citizen of Ardmore, Okla., who was one of the outstanding business and cattle man in my district. Not only was he an outstanding businessman and cattleman but he was a philantropist as well. He did not render assistance to his fellow men for the sake of publicity, and but little is known to the public of his ceaseless efforts to assist the needy and unfortunate.

For more than half a century, to know southern Oklahoma was to know Sam Daube. The Third Congressional District, the State of Oklahoma have lost a great citizen and the Nation has lost a man of the type that made this country great.

I am inserting here an editorial from the Daily Ardmoreite which pictures the life of Sam Daube:

SAM DAUBE

Death has removed from Ardmore and the southern Oklahoma community one of its most picturesque and lovable characters.

Sam Daube, who came into this area when the country was raw and new, in those days that now exist only in the highly colored memories of the older men, had seen the district pass through an endless series of dramatic changes—watched it shift from the rugged days of the pioneer, through the hectic and stirring interval of oil boom, into the staid and genteel era of modern times.

He lived through three periods in Ardmore when war was the topic on every tongue. He had seen America grow, too, in those long years and he had the satisfaction of knowing that he had a part in that growth.

Fortune favored Sam Daube, but there was more to it that the mischance flare of luck. He was an able businessman, marked by a tenacity of purpose and the kind of vision that saw far into the future.

By the combination of these factors, he was able to accomplish much as a leader in industrial and mercantile activities. He became a dominant figure in the district, his influence spread to all the State, and he was known in all parts of Oklahoma and in far-flung sections of the Nation.

Nor was his interest centered wholly in the career of businessman, industrialist, and financier. He had a strong humanitarian trend—a generous heart that he yielded to in countless thousands of instances.

Only a few of these instances are known; it was not any desire to be known as a philanthropist that urged him to be generous and kindly to the unfortunate.

Ardmore will seem strange without Sam Daube.

There will be something missing; something lacking; something that will be sad to contemplate.

Later

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. VOORHIS of California. Mr. Speaker, a very large number of Members of the House voted for the Case bill because they felt they had to vote for something. I have little doubt that a clear majority of the House feels entirely dissatisfied with the legislative job that was done in passing the Case bill and realizes full well that no practical results at all, let alone any beneficial ones, can flow from the action taken by the House.

Obviously what is needed now and what has been needed for a long time is a careful, judicious, and fair consideration of the whole problem of labor-management relationships in the United States with a view to devising workable, equitable, and beneficial legislation, and bringing it before the House and Senate for action. This cannot be accomplished either by those who have little understanding of the aims, purposes, and critical importance of labor unions in our national life, nor any good will toward labor organizations, nor can it be done by those who frankly state that they are against any legislation at all. I am confident that a majority of Congress falls in a middle group between these two extremes. That majority has to find a way to work its will.

Under unanimous consent to extend my remarks, I include an editorial appearing recently in the Washington Evening News concerning the Case bill and setting forth the general point of view which I have just expressed:

LOOK BEFORE YOU LEGISLATE

Congress, we say once more, is not prepared to pass a law that will do what the Wagner Act promised, and has monumentally failed, to do—namely, "to diminish the causes of labor disputes."

Being unprepared, and in a time of crisis, Congress is under pressure to pass hot and hasty legislation that could make bad matters worse.

Before the House today goes a watered-down version of President Truman's fact-finding bill. As a substitute for it, the Rules Committee has held, the House may consider an entirely new bill introduced only 2 days ago by Representative FRANCIS CASE, of South Dakota.

Some proposals in the Case bill may have merit. Others, in our opinion, are unfair and dangerous to labor. There have been no committee hearings on the Case bill. Citizens who oppose it have had no opportunity to state their objections. It cannot be perfected, or adequately considered, in a few days of limited debate on the floor of the House.

We believe the House should reject the Case bill. We doubt that passage of the President's fact-finding bill would do any real good in the present strike crisis. And there is grave danger that passage of ineffective, half-baked legislation now would delay or prevent the preparation of sound, fair, and effective legislation.

The present strike crisis may pass soon. We hope it will. But there will be other crises, without end, until Congress does its duty carefully and properly.

The first step should be a thoughful study of the reasons why the Wagner Act has failed to keep its promise. Next, there should be thorough hearings on the Hatch-Ball-Barton bill and all other responsible proposals for industrial peace, advocates and opponents being given full opportunity to be heard.

Then at last Congress would be prepared to legislate—to protect the legitimate rights of both labor and management, to protect the public against abuses of power by either, and to establish conditions under which collective bargaining can work without breaking down into civil warfare.

The Lake Breezes Whisper

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. O'HARA. Mr. Speaker, the Fairmont Daily Sentinel is one of the outstanding daily newspapers in Minnesota. I know Republicans who call it a Democratic paper and Democrats who call it a Republican issue. Some men holding public office have referred to it as the "loyal opposition." This should make it an independent newspaper.

Claude N. Swanson, one of its editors, affectionately known and highly regarded by all, has for many years ably edited a column under the by-line The Lake Breezes Whisper, which reflects the opinion of that section of the country. His column of February 9, 1946, has aroused widespread comment and approval and is an outstanding message to Congress as an indication of how the wind blows.

Under leave to extend my remarks in the RECORD, I include this column:

THE LAKE BREEZES WHISPER

(By Claude N. Swanson)

The present administration is following in the footsteps of the New Deal—asking us to eat black bread so Europe won't starve.

We don't want anybody to die of starvation, least of all the women and children in the Nazi war-devastated countries. But if these same people, starving now, had been on the alert while the Hitlers and Mussolinis were waxing fat and preparing for war, they wouldn't be starving.

Someone should have told them that eternal vigilance is the price of liberty.

And that goes for the people of the United States, too.

It may not hurt us—in fact may be good for us—to eat black bread. But if we are to do it, let it be by choice, rather than by Government regulation.

Our boys have fought a good fight, won indisputable victories, and we have backed them up.

We've fought for freedom, justice and democracy. Let's start enjoying some of it. We've paid a good price for it.

Even though State, Federal, and local taxes take about 25 cents out of every dollar we

earn, this is still the best Nation on earth in which to live. Let's keep it that way.

Instead of thinking up laws, regulations, devices, and directives, to hamstring individual initiative, let's restore that liberty which gave us our great industries without which we could not have won the last war.

Let's restore that certain type of American opportunity which gave us our Fairmont Railway Motors, our Henry Fords, our Andrew Carnegies, our Thomas Edisons, our Walter P. Chryslers, our Jim Hills, our Pillsburys, our John D. Rockefellers.

There was no limit on initiative, ambition, and industry, in those days. That's what made America great.

Now we are engaged in not only feeding but in policing a good share of the world. Without doubt, we are in the best position to do that very thing. But somebody should tell our Representatives in Washington not to spread our forces so thin and so far that some great power will come in and grab us off.

As for eating black bread, we have not yet forgotten—nor are we likely to forget—the New Deal having us plow under our pigs, restrict our crop acreage; plow under our cotton, and the rationing that followed.

We're still short of shirts, dress materials, meats, and long on taxes.

Right now we have an opportunity to show warring European nations that it pays to pursue the path of peace and industry.

Let them make an honest effort to get on their own feet. Let them learn, through experience, what it means to provide for themselves; to improve their own conditions.

The longer it takes them to get their bellies full and back on their feet, the longer it will be before we'll have to send our sons and grandsons over there again to save civilization.

Let's not be in too big a hurry to save the rest of the world. There's work to be done at home—first.

Before we concern ourselves too much with either our late allies or foes, let's get about 2,000,000 men back into production in the steel mills, the packing plants, the mines, the lumber industries. Let's get the flow of material started. That will promote jobs.

Unless we do that, and soon—somebody will have to feed this country. And then there'd be nobody to borrow from.

We've been in Europe. We were there not too long, but long enough to see there hadn't been much progress there in the last 500 years—except in the art of war making. They still farmed the same old way. Their houses, most of them of stone or brick, had been unchanged in design or appearance in the last 200 years. The natives didn't seem to have any ambition beyond acquiring a bottle of wine and a loaf of bread for the day.

A stagnant, decadent, worthless civilization if ever there was one. If any one of them had an original idea in the last 400 years, there certainly is no evidence of it.

If we had such a colony in Martin County—people who'd be satisfied to live in shacks—dress in rags, exist on bread and wine and a few potatoes—with never any trace of ambition on the part of any of them to improve their condition, we'd probably ask them to move.

We do have such people here, but they're not colonized. They're on relief. But we don't go hungry to feed them. We don't lend-lease 'em.

We showed the above to one of the leading legal minds in Minnesota. "There's more genuine food for thought in that than in anything I've read in months," he said. Then he added:

"If every citizen would take at least 1 hour out each day, to think about these things, we'd get this Nation straightened out."

And there is truth in what he says. Not only do we have local, State, and national politics and politicians to watch, but from here on out international politics must be considered.

So we can't afford to be caught asleep at the switch, or we may wake up to find it is too late. "Eternal vigilance is the price of liberty."

United States Troops in China

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. ANDERSON of California. Mr. Speaker, due to the general public interest concerning the number of American troops in China, I wish to take this opportunity to call the attention of the House to the following exchange of correspondence between the War Department and myself:

FEBRUARY 1, 1946.

Hon. ROBERT PATTERSON,
Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: The enclosed communication from one of my valued constituents is self-explanatory.

In view of the statements contained therein I should like to be advised as to why additional Army troops are necessary in China, and when we may expect that the troops now stationed there can be withdrawn.

Please return the enclosure with your reply.

Thanking you for any information you can furnish me and with best wishes, I am

Sincerely yours.

FEBRUARY 12, 1946.

Hon. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

DEAR MR. ANDERSON: Mr. Patterson has asked me to reply to your letter of February 1, concerning United States troops in China and the questions raised by your correspondent, Mrs. Genevieve Woelfl.

Contrary to your correspondent's information, our forces in China are being reduced in strength, and it is hoped that by July 1, United States Army strength in the China theater will be reduced to approximately 6,000. Such additional men as are now being sent to China are being sent as replacements to enable men who have had long service to be returned to the United States for discharge. To the largest extent possible volunteers are being used for these replacements.

The mission of the United States forces in China is to assist the Chinese in accordance with the policy toward China announced by the President and the Department of State. Obviously in such a large country with limited transportation facilities, air transportation is a necessity. However, in view of the reduction of our activities in China, only recently the number of air transport groups has been reduced from two to one-half a group, and our over-all forces have been reduced from 65,000 to a strength of 7,700 men.

It is true repatriation of 3,000,000 Japanese from China to Japan is being carried out with the cooperation of the Navy, Chinese, and the Japanese themselves, but the over-all planning, supervision of loading, and establishment of schedules is done by the Army.

We are completing rapid disposition of our surplus property in China, and as the most economical method of disposal have negotiated a sale of equipment in West China to the Chinese Government. After this agreement it was possible to fly almost 45,000 United States troops in West China to India-Burma for return to the United States.

With reference to the question your correspondent raises regarding formation of a military advisory group in China, I should like to tell you that this is merely in the planning stage. A small group of officers in the Headquarters, China Theater, are working on plans for such a group for submission to the War Department. You may be assured governmental approval will be obtained before there are any directives establishing such a group.

I trust the above will provide you with the information you have sought.

Sincerely yours,

JOHN W. MARTYN,
Administrative Assistant.

Ceiling Prices on Old Homes Completely Protect American Home Owners—Real-Estate Speculators Fight for Selfish Profits

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. PATMAN. Mr. Speaker, within the past few days it has come to my attention that the real-estate speculators are propagandizing American home owners with the falsehood that putting a ceiling price on existing homes would somehow penalize every home owner in the Nation.

Anyone who has read my proposal with an open mind for putting ceiling prices on existing homes could not fail to clearly understand its simple wording. It only states that an owner would be permitted to sell his home for any price he can get in today's hungry market, and that that sale price would become the ceiling for that particular house for the short period of some 18 months—the estimated duration of the housing crisis. I cannot see how such a provision would penalize a legitimate home owner; on the contrary, it would completely protect him in the present rising market.

Of course, the difficulty in my program is that it would penalize those unscrupulous speculators who are willing and eager to squeeze from the home-hungry their hard-earned dollars. They would sell and resell our homes, with a higher speculative profit each time. Yes, Mr. Speaker, it would penalize those who are willing to sacrifice the security and stability of our people in the coming years ahead for lush profits for themselves today.

I do not see how any housing program can be a success without ceiling prices on existing homes. Without such a provision we are pouring water into one part of the inflation fire, while we allow it to rage unchecked elsewhere. We are trying to attack the problem with one hand tied behind us.

I fail to see the logic of saying to speculators: Go ahead, buy all the existing houses you can, sell them for any price you can get, make your profit at the expense of the veteran; while, on the other hand, we are saying to the builders of new houses: You can only get so much. We ask your help in holding down prices so that our veterans can obtain homes—we need your cooperation. The result of

such a two-faced policy—if it can be called that—would be a cry of injustice from the legitimate builders. It would be an incentive for black-marketing that would undermine the whole of our housing program. Only a week ago Mr. Wilson Wyatt, the new National Housing Expediter, told a Nation-wide radio audience that his program would suffer a serious handicap without price control on existing homes.

In many ways this threat of inflation in the housing market has become more serious with the President's contemplated easing of price policies. This danger is familiar to all of us. The headlines are full of the facts on skyrocketing prices on real estate. I dare say every one of the Members has received scores of letters from veterans and others, complaining because they cannot find homes at prices they can pay.

It is now expected that more than 3,000,000 veterans will be in the market for houses by next Christmas. I want you to remember that Mr. Wyatt does not expect, under the most favorable circumstances, to be able to provide more than 1,200,000 homes this year. That even includes a lot of converted barracks and house trailers. On the basis of these figures, I predict that the housing situation is going to be worse before it gets better. It is time now that we prevent our veterans from being gouged by putting some ceiling on the houses they must buy.

Builders all over the country have been admitting inflation in real estate prices for months. In Philadelphia, houses which generally sold for $6,000 before the war now are selling for $9,000—$3,000 in velvet profit to feed the speculators. In Detroit, some $8,000 houses are bringing $12,000. Here in the Capital, $12,000 homes have gone to $15,000, and even higher. Most of these increases have taken place in less than 90 days' time. Our spiral toward inflation has started, and the question is: Have we the common sense to hold it now?

I know these prices cannot be rolled back to the level that they should be. Our opportunity to do that has long since passed. I am not suggesting it—my proposal would not provide for that, as some have said. It would set the ceiling at the price today's home owner gets when he sells his house—after the passage of this legislation—and that is all it would do.

Mr. Speaker, I shall speak on this subject again. We owe it to our veterans to see that housing prices are kept at decent levels. We owe it to ourselves as well. This Nation provided well for its men in battle. Let it not be said that this Congress failed them at home.

Legislative Program of VFW

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting the digest of the legislative objectives of the Veterans of Foreign Wars adopted at the national encampment in Chicago, Ill., in October 1945.

The matter referred to reads as follows:

DIGEST OF CURRENT LEGISLATIVE OBJECTIVES OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, 1945–46

This digest has been prepared by Mr. Omar B. Ketchum, national legislative representative, and is based on resolutions adopted at the forty-sixth national encampment of the Veterans of Foreign Wars and formal actions of their national council of administration and national legislative committee. Where a bill has been introduced to cover the objective, the bill number, author, and committee is noted.

1. Enactment of an equitable adjusted service pay act for veterans of World War II, based on length and type of service. Payment of $3 per day for home service and $4 per day for sea or overseas duty, plus a premium of $500 for combat wounds. A limitation of $3,500 for home service or $4,500 for combined home and overseas service would be established, exclusive of the $500 for wounds. H. R. 127, by Mr. LESINSKI. House Ways and Means Committee.

2. Grant pensions to veterans of World War I on the same basis as Spanish-American War Veterans, i. e., $20 for one-tenth disability; $25 for one-fourth disability; $35 for one-half disability; $50 for three-fourths disability; $75 for total disability or upon reaching 65 years of age; and $100 if so helpless or blind as to require attendant. H. R. 2859, by Mr. MANSFIELD of Montana. House Committee on World War Veterans' Legislation.

3. Amend the National Service Life Insurance Act of 1940, as amended, to provide the following options: Lump-sum payment of benefits; payment in continuous monthly installments throughout lifetime of beneficiary with 240 months certain; or payment in continuous monthly installments throughout lifetime of beneficiary with 120 months certain. H. R. 4965, by Mr. RANKIN, referred to House Committee on World War Veterans' Legislation; and companion bill, S. 1677, by Mr. JOHNSON. Senate Committee on Finance.

4. Establishment of statutory employment seniority equivalent to time spent in the armed forces for veterans of World War II who qualify for a job in competition with non-veterans who have equal or less actual seniority. H. R. 3746, by Mr. KNUTSON. House Committee on Military Affairs.

5. In reduction of Federal civilian personnel, preference shall be considered in the following order: (1) Military preference, (2) length of total Federal service, and (3) efficiency ratings. When competing employees have equal standing they shall be released on the basis of their standing in the next lower category. Repeal section 12 of Veterans' Preference Act. H. R. 4069, by Mr. REES. House Committee on the Civil Service.

6. Amend section 800 (b) of the Servicemen's Readjustment Act of 1944, as amended, to permit payment of readjustment allowance to World War II veterans during periods of unemployment caused by strikes which they have not supported. H. R. 5379, by Mr. GIBSON. House Committee on World War Veterans' Legislation.

7. Amend section 800 (b) of the Servicemen's Readjustment Act of 1944, as amended, to permit payment of readjustment allowances to World War II veterans during periods of unemployment caused by strikes in States where, and upon the same conditions that, non-veterans receive unemployment compensation. H. R. 5355, by Mr. KELLEY of Pennsylvania. House Committee on World War Veterans' Legislation.

8. Protection of servicemen's rights under Social Security Act by allowing insurance credits to veterans for military service under the old-age and survivors' insurance at a wage rate of $160 a month. Retroactive to September 16, 1940. H. R. 1970, by Mrs. ROGERS of Massachusetts. House Committee on Ways and Means.

9. Establish effective veterans' priority in purchase of surplus government property, second only to Federal agencies, and permit veterans to purchase such property for their personal, as well as business, use. S. 1757, by Senators MAYBANK, O'MAHONEY, and CHAVEZ. Senate Committee on Military Affairs.

10. Authorize accumulation of annual leave for enlisted men at the rate of 2½ days per month of active military service, and upon discharge or release, a lump sum payment, computed at the rate of pay and allowances received at that time, to be paid to cover unused accumulated leave. H. R. 4051, by Mr. ROGERS of Florida. House Committee on Military Affairs.

11. Formulas, processes and equipment used in development of the atomic bomb shall be retained by the United States Government; but atomic bombs may be made available to any world security force in which the United States is an active participant. Funds shall be appropriated to continue research work, under strict Government control, to develop further the utilization of fissionable and radio-active materials for medical and industrial purposes. A committee shall be appointed to exercise supervision and control over the development and use of atomic power as representatives of the American people. S. 1717, by Mr. MCMAHON. Special Senate Committee on Atomic Energy.

12. Establishment of peacetime military training, using a revitalized National Guard system as a nucleus upon which to build a training staff and a program capable of indoctrinating the youth of this country in basic military techniques sufficiently to make it possible to mobilize effective military units in a minimum of time and thus meet the threat of modern blitzkrieg warfare.

13. Deny admission to the United States and naturalization of aliens who have served in the armed forces of countries at war with the United States, or who have been members of parties or organizations supporting nazism or fascism. H. R. 3663, by Mr. GOSSETT. Committee on Immigration and Naturalization.

14. Housing program: It was urged that (1) the President declare the housing shortage a national emergency and take necessary steps to allocate and divert building materials and surplus housing to alleviate the crisis, calling upon the construction industry for full cooperation in granting priority in rentals, construction, and sale of homes to veterans; (2) that an immediate survey be made to determine materials available for conversion into temporary housing, along with a program liberalizing on-the-job apprentice training in construction, and more flexible rent-control provisions to encourage remodeling and reconversion of existing property for temporary housing; (3) that maximum ceiling price on homes constructed under the President's emergency program be $10,000, but that only 15 percent of the dwellings be constructed to sell at more than $6,500, and not more than 15 percent of the rental properties to rent at more than $52.50 per month; and (4) that a Veterans' Relocation Authority be established with power to place veterans in available temporary housing in preference to all other tenants. The President's emergency-housing program for veterans; and S. 1592, by Messrs. WAGNER, ELLENDER, and TAFT. Senate Committee on Banking and Currency.

15. Urge creation of one major committee on veterans' affairs in the Senate and House of Representatives, respectively.

16. Enactment of legislation that will speed up settlement of differences between labor and management, restore economic balance,

and protect veterans in their right to work at a steady job with a fair living wage.

17. Consolidation of the Army, Navy, and Air Forces on a coequal status into a single Department of National Security, under one Cabinet member.

18. Amend title IV of the Servicemen's Readjustment Act of 1944, as amended, to provide that all veterans' employment representatives shall be war veterans, and shall be placed directly under the jurisdiction of the Veterans' Employment Service.

19. Amend the Civil Service Commission Act to provide that at least one member of the Commission, at all times, shall be a war veteran.

20. Amend veterans' regulation 9 (a) to increase allowance for burial of war veterans from $100 to $200. H. R. 1939, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

21. Prohibit all quota immigration for a period of 10 years after cessation of hostilities. H. R. 545, by Mr. RANDOLPH. House Committee on Immigration and Naturalization.

22. Construct north-south, east-west superhighways as self-liquidating, employment projects.

23. Establishment of combined foreign intelligence office, in line with recommendations of Maj. Gen. William J. Donovan and the Joint Chiefs of Staff.

24. Grant pensions to orphans of war veterans equal to child dependency allowance during father's service.

25. Increase maximum income limitation from $1,000 to $1,500 for childless widows and unmarried veterans otherwise qualified to receive pensions. H. R. 4485, by Mr. RICHARDS. House Committee on World War Veterans' Legislation.

26. Amend title V of Servicemen's Readjustment Act of 1944, as amended, so that no veteran shall be ineligible to receive the readjustment allowance during the first 60 days after discharge from the service, or discharge from a veterans' hospital if he entered same immediately upon separation from the service.

27. Provide for naval personnel to wear gold stripes denoting foreign service. H. R. 2889, by Mrs. BOLTON. House Committee on Naval Affairs.

28. Amend the act of March 20, 1933, so that no veteran who applies for domiciliary care and hospitalization in Veterans' Administration facilities shall be required to state: (1) The value of his real and personal property, or (2) whether or not he is financially able to pay. H. R. 2413, by Mr. WICKERSHAM. House Committee on World War Veterans' Legislation.

29. Pensions payable to veterans for non-service-connected disabilities shall not be reduced to less than $20 per month while veteran is undergoing hospitalization in a Government hospital. H. R. 1832, by Mr. KILBURN. House Committee on World War Veterans' Legislation.

30. Direct the Administrator of Veterans' Affairs to extend a minimum rating of 1 percent to the claim of any war veteran based on any injury, disease, ailment, or disability incurred in active service in time of war. H. R. 1495, by Mr. ALLEN of Louisiana. House Committee on World War Veterans' Legislation.

31. Disabled veterans whose life expectancy is shortened by their disabilities, shall be placed on civil-service register for which qualified, but on appointment to Federal positions they shall not come under the Civil Service Retirement Act but shall be entitled to Federal old-age and survivors' insurance benefits under Social Security Act. H. R. 314, by Mr. MCMILLAN of South Carolina. House Committee on the Civil Service.

32. Amend existing law to provide that insurance judgments shall be binding on the Veterans' Administration until modified by order of district court. H. R. 722, by Mr. GIBSON. House Committee on World War Veterans' Legislation.

33. Amend existing law to extend eligibility to a widow otherwise entitled to pension providing she was married to and living with a veteran for 2 years preceding his death, or if she gave birth to a child by the veteran, being married to and living with him at the time of his death. H. R. 2150, by Mr. HAGEN. House Committee on Invalid Pensions.

34. Amend the Civil Service Retirement Act to provide for voluntary retirement from civil service after 30 years, without regard for age, and that time served overseas in the armed forces will be credited as double time for purposes of retirement and retired pay. S. 402, by Mr. DOWNEY. Senate Committee on Civil Service. H. R. 310, by Mr. MCMILLAN of South Carolina. House Committee on the Civil Service.

35. Place the Indian veteran in same status as other veterans, giving him full American citizenship, removing all property restrictions, divorcing his affairs from control of the Indian Bureau, and improving educational standards on all Indian reservations.

36. Amend Public Law 359, Seventy-seventh Congress, to provide that pensions and compensation be paid to World War II veterans under the 1925, 1933, or 1945 schedule of disability ratings, whichever is most favorable for the individual.

37. Amend section 3 of the Veterans' Preference Act of 1944, as amended, to provide additional Government positions with competition restricted to veterans.

38. Extend pension benefits to those veterans engaged in hostilities in the Moro Province, including Mindanao, or in the Islands of Samar and Leyte, between July 4, 1902, and January 1, 1914, and to their unremarried widows and their children. H. R. 3251, by Mr. LESINSKI. House Committee on Invalid Pensions.

39. Amend Federal income tax law to continue the special exemption of $1,500, in addition to the normal exemption, to all honorably discharged personnel of the armed forces of World War II, for a period of 1 year for each year served, or major portion thereof.

40. Enactment of legislation to grant a certificate of priority to each honorably discharged veteran of World War II who served 90 days or more, which shall be valid for 3 years from date of enactment, and shall be honored as a priority to purchase a car or truck from any person, firm, or corporation engaged in the retail or wholesale business of selling motor cars and trucks.

41. Restore the retainer pay of the Navy to the schedule in effect before July 1, 1925. S. 1438, by Mr. WALSH. Senate Committee on Naval Affairs.

42. Enlisted personnel of the armed forces advanced to commissioned rank shall be entitled upon return to enlisted status (1) to promotion of not less than one grade for each year of commissioned service, (2) to retirement (when eligible) with the grade, pay, and allowances of chief warrant officer. H. R. 737, by Mr. KEARNEY. House Committee on Military Affairs.

43. Authorize payment of compensation to veterans for a partial service-connected disability plus a computed percentage of his permanent total non-service-connected disability. H. R. 555, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

44. Authorize the Administrator of Veterans' Affairs to furnish certain medical, surgical, and dental services and orthopedic or prosthetic appliances to veterans discharged under conditions other than dishonorable. H. R. 1581, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

45. Amend Veterans Regulation 1 (a), part III to include the provision that a non-service-connected disability is permanent and total when it is established that the veteran is unable to perform manual labor. H. R. 106, by Mr. VOORHIS of California. House Committee on World War Veterans' Legislation.

46. Prohibit reduction of the pension, compensation, or retirement, pay of a veteran during his hospitalization in a Government hospital. H. R. 4464, by Mrs. ROGERS of Massachusetts. House Committee on World War Veterans' Legislation.

47. Permit suit to be brought at any time on automatic, yearly renewable term, or Government life (converted) insurance, with no application of State or other statutes of limitation to suits filed, and suits already thus barred may be reinstated. H. R. 1293, by Mr. PETERSON of Florida. House Committee on World War Veterans' Legislation.

48. Permit Government employees with 25 years service to retire voluntarily at the age of 55 with an annuity equal in value to the present worth of a deferred annuity at the age of 65. H. R. 1445, by Mr. MUNDT. House Committee on the Civil Service.

49. Removal of all limitation dates before which to make application for various types of benefits for veterans and their dependents. H. R. 1932, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

50. Amend existing laws so as to provide that the amount of compensation or pension payable to any veteran for his service-connected disability shall be increased by 20 percent upon reaching 40 years of age, and 20 percent each 5 years thereafter, but not to exceed the amount payable for total disability. H. R. 1582, by Mr. VOORHIS of California. House Committee on World War Veterans' Legislation.

51. Redefine the status of the United States army of occupation serving in Germany between November 11, 1918, and July 2, 1921, so that they may participate in all of the benefits provided for veterans of World War I. H. R. 5266, by Mr. HUBER. Committee on World War Veterans' Legislation.

52. Redefine the terms "compensation" and "pension." Payments for service-connected disabilities are compensation; payments for non-service-connected disabilities or age, and payments made to dependents of deceased veterans based upon service-connected or non-service-connected death are pension. H. R. 1938, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

53. Provide for the fingerprinting and identification of all persons within, or hereafter to enter or pass through, the United States, its Territories, and possessions, and that such fingerprints shall be filed with the Federal Bureau of Investigation. H. R. 601, by Mr. SPRINGER. House Committee on the Judiciary.

54. Recognize foreign service by increasing by 20 percent rates of pension, compensation, or retired pay of veterans with war service outside the continental United States. H. R. 729, by Mr. KEARNEY. House Committee on World War Veterans' Legislation.

55. Extend the filing time on applications for benefits under the World War Adjusted Compensation Act to January 2, 1950. H. R. 1124, by Mr. CARLSON. House Committee on Ways and Means.

56. Authorize the Veterans' Administration to grant burial allowances to deceased honorably discharged veterans who served in a recognized campaign, expedition, or occupation. H. R. 649, by Mr. ALLEN of Louisiana. House Committee on World War Veterans' Legislation.

57. Redefine "misconduct" for compensation and pension purposes. H. R. 560, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

58. Provide for a statutory award of $10 per month to any war veteran who was wounded, gassed, injured, or disabled by an instrumentality of war in a zone of hostilities. H. R. 138, by Mr. VOORHIS. House Committee on World War Veterans' Legislation.

59. Restore 100 percent compensation to veterans of World War I whose disabilities were re-established as service-connected under the act of March 28, 1934. H. R. 733, by Mr. KEARNEY. House Committee on World War Veterans' Legislation.

60. Redefine "permanent and total disability," for compensation and pension purposes, to include (1) ratings without regard to fixed evaluations of the Veterans' Administration, and (2) defects of mind or body which render a veteran totally incapable of manual labor or earning a support. Each case shall be rated according to the circumstances and capabilities of the individual, and they shall not be adjudged upon the basis of a hypothetical average veteran. H. R. 106, by Mr. VOORHIS. House Committee on World War Veterans' Legislation.

61. Amend existing law to provide that the widows, orphans, and dependent parents of deceased World War I veterans suffering from permanent total combat-incurred disabilities shall, regardless of the cause of death, be entitled to the rates of pension which would have been payable to them if the veteran had been killed in action. H. R. 2047, by Mr. HAGEN. House Committee on Invalid Pensions.

62. Insurance benefits shall not be considered as income as to veterans receiving pension or compensation for nonservice-connected disabilities. H. R. 1183, by Mr. MCMILLAN. H. R. 1113, by Mr. SMITH of Wisconsin. House Committee on World War Veterans' Legislation.

63. Fix Federal Government's responsibility for assistance to honorably discharged war veterans, and in lieu of employment opportunities, or inability to work full or part time, pension entitlement shall be granted such veterans having at least 90 days' service. H. R. 563, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

64. Fragmentary periods of employment of a veteran shall not be considered as evidence of employability. H. R. 105, by Mr. VOORHIS. House Committee on World War Veterans' Legislation.

65. Unemployable veterans who served in any war or recognized campaign beyond the continental limits of the United States and were honorably discharged shall be entitled to total disability ratings for pension purposes. H. R. 734, by Mr. KEARNEY. House Committee on Invalid Pensions.

66. Widows and children of World War veterans who were entitled to disability benefits as a result of injuries caused by examination, hospitalization, or medical treatment shall be entitled to benefits under 38 United States Code 503–7. H. R. 567, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

67. Pensions to veterans for disability or death incurred during peacetime service shall be equivalent to 90 percent of the compensation payable to war veterans for service-connected disabilities. H. R. 279, by Mr. LESINSKI. House Committee on Invalid Pensions.

68. Eliminate the income limitation as to eligibility for pensions to widows of certain World War Veterans. H. R. 315, by Mr. MCMILLAN. House Committee on World War Veterans' Legislation.

69. Any person who served in the military or naval forces of the United States during a recognized campaign or expedition, who was honorably separated from such service, shall be granted hospitalization and domiciliary care by the Veterans' Administration subject to the same conditions as are now applicable to World War veterans. H. R. 650, by Mr. ALLEN of Louisiana. House Committee on World War Veterans' Legislation.

70. War risk insurance policies, including reinstated converted policies, shall be incontestable 2 years after the date of issuance, reinstatement, or conversion except for nonpayment of premiums, or because applicant was not a member of the armed forces. H. R. 565, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

71. Grant the franking privilege to all veterans who are patients in facilities of the Veterans' Administration. H. R. 111, by Mr. CARLSON. House Committee on the Post Office and Post Roads.

72. A veteran who is (1) permanently and totally disabled, and (2) has paid 240 installments or more on yearly renewable term, automatic, or United States Government life insurance, shall be conclusively presumed to be disabled for life. H. R. 566, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

73. When a veteran is shown to have been in combat with the enemy or to have been subjected to any other arduous conditions of active military or navy service which can be considered as causing or aggravating the disabilities on which a claim is based, service connection shall be established. H. R. 151, by Mr. VOORHIS. House Committee on World War Veterans' Legislation.

74. When the disability rating of any veteran of World War I to whom disability compensation is allowed under the act of March 2, 1933, as amended, has been in effect for 10 years, such rating shall become permanent, except in cases of fraud. H. R. 573, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

75. The Administrator of Veterans' Affairs shall pay a claim, timely filed, notwithstanding a prior denial, when right thereto is clearly demonstrated. H. R. 564, by Mr. RANKIN. House Committee on World War Veterans' Legislation.

76. Any nature of certificate issued by the Secretary of War, Navy, or the Treasury giving the date and place of birth, as shown on the service records of former members of the armed forces, shall be accepted by the Federal agencies in lieu of birth certificates. H. R. 736, by Mr. KEARNEY. House Committee on Military Affairs.

77. Deductions shall not be made from the earnings of civilian officers and employees of the Veterans' Administration for subsistence, quarters, or laundry unless such services are voluntarily accepted and used. Facilities when voluntarily used, shall be furnished at cost. H. R. 495, by Mr. LUDLOW. House Committee on World War Veterans' Legislation.

78. Reduce the minimum retirement age under the Social Security Act to 55 years, providing that the retirement pay shall remain the same as at present allowed for at the age of 65. An increase of contribution by Government employers and employees is authorized, if necessary, to permit such allowances to be paid. Retirement at 55 shall be voluntary, and those who retire at a later date shall receive an allowance based on their accumulated contribution.

79. Prohibit reduction of compensation, pension, or retirement pay of a veteran of the War with Spain during hospitalization in a Government hospital. H. R. 1294, by Mr. PETERSON of Florida. House Committee on Pensions.

80. All war veterans employed by the Civil Service under war-service appointments, for the duration of the war plus 6 months, who have efficiency ratings of "good" or better, shall be placed on a permanent basis and without further physical or mental examination. H. R. 2213, by Mrs. ROGERS. House Committee on the Civil Service.

81. The act of January 27, 1936, entitled "An act to provide for the immediate payment of World War adjusted-service certificates and for the cancellation of unpaid interest accrued on loans secured by such certificates and for other purposes," should be amended by changing the period at the end of section 3 (a) to a colon and adding: "*Provided*, That where the maturity date of a certificate, as referred to herein, precludes waiver of interest as provided by section 2, and/or payment of interest on adjusted-service bonds as provided by this act, such maturity date shall be extended by the Administrator of Veterans' Affairs for a period of 5 years."

82. War veterans wounded in action, if otherwise qualified, shall be exempt from passing a physical examination as a prerequisite to employment in the Federal civil service.

83. Extend to veterans of World War II the same statutory awards as those extended to veterans of World War I in service-connected cases of arrested tuberculosis or loss of procreative powers through injury or disease of one or both testes.

84. Extend the benefits offered to service-connected sightless veterans of World War II to similarly disabled veterans of World War I who may wish to avail themselves of such privileges.

85. Extend the benefits of the National Service Life Insurance to all members of the armed forces while in active service, without time limitation, regardless of their physical condition.

86. Amend existing law so as to reduce the interest rate on United States Government (converted) insurance policy loans from 5 percent to 3½ percent per annum. H. R. 343, by Mr. WICKERSHAM. House Committee on Ways and Means.

87. Increase payment of compensation by 20 percent for service-incurred disabilities to men who have served overseas in time of war, provided that such increase only applies to the degree of disability and shall not be applicable to a statutory rating or award.

88. Amend the Selective Training and Service Act of 1940, as amended, to provide that a veteran of one war or recognized campaign or expedition may not displace another war veteran from employment when the latter has equal or greater employment seniority.

89. Petition the Congress to set aside 1 day of the year when the veterans of all wars may celebrate the victories they have attained by their sacrifice and hardships, and that this day shall be a legal holiday in the United States of America and her possessions, officially known as Victory Day.

90. Amend Public Law 483 of the Seventy-eighth Congress, approved December 14, 1944, to provide for pension payments to parents of deceased veterans of World War I, whose disabilities were non-service-connected, as defined in the said act.

91. Amend existing law to provide that members of the armed forces be paid an additional 50 percent of their base pay when they are retained in the service as essential although having enough points for discharge.

Cleveland Conquers Typhoid

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Cleveland Press of February 11, 1946:

CLEVELAND CONQUERS TYPHOID

Typhoid fever is a filth disease that early in our century was taken as a matter of course by the public. The city dumped its sewage into Lake Erie and pumped its drinking water out of it. There was some typhoid fever every year, and ever so often there would be a serious outbreak.

There was an epidemic of typhoid in 1903, following which city officials decided to go further out in the lake for the water supply.

But not until Newton D. Baker's administration in 1913 was any official action taken toward filtering the city's drinking water and then not until doctors and health officials had been aroused by a sharp increase in the number of typhoid-fever cases. As an emergency measure, the city started to treat the water with chlorine.

In the course of time, filtration plants were completed. After years of planning, sewage-dispcsal plants also were put in operation to take care of most of the city's sewage.

In the meanwhile, the disease was tackled from other angles. A whole new sanitary code was enacted. Fly-breeding places were cleaned up. A typhoid vaccine was developed. The city lacked authority to require innoculations against typhoid fever. Thousands of its citizens who served in World War I and World War II, however, received these anti-typhoid shots—which are intended to confer immunity against the disease.

What has been the result? A small news item the other day told the story. For the first time in history there was not a single death from typhoid fever in Cleveland last year. Typhoid has been licked. This does not mean, of course, that our public-health armies are to be withdrawn. Vigilance must be maintained. The successful fight against typhoid, however, does point the way for the conquest of other diseases, now grown more formidable.

Shortages of Housing Materials

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, the need of lumber, not alone for building of new homes, but for the repair and modernization of others, has reached a point bordering on the state of revolution, if correspondence coming to my desk is any indication.

From every part of my State come volumes of correspondence urging that some action be taken by the Congress to stop the deportation of lumber to European countries until in some measure we are able to catch up with the vitally needed shelter for humanity within the confines of our own country.

Under unanimous consent, I include herewith an article on the shortage of material causing the delay of housing construction from the Fargo Forum, of Fargo, N. Dak.:

SHORTAGES BIG CAUSE OF DELAY IN HOUSING CONSTRUCTION HERE

The shortages of housing materials, which are blamed for the delay in much renovation and construction in the Fargo-Moorhead area, include especially shortages of soil pipe and fittings, plumbing fixtures, especially bath tubs and sinks, hardwood flooring, trim, sheet rock and rock lath, plywood, dimension lumber, common brick, furnaces, and millwork, according to Homer W. Ludwick, executive secretary of the chamber of commerce.

Ludwick summarized the situation in response to a request from the United States Chamber of Commerce, which was making a Nation-wide survey of such shortages.

In a telegram to the national chamber's offices in Washington, Ludwick termed the Fargo housing situation critical, with more than 300 veterans' families hopelessly house-hunting. Ludwick told of the press, radio, and pulpit campaigns to ease housing, of the attempt to get grain bins for 100 temporary housing units.

Suggested reasons (for housing shortage), said Ludwick, include the fact that rent control, either psychologically or in fact, is retarding the opening up of additional housing units. He suggests the removing of newly created living units from rent control.

Increased production of housing, said Ludwick, is the real answer to the shortage, with the uncertain labor situation and unrealistic OPA pricing attitude making industrialists reticent to go all out.

The national survey boiled down to the following reasons for continued delays in making new housing available: OPA reluctance to make price adjustments, need to speed release of old Army barracks and prisoner-of-war camps, delay in releasing plumbing and other supplies now held by Army and Navy, diversion of lumber for export.

Unless OPA ceilings are relaxed, to break up the log jam of housing needs, materials shortages will continue to exist, Fargo contractors and building materials dealers agreed in a meeting in the chamber of commerce offices Tuesday.

The emphasis of Government intervention might better be toward putting a green light on production than a strict allocation of short supplies of building needs, the builders agreed. Besides spending too much time dividing up a too-short supply of building needs, said the contractors, the Government has developed elaborate machinery for credit assistance to those who wish to buy or build homes. In reality, they believe, people have more money today, less need of credit assistance, than ever before.

C. A. Williams, chairman of the chamber's housing committee, was chairman of the meeting called to evaluate what is being done in Washington, what can be done in Fargo-Moorhead.

Reporting on an application placed with the Federal housing authority, asking temporary housing units for Fargo, Williams said the agency has applications already for 45,000 such units, can supply only 8,000.

Congress, it was reported, has authorized the Civilian Production Administration to issue priorities to builders and contractors who wish to get supplies for creating dwellings which will be occupied by veterans.

Major Farm Organizations Endorse School-Lunch Program

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a statement addressed to Members of the House of Representatives and signed by representatives of the American Farm Bureau Federation, the National Grange, the National Council of Farmer Cooperatives, and the National Cooperative Milk Producers Federation:

FEBRUARY 14, 1946.

To Members of the House of Representatives of the United States:

The school-lunch program has the unanimous endorsement of all major farm organizations. Its principles are embodied in H. R. 3370 by Representative John W. Flannagan, Chairman of the House Committee on Agriculture; a bill to establish a permanent system of Federal-State supported lunches for school children. Among the reasons why we favor enactment of this measure are:

Control of the program rests in the hands of the Secretary of Agriculture.

It places on a permanent instead of a year-to-year basis a program that already has proved its value in the improved nutrition of children. With a permanent program assured, additional schools will be encouraged to install equipment. Thus the program should produce increasing results for the expenditure involved.

The school-lunch program in general assures increased food consumption and consequently enlarged market for some farm products.

The annual appropriation of $50,000,000 in Title I, does not put any additional strain upon Federal finances since about this amount has been annually spent by the Secretary of Agriculture from funds authorized by the Congress.

The proportion of State funds to that of Federal funds is increased each year until, in 1950 and thereafter, the States will be bearing 80 percent of the total cost.

As revised and reported, the bill in the main incorporates the recommendations of the farm organizations.

For the above reasons, we hope that you will give us your support in carrying on and expanding the school-lunch work which already is helping more than 8,000,000 children.

Respectfully submitted.

AMERICAN FARM BUREAU FEDERATION,
EDWARD A. DAHL, *President.*
THE NATIONAL GRANGE,
A. S. GOSS, *Master.*
NATIONAL COUNCIL OF FARMER COOPERATIVES,
JOHN W. DAVIS, *Executive Secretary.*
NATIONAL COOPERATIVE MILK PRODUCERS FEDERATION,
CHARLES W. HOLMAN, *Secretary.*

Neither Fish Nor Fowl

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. CHIPERFIELD. Mr. Speaker, in view of the action taken by the Rules Committee on yesterday, refusing to grant a rule on H. R. 4982, entitled "The interchange of persons, knowledge, and skills between the people of the United States and the peoples of other countries," I feel the accompanying editorial from the Daily Register Mail, Galesburg, Ill., under date of January 7, 1946, is of timely interest.

To demonstrate how quickly the plans of an agency expand, the $13,000,000 referred to in this editorial was the surplus left over from the OWI. Now it is contemplated to ask for an appropriation of $29,000,000 for the coming year.

As I indicated in my remarks, appearing in the RECORD of February 13 on this same subject, it is difficult to estimate how much such a program will cost when it gets going full blast as these agencies, once established, keep growing like Topsy.

NEITHER FISH NOR FOWL

The State Department has $13,000,000 to spend on its proposed Foreign Information

Service during its first 6 months of existence. It has jobs for some 2,600 persons in 62 countries. All it has to do now is persuade Congress to breathe the breath of life into the new agency.

Given that, we shall have a permanent successor to the late OWI and Office of Inter-American Affairs whose object, according to Assistant Secretary of State Benton, is to give foreign peoples "a full and fair picture of American life and of the aims and policies of the United States Government." Its instruments will include world-wide short-wave broadcasts and wireless bulletins every day, newsreel and documentary films, periodicals and such like.

Mr. Benton has said the new agency has no intention of competing with foreign propaganda abroad. He has likewise declared that it is not intended to compete with or supplant existing private news services.

Perhaps Mr. Benton is wise in making this explanation, since both foreign government propaganda agencies and nongovernment news services are strongly established in their opposite fields. But he leaves us with the odd and hesitant inference that the State Department is going in neither for propoganda nor for factual news distribution.

Only one thing seems definitely certain in this tepid declaration of an expensive project. Most foreign readers and lookers and listeners are going to accept the State Department's foreign information output as slanted American propaganda. They've been fed too much Government-issue news and views in the past to believe otherwise.

The State Department implies, by its declaration of this proposed agency's purpose, that foreign peoples have been getting an inadequate and unfair picture of this country, and a distorted impression of its Government's intentions. But will these foreign peoples believe that a Government information agency, confronted with a choice, will ever fail to show that Government's activities in anything but the most favorable light? We doubt it.

We do not question that the State Department's intentions are the best and most honest in the world. Nevertheless, this information agency seems doomed to sow more confusion and to reap a harvest of cynical suspicion.

It might be more realistic if the State Department would cease to disclaim any propaganda intentions and to try to compete with foreign propaganda agencies as best it could. Or, much better, it might throw its influence behind the growing efforts to promote a greater freedom of the press throughout the world.

For that world is badly in need of a free access to news for agencies which are known and trusted, and which will give the most straightforward information that human frailty and prejudice will permit. And we doubt that more Government handouts will meet that need.

OPA

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. WHITE. Mr. Speaker, to judge by the many complaints demanding the removal of price controls and that the OPA be abolished, it appears that many people fail to realize the danger in existing conditions and present price trends.

In this connection, there is submitted for insertion in the RECORD a letter with editorials on the OPA and my reply thereto:

I'll go Wilson's Vice President Marshall one better. What the country needs is a good two for a nickel cigar. Try and get it and retain OPA.

What's the use of holding prices at a place where manufacturers don't produce and you can't buy?

A man convinced against his will, remains of the same opinion still. The war is over, and I still think it is time to liquidate Chester of the House of Bowles—and confiscate his castles of OPA.

Some of the things that have come under my observation:

Suits with one pair of trousers. On my job, I always wear my trousers out in the rear before the coat shows wear. Net result, two suits instead of two pair of trousers. Is that saving?

Then no cuffs on trousers.

Then double-breasted suit without vest. Am developing a sort of Milwaukee front, which would be less noticeable in a double-breasted coat—but no vest—no place to carry my watch, small change, and pen and pencils.

Cigars—standard brands just occasionally available at nearly double the pre-war price. Show cases filled with imported cigars (of about two-for-a-nickel pre-war quality) priced at fancy prices, and practically all of them rotten smokes. Is that economy?

About half the time the grocer is out of butter, mayonnaise (hope that is spelled near enough correctly that you can tell what I mean), salad dressing, bananas, ham, sometimes eggs and meat. These are only a few. Free enterprise would furnish these, but price controls prevent a profit and destroy incentive.

Shirts, underwear. If they don't get some ordinary shirts and underwear on the local market soon, so that I can take my annual bath, I'm going to have to quit circulating.

Handkerchiefs, 59 cents—I believe I have heard—for a cotton rag? I haven't bought any, so can't speak of this first hand.

Cars. 1940 Chrysler laid up for 4 months. All I could get from the repairman was he didn't know when he could get it going. Finally sold it to him. Thought I had a record and was telling my story, when someone told of a farmer that had one in the garage 2 years. New cars not available and not being produced in any appreciable quantities. Why? Because price controls will not let free enterprise function, and has brought about (together with all New Deal vote-catching labor laws) the greatest industrial unrest in the history of the country.

Did you ever notice the papers along last spring when Congress was debating extending OPA for another year. The number of suits OPA was filing in Idaho? And I assume elsewhere. Did you ever investigate these and see what there was to base them on?

Building material. Understand it is common custom to represent that you need some lumber to repair one's chicken coop and if one can get it at two prices use it to repair his back steps or some other part of his house to make it usable. Is that holding prices?

I've been paying grocery bills for a good many years, and I don't believe OPA is holding the line.

"The best government is that which governs least."

Probably doesn't apply to the politician.

The question is bigger than booms and depressions.

I realize that the Supreme Court has amended the Constitution until Congress now has the power to do anything, so until Congress sees fit to redefine interstate commerce, there is no provision for State rights in our fundamental law.

However, aside from (I believe about 75 percent) the majority of our Federal judges having been appointed by one man and all presumably with the New Deal "phobia"; other than the Supreme Court packing bill, there has been no direct attempt of which I am conscious of trying to destroy the "holy trinity of democracy," the three independent departments of Government—legislative, executive, and judicial. As I understand it, the OPA act does this. The department makes its rules and regulations, prescribes the penalties, says when they are violated, and the victim has no appeal to the courts.

The fear of dictatorship is not all political "hooey."

These political bureaus are like body lice. They grow and multiply and annoy and sap the strength and serenity of the people. And now the UNO is starting a world bureaucracy for the American taxpayer to support.

Congressman HENRY DWORSHAK is strictly on the job. During 1945 he was absent only on 11 of the 211 roll calls. His voting record shows him as a militant foe of big Government spending and domination. The CONGRESSIONAL RECORD reported that during the first session which ended in December, DWORSHAK stood with his fellow Republicans in four attempts to liberalize ration controls. He voted "yes" on proposals to transfer food control from OPA to the Agriculture Department, to give meat packers relief from OPA, to give the Secretary of Agriculture a veto on OPA food regulations, and to make OPA penalties reviewable in Federal courts.

Our HENRY is strictly on the job.

NINE STATES PROTESTING

SAN FRANCISCO.—Independent meat packers of nine Western States, in what they term a "fight for existence" against Office of Price Administration regulations, have joined together for the first time on a permanent basis.

The packers determined to organize, probably as the Western Federation of Meat Packers, at a meeting here earlier this month. Final details, including the establisment of a headquarters and selection of officers, will be completed at a second meeting here shortly.

More than 250 independent packers of California, Oregon, Washington, Neveda, Idaho, Arizona, Utah, Wyoming, and Montana will be represented.

Dan M. McKinney, secretary of the California Cattlemen's Association, said the problem of compliance with OPA regulations was an almost impossible task under western conditions, and is one of vital importance to producers and consumers as well as the packers, for on their staying in business depends the bulk of the distribution of western meat.

"Certainly producers could ill afford to lose the independent packer as a customer for cattle," McKinney wrote in "Hot Irons," the cattlemen's weekly trade bulletin. "It appears that the independent packer has a legitimate complaint and one in which all western producers have a vital concern."

First move of the new packer organization, McKinney said, will be to seek OPA compliance regulations which will permit western independents to qualify for Government subsidies "with which they could break even and show a profit as provided in the Barkley-Bates amendment to the Price Control Act."

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 13, 1946.

Mr. W. C. LOOFBOURROW,
Attorney at Law,
American Falls, Idaho.

DEAR FRIEND LOOFBOURROW: The wide expanse of white paper on the front page of

your letter which came in just now with the clippings and other enclosures tempts me to write my comments in blue pencil across the face of this page as I do on some of these insistent communications that come from eastern centers. However, you are a good friend of mine, whose sound opinions and good advice I prize very highly.

Now about OPA. Maybe we, you and I, should look this thing over a little more before we jump at conclusions. You know we got our price structure all out of joint as a result of the last war and have been trying to bring our national economy back to adjustment ever since. With a lot of legislation, with not much success, and with all the high prices we had in the country then, we only had a peak of $6,500,000,000 in currency in circulation at any time during that period, and no OPA. Now we have $29,000,000,000 of legal-tender money out in circulation, and the people of this country are still turning in the Government bonds and the banks are still turning out paper money, being printed by the Government Bureau of Engraving, of course. Now, as the thing stands, I am afraid to go along with you, and liquidate this Bowles fellow, or whoever the Price Administrator is.

I will admit that the OPA is a rickety castle, but just being a taxpayer, with some county, State, and Federal taxes to pay—and you know we must keep all these public officials in proper style—I do not want to see this price thing get completely out of control, because when farm prices go up and get way out of sight all the other industries start seeing which one can get the best prices, and when they get things fixed about right for themselves, then the utilities, the railroads will have to raise their rates and charge you a lot more for a train ticket. The electric-light people will have to charge more, and then will come the telephone and the telegraph. Then when everything gets out of reach naturally the boys in the courthouse, State capitol, and all the whole raft of Federal employees will insist upon, and maybe get, a raise, and then maybe the bottom will drop out of the whole thing. It usually does—then poor old Congress will have a worse mess on its hands than it did after the big slump in 1929. Boy, I'm scairt!

Maybe we had better keep some kind of OPA to hold down prices until things sort of settle down, because those railroad and utility fellows are hard to deal with when it comes to trying to get them to let down prices. You will agree, I know, that Government pay rolls never come down. Ever since our national economy was thrown out of adjustment, due in a large measure to disparity in prices, the Congress has been trying to get things back in order. Let's try not to make things any worse than they are.

With kindest personal regards, I am

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Text of Ickes' Broadcast Explaining Resignation

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include the prepared text of Secretary Ickes' broadcast delivered on the evening of February 13, 1946, as follows:

I am here tonight to explain why I chose to resign after almost 13 years in the high post of Secretary of the Interior, with which President Roosevelt honored me on March 4, 1933.

My task is no easy one, nor was the decision to resign an easy one. But a man has to live with himself. I have to spend the rest of my life with Harold L. Ickes, and I could no longer, much as I regret it, retain my self-respect and stay in the Cabinet of President Truman.

In my letter of resignation to the President I proposed that my resignation take effect at the close of business on March 31. My reason for this was that the hearings on the proposed Anglo-American oil treaty will begin on March 4. I am proud of this treaty, which I nurtured and raised by bottle from the beginning. I think that I had more to do with setting it up than any other man in the Government. I wanted to be here for those hearings. However, I told the President that if it was his desire that I should retire at an earlier date, I would be glad to do so.

PRESIDENT SETS FEBRUARY 15

In a brief note late this morning, he told me that my term of office would end on February 15, the day after tomorrow. I suppose that after being here almost 13 years I shall have no trouble in picking up in 2 days the odds and ends which have accumulated during that period. He also said that he considered that my resignation terminated all of my other governmental activities. I regard this remark of the President's as in the nature of supererogation. It was like saying that when a tree falls to the ground all of its branches go with it.

On no occasion did the President ever tell me that he proposed to nominate Mr. Pauley for Under Secretary of the Navy. Of course, I had seen reports to this effect in the newspapers and this possibility seemed to be on the tongue of many people in Washington.

Word came to me indirectly that Mr. Pauley himself had told the President of my probable opposition to his nomination. In the circumstances, it surprised me that the President did not frankly ask me what might be the basis of such oppcsition. Late Thursday afternoon, January 31, I received a telegram from Senator WALSH, chairman of the Naval Affairs Committee of the Senate, asking me, at the request of Senator TOBEY, to appear before his committee on the nomination of Mr. Pauley the following morning at 11:30. The Cabinet met at 10 o'clock on that day. At almost exactly 11, as we were about to adjourn, I left my chair so as to reach President Truman first and showed him the telegram from Senator WALSH. He still refrained from asking me if I had any objections to this nomination. All that he said was "of course, you will have to tell the truth but be as gentle as you can with Ed Pauley." In the light of succeeding circumstances, I may be permitted to doubt whether the President was not speaking in a Pickwickian sense when he told me to tell the truth.

SHUNNED PERJURY

I proceeded to the meeting of the Naval Affairs Committee and I think that the record will show that I did everything that I could in behalf of Mr. Pauley except to perjure myself. It is rather shocking to me to learn that certain members of the Democratic Party, of standing and supposed reputation, evidently are incensed that I did not commit perjury. Even if I could subscribe to the theory that a man obviously unfit for the office for which he has been nominated should be confirmed by the Senate, I dissent vigorously from the motion that one should forswear himself in order to get an office for an unfit man, or even for a fit one.

Mr. Pauley followed me on the stand. Senator BREWSTER asked him whether he had heard my evidence that morning to the effect that he had suggested to me that if he could be assured that the tidelands bill would not be filed, he could raise three or four hundred thousand dollars. Mr. Pauley replied, "That statement is not true." Subsequently, I received another summons from the Naval Affairs Committee which required me to take with me all memoranda relating to conversations with Mr. Pauley with respect to campaign contributions and Federal title to offshore oil lands in California. On this occasion, under questioning from Senator TOBEY, I read my memoranda—there were several of them on the subject—to the committee. In one of these memoranda, written only a few days after Mr. Pauley visited me, I wrote that he had made me the "rawest proposition that I had ever heard." I feel no desire to modify that characterization.

At the President's press conference on Thursday, February 7, he definitely alined himself with Mr. Pauley as against me, thus making my position as a member of his Cabinet untenable. Of course, this was his privilege, but I question the propriety of his saying that I had not consulted him in advance of my testimony with respect to Pauley and particularly of his statement that "Ickes can very well be mistaken as well as the rest of us."

It seemed to me clear from what President Truman said at this press conference that he had prejudged this case without giving me a chance to be heard.

My feeling is that, since President Truman was not present at the hearing and presumably had not read the record, it was not proper for him, even although he be the President of the United States, to pass judgment on a question of veracity between Mr. Pauley and myself. On this issue I am ready to appear before any competent tribunal at any time, although, of course, I should want one that would not announce, or even form, its opinion in advance of a full and careful consideration of all of the evidence.

As to whether I had or had not consulted President Truman in advance of my testimony on the Pauley nomination, my reply is that he had full notice of the probability of my embarrassment, plus several opportunities, in addition to those he might create at will, to ask me the reason why I might oppose Pauley.

CHALLENGES PAULEY STATEMENT

I wish that every American could read the record of Mr. Pauley's testimony before the Naval Affairs Committee of the Senate. At the very least, I hope that the Attorney General of the United States will assign one of his best lawyers to a scrutiny of Mr. Pauley's denial under oath of activities that he admits in other parts of the record. He said that he had "never asked any Senator or Representative to vote in favor of or against any bill involving tidelands rights or any other matter related thereto." He insisted that "never at any time" did he request "President Roosevelt or Attorney General Biddle to delay, postpone, or withdraw any suit relating in any way to the tidelands." He categorically denied that he had "presented his viewpoint on the tidelands issue to President Roosevelt, Attorney General Francis Biddle * * * to Secretary Ickes, and * * * others."

I challenge these statements. To the contrary I charge that Mr. Edwin W. Pauley was not speaking the truth when he said under oath that he had never attempted to influence President Roosevelt, Attorney General Biddle, or myself with respect to these tidelands suits. Such a statement is simply not true. Why, I remember his coming to my office to tell me that he had made representations to others in the administration against these tidelands suits. It is on record that he solicited Attorney General Biddle in the same behalf. He left no stone unturned to prevent the filing of suits that he now, with pretended innocence, declares that he had so little interest in that he never said anything to anyone on the subject.

GLAD TO GO

Things have come to a pretty pass if, under pressure from party organizations, men are not only expected but are urged to testify under oath to what is not true. I wonder what President Truman meant in that last hurried colloquy that I had with him when he said, "Of course, you must tell the truth, but be as gentle as you can with Ed Pauley." I told the truth and my oral testimony was supported by written memoranda made immediately following the visits of Mr. Pauley to my office. I told the truth with the result that the President for several days, although I was a member of his Cabinet, was unwilling to see me. I told the truth with the result that following my voluntary resignation I have been graciously allowed less than 3 days to clean up the accumulation of 13 years in the Department of the Interior.

I am glad to go. But I want to make it clear that I applaud President Truman for advocating the policies for which his great predecessor, Franklin D. Roosevelt, fought. I want also to make it clear that he has made some excellent appointments—men of character and ability who are devoted to the public welfare. However, lately I have noticed a trend that has seriously disturbed me as a citizen. Recently there has been a decided and alarming deterioration in the quality of his appointments. Now it is all very well to advocate policies that are in the interest of the people, but policies are not self-enacting any more than laws are self-enforcing. Policies and laws must be fought for and enforced or their substance will ooze away and nothing worth while will remain. It takes men of character, strong men, men who expect to speak the truth and to hear the truth, to give form to the policies and the laws for which President Roosevelt fought and which President Truman favors in his speeches.

So, men and women of America, this was the way in which the problem presented itself to me. Should I have put the country first or the administration first? So long as I can remember, I have owed allegiance to America. I have never subscribed to the view that party allegiance should override the interest of the country. I do not now subscribe to that view. Nor have I ever believed, as the Nazis did in Germany, that the interests of the party and the interests of the country are always identical. I do not now believe this.

I have enjoyed my 13 years as Secretary of the Interior and I feel a sense of loyalty and obligation to the fine men and women who have served that Department with me. Although I am about to retire from public office, the fight for good government and good administration that I have waged all of my life will go on.

Thirty-nine Economists Against Inflation

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. BIEMILLER. Mr. Speaker, the New Republic for February 18, 1946, has an interesting article called Thirty-nine Economists Against Inflation, which I should like to call to the attention of the House:

THIRTY-NINE ECONOMISTS AGAINST INFLATION

The economists of this country are badly worried about the immediate danger of inflation. They favor continuation of price control, and many of them advocate strong and integrated action on a broadened front to check inflationary pressures.

These opinions are indicated positively in messages to the New Republic, received February 5, 6, and 7, in response to a telegram sent from the Washington office of this magazine on February 4, addressed to 49 university and business economists and groups of economists. Twenty-six replies, signed by forty-three economists, were received within 3 days.

The New Republic asked the economists to indicate "whether you feel price control should be continued and strengthened in order to minimize danger of inflation. Whether answer favorable or unfavorable, do you advise additional steps against inflation, and if so, what?"

All the first replies disclosed that these men felt the problem was of great urgency. Thirty-nine of the forty-three said that the Price Control Act, which expires June 30, should be extended without delay. Three said no, and one gave an equivocal answer. Of the 39, one qualified his answer by recommending strong price control on basic raw materials and wholesale commodities, with some relaxation on finished products. Four suggested improvements in administration of the extended act, such as achieving a better balance among price ceilings, permitting some rise in the general price level and not holding business too closely to 1936–39 profit levels.

On the other hand, 29 of those who recommended price-control extension said it should be strengthened. Two suggested the necessity of extending control to cover the sale price of houses, which is specifically exempted from the present act. Two others emphasized that there must be no crippling amendments or impairment of the powers of the Office of Price Administration. Although they were not asked for how long the act should be renewed, four suggested a full year's extension. Five others thought control would be necessary until there is a reasonably good balance between production and demand.

Of the three who thought price control should be discontinued, one stated his belief that any effort to maintain a controlled economy is self-defeating; he would stop further monetization of the debt and, in unspecified ways, "bring all possible production into force." Another opponent suggested the necessity of 11 other controls which, if instituted, would make price control practically unnecessary. The third thought that the administration's abandonment of other controls has made price control impossible.

Responding to the second part of the question, all but 4 of the 43 economists suggested other controls to combat inflation. Twenty-two proposed wage adjustments or controls, while 10 suggested measures for avoiding work stoppages through industrial disputes; the chief concern on this point appeared to be the achievement of a balance between wages and prices. Twenty-eight would maintain at least the present tax rates; 10 of these advocated steeper taxes or additional taxes. Twenty-six suggested various means to reduce bank credit and the amount of money in circulation, or proposed other monetary and credit controls. Twenty-one favored reinstatement of priorities and allocations of essential materials, particularly building materials.

Space prevents publication here of all the telegrams, but the sampling that follows is fairly representative.

Dr. I. L. Sharfman of the University of Michigan, just retired as president of the American Economics Association, said:

"Continuation and strengthening of price control are indispensable if movement of inflation is to be checked. Authority should be extended for not less than 12 months with least possible delay to remove motive for withholding goods from market and for intensifying demand in expectation of further price increases. Controls should be exercised firmly in each important sphere until adequate flow of goods is attained. Most urgent additional need is to adjust labor disputes to eliminate actual or threatened work stoppages. Full production under genuinely competitive conditions and supplemented by intelligent monetary and fiscal policies constitutes the basic safeguard against inflation."

Dr. Frank D. Graham of Princeton University:

"In the absence of strong price controls while we catch up on production of civilian goods, prices will tend to rise out of all proportion to costs. This will do nothing but give swollen profits to business at the expense of consumers. Controls should not be so stringent as to prevent production, but by the same token we need official resistance to wage-rate increases at this time. Checking inflation calls for maintenance of existing wage rates coupled with full production. While profits pile up, ceiling prices on the goods involved should be lowered."

Dr. Sumner Slichter of Harvard University:

"I believe that price controls should be continued after June 30, 1946, until business enterprises are in a position to assume responsibility for preventing a disorderly rise in prices. Arrangements for correcting serious lack of balance in price ceilings need to be made more effective. Many concerns find their output limited because of inability to obtain parts or raw materials which are produced in limited amounts only because of the lack of balance in price ceilings. Some firms could sell for less if they were allowed to pay more for necessary parts or materials. The problem in a rough way is analogous to the problem of intra-plant wage inequities formerly faced by the National War Labor Board."

Gen. Leonard P. Ayres, of the Cleveland Trust Co.:

"Attempted controls over commodity prices cannot be made effective unless they are accompanied by controls over wages and over the allocation of key materials. Since the administration has abandoned its controls over wages and materials, and cannot now reassume them, it should abandon its futile attempt to continue price controls. If that should be done, the volume of production would rapidly increase instead of shrinking as it is now doing largely as the result of continuing attempts at price and profit controls."

An economist for a big New York bank, who asked that his name be withheld, said: "Strongly favor unimpaired price control. * * * Also favor controls on sale price of new and old houses and other buildings. Recommend special capital-gains tax and no tax reductions. Advise tightening controls to prevent further increase in bank credit. Also rapid use of Federal cash balance to reduce debt held by banks."

Dr. J. J. Spengler, of Duke University:

"Present situation three times as serious as 1918 when credit inflation facilitated postwar inflation. Present actual and immediately potential money supply can permit trebling of prices despite maximum possible production increase. Rid Truman's official family of inflationists. Support Bowles unreservedly. Raise through taxation more than is expended. Sponge up about fifty unneeded billions through stabilization-loan drives. Imposed proceeds and disburse as annual interest, thus sustaining future purchasing power. Rigorously curtail bank-credit extension. Control all prices and costs. Reinforce with priorities. Congressional failure to act along these lines will destroy much of value of veterans' benefits, insur-

ance, war bonds and savings, and prepare way for fascism. But given the above monetary and fiscal policies we can remove price controls in 2 or 3 years."

Dr. Alvin H. Hansen, of Harvard University, said: "A continuation of price controls is most urgently needed. Without it, I feel that we are in very serious danger. An extension of the control now would itself have a stabilizing effect."

Dr. A. B. Wolfe, of Ohio State University, former American Economics Association president believes OPA powers should be increased if politically possible as "it is the only agency which can or will save us from disastrous inflation." He suggested government take over plants in which labor and management refuse to start production on the basis of the Administration's current proposals, and stated that "at present any general increase in either prices or wages is bound to start the inflationary spiral."

Dr. Mabel Newcomer, of Vassar College, feels there is no assurance that higher prices will achieve full production. Favoring stronger and continued price control, she commented: "Unprecedented profits—after taxes—in recent years indicate that with industry operating to capacity, current prices should be adequate, even after substantial wage increases."

Dr. Kenneth Boulding, of Iowa State College, thinks that the abandonment of price controls would make inevitable a 100- or 200-percent rise. Suggesting stronger controls on basic raw materials and wholesale commodities, along with relaxation on finished products, he felt that some rise in the price level is "probably inevitable."

Dr. C. L. Christensen, of the University of Indiana, doubted if price controls can prevent inflation unless increased taxes on income can be used to balance the Federal Budget.

Five University of Texas economists—C. E. Ayres, A. R. Allen, G. V. Stocking, C. A. Wiley, E. E. Hale, and R. H. Montgomery—favored stronger price control, along with higher progressive income taxes to drain off existing excess purchasing power.

Fifteen of the University of California economics faculty—T. Grether, R. A. Brady, W. J. Fellner, C. A. Gulick, R. A. Gordon, S. Daggett, L. Kidner, A. H. Mowgray, P. Mason, L. A. Doyle, M. M. Knight, E. H. Huntington, M. M. Davisson, I. B. Cross, and C. Landauer—noted that pressures are approaching a breaking point. They favored continuing price controls with strengthened authority for another year, holding wages and prices in a balanced relationship, holding tax revenues at a high level, allocating strategic materials, and increasing Federal Reserve Board powers over reserve requirements.

Dr. Frank Albert Fetter, of Princeton University, on the other hand, found present policies hopeless, and price control more evil than good since the war. He suggested restoring the gold content of the dollar, contracting the money volume, increasing the bank reserve requirements, increasing the interest rate on bonds in the hands of individuals, enabling the exchange of cashable bonds bonds for old-age annuities, replacing strikes and labor violence by compulsory courts, permitting wages to rise to competitive levels, strengthening and enforcing laws against monopoly prices, increasing production, delaying demand for consumables, reducing public expenditures, and balancing the Budget.

Other replies, all affirmative and generally urgent, came from Dr. Harold M. Groves, of the University of Wisconsin; Dr. B. F. Haley, of Stanford University; Dr. Ben W. Lewis, of Oberlin College; Dr. Seymour E. Harris, of Harvard University; Dr. J. M. Clark, of Columbia University; Dr. Leo Rogin, of the University of California; Dr. Alan Sweezy, of Williams College; Dr. Earl Rolph, of the University of California; and Dr. Joseph S. Davis, of the Food Research Institute.

Aubrey G. Lanston, vice president of the First Boston Corp. of New York City, replied that he favored the immediate relaxing of control and some inflation which can be curbed by attaining full production, instead of a later, far more disastrous result. An answer was received from President Robert R. Wason of the National Association of Manufacturers, although the inquiry was addressed to one of its economists, outlining the well-known stand of that organization for dropping price controls.

New Deal Blunders

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. LANDIS. Mr. Speaker, a new day is dawning. Americans are awakening to the dangers of the course the Nation has been traveling. This great Nation cannot be allowed to drift. The American people will not stand for too many major blunders. Americans are looking to the Republican Party for leadership to clean up the New Deal mess.

Now let us look at the mess we find ourselves in. Strikes and threats of strikes have interrupted our reconversion program. For a long time everyone has been interested in reestablishing labor-management peace and getting the Nation safely back on the reconversion road.

America can blame the New Deal for removing the War Labor Board last fall before the reconversion program could get under way. If the War Labor Board had been continued for another 6 months and the Little Steel formula increased some 15 to 20 percent, we would be in full production today. Prices could have been raised enough to allow management to pay the wage increase. A serious threat of inflation would have been avoided because production is our best guaranty against inflation.

As a result of this blunder our postwar program has been delayed 6 months and many workers have cashed their war bonds and spent their war savings. Thousands of retailers and wholesalers have lost money and hundreds of thousands of workers are out of jobs. Millions of our people will be forced to wait several months to purchase important items and materials. Many of our workers will have to start all over and earn enough to buy the necessities of life before they will be able to purchase automobiles, radios, electric washers, and refrigerators.

Someone in the administration got a bright idea that you could raise wages materially without raising prices. The OPA must have a flexible policy in adjusting price ceilings or thousands of little businessmen will have to retire.

The administration also had an idea that collective-bargaining agreements should be based upon the employer's ability to pay. Obviously some employers are better able to pay a high wage scale than others. But would you put a premium upon lack of thrift? Would you stifle initiative and business ingenuity which in a large part has made this Republic the wonder of the world? Is it fair that one manufacturer be required to pay a high wage scale and another a low one when they are in direct competition with each other? Is it conceivable that this is to be regarded as a sound economic policy?

Now, let us take a look at another New Deal blunder in the housing situation. The present shortage of lumber is due to shortage in production, absence of pipe lines, and maldistribution of available lumber supply. Yellow pine lumber is less than half full capacity. Labor is scarce and insufficient. Much of their equipment is worn out and replacements are not available. Surplus disposal of lumber, price adjustment, recruitment of labor and preventing the exportation of lumber and logs are some of the steps that should be taken immediately.

Housing Shortage

REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 15, 1946

Mr. PITTENGER. Mr. Speaker, I am beginning to get letters from people about the housing shortage. I had an interesting letter this morning from a man who is engaged in the business of building houses. His remarks are nothing new, his message is nothing new. He makes a plea that Congress get busy and shake off the shackles of bureaucracy so that they can begin under our system of a free economy to produce building materials so that they will be available for men who want to hire labor and buy building materials to build houses. The New Deal is straining at a gnat and swallowing a camel, maybe an elephant; I do not know.

The policy of the administration seems to be somewhat uncertain and it is my hope that those party leaders in Congress who have the votes to determine just what bills should be acted on by other Members, make some announcement as their housing program. We know that the mayor of Louisville, Mr. Wyatt, is the new Housing Administrator, and that the President and Mr. Wyatt have announced something in the nature of a subsidy to encourage building; that they plan to train a million and a half men for housing and construction work; also that they intend to turn over a lot of business to the prefabricated housing manufacturers. They also plan ceiling prices on old and new houses. No one seems to understand the new program and everybody feels that it is part of the performances of the past—namely, create another bureau and let bureaucracy run wild again. Peaple are already telling me that this is not the way to get houses.

Then the House Committee on Banking and Currency has reported out a bill which as I understand it, is entirely different from the program as reported by the President and his new National Housing Administrator, Mr. Wyatt. The House Committee meets again Monday and they do not seem to know whether they will draw up more housing legislation or just what they will do about it. As I understand it, announcement has been made by the majority leader that we will consider housing legislation on next Wednesday and Thursday.

May I suggest, Mr. Speaker, now that we are on a peacetime basis, the sensible procedure would appear to be a lifting of wartime controls, so that American labor and American businessmen can produce the building materials needed for houses, and then build the homes in the good old American way. This may be unorthodox in certain circles, but it will get results, and it is better than the other alternative of having the Federal Government go into the business of building homes.

I just received a letter this afternoon, Mr. Speaker, from a man who is thoroughly familiar with the construction of homes and other buildings. His comment, which is typical of the opinions of thousands of good, energetic American citizens, reads in part as follows:

It looks to the writer as if the last releases by the President are merely so much propaganda to help put over the Ellender-Wagner-Taft bill, S. 1592. You can fill the Congressional Library full of legislation and it is not going to get any housing built, particularly if you give the National Housing Agency such sweeping control over housing as the above-mentioned bill will do.

This country and our actions are so much under the control of the bureaucrats at the present time that we hardly know where to turn, and sometimes wonder how far Washington is going with this planned economy stuff. What we need to build homes for veterans and others at the present time is materials to build with, not legislation, and if somehow, out of this confused mess of price control, wage control, and what-have-you, something could be devised whereby the manufacturers of building materials could put on the market enough materials to allow us to build what the people want to build, the housing situation would soon right itself.

We hope you will give this housing situation and the bureaucratic controls proposed your attention, so that we will not be tied up with any more red tape than is necessary, for we in the building game are always anxious to furnish and build homes as anyone else in the country is, and will be only too pleased to do so if we are allowed to.

If there is anything wrong with the views of this man who is in the building business, who knows how to build houses so he can support himself and his family and furnish employment to carpenters and other men in the building trade and incidentally, produce houses for people who need them, I wish somebody would give me the answer. It seems to me that the views of this small-business man are entirely correct and as you know, he is fearful that the administration is going to sell him and tens of thousands of others like him, down the river again.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement made this morning by the Under Secretary of State, the Honorable Dean Acheson, before the subcommittee of the Senate Foreign Relations Committee for the St. Lawrence seaway and power Project. I also ask leave to have inserted in the Appendix of the RECORD in connection with this statement a letter addressed to the Secretary of State under date of February 16, 1946, by Robert P. Patterson, Secretary of War, setting forth the position of the Joint Chiefs of Staff in support of the St. Lawrence seaway and power project.

I have had an estimate of cost of printing made. The cost will be $130.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

Mr. Chairman, the purpose of the legislation before you is to increase the wealth of the United States by developing one of the greatest natural resources in the world, the Great Lakes-St. Lawrence Basin.

The St. Lawrence seaway is as old in its conception as the history of our country. The search for easy water communication to carry the commerce of the world led explorers and traders through this route 400 years ago. For over half a century the Governments of the United States and Canada have worked toward the development of a waterway from the Atlantic Ocean to the great farm lands and factories of the interior of our continent. The seaway is not a new project. In fact the legislation before you provides merely for a series of improvements of an already existing inland waterway which are the logical sequel to the construction by the United States of such great works as the MacArthur Locks at Sault Ste. Marie and by Canada of the Welland Canal connecting Lake Ontario and Lake Erie. Today the Great Lakes-St. Lawrence system lies like a great highway of commerce stretching for 2,400 miles from Newfoundland into the industrial and agricultural heart of the United States and Canada, its potentialities for producing wealth limited only by some rapids between northern New York and Montreal where the existing canals are too shallow for most oceangoing vessels. The question now before you is whether this short obstruction should be removed.

Secondly, the legislation would provide for the construction in the International Rapids section of hydroelectric power works which would convert the torrential flow of the St. Lawrence into one of the greatest sources of cheap power in the world. The single power dam to be built will have a generating capacity of 2,200,000 horsepower half of which would be made available to Canada and half reserved to the United States. The bill before you would wisely provide that the United States share of these power facilities be turned over as a public power project to the State of New York which will share with the Federal Government in the cost of the project.

It is estimated that all of this will cost the United States some $285,000,000 on the basis of 1941 figures, of which about one-third would be paid by New York so that the total cost to the Federal Government would be something under $200,000,000. Some of the work allocated to the United States and included in this estimate, such as the MacArthur Locks, has been done since 1941 and there will be some changes in these figures as the result of price variations. The Corps of Engineers will address themselves to this point.

What is the interest of the State Department in this mattter? The obvious basis of the State Department's interest is that for geographical reasons the St. Lawrence project must be built in cooperation with Canada. The working out of the plans have required negotiations over a period of many years with the Canadian Government on a variety of questions such as sharing of the cost, engineering plans, and so forth, in the negotiation of which the State Department has cooperated with other agencies of our Government. The result of these negotiations is the agreement of March 19, 1941 with Canada the approval of which is provided for in the pending legislation. The negotiation and execution of this agreement in cooperation with Canada would in itself constitute a remarkable example of international cooperation.

But, it may be asked—aside from this are not the issues involved pretty much of a domestic character just as in any other public-works program? The answer to that is obviously "yes—in part"—but there is a larger interest that our Department has in the matter which in turn is intimately related to the principal question which must be asked about this legislation, namely—What does the United States get out of all this to justify the expenditure involved?

From the standpoint of our national security, the answer to that is clear. I have here a letter from the Secretary of War which states that the construction of the seaway is a matter of importance to our national defense. The full statement which I hereby offer for the record, reads as follows:

FEBRUARY 16, 1946.

The honorable the SECRETARY OF STATE.

DEAR MR. SECRETARY: In conformity with your request of November 5, 1945, the Joint Chiefs of Staff have examined the matter of the Great Lakes-St. Lawrence seaway and power projects and their effect on the national security.

The principal factors which influence the consideration of these projects in the interest of the national security are that, in the event of a national emergency, they would provide:

(a) Shipbuilding and ship-repair facilities, located in a relatively secure area, capable of expansion and of conversion for handling deep sea vessels, which could be used to supplement coastal shipyards.

(b) An additional line of communication, navigable by ocean shipping, which could, by diversion of some cargo for overseas destinations, ease the strain during wartime on rail transportation and port facilities of the east and gulf coasts. This seaway could also serve as a reserve route to be used in the event of interruption of other routes by enemy action.

(c) A large source of cheap, dependable power, which can be generated without the use of coal or other critical combustibles and without use of crowded rail or highway transportation facilities; this power would be available in an area which, during World War II was a power deficit area.

The foregoing factors prompted the Secretaries of War and the Navy to support the projects in 1941 in the interests of national defense. In the light of the experiences of

World War II, in which total mobilization became a near actuality, it is evident that the prospective increase in our war potential that would have been contributed by these projects, had they been completed, would have been of material assistance in prosecuting the war. It is probable that attainment of success in any future world conflict would require utilization of the ultimate production and transportation facilities of the United States and possibly Canada. The Joint Chiefs of Staff consider that it would be in the interests of national security to complete projects, such as these, which would have distinct military advantages and would materially increase the industrial and transportation potential of the United States.

Although the St. Lawrence Valley is a possible route for invasion of eastern North America, the Joint Chiefs of Staff consider that construction of the proposed works would not facilitate invasion by that route since the power plants, locks, and canals could readily be rendered unusable in the event such action became necessary.

ROBERT P. PATTERSON,
Secretary of War.

But from the standpoint of the development of our national wealth the advantages of the construction of the seaway are even greater. The heart of our agricultural and industrial wealth lies in the great middle section of the United States around the Great Lakes. Almost unique among the highly industrialized sections of the world, our Middle Western manufacturing areas have grown up far away from ocean transportation. One of the chief reasons for this, of course, has been low-cost inland transportation on the Great Lakes. But since the First World War this area has progressively grown into a surplus producing area which now must ship its products not only within the United States but to foreign countries, and which must procure its raw materials not only from within the United States, but increasingly from abroad. For all of this a water route to the sea is needed. Our farmers in this area have competed in world markets despite their transportation disadvantages.

The time has come when we can no longer be profligate with our natural resources. To maintain our production in the Middle West at the increased rate which will be necessary to supply jobs for our working population—including returned servicemen—at the standards of living to which our people justifiably aspire, we must make use of every single profitable resource that we have available. Our great civilization in the Middle West has competed in the world market despite our higher living standards and higher costs, not only because of the special genius for production of the American people but because we have had in the United States conditions of climate, natural resources, and fertility of soil which have made it possible for us as a nation to get more out of what we put into the job of producing goods, relatively speaking, than any other country in the world. We have had in other words a margin of superiority in this respect that is the basic reason for the miracle of our industrial development and of the staggering production performance of the United States during this war. We must make our plans carefully to maintain this margin of superiority and to go constantly forward in our industrial and agricultural development. For this purpose we have negotiated and submitted to the Congress for approval the agreement with Canada that is now before you.

The St. Lawrence project has been described in the Department of Commerce Survey of 1941 as "among those projects which will reduce the expenditure of human energy per unit of product produced." It will make it possible not only to cope with the transportation problems which will arise as our present Great Lakes industries call upon the outside world for more and more raw materials, but it will also help to serve other industries which may be expected to develop in this area in the next 30 years. It will enable the farmer to get more out of his wheat crop and perhaps to make his crop larger to the extent that he can economically compete in the world market. Finally, as our efforts to build up an expanding world economy are successful, the seaway will assist us in maintaining our share of the markets of the world—and will make it physically possible to move the increased volume of trade to which we must look forward.

Added to this we shall be harnessing the waters of the International Rapids section so that we can utilize to the fullest extent this great source of cheap electrical power. The results are incalculable in terms of increased wealth and added purchasing power for our Nation. We have already seen what the TVA, the Boulder Dam, and the Grand Coulee have done for their respective areas. The part of the United States which would be served by the St. Lawrence power development has been a power deficit area and also needs the stimulation of low cost power. The value of water power has long been recognized in other countries. The committee members undoubtedly have seen recent reports that water power generated in Norway will be made available across the Skagerrak for consumption in Denmark. In the Soviet Union, China, and other parts of the world, water power development is constantly increasing. We must make certain that the development of our power resources keeps pace with our industrial development. While the deep water navigation through the St. Lawrence will promote international trade, the power made available by this project will serve the same end. Every bit of power that we add to our capacity increases our ability to use the world's raw materials and to provide the finished goods which are needed in our own and other areas. The time has come when we can no longer afford the enormous waste of wealth that is involved in our failure to harness the energy of this river.

Not least among the advantages of the St. Lawrence project will be the benefits that it will bring about also for our neighbor Canada. For years the waters of the St. Lawrence have been a source of mutual concern to our two countries. The Canadian Government has already made important improvements in the waterway at its expense which the United States is entitled to and does utilize free of charge. The cost to Canada of the Welland Canal and certain less important improvements in the system has been about $133,000,000. It is proposed that Canada will be given credit for these expenditures in arriving at the over-all division of cost between the two countries in the construction provided in the pending agreement. Furthermore, the economic development of the Great Lakes Basin in Canada is naturally of interest to us since Canada has long been our second best customer and we in turn are Canada's best customer. The stronger that Canada becomes, the better it is for us.

The Department of State realizes that there are interests in this country that object strongly to this program of construction. Some railroads believe that their capital investment will be prejudiced through diversion of traffic to the seaway. Certain port cities entertain the same fear of loss of traffic. Great Lakes shipping interests believe that the entrance of oceangoing vessels into their territory will injure them economically. Coal interests allege that they will lose all or part of the Canadian markets. And power interests raise the controversial issue of public power. Other witnesses will appear in favor of the St. Lawrence project who can testify with greater authority on these matters than I. However, there is good authority for saying that these fears are unjustified. The St. Lawrence survey of the Department of Commerce, completed in 1941, indicates, for example, that the prospective increase in freight traffic in the United States over the next 15 years will be such as to make the St. Lawrence seaway an absolute necessity to help in handling our ocean-bound traffic. Similarly, the survey indicates that many or all of the port cities deemed to be affected will gain new traffic as the result not only of normal growth in the United States but of the industrial expansion that will be stimulated through this project.

Every technical and mechanical advance in the history of the world has been viewed by some with alarm. This was true of the railroad, the automobile, the airplane—of the development of each new resource and of each section of our country. But our country has become great, not by listening to these fears but by utilizing every resource of brain or nature.

Fears have also been raised by the opposition to the St. Lawrence project that the pending agreement with Canada may not constitutionally be acted upon by the Congress through legislation, but must, so the argument goes, be a treaty. The Department of State believes that this position is incorrect and that the participation of the United States in the construction of the St. Lawrence project may legally be brought about through legislation to approve and effectuate the pending agreement. In support of this contention I have filed with the chairman of the subcommittee the full legal argument to substantiate this position. The memorandum also contains a statement of the historical and legislative background of the St. Lawrence project. Since the memorandum is voluminous and since sufficient copies have not yet become available for distribution to all members of the subcommittee, I shall be glad to appear again later during the hearings if the subcommittee desires in order to discuss this aspect of the legislation further.

Under the Constitution, Congress is given power to regulate commerce with foreign nations and among the several States. This clause has for over 100 years been construed by the Supreme Court to vest in the Congress plenary powers to control navigation and to authorize the construction by private interests or by the Federal Government of projects relating to the improvement and utilization of navigable waters including the hydroelectric projects. Under these powers the Congress has authorized the construction by the Federal Government of navigation and power projects of profound significance to the economic life of the United States such as the Tennessee Valley Authority, the Boulder Dam and the Columbia River projects.

The Congress is not deprived of its powers to enact legislation to authorize the construction of projects of this nature simply because such legislation is related to or is designed to effectuate an agreement with a foreign country. In fact there are many precedents in the history of our relations with Canada and with other nations of the exercise of the powers of Congress to authorize, to approve, or to carry out agreements with foreign countries in the field of the delegated powers of Congress. Congress has authorized the President to enter into postal treaties; to make agreements with foreign countries with respect to patent and copyright protection, and to enter into reciprocal trade agreements and it has successively extended the trade agreements legislation over claims that the procedure involved is unconstitutional. The Congress through joint resolution has authorized United States participation in

the International Labor Organization, UNRRA, and the Food and Agriculture Organization, and finally in the last session of Congress passed the Bretton Woods Agreements Act authorizing the President to participate in the International Monetary Fund and the International Bank for Reconstruction and Development. The latter was one of the most important pieces of legislation ever passed in relation to an agreement with a foreign country. During the consideration of the agreement in the Senate the question was raised as to the constitutionality of the procedures and the State and Treasury Departments filed with the committee a memorandum supporting the procedure on the ground that the legislation was within the power of Congress to legislate on financial and monetary matters. Other examples of agreements entered into by the United States in conjunction with legislation are the international silver agreement, the international wheat agreement, the stabilization agreement of 1936, and various aviation agreements, all of which have been entered into under the authority of existing legislation, and the debt-funding agreements after World War I which were negotiated by a committee of representatives of the executive and legislative branches of the Government pursuant to congressional authorization and later submitted to the Congress for its final approval.

These agreements would appear to establish that matters of importance to the foreign relations of the United States have since the early days of the Republic been concluded through agreements entered into by the executive branch with legislative sanction. The validity of agreements with foreign countries has been frequently passed upon by the Supreme Court and never has the validity of an agreement so executed—or of legislation with respect to such an agreement—been held invalid by the Court.

It is not claimed that any foreign negotiation may be concluded in this manner. There are obviously certain classes of foreign arrangements which must be reserved exclusively for the treaty power. During the last session of Congress probably more important treaties were submitted to the Senate for its advice and consent to ratification than in any other corresponding period in recent history. Furthermore, it should be made clear that in considering the St. Lawrence agreement we are not dealing with the type of so-called Executive agreement that can be entered into by the President under his own, exclusive powers as Chief Executive and diplomatic officer of the Government and Commander in Chief of the armed forces. There are admittedly numerous types of purely Executive arrangements of this nature which are not relevant to the problem at issue here. What we are concerned with in this case is a foreign agreement, which by its terms does not become effective until the necessary enabling legislation of the two countries has been obtained, and which, because of the very nature of its subject matter, cannot be carried out in the absence of such legislation. The precedents and cases referred to above make it clear that it is entirely appropriate for United States participation in this great project to be authorized in this manner.

The history of our relations with Canada contains many examples of arrangements of great importance to the economic relations of the two countries which have been concluded through the enactment of reciprocal legislation by the legislative bodies of the two countries. Thus joint commissions have been created to supervise the construction of great bridges over international streams, such as the Niagara and St. Lawrence Rivers, and to supervise the operation of these bridges. In 1893 the two countries concluded through the passage of reciprocal legislation and simultaneous proclamations—an agreement extending to nationals of both countries reciprocal privileges to render aid to vessels of their respective nationalities in distress in the waters of each country. In 1911 President Taft concluded an agreement with Canada for the reciprocal lowering of tariffs, which agreement provided that it would come into force when the necessary enabling legislation had been obtained in both countries. The United States Congress acted favorably upon the agreement but it did not become effective in the absence of corresponding action by Canada.

It has also been lightly said that Congress cannot authorize the expenditure of funds for construction in foreign countries. The memorandum filed refutes this contention by numerous and long-standing precedents. Rivers and harbors legislation has frequently, beginning as early as 1874, authorized the improvement by the United States of boundary streams, including connecting channels in the Great Lakes system, even though work has been required to be done in Canadian territory at the expense of the United States. Legislation of 1939 authorized the expenditure of some $30,000,000 in improving the connecting channels between Lake Huron and Lake Erie near Detroit. The Alaska Highway, although finally built under the President's war powers, had a long record of legislative action by Congress, such as the act of August 1935, authorizing the President to enter into an agreement with Canada for the survey and construction of a highway between the United States and Alaska. Similarly there is a long record of congressional action with respect to the Inter-American Highway, which has been built in large part with appropriated funds.

A further basis for action by Congress on this project is furnished by the previous treaties to which the United States is a party and under which the United States is given the same rights as Canada to navigate in the Great Lakes-St. Lawrence system, including the wholly Canadian sections thereof. These treaties having vested in the United States reciprocal rights to navigation in boundary waters and in the other waters of the Great Lakes-St. Lawrence system, the only question remaining is the method of further developing the usefulness of these rights through reciprocal improvements. For this purpose the parties agreed upon such a method in the Boundary Waters Treaty of 1909, whereby special agreements may be entered into by the two countries expressed by concurrent or reciprocal legislation, to provide for uses, obstructions or diversions of boundary waters. The 1941 agreement with Canada is a special agreement which, under the 1909 treaty, may be brought into force as specifically there provided by reciprocal legislation.

Finally it has been said that the 1941 agreement may not be brought into force through legislation because articles VII and IX purport to affect rights created by previous treaties. Because of the doubts raised by this contention and in order to facilitate consideration of the project on its merits, the pending legislation provides for the omission of these articles from the approval of the Congress. The Department of State will, of course, follow the provisions of the bill, if Congress enacts it, to negotiate a treaty with Canada covering these two articles. This removes the argument.

Thus it is hoped that the way has been cleared for the consideration of the agreement on its merits with full assurance of the constitutional validity of the procedure which has been used.

A Senator Looks at Office Work

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Senator Looks at Office Work," written by me, and printed in the Office Economist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR LOOKS AT OFFICE WORK

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

Imagine now that you are a United States Senator. You have a staff of about half a dozen people, a small suite of offices, and a very modest office expense appropriation. Your crew works with you from 9 to 5:30 6 days a week with the exception of one afternoon which each member of your staff has off on different days.

Now, in that time, with those resources and your own personal resources, you must be adequate to accomplish the following work within and outside your office:

(a) Read, assimilate, act upon, and answer an average of 300 pieces of correspondence a day. This correspondence includes everything from recommendations on bills to personal requests, inquiries, and appeals, together with many other types of subject matter.

(b) Make, answer, and act upon innumerable local and long-distance telephone calls on behalf of your constituents.

(c) Greet and talk over problems with innumerable visitors and delegations from back home.

(d) Attend and participate in an average of half a dozen committee meetings a week.

(e) Attend and participate in the meetings of the Senate.

(f) Prepare for your legislative work by reading and assimilating hundreds of newspapers, magazines, committee hearings and reports, CONGRESSIONAL RECORDS, bills, legislative documents, etc.

(g) Speak to press and radio representatives and perform other public functions, including attending receptions and dinners, speaking before groups, making radio talks, writing articles, and doing similar tasks.

That, perhaps, gives you a fair idea of the functions and problems which your 96 Senators face and substantially those which your 435 Representatives face.

It is understandable, therefore, why your Congressmen should have a keen appreciation of the work of office managers and business executives. Congressmen are themselves each the directors in a little nonprofit public-service "business" at the behest of their constituents. Each Congressman manages an office and faces problems of personnel, budgeting, organizing, etc., similar to my readers' problems, albeit probably on a smaller scale.

He, too, must file his letters, his speeches, his documents in a manner that will permit him to get them speedily and accurately when he wants them. He, too, must have an orderly system of records disposition, a clean-cut system of correspondence procedures, a workable office lay-out, etc. In a larger sense, Congressmen can, of course, ap-

preciate the absolutely indispensable role which office work played in planning and executing the gigantic war work of factory and mine, fox hole and airfield in the military victory just achieved. Congressmen can, too, keenly perceive the mighty role which American office management is playing in our reconversion and is going to play in our continuing prosperity.

Perhaps, therefore, you will feel that I, for one, with my background as a United States Senator and as for over 30 years a practicing lawyer, am qualified to present some of the precepts which have guided me in my own office work. These precepts may be of some help to you; they definitely have been to me.

Here they are:

1. Plan: Someone has defined planning as "organized foresight based on corrective hindsight." But, however you may define it, effectiveness of planning is crucial to any successful business.

Planning demands vision and perspective. It demands an estimate of your tasks up ahead and the resources—men, money, material, and time—with which you can handle these tasks. It demands a certain fixity and yet flexibility in execution.

Perhaps my habit of planning may be most simply illustrated by my practice of layout. Each night before my departure from work, the "must" tasks and the "optional" tasks (that is, those to be done if time permits) for tomorrow's work.

2. Delegate: It has always been my endeavor to make sure that each member of my crew clearly knew what he was to do and how, when, and where he was to do it. Delegation is more than a matter of conferring authority and responsibility. Viewed in a larger sense, it is a matter of equipping each individual to fulfill his given tasks; it is a matter of training. With a Congressman away from his office so much of the time because he is in committee or in congressional session, his staff must have the clearest possible conception of their duties and must be competent to handle them.

3. Evaluate: All work can and must be evaluated and insofar as possible that evaluation must be objective, that it, against objective standards. In my own office, we can gage our effectiveness by, for example, the fact that we have satisfactorily processed (as we usually do) all incoming mail pieces the same day they arrived. We can gage our effectiveness by the number of letters of appreciation from constituents reporting satisfaction with our efforts in their behalf. Much of our work is, of course, relatively intangible in its nature and its effects. Yet somehow we can, if our eyes are open, always find some criteria to judge how well we are doing the job for the folks back home.

4. Inspire: This is a toughie. Yet management is the science of getting things done through people. Management is therefore really "humanagement"—of ourselves and others. And so, the successful manager must continuously inspire his crew b, displaying that zeal for his work, that appreciation for others' efforts, that willingness to pitch in and help in the humblest job if necessary, that confidence, that faith which gives the crew a lift, a sense of adventure and of triumph. It is almost inevitable that during the workday and workweek, energies will flag and tempers may become frayed. That is why the captain must antidote these reactions, must constantly inspire his crew by radiating enthusiasm and good will. This is truer perhaps in a congressional office, subject as it is to vast pressures from all sides. But I am certain that the need for the captain's inspiration is manifest in your own office too.

5. Aspire: Life is growth. It is unfoldment, development, improvement. We must not be guilty of arrested development either in our personalities or in our work. We must not fall into a rut of outdated procedures and processes in our office labor. We must ever seek the better way, the faster way, the more economical way of doing things. We must use our evaluation technique to refine our work standards and devise new methods of beating those standards. We must constantly seek to become better salesmen—of ourselves and our ideas.

These then, are a few of the precepts which have been of service to me in my senatorial and other office work and which may, in turn, be of service to you in whatever your vineyard of toil.

Foreign Loans

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address upon the subject of foreign loans, which I delivered on February 5, 1946, over radio station WTOP, in Washington, D. C., over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to talk with you tonight about loans to foreign governments. The administrative side of our National Government has definitely indicated that it will embark upon a policy of loaning large sums of the money of the American people to foreign governments. Already the terms of a loan to the British United Kingdom have been drawn whereby we are to loan several billions of dollars to them if Congress will approve it.

I use the word "policy" because if this loan to Britain is made, similar loans to other nations will follow. There can be no just or equitable ground upon which to refuse the requests of others if such a policy is started. Naturally Russia, France, China will all ask the same consideration.

The newspapers already report that Russia suggests that she borrow $6,000,000,000 from us. And just week before last the press carried the statement of an officer of the new French Government saying that France must have a loan of two and one-half billions from America if her economy is to be saved. They ask for America's money. They do not seek it elsewhere. They have not gone yet to the international monetary funds to which we have already made the largest commitment by far of any of the nations.

This apparent course is the same policy of loaning American money that was followed after the First World War. It did little good. Certainly it did not prevent war. And from a commercial point of view it was a poor investment, particularly with respect to repayment by the borrowers. Vast unpaid amounts are still outstanding.

This problem is one of immense interest to you, the American people, because it is your money that will be loaned. It will be money exacted from you through taxation or given over by you in the purchase of Government bonds.

We can but determine the wisdom of making the British loan by consideration of its principal features. I submit to you that the terms should not be accepted.

It provides that this Government shall loan three billions seven hundred and fifty millions to the United Kingdom from money to be appropriated by Congress. In addition, there is added to that sum, to be repaid, the amount of six hundred and fifty millions, which is in full settlement by Great Britain to us for all that we have advanced under lend-lease; for purchase of all installations erected by us, including airports and other structures; for all goods now in transit; and for all surplus property of the United States now located in the British Isles.

The net amount advanced by us to Great Britain under lend-lease is $25,000,000,000.

In other words, the terms of this loan accept a settlement of six hundred and fifty millions for twenty-five millions net lend-lease, and, in addition, for the American installations and surplus property now located in Britain. The six hundred and fifty millions is to be paid over the period of 50 years, just as the three billions seven hundred and fifty millions is to be paid, making a total indebtedness of $4,400,000,000.

The three billions seven hundred and fifty millions may be used by the borrower at any time before 1952, and may be called for as needed.

Beginning in 1952, Britain is to begin payments in annual installments over a period of 50 years, the contract being to pay the debt back by the year 2002.

Interest of 2 percent may be charged, but even the interest charge of 2 percent is not positive because it is provided in the written terms of the proposed agreement that the United States, under certain conditions, upon request of Britain, will waive the interest. (Secs. 5 and 6 of Financial Agreement Between the Governments of the United States and the United Kingdom.)

It is interesting to note here that 4 percent interest is charged to our veterans when this, their own Government, loans them money.
